PROCEEDINGS AND DEBATES OF THE 95<sup>th</sup> CONGRESS, FIRST SESSION

## SENATE—Wednesday, May 25, 1977

(Legislative day of Wednesday, May 18, 1977)

The Senate met at 10 a.m., on the expiration of the recess, and was called to order by Hon. RICHARD STONE, a Senator from the State of Florida.

### PRAYER

The Chaplain, the Reverend Edward L. F. Elson, D.D., offered the following prayer:

Eternal God, from whom our spirits come, to whom they shall return, and in whom we live and move and have our being, lift us, we pray Thee, into Thy presence. Thou art the source of our faith and the ground of our hope, the strength which gives us courage and the courage that gives us strength.

We thank Thee for Him who revealed Thy fullness, who worked at a carpenter's bench, who taught and healed and daily went about doing good.

May a measure of his life indwell us, that we may be humble as He was humble, kind as He was kind, loving as He was loving, serving as He served. And when the day is done may we have advanced Thy kingdom on Earth.

We pray in the name of Him who was Master of life. Amen.

### APPOINTMENT OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore (Mr. EASTLAND).

The legislative clerk read the following letter:

U.S. SENATE,  
PRESIDENT PRO TEMPORE,  
Washington, D.C., May 25, 1977.

To the Senate:

Being temporarily absent from the Senate on official duties, I appoint Hon. RICHARD STONE, a Senator from the State of Florida, to perform the duties of the Chair during my absence.

JAMES O. EASTLAND,  
President pro tempore.

Mr. STONE thereupon took the chair as Acting President pro tempore.

### THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of Tuesday, May 24, 1977, be approved.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

CXXIII—1039—Part 14

### COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

### ORDER OF BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I yield back my time.

Mr. BAKER. Mr. President, I yield back my time under the standing order.

### SECURITIES AND EXCHANGE COMMISSION AUTHORIZATIONS, 1978

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now proceed to the consideration of S. 1311, which the clerk will state by title.

The legislative clerk read as follows:

A bill (S. 1311) to amend the Securities Exchange Act of 1934 to authorize specified amounts to be appropriated for the Securities and Exchange Commission for fiscal years 1978-80.

The Senate proceeded to consider the bill.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, Senator WILLIAMS has a statement which I shall read on his behalf:

S. 1311 would amend the Securities Exchange Act of 1934 to authorize \$58,290,000 to be appropriated for the Securities and Exchange Commission for fiscal year 1978.

Senator Tower and I introduced the original bill on April 19, 1977 at the request of the SEC. A few weeks ago, the Committee on Banking, Housing, and Urban Affairs held one day of hearings to allow the SEC to present testimony. Earlier this month, on May 3, the Committee unanimously approved the bill, with an amendment and ordered it reported.

As introduced, the bill provided for multi-year budget authorizations up to a maximum of \$64 million in fiscal year 1978, \$70 million in fiscal year 1979, and \$75 million in fiscal year 1980.

The Committee amended the bill in two respects.

First, the Committee approved a one-year authorization covering fiscal year 1978, as recommended by Chairman Harold M. Williams, to allow him time to formulate long range priorities for the Commission.

The second change reflected in the Committee amendment concerns the amount of the authorization. Both at the hearing and during its deliberations, the committee was particularly interested in the variance between the Commission's budget estimate (\$58,290,000) and the requested authorization (\$64 million). Neither the Commission's budget submission nor additional information furnished to the committee upon request provided satisfactory explanations to justify the full amount of the requested authorization.

Accordingly, the committee decided to authorize the precise amount of the SEC's budget estimate, \$58,290,000. This figure reflects an increase of \$2,020,000 over the current appropriation necessary to cover increased costs associated with maintaining current activities and anticipated requirements for additional resources. Specifically, according to the Commission, the increase is necessary to continue the modernization of its records systems, and provide funds for increased costs related to travel, communications and other non-personnel expenses. The Commission has not requested funds for additional personnel; in fact, the Commission projects a slight decrease in personnel costs during the next fiscal year. The committee agreed unanimously that these increments are necessary for the continued operation of the Commission.

The committee unanimously recommends the enactment of this legislation in order that the necessary funds can be appropriated.

Mr. WILLIAMS supports the committee amendment, and asks that it be agreed to.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the committee amendment in the nature of a substitute.

The committee amendment in the nature of a substitute was agreed to.

The ACTING PRESIDENT pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, and was read the third time.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of H.R. 3722, Calendar Order No. 195.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

16509

The legislative clerk read as follows:

A bill (H.R. 3722) to amend the Securities Exchange Act of 1934 to authorize appropriations for the Securities and Exchange Commission for fiscal year 1978.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. WILLIAMS, I move that all after the enacting clause be stricken, that the language of S. 1311, as amended, be inserted in lieu thereof, and that H.R. 3722, as so amended, be considered as having been read the third time and passed.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the motion.

The motion was agreed to.

The bill (H.R. 3722) as amended, and passed, reads as follows:

That section 35 of the Securities Exchange Act of 1934 (15 U.S.C. 78a et seq.) is amended by striking the words "For fiscal year succeeding the 1977 fiscal year, there may be appropriated such sums as the Congress may hereafter authorize by law." and inserting in their place the following: "and not to exceed \$58,290,000 for the fiscal year ending September 30, 1978. For fiscal years succeeding the 1978 fiscal year, there may be appropriated such sums as the Congress may hereafter authorize by law."

Amend the title so as to read: to amend the Securities Exchange Act of 1934 to authorize the amount to be appropriated for the Securities and Exchange Commission for fiscal year 1978."

The PRESIDING OFFICER. Does the Senator offer the title amendment?

Mr. ROBERT C. BYRD. Yes.

The ACTING PRESIDENT pro tempore. Without objection, the title is amended so as to read:

A bill to amend the Securities Exchange Act of 1934 to authorize the amount to be appropriated for the Securities and Exchange Commission for fiscal year 1978.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which H.R. 3722 was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. I ask unanimous consent that S. 1311 be indefinitely postponed.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### NUCLEAR REGULATORY COMMISSION AUTHORIZATIONS

Mr. ROBERT C. BYRD. Mr. President, the Senator from Colorado (Mr. HART) will be on the floor shortly to handle the bill (S. 1131); Calendar Order No. 170. I ask unanimous consent that the Senate proceed to the consideration of that measure.

The ACTING PRESIDENT pro tempore. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 1131) to authorize appropriations to the Nuclear Regulatory Commission in accordance with Sec. 261 of the Atomic Energy Act of 1954, as amended, and Sec. 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes.

The ACTING PRESIDENT pro tempore. Without objection, the Senate will proceed to its consideration.

The Senate proceeded to consider the bill, which had been reported from the Committee on Environment and Public Works with amendments.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

#### EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, while we are awaiting the arrival of Mr. HART, who is on his way to the floor, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

The nominations will be stated.

#### DEPARTMENT OF STATE

The second assistant legislative clerk read the nomination of George S. Vest, of Maryland, to be an Assistant Secretary of State.

Mr. BAKER. Mr. President, I might observe for the information of my colleagues and the majority leader that all of the names on the Executive Calendar for the Department of State—Mr. Vest, Mr. William H. Sullivan, Mr. Heck, Mrs. Ridgway, Mr. Lowenstein, Mr. Miller, Mr. Shlaudeman, Mr. Eagleburger, Mr. Levin, Mr. John H. Sullivan, and Mr. Bergus—have been cleared for confirmation on this side.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader. Since we have a little time, I will have the clerk read each nomination.

The ACTING PRESIDENT pro tempore. Without objection, the nomination of Mr. Vest is considered and confirmed.

The second assistant legislative clerk read the nomination of William H. Sullivan, of Rhode Island, to be Ambassador to Iran.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of L. Douglas Heck, of Oregon, to be Ambassador to Nepal.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Rozanne L. Ridgway, of the District of Columbia, to be Ambassador to Finland.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of James Gordon Lowenstein, of the District of Columbia, to be Ambassador to Luxembourg.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Robert H. Miller, of Washington, to be Ambassador to Malaysia.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Henry W. Shlaudeman, of California, to be Ambassador to Peru.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Lawrence S. Eagleburger, of Virginia, to be Ambassador to Yugoslavia.

Mr. ROBERT C. BYRD. Over, Mr. President.

The ACTING PRESIDENT pro tempore. Without objection, the nomination will be passed over.

The second assistant legislative clerk read the nomination of Sander Martin Levin, of Michigan, to be an Assistant Administrator of the Agency for International Development.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of John H. Sullivan, of Virginia, to be an Assistant Administrator of the Agency for International Development.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

The second assistant legislative clerk read the nomination of Donald Clayton Bergus, of New Jersey, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to the Democratic Republic of the Sudan.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

## U.S. INFORMATION AGENCY

The second assistant legislative clerk read the nomination of Charles William Bray III, of Maryland, to be Deputy Director of the U.S. Information Agency.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

## FARMERS HOME ADMINISTRATION

The second assistant legislative clerk read the nomination of Gordon Cavanaugh, of Maryland, to be Administrator of the Farmers Home Administration.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

## DEPARTMENT OF JUSTICE

The second assistant legislative clerk read the nomination of John C. Merkel, Jr., of Washington, to be U.S. attorney for the western district of Washington.

Mr. BAKER. Mr. President, I meant to say, and did not gain recognition in time to say, that in examining the Executive Calendar I find that the confirmations we have just completed—that is to say, Mr. Cavanaugh and Mr. Merkel—have been cleared for confirmation.

I advise the distinguished majority leader that I have cleared, as well, the nominations listed on the calendar for Mr. Medina, of the Department of Housing and Urban Development, and the additional Department of State nominations—to wit, Mr. Spiers, Mr. Lucey, Mr. Irving, Mr. Weissman, and Mr. Fisher.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that those nominations be considered en bloc.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

The nominations considered and confirmed en bloc are as follows:

## DEPARTMENT OF JUSTICE

John C. Merkel, Jr., of Washington, to be U.S. attorney for the Western District of Washington for the term of 4 years.

## DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

William Antonio Medina, of Maryland, to be an Assistant Secretary of Housing and Urban Development.

## DEPARTMENT OF STATE

Ronald I. Spiers, of Vermont, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Turkey.

Patrick J. Lucey, of Wisconsin, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Mexico.

Frederick Irving, of Rhode Island, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Jamaica.

Marvin Weissman, of Maryland, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Costa Rica.

Adrian S. Fisher, of the District of Columbia, for rank indicated while serving as the U.S. Representative to the Conference of the Committee on Disarmament, to be Ambassador.

## DEPARTMENT OF JUSTICE

The second assistant legislative clerk read the nomination of Michael D. Hawkins, of Arizona, to be U.S. attorney for the district of Arizona.

Mr. BAKER. Mr. President, there is no objection to this confirmation.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

## OFFICE OF DRUG ABUSE POLICY

The second assistant legislative clerk read the nomination of Peter G. Bourne, of the District of Columbia, to be Director of the Office of Drug Abuse Policy.

Mr. BAKER. Mr. President, for the information of the majority leader, these two nominations—that is to say, Mr. Bourne and Mr. Dogoloff—are cleared on our Calendar for confirmation, as is the following one, Adrian Paul Winkel, to be High Commissioner of the Trust Territory of the Pacific Islands.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I did not ask that.

The ACTING PRESIDENT pro tempore. The clerk will proceed.

The second assistant legislative clerk read the nomination of Lee I. Dogoloff, of Maryland, to be Deputy Director of the Office of Drug Abuse Policy.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed.

## TRUST TERRITORY OF THE PACIFIC ISLANDS

The second assistant legislative clerk read the nomination of Adrian Paul Winkel, of Maryland, to be High Commissioner of the Trust Territory of the Pacific Islands.

The ACTING PRESIDENT pro tempore. Without objection, the nomination is considered and confirmed.

Mr. ROBERT C. BYRD. Mr. President, I ask that the President be notified of the confirmation of the nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

## LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate resume legislative session.

There being no objection, the Senate resumed the consideration of legislative business.

## NUCLEAR REGULATORY COMMISSION AUTHORIZATIONS

The Senate continued with the consideration of the bill (S. 1131) to authorize appropriations to the Nuclear Regulatory Commission in accordance with section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1974, as amended, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, what is the business before the Senate at this time?

The ACTING PRESIDENT pro tempore. The pending business is S. 1131, authorizing appropriations to the Nuclear Regulatory Commission.

Mr. HART. Mr. President, I ask unanimous consent that Haven Whiteside and Kevin Cornell, of the committee staff, be granted the privileges of the floor during the consideration of this measure.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. HART. Mr. President, S. 1131, the legislation currently pending before the Senate, is the first bill to be reported out from our new Subcommittee on Nuclear Regulation in the Committee on Environment and Public Works. This bill extends through fiscal year 1978 the authorization for appropriations for the Nuclear Regulatory Commission. The bill is based on testimony received in five hearings which I chaired earlier this year. These hearings were very educational for this Senator and for the members of this committee and subcommittee. The subcommittee held two markups and the full committee held one before reporting the bill favorably, with amendments.

The Nuclear Regulatory Commission touches many of the nuclear issues that are important today: Reactor safety; radioactive waste disposal; regulatory procedures; public participation in agency proceedings; and the issue that is perhaps paramount in the public mind today, that of safeguards of nuclear materials against unauthorized use or diversion.

Mr. President, the bill as reported does not significantly depart from previous NRC authorizations or from the administration's budget request. The bill authorizes \$299,649,000 which is \$7.5 million more than the administration request and \$51 million more than the fiscal year 1977 estimate.

The President's national energy plan proposes two major changes in nuclear power policy: Redirecting the breeder reactor program and indefinitely delaying recycling plutonium from spent fuel. The first embodies cancellation of the Clinch River breeder reactor demonstration project. The second involves committing no Government support to fuel reprocessing plants. These proposals were based on the testimony of many distinguished scientists and economists that the timetable for early commercialization of the breeder will not produce a reactor which will economically compete without massive Government subsidization until well into the 21st century. They are also based on a desire to avoid the nuclear proliferation problems associated with use of plutonium fuel. There is time to develop alternate approaches and still meet our energy needs. And, in fact, by relying on just one of many technological options, the current plutonium breeder program could prematurely freeze out other more promising alternatives and compromise the eventual development of nuclear energy.

Mr. President, this bill contains about

\$18.6 million for liquid metal fast breeder research as part of the NRC regulatory research program. Most of this money is for generic breeder studies which would continue under the President's program. However, the NRC has indicated that if the Clinch River breeder reactor project is canceled or indefinitely deferred, their budget can be reduced by \$3.7 million, most of it coming from the research program. The committee included a requirement that such a reduction occur if indeed Clinch River is canceled or indefinitely deferred.

The committee itself determined that the initiative on Clinch River lay elsewhere, with ERDA and the Energy Committee, and that this committee should remain neutral on the question of whether that program should be canceled or deferred. My personal opinion is that the President is absolutely right. I support his judgment that this is one we can do without. We should in no way hasten to introduce a technology which is totally dependent on dangerous plutonium and which may preclude the development of more viable alternate breeder technologies.

The bill also contains a similar provision related to plutonium recycling. If the license application is withdrawn, or further construction is canceled, for the fuel reprocessing plant at Barnwell, S.C., the NRC authorization should be reduced by \$3.1 million. This is related to the President's recommendation that the commercial reprocessing of spent nuclear fuel be delayed indefinitely. Again, the committee felt that the initiative on the question of fuel reprocessing and plutonium recycle lay elsewhere, although the responsibility for protection of public health and safety does lie with the Nuclear Regulatory Committee, the licensing authority. Therefore, the committee took the contingent action of authorizing the money in case the license application proceeding continues, but requiring that the money not be appropriated if that reprocessing plant is canceled or indefinitely deferred.

Although the committee did not take a position either pro or con, I feel strongly that the President's policy of delaying plutonium recycle and fuel reprocessing is a wise one. The recent report by the Mitre Corp. concluded that the international and social costs of plutonium recycling far outweigh the minimal economic benefits even under optimistic assumptions. Plutonium recycling can only make a marginal contribution to our energy effort in the future, and a delay may well lead to better nuclear fuel cycles. I believe this issue has such enormous consequences, and is so critical to the health and safety of the American people, that any future decision to proceed with fuel reprocessing should not be made without congressional approval. The committee intends to investigate this question further in our oversight capacity in the months ahead.

The committee discussed a proposal from the NRC for authorization of \$200,000 for fiscal year 1977 for the specific purpose of funding intervenor participation in the licensing proceeding for use of recycled plutonium—the so-

called GESMO proceeding. Although the committee was united in the belief that the NRC should avail itself of all information which would contribute to their understanding of the issues before reaching licensing decisions, the committee was divided over the specific question of intervenor funding, which was dropped from the bill by a one vote margin in subcommittee. In full committee, I offered a somewhat different proposal to encourage public participation. However, that was also defeated by a single vote. Nevertheless, in the year ahead, as the subcommittee considers the larger issue of licensing and regulatory reform the question of whether the public voice is being adequately represented is one which we will have to consider once again.

The committee also added \$6 million to provide for an inspector at every nuclear reactor site, a proposal which will nearly double the number of hours of inspection at each nuclear reactor in operation or under construction within 2 or 3 years when it is fully implemented. This will be a major step in tightening up safety and security procedures in the nuclear power industry.

On the safeguards front, the NRC promulgated new regulations in February requiring stricter safeguards at nuclear powerplants. The committee added \$600,000 to the bill in order that those new regulations can be implemented more expeditiously. These are important changes and the country cannot afford delay in getting them in place.

An incidental matter, but one that is very important to the Commission, is an action which the committee took under section 11(b) of the Public Buildings Act of 1959 to direct the Administrator of the General Services Administration to study the feasibility of consolidation of the NRC at a single location. At present the NRC is housed in nine buildings scattered over the Metropolitan Washington area. The direct added cost of this dispersal is \$5 million per year and the indirect costs due to reduced operating efficiency is substantial. It is our firm hope that this situation can be corrected before another year has passed.

Mr. President, the Nuclear Regulatory Commission is the Nation's primary agency for insuring that our nuclear energy activities are conducted in a manner which will protect public health and safety. I am sure that as time goes on we will have suggestions to make to the Commission which we believe will improve their operations and we may see the need for additional legislation. But in the meantime, Mr. President, I am happy to present the committee's report on the authorization bill for fiscal year 1978 and recommend that my colleagues give full support to the Commission's activities for another year.

Mr. President, I am unaware as to whether the minority wishes to express itself on this measure. It is my understanding that the minority members of the subcommittee and the full committee endorse this authorization bill and have no particular objection to its immediate consideration and passage by the Senate.

If there are those of the minority side

who wish to comment on the authorization bill, I would be more than happy to have them do so at this time.

Mr. BAKER. Mr. President, I have been asked by the distinguished Senator from Idaho (Mr. McClure) to explain to the distinguished manager of the bill and to our colleagues that, because of three other committee meetings he feels obligated to attend during the course of the first hours of the Senate session today, it will not be possible for him to be here to participate in this debate on this matter. However, to express and underscore his interest in this field and his views, he has delivered to me a statement, which I will ask unanimous consent to have printed in the Record if Mr. McClure is unable to arrive in the Chamber before action on this measure has been concluded.

Mr. STAFFORD. Mr. President, I am pleased to support S. 1131, a bill to authorize appropriations for the Nuclear Regulatory Commission for fiscal year 1987.

I call to my colleagues' attention that this bill is the first reported out by the Committee on Environment and Public Works on the subject of environmental regulation and control of nuclear energy. This is a new area for our committee—one which will require substantial effort both from a legislative and oversight viewpoint. It is also obviously a very important area in view of the fact that this country is depending upon nuclear energy to provide an important share of our future electrical energy needs. The committee feels a very strong responsibility for assuring that nuclear energy is used in a safe manner with an acceptable impact on the environment.

I want to take this opportunity to compliment the members of our Nuclear Regulatory Subcommittee for the fine job they have done. There is no doubt that nuclear energy matters are highly controversial and emotionally charged. I have observed that the members have approached the issues in a constructive and harmonious manner. Much of the credit for this approach is due to Senator HART, the chairman of the subcommittee, and Senator McClure, the ranking minority member.

Mr. President, I recommend the passage of this bill.

Mr. McClure. Mr. President, I am pleased to join my colleague from Colorado in urging favorable passage of S. 1131, as amended—a bill to authorize appropriations for the Nuclear Regulatory Commission for fiscal year 1978.

We all share the objective that nuclear facilities and materials be utilized in a way which adequately protects the health and safety of the public and minimizes any adverse impact on the environment. This bill provides the necessary funds for the Nuclear Regulatory Commission to assure that this objective is met.

As the report accompanying this bill indicates the Committee on Environment and Public Works has carefully reviewed the agency requests, and believes they are justified. As a result of our deliberations, we acted to provide an increase in funding authorization of some \$7.49 million, bringing the total recommended

NRC authorization for fiscal year 1978 to just under \$300 million. Personally, I am very concerned about the tremendous expansion which has been occurring in the size and authority of our Federal regulatory agencies—including the NRC. I believe rather strongly that the Congress must exercise tighter control over these agencies to assure minimum regulatory control—consistent with full protection of the public interest. In this regard, it is fair to say that the nuclear industry is one of the most closely regulated industries in this country. I did decide, in this case, to support the funding levels requested by the agency as well as those increases proposed in committee since I am of the view that if we are to err in this field, we should err in the direction of increased safety. I do intend to do all in my power, however, to make certain that NRC utilizes the resources given to it by the Congress in the most judicious way possible.

I would like to offer some brief explanatory comments on several of the other amendments agreed to in committee.

The committee adopted an amendment to reduce NRC's authorization by \$3.7 million in the event that the Clinch River breeder reactor demonstration is canceled. I want to underscore the fact that in taking this action, the committee was not taking a position one way or another as to whether the Congress should agree with the President's recommended course of action on the breeder program. All we are saying is that in the event a congressional decision is made to agree to the cancellation of Clinch River, NRC's budget logically can be reduced by \$3.7 million.

The committee also adopted a similar amendment that reduces NRC's authorization by \$3.1 million in the event that the license application is withdrawn or further construction is canceled for the Barnwell nuclear fuel reprocessing plant. As our report emphasizes, in making this recommendation, the committee intended to remain strictly neutral in terms of expressing a judgment either in favor of or against reprocessing nuclear fuel or recycling plutonium. All we were doing is to assure that NRC funds are reduced by \$3.1 million in event the Congress accepts the Presidential recommendation for an indefinite deferral of commercial reprocessing and recycling of plutonium.

While the committee agreed to remain neutral for the purposes of this bill on the issue of the breeder and fuel reprocessing, I would like to briefly note some of my personal views on these matters. I believe that the course of action recommended in the President's Energy Message is just plain wrong, and if followed by this country will substantially reduce the options available to this country to meet our future energy needs. Study upon study has shown that fuel reprocessing and the fast breeder are essential if this country is to realize the full potential of nuclear energy. These programs can be implemented in a way which fully protects the public health and safety and the environment. Furthermore, in my view, the President's

policy will not serve to advance this Nation's nonproliferation objectives that we all share. Indeed, if anything, the President's policies are likely to be counterproductive.

I will have more to say on these matters as the Senate proceeds to review the President's proposals during the coming weeks.

I would also like to briefly discuss why I opposed several amendments in committee to provide for funding of intervenors in NRC proceedings—and specifically for the funding of intervenor participation in the NRC proceeding to determine whether widescale commercial use of mixed oxide fuel should be authorized. As discussed in our report, these proposals were defeated in committee action. I want to make it clear that I am wholeheartedly in favor of public participation in NRC proceedings. Indeed, the Atomic Energy Act establishes the framework for such participation. I also believe that NRC can and should obtain whatever expert advice it needs to reach sound licensing decisions. I do strongly object, however, to paying intervenors to challenge the findings of the Government agency charged with the responsibility for protecting the public interest. Further, I believe that this issue should not be considered on an agency-by-agency basis, but rather should be considered from a broader viewpoint as has been proposed in the legislation pending before both House and Senate committees.

In closing, I urge my colleagues to support S. 1131 as reported by the Committee on Environment and Public Works.

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The ACTING PRESIDENT pro tempore. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. HART. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HARRY F. BYRD, JR.) Without objection, it is so ordered.

Mr. HART. Mr. President, I ask unanimous consent that the committee amendments be agreed to en bloc.

The PRESIDING OFFICER. Without objection, the committee amendments are considered and agreed to en bloc.

#### UP AMENDMENT NO. 316

Mr. HART. Mr. President, I send to the desk a technical amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Colorado (Mr. HART) proposes an unprinted amendment numbered 316:

On page 2, line 2, after "\$299,640,000" insert "for fiscal year 1978."

Mr. HART. Mr. President, the inclusion of the date of this authorization measure is on the advice of legislative counsel and merely makes the language of the bill conform to standard legislative practice. It in no way changes substantively the bill itself.

I do not believe there is any objection from the minority on this.

Mr. McCLURE. Mr. President, I state on behalf of the minority that there is no question on it. The Senator from Colorado is right.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Colorado.

The amendment was agreed to.

Mr. HART. Mr. President, I know of no further amendments to the bill.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

#### TITLE I—AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1978

SEC. 101. (a) There is hereby authorized to be appropriated to the Nuclear Regulatory Commission in accordance with the provisions of section 261 of the Atomic Energy Act of 1954, as amended, and section 305 of the Energy Reorganization Act of 1954, as amended, for salaries and expenses, \$299,640,000 for fiscal year 1978, to remain available until expended.

(b) In the event that the license application is withdrawn or the construction of the Clinch River Breeder Reactor is not authorized, the authorization in subsection (a) shall be reduced by \$3,700,000.

(c) In the event that the license application is withdrawn or further construction is cancelled for the fuel reprocessing plant at Barnwell, South Carolina, the authorization in subsection (a) shall be reduced by \$3,100,000.

SEC. 102. Moneys received by the Commission for the cooperative nuclear safety research programs may be retained and used for salaries and expenses associated with those programs, notwithstanding the provisions of section 3617 of the Revised Statutes (31 U.S.C. 484), and shall remain available until expended. Funds may be obligated for purposes stated in this section only to the extent provided in appropriation Acts.

SEC. 103. Transfers of sums from salaries and expenses may be made to other agencies of the Government for the performance of the work for which the appropriation is made, and in such cases the sums so transferred may be merged with the appropriation to which transferred.

Mr. HART. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. McCLURE. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. HART. Mr. President, I thank the Senator from Idaho (Mr. McCLURE) for his help at the subcommittee level on this bill. Also, I thank the ranking minority member, the Senator from Vermont, on the full committee for his participation in this matter. I thank all committee members for their assistance in getting the measure passed.

I acknowledge the work of Mr. Haven Whiteside of the committee staff; Kevin Cornell, Norman Klug, of the committee staff, also, for shepherding this measure through.

TANKER AND VESSEL SAFETY ACT  
OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order 149, S. 682.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 682) to amend the Ports and Waterways Safety Act of 1972; to increase the use of vessels of the United States to carry imported oil.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Commerce, Science, and Transportation, with an amendment in the nature of a substitute.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum—if nobody seeks recognition at this point.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. BROOKE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. (Mr. ZORINSKY). Without objection, it is so ordered.

## AMENDMENT NO. 338

Mr. BROOKE. Mr. President, I call up my amendment No. 338 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

Mr. BROOKE. Mr. President, I ask unanimous consent that reading of the amendment be dispensed with.

Mr. ROBERT C. BYRD. Will the Senator put in another quorum call?

Mr. BROOKE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STEVENS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. I ask unanimous consent that Philip Grill and Malcolm Sterrett, from the committee staff, be granted the privilege of the floor during consideration of this measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. STEVENS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MAGNUSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, before discussing the matter before the Senate, I ask unanimous consent that the following members of the staff of

the Committee on Commerce have the privilege of the floor during consideration of and votes on S. 682 and amendments thereto: Thomas Allison, Edward Merlis, Christopher O'Neill, and Michael Senger.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, we are considering today a bill before the Senate that is a very important piece of legislation. All of my colleagues, I know, are familiar with the epidemic of tanker incidents and accidents which occurred during the year, in December of 1976 and the first 2 months of this year. Those accidents are well documented in the hearings before the Senate Committee on Commerce held January 11 and 12. These were lengthy hearings. Hearings had been held prior to that on other tanker matters. But these incidents are only the "tip of the iceberg" in tanker losses.

I use the words "the tip of the iceberg" for this reason:

Mr. Arthur McKenzie, the director of the Tanker Advisory Center in New York, has provided the committee with some rather startling statistics about the worldwide trends:

In 1976, at least 19 tankers totalling 1,129,000 deadweight tons were total losses. This is nearly 50 percent greater than the tonnage lost during 1975. It is six times greater than that lost in 1964.

Since 1964, 198 tankers totalling more than 7 million deadweight tons have been total losses. Four of these were massive oil carriers, each of more than 200,000 deadweight tons capacity; and eight others, each with more than 100,000 tons capacity.

These are what we call supertankers. These are big ships.

As a result of these 198 total losses, 1,054 seamen died and over 500 million gallons—1,694,600 tons—of oil entered the oceans.

While a major concern in this country is protection of the marine environment from oil contamination, the loss of human life, the destruction of valuable ships, and the loss of a substantial amount of energy resources is far too great to be tolerated. Technology seems to be moving faster than our understanding of its consequences. And far too many careless shipowners and operators are allowed to cut corners in vessel safety.

The growth in tanker traffic—and the concomitant growth in tanker accidents—is, as we all know, driven by the world's insatiable appetite for crude oil, which is great. Just 10 years ago, the United States imported very little foreign oil by tanker. Now, as our indigenous sources of oil decline and our demand for oil continues to climb, we must import tremendous quantities from abroad. According to President Carter's national energy plan, the United States imported about 9 million barrels of oil a day in January and February of this year, approximately now half of U.S. consumption.

Ninety-six percent of this oil was carried in foreign tankers. This bill is vital in order to require that all foreign vessels comply with certain standards to gain entry into U.S. ports.

Risk analyses of oil transportation

show that oil spillage is directly related to the amount of oil moved on water. So it comes as no surprise that we discover foreign-flag tankers foundering off our shores.

To compound the problem, the tanker fleet which serves the United States is composed of older, smaller vessels, many like the *Argo Merchant* with long, sordid histories of breakdowns and pollution incidents. U.S. ports are too shallow for the newer vessels which have been built to carry as much as 2 million barrels of oil per ship. As yet, construction has not begun on the two deepwater superports planned for the Gulf of Mexico off Texas and Louisiana. America has become the dumping ground for many of the "rust buckets" of the world. When these ships get into trouble, no one wants to announce their ownership or claim responsibility. Anonymity should be expected of one who knows he is playing percentages with lousy ships. I think these people should conform their ships to the most stringent vessel safety standards or be put out of business. Seadock and LOOP, the names of the deepwater ports, should get on with the business of building deepwater ports for the United States.

Unfortunately, the foreign-flag tanker fleet is more susceptible to casualty than U.S. vessels. Since 1964, 68 Liberian-flag tankers have been lost—a .58 losses to existing tonnage ratio—and Panama lost 17 tankers for a .51 loss ratio. For the same period, 9 U.S. tankers were lost for a .15 loss ratio. Therefore, to some extent, tanker safety is an international concern and it has been treated as such by the U.S. Coast Guard which is in charge of U.S. vessel safety policy.

There are international treaties which address the subject of tanker safety and protection of the marine environment. However, these have not been totally successful in arresting the problem. These treaties rely on the flag-nation to police its terms. Yet many flag of convenience nations, such as Liberia, totally lack the resources to undertake any meaningful law enforcement. Very few, if any, Liberian-flag vessels ever enter a Liberian port for inspection, or for any other reason. The same is true with the other countries that allow the licensing of flag of convenience ships. The decisions about tanker safety are made in a forum which is heavily weighted toward maritime interests.

It has even been suspected that the American oil people, who are usually the owners or part owners or sometimes full owners of the foreign-flag vessels, dominate the delegation that comes to these conferences to do something about world tanker safety—and they do. So it is heavily weighted toward maritime interests. It is called the Intergovernmental Maritime Consultative Organization, IMCO. In my view, this system of international rules, purportedly enforced by all flag-nations, is weak and inherently self-defeating. What is needed is greater pressure by nations with a strong concern for protecting coastal resources. This balance has been lacking at IMCO and in the existing pattern of international rules.

International law does not preclude greater influence in policymaking by nations which are dependent on foreign-flag vessels. In fact, when a vessel enters the ports and internal waters of a nation, that nation has very broad control over the vessel regardless of the vessel's flag. The most recent IMCO conference recognized this right in the 1973 Treaty on Marine Pollution from Ships by affording port-nations the right to impose standards more stringent than those contained in the treaty. This concept is identical to that contained in many U.S. environmental statutes—the Federal Government sets minimum standards, the States may set more stringent ones.

This is the approach taken in S. 682. Under this legislation, the United States would be exercising its inherent right to regulate ship traffic coming to its ports.

The bill would set more stringent standards for all vessels carrying oil, regardless of flag, entering U.S. ports. These standards are generally accepted as providing greater navigation and vessel safety and enhanced protection of the marine environment. Most have been analyzed by the Congressional Office of Technology Assessment in its report on oil transportation by tankers. In addition, nearly all of the minimum standards for tankers contained in S. 682 are called for in President Carter's tanker proposals, some of them now being carried out by the Secretary of Transportation, Mr. Adams. He moved swiftly on this matter, but he needs much more authority, authority which is contained in this bill.

I believe the committee report adequately addresses the various issues raised by the bill. I ask unanimous consent that pages 1 through 17 of Report No. 95-176 be printed at this point in my statement.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### PURPOSE OF THE BILL

The purpose of the bill is twofold: (1) to establish improved Federal standards governing navigation and vessel safety and protection of the marine environment, and (2) to authorize a comprehensive program of ocean pollution research and monitoring.

#### DESCRIPTION

Title I of the legislation contains amendments to the Ports and Waterways Safety Act of 1972 (Public Law 92-340). That statute was enacted as the first comprehensive attempt to reduce the safety hazards of marine transportation and to prevent or minimize pollution resulting from operation and casualties of vessels carrying oil or hazardous materials in bulk. Public Law 92-340 also authorized, for the first time, the creation of vessel traffic services and systems in the Nation's ports, harbors, and waterways. After 4 years of oversight, the Committee has approved S. 682 which contains a complete rewrite of that basic statute. Title I, the Ports and Waterways Safety Act Amendments of 1977, contains provisions to—

(1) establish more stringent construction, design, equipment, repair, manning, maintenance, and operation standards for all tankers, regardless of flag, entering U.S. ports;

(2) provide clear authority for the Secre-

tary of Transportation to bar substandard vessels from operating in U.S. waters;

(3) authorize the creation of a Marine Safety Information System to identify substandard vessels and for disclosure of true ownership of ships;

(4) authorize the establishment of regulations for controlling lightering (vessel-to-vessel transfer of cargo) in U.S. waters and on the high seas where a U.S.-bound vessel is involved;

(5) mandate that all self-propelled vessels of 20,000-dead-weight tons or larger carrying oil in bulk be equipped with a dual radar system, a collision avoidance system, a long-range navigation aid, adequate communications equipment, a fathometer, a gyrocompass and up-to-date charts by not later than June 30, 1979;

(6) mandate that such vessels also be equipped, by not later than June 30, 1983, with a segregated ballast system, a gas inerting system, a transponder or other appropriate position-fixing equipment, and a double bottom if the vessel is contracted for, or construction is actually commenced, after January 1, 1978;

(7) create an expanded inspection and enforcement program; and

(8) authorize the promulgation of improved manning and qualification standards.

In addition, title I of S. 682 contains provisions amending an 1896 statute which sets forth the qualifications for receiving a Federal pilot's license. These proposed new provisions specify more stringent requirements for obtaining such a license. Also, the Secretary of Transportation is directed to seek more uniform pilotage standards among the States. Pilotage for foreign vessels and all U.S. vessels in the foreign trade is regulated by the individual coastal States.

Title II of S. 682 contains the Ocean Pollution Research Program Act. The purpose of this act is to provide for a more comprehensive and coordinated Federal approach to ocean pollution research and monitoring. The National Oceanic and Atmospheric Administration is designated as lead agency for the Federal effort, to be assisted by the President's Office of Science and Technology Policy. In addition, a special study by the Department of Transportation is commissioned to evaluate monitoring systems for vessels.

#### BACKGROUND OF THE LEGISLATION

##### 1. Marine transportation of oil—

In the last 10 years, the world experienced a dramatic rise in the amount of crude oil transported by water. As of today, the world trade in petroleum shipped by tanker averages approximately 35 million barrels per day. As use of oil products has increased tremendously, and as many nations have begun to exhaust their indigenous sources of oil, more and more nations must import from other countries with an abundance of petroleum: namely, the Arab nations and the producing nations in Africa and South America.

To accommodate this growth of water traffic in oil, large numbers of very large tankers have been constructed to move large amounts of oil more economically. From 1966 to 1970, the world fleet of "super-tankers" increased from less than 2-million-deadweight tons to over 50 million tons. During the next few years another 50 million tons were constructed.

But with this sharp growth in tankers has also come expanded pollution problems. In a report entitled "Petroleum in the Marine Environment," issued in 1975, the National Academy of Sciences estimated that transportation-related activities (mostly tankers) resulted in 2.1-million-metric tons of oil being introduced into the marine environment. The report also concluded that:

"The quantity of oil entering the oceans from transportation related sources has been increasing every year; given further increases in production and transport, it is possible that transportation related inputs will continue to increase despite the current interest and activity in control measures." (p. 104).

Of this amount approximately 85 percent is estimated to be discharged into the ocean as a result of normal tank cleaning and deballasting operations. Once emptied of cargo, tankers take seawater into their tanks for ballast and upon entering a loading port discharge that dirty ballast water at sea. This practice is more pronounced in the mid-ocean; however, large amounts of deballasting occurs along the coast of the United States, particularly off Florida. While normal operations account for the greatest quantity on a generalized basis throughout the ocean, a single accidental pollution incident can be far more damaging in effect. Accidents such as the *Torrey Canyon* and the *Argo Merchant* can cause considerable damage to elements of the marine ecosystem.

In short, oil spillage is directly related to the amount of oil moved on water. Prior to 1973, international standards covering ship safety did not address the problem of marine pollution other than limiting normal discharge of ballast. In 1973 the Intergovernmental Maritime Consultative Organizations (IMCO) convened a major international conference and a treaty governing marine pollution from ships resulted. This treaty contains design, construction and operation standards to reduce or eliminate both operational and accidental pollution. Much of the impetus behind that treaty came from the United States.

Once again in 1977, there has been increased public pressure to reexamine the tanker safety problem. A series of tanker incidents around the Nation once again focused on the need for increased tanker safety standards. As a result of those accidents, the Committee conducted 2 days of hearings in early January to examine the related issues. In March, 5 days of hearings were held on various bills addressing this general issue. On April 26 the Committee favorably reported S. 682, the Tanker and Vessel Safety Act of 1977.

##### 2. The Ports and Waterways Safety Act of 1972—

In 1972, the Ports and Waterways Safety Act was enacted (Public Law 92-340; 86 Stat. 424). The purpose of this legislation is to promote the safety and protect the environmental quality, of ports, waterfront areas, and the navigable waters of the United States. It provided the Coast Guard with broad authority to establish and operate vessel traffic services for congested waters, and to prescribe safety equipment and procedures for waterfront areas and structures. That law also amended the Tank Vessel Act (46 U.S.C. 391a) to authorize the Coast Guard to establish comprehensive regulations for the design, construction, maintenance, and operation of vessels carrying oil or hazardous materials in bulk for the express purpose of protecting the marine environment.

Until passage of Public Law 92-340, the Coast Guard conducted its port safety program under the authority of the Magnuson Act (50 U.S.C. 191). That act enables the Coast Guard, with the approval of the President, to make rules and regulations governing the "anchorage and movement of any vessel foreign or domestic in territorial waters of the United States during times of 'national emergency'" (a national emergency has existed since July 31, 1951). Obviously, this law did not provide a sound basis for comprehensive marine traffic management for anti-pollution purposes.

The Ports and Waterways Safety Act also shifted the emphasis of national vessel pollution policy from one of cleanup and liability to one of prevention. For the first time, regulations were to be established for preventing oil pollution in the event of an accident. The goal was to achieve major design improvements in the tanker fleet which was then changing over to a fleet of super-tankers. In its report on the bill which eventually became Public Law 92-340, the Committee stated:

"The Committee unanimously ordered H.R. 8140, as amended, favorably reported. The legislation is a major step in promoting the safety and protecting and environmental quality of our ports, waterfront areas, and navigable waters. It puts appropriate emphasis where emphasis is urgently needed: prevention. It provides a comprehensive and systematic approach to the problem of pollution of the marine environment from maritime transport of polluting cargoes, and provides a means for obtaining both vessels and better vessel traffic control. Enactment of the legislation and its vigorous implementation and administration should yield tangible results both with respect to safety and to reduction of pollution of our coastal waters."

### 3. Committee oversight—

Soon after passage of Public Law 92-340, the Committee began to follow closely the implementation of the new law. Since then numerous communications between the Department of Transportation and Committee members have been exchanged. The Committee has also conducted oversight hearings on January 29 and 30, 1975, and again on March 2 and 3, 1976.

In 1973, the Committee sponsored an amendment to Public Law 93-153, the Trans-Alaska Pipeline Authorization Act, to accelerate the promulgation of regulations governing the design, construction, and operation of tankers in the U.S. domestic trade, including the carriage of Alaska oil.

During rulemaking under the act, members of the Committee expressed their concern to the Coast Guard that: (1) rulemaking was proceeding too slowly; (2) the proposed regulations were not as stringent as Congress had intended; (3) international law and agreements did not preclude the United States from enforcing standards more stringent than those set internationally; and (4) action on manning and maneuverability standards was long overdue.

### 4. Recent tanker accidents—

In the month of December 1976, a series of oil tanker incidents in or near U.S. waters received front-page attention.

**SS Argo Merchant.**—On December 15, the *SS Argo Merchant* ran aground 28 miles southeast of Nantucket Island in international waters of the Atlantic Ocean. The *Argo Merchant* was built in 1953 in Hamburg, Germany. The owner of the vessel was the Thebes Shipping Co., and her home port was Monrovia, Liberia. At the time of the casualty the vessel was bound for Salem, Mass. At the scene on December 15 winds were blowing from the southeast at 15 knots, with 6-foot seas and visibility of 10 miles.

Shortly after reporting the vessel aground, the master requested permission to pump oil over the side. The Coast Guard refused permission and the Coast Guard cutters *Vigilant* and *Sherman* along with Coast Guard C-130 aircraft were immediately diverted from other missions to the scene. Helicopters with dewatering pumps were also launched from the Coast Guard air station in Cape Cod. Within 1 hour of the grounding the regional response team was activated and the deployment of the Atlantic strike

force was requested from Elizabeth City, N.J.

All efforts to offload and refloat the vessel were unsuccessful, and in the succeeding days the strike teams, working in winds up to 40 knots and seas of 12 feet, attempted to lighten the cargo to barges, conducted burn experiments, and initiated environmental monitoring. On December 21, the *Argo Merchant* broke up in heavy seas spilling most of its 7.3-million-gallon cargo of heavy heating oil into the sea. The spilled oil moved in an easterly direction, away from the U.S. coastline, and soon began the process of breaking up and dissipating into the sea. The entire crew was safely evacuated by Coast Guard rescue units. The grounding was caused by navigational error. A marine board of investigation has been convened by the Government of Liberia to ascertain the detailed circumstances of the casualty, particularly how the ship could have been so far off course even though there are extensive aids to navigation in the area and the vessel was equipped with navigational equipment including a radiobeacon receiver and a fathometer. The ship did not have a Loran receiver.

The *Argo Merchant* had a previous history of oil pollution violations in Philadelphia, Boston, and Portland, Maine. In August 1975, the vessel was directed by the Captain of the port (COTP) to depart the Port of Boston after it had caused a minor pollution incident. All COTPs were subsequently advised of the action and the reasons for it. On December 2, 1976, the Marine Safety Office in Boston was advised that the *Argo Merchant* would probably return to the Boston area within 2 weeks. Plans were made for an aircraft from Coast Guard Air Station Cape Cod to overfly the vessel prior to her arrival to determine if she was leaking oil. The overflight was planned to take place where the vessel rounded Cape Cod on December 15, 1976. Coast Guard personnel were to board the vessel upon arrival in U.S. waters to verify her conditions, and to prohibit her entry into Boston Harbor if she was found to be leaking or otherwise in doubtful condition.

**SS Sansinena.**—On December 17, the *SS Sansinena* suffered a massive explosion while moored at an oil terminal in Los Angeles harbor. Eight were killed and nearly 50 injured. The vessel had discharged her cargo and was taking on bunkers and ballasting her cargo tanks at the time of the explosion. The force of the explosion blew the ship apart, broke windows over 20 miles away, and scattered over 1,700 pieces of steel into the adjacent pier and terminal area. Between 10,000 and 20,000 gallons of fuel were spilled into the harbor and the resultant fire was not extinguished until the following day. A Coast Guard Marine Board of Investigation has been convened to inquire into the circumstances surrounding this casualty.

**SS Olympic Games.**—On December 27, the fully laden *SS Olympic Games* grounded in the Delaware River, punctured a cargo tank and spilled 133,000 gallons of crude oil. The maneuvering in a narrow channel in preparation for mooring at an offloading terminal, and was caused by a main propulsion machinery failure. The tugs in attendance were unable to control the vessel in the narrow channel without the assistance of the ship's astern maneuvering capability. At the time of the grounding a State licensed pilot who also held a Federal license and a docking pilot were on board.<sup>1</sup> On December 28, the

<sup>1</sup> The Master of the *Olympic Games* was arrested on December 29 by the U.S. Marshal at the direction of the U.S. Attorney in Philadelphia for violations of 33 U.S.C. 407, 411 and 1321(b)(5). After arrest he was released on \$50,000 bail.

Coast Guard checked the aids to navigation in the vicinity of the grounding, and all aids were found to be functioning properly. One buoy had been recently moved to facilitate dredging and was 75 yards from its charted position. A local notice to mariners had been issued regarding this relocation, but it is not clear that the master or docking pilot were aware of this, nor, since the vessel was without power, does it appear that it would have made any difference if they had been aware of it.

Upon notification of the casualty, the Coast Guard diverted a utility boat to the scene, and the regional response team and the Atlantic strike force were activated. The resulting oil spill spread over a 22-mile area of the Delaware River, its connecting wetlands and tributaries. The vessel agents notified two private firms, Coast Services and Underwater Technics, and contracted their services to boom off the tidal marshes and small tributaries to prevent the spread of oil along the river. The vessel was boomed off at the British Petroleum Dock and 50,000 gallons of crude oil was effectively contained. Along the Delaware River, ice and wind conditions slowed recovery operations of the oil. The oil was sandwiched between layers of ice in many locations. A formal Coast Guard investigation has been convened.

**SS Daphne.**—On December 28 the inbound and fully laden crude oil carrier *SS Daphne* grounded in pilot waters while approaching the harbor entrance to Guayanilla, Puerto Rico. She did not have a pilot on board. The vessel could not be refloated by her own power or by tugs called to assist, and remained hard aground until her cargo was offloaded into lighterage barges. There was not any apparent damage to the vessel and pollution did not occur. The cause of the casualty is still under investigation.

**SS Oswego Peace.**—On December 24, the Liberian flag vessel *Oswego Peace* started leaking bunker oil through the skin of the vessel while offloading cargo at the Hess Oil Terminal on the Thames River at New London, Conn. The vessel had started heating its own No. 1 bunker fuel tank, and as the draft lessened because of offloading cargo the recently heated bunker fuel started leaking through a fracture in the vessel hull. The contents of the tank were immediately transferred to another tank; however, 5,000 gallons escaped into the river. Divers made an underwater examination and found a fracture 1 inch wide and 8 feet long beside the keel jammed full of wooden slivers and sticks. After offloading cargo and completely transferring the oil from the tanks, the vessel departed enroute to a shipyard in Jacksonville, Fla., for drydocking and permanent repairs. The master advised the Coast Guard investigating officer that while the vessel was outbound in the Delaware River and enroute to New London, it struck a floating or partially submerged object. Damage was not detected until arrival at New London. Cleanup of the terminal beach area and a Coast Guard investigation to determine all the circumstances surrounding the casualty are still in progress.

### 5. Transportation of oil in the United States—

As shown in table 1, petroleum and petroleum products are the largest single category of cargo carried by water. Domestic carriage is required to be accomplished in American vessels by the Jones Act (section 27 of the Merchant Marine Act of 1920). However, only 4 percent of oil imports is carried on U.S.-flag vessels.

TABLE 1.—U.S. WATERBORNE COMMERCE OF HAZARDOUS MATERIALS  
[Millions of short tons]

Source: U.S. Coast Guard.

The heavy dependence on foreign-flag vessels has caused concern about the ability of the U.S. to protect its oil supplies in times of national emergency. Legislation to increase the U.S.-vessel share of the oil import market was approved by the Committee in 1974 but was pocket-vetted by President Ford. Since the Carter Administration has yet to take a position on the issue of oil cargo preference, provisions to create a preference for U.S. ships was deleted from S. 632 as introduced.

Imports of petroleum by tanker into the U.S. in 1976 represented an average of 7.3 million barrels per day, of which three-fourths was crude and one-fourth refined products. It is projected to increase to 8.3 million this year. The refined products were received mainly from Caribbean sources and the crude oil was received from Venezuela, the Arabian Gulf North and West Africa, and Indonesia. Various projections of rising crude imports in the future all consider the source of added supply to be the Arabian Gulf.

The major portion of crude imports in the U.S. are received at the key refining centers located in the New York-New Jersey-Delaware area, or the Texas-Louisiana area, or the California area. In the recent past (1972-74) two-thirds of these crude imports have been received on the U.S. East Coast. Imported refined products have also been received principally on the East Coast.

The U.S.-flag tanker fleet is small in relation to the world fleet and numbers 218 ships, with only one VLCC (very large crude carrier) in service and nine others under construction, totaling 7.4 million deadweight tons. Ninety-six percent of petroleum imports to the U.S. are carried by foreign-flag ships. Supertankers cannot enter any U.S. East or Gulf Coast ports today because of draft limitations and, therefore, a foreign-flag fleet of smaller tankers is presently carrying the increasing U.S. demand for petroleum imports.

The U.S.-flag tanker fleet is now experiencing significant growth from two principal thrusts. First, the Alaskan to U.S. West Coast trade carrying crude oil from the new Trans-Alaska Pipeline is anticipated to total 2 million barrels per day by 1980. More than 2.8 million tons of 60,000-120,000 dwt tankers (32 vessels) have recently been built or are under construction to fulfill this need. In addition, ten VLCCs are under construction under the Maritime Administration subsidy program for use in the foreign trade.

The U.S.-flag supertanker fleet is minimal with six vessels (recently constructed for the Alaska to West Coast Trade) of the 120,000 dwt size and one recently completed 225,000 dwt tanker for the foreign trade. In addition, one 120,000 dwt and nine VLCCs (225,000-265,000 dwt) are under construction, and three VLCC's (390,000 dwt) are in order. The *Massachusetts*, a 265,000 dwt tanker, built for Boston Tankers, Inc. was launched on January 10, 1975 at Bethlehem Shipyard in Baltimore, Maryland. The

only other U.S.-flagship VLCC in service is the *Brooklyn*, a 225,000 dwt tanker delivered in December, 1973 to Longfitt Shipping Co. by Seatrain Shipyard, NYC.

An international conference to deal with this subject has been set by the Intergovernmental Marine Organization (IMCO) for 1978. The goal of the conference is to establish worldwide minimum standards for crew competency. While the United States possesses the authority to set crew qualification and training standards for all vessels entering U.S. ports, no such standards will be enforced against foreign vessels, pending the outcome of the 1978 conference. The Committee hopes that this conference will be successful. If not, national standards should be instituted under authority of the Ports and Waterways Safety Act.

4. **Lightering**—Lightering is the practice of transferring a liquid cargo such as oil from a larger tank vessel to a smaller one at sea. Larger tankers, when fully laden, run too deep in the water to enter most U.S. ports. Most East and Gulf Coast ports are limited to vessels which draw no more than 45 feet of water. Newer tankers are much larger in size than older vessels—from 100,000 to 350,000 deadweight tons (dwt) compared to 12,000 to 40,000 dwt.

The practice of lightering has been going on for some time in Delaware Bay. Ships of 90,000 to 150,000 (dwt) anchor in deeper water outside the bay and transfer part of their cargo to barges. Once lightened, the tankers then proceed upriver to dock. Lightering in areas offshore Gulf Coast ports has also increased in the last few years. The vessels are usually underway at low speeds during the operation which occurs about 25 miles at sea.

A recent report done for the U.S. Coast Guard (Implications of the Segregated Ballast Retrofit Ruling on Import Alternatives and Pollution of the Marine Environment; October 1976), describes the practice of lightering in detail. That report indicates (1) that the practice is increasing and may be economically preferable to deepwater ports, and (2) lightering is conducted in 8- to 15-foot wave heights. The U.S. Coast Guard has stated that cleanup of oil spills on the high seas is nearly impossible in wave heights greater than 5 feet. Since lightering is virtually unregulated and since there is great temptation to lighter in bad weather, regulations governing the practice are needed.

Authority to control lightering in areas beyond jurisdiction of the United States is obtained by exercising control over the smaller vessel when it seeks to unload the transferred cargo in a U.S. port.

#### 5. Mandatory minimum standards—

The bill would require each oil tanker which is of a size greater than 20,000 deadweight tons to be constructed to meet specific minimum standards, in addition to any prescribed by the Secretary by regulation. Four general categories of construction features are covered:

- (1) navigation equipment and aids to assist safe operations;
- (2) segregated ballast systems to reduce operational oil discharges;
- (3) gas inerting systems to reduce explosion hazards; and
- (4) double bottoms to reduce oil outflow in the event of grounding accidents.

These features are considered the most significant technical improvements in tanker construction that could be applied to the fleet operating in U.S. waters for the purpose of reducing oil spills and accidents. The following summarizes the uses and capabilities of each feature specified under these categories, the benefits that could result from each and the cost associated with each.

**Dual radar equipment.**—Radar is one of the essential pieces of equipment utilized by most modern ships for all-weather navigation in coastal waters, in harbors, or wherever other ships or obstacles may be encountered. By means of transmitting electromagnetic pulses and sensing the reflected return signals, a radar is capable of displaying the locations of surrounding objects (such as other ships) to the navigator. The coverage and accuracy of locating these objects so that one may avoid collisions and also keep to prescribed channels and shipping lanes depends on the type of radar and the reliability of the system. The two-radar concept, as would be mandated by the bill, is standard, good practice for many commercial operators and is essential not only for redundancy and reliability, but to have the best available equipment on tankers. A short range radar with high resolution identifies objects near the ship and a longer-range radar gives distant coverage, and both should have true-north features to aid position-fixing. In addition, the short-range radar provides necessary accuracy in resolution for use with a collision-avoidance device.

The present cost of a dual radar system is about \$50,000 which, if incorporated in the total transportation cost of crude oil or product by tanker, would have a negligible effect.

**Collision avoidance systems.**—S. 682 would require each tanker to be fitted with a collision avoidance device for the purpose of reducing the hazards of collision and other similar accidents which, in the past, have been the cause of between 20 percent and 25 percent of the tanker accidents causing oil pollution. Personnel error has often been cited as the dominant probable cause of collision. A collision avoidance system has substantial potential for reducing casualties through relief of deck officer's workload and improvement in decision processes and timeliness.

Most collision avoidance systems utilize a computer to automatically process radar data and display encounter situations in a form enabling the ship to be maneuvered to avoid dangerous situations. The systems also include alarms and may include other features to display or present important navigational data. The present cost of such a system is less

than \$100,000, which if incorporated in a tanker, would add a negligible fraction to the total oil transportation cost.

**Long range navigational aid.**—At distance beyond range capabilities of radar, several electronic systems are available for navigational aid. The bill would require that each tanker carry such equipment. Such aids are important to general open-ocean navigation and most modern ships utilize one or more depending on the waters traversed. This equipment is also important for accurate position fixing in many areas offshore the U.S. where shipping lanes may extend over 100 miles and are located near shoal water or near such other structures, such as offshore drilling platforms.

**LORAN-C** is a long-range navigation system operated by the U.S. Coast Guard from shore broadcasting stations which cover the U.S. coastline out to 200–300 miles depending on the region. Ships which are equipped with LORAN-C receivers can utilize this system and locate themselves within about 1,000 feet under all weather conditions. Greater accuracy for specific localities is also possible. LORAN-C receivers cost about \$10,000.

Other long range navigation systems are also available, some of which may offer improved advantages in the future. Two other U.S. systems are OMEGA and satellite systems both of which have much greater world-wide coverage than LORAN-C but have less accuracy or availability. Satellite navigation systems are presently limited by the number of satellites in orbit and thus a long time delay (a few hours average) between navigation fixes. The bill does not specify which navigation system will be required thus giving the Secretary the option of specifying the best available equipment and revising such requirements in the future if better equipment becomes available. It is also important that the Secretary consider standards of design, testing and reliability of such equipment in such requirements since that greatly affects accuracy and usefulness of navigation equipment. As a minimum, the equipment should have accuracy up to a quarter-mile.

**Adequate communications.**—The bill would require each tanker to have adequate communications equipment which are essential to safe operation in confined or congested waters. Radio communications with other vessels and with port authorities must be maintained in order to avoid hazardous conditions of other nearby vessels. The Secretary may develop specific requirements for communications equipment, including type, coverage, and performance standard to assure adequacy of systems used.

**Fathometer.**—The bill would also require each tanker to be equipped with a fathometer. A fathometer is a sonar device which measures the time delay of a sound signal when reflected from the sea bottom and thus provides an accurate measurement of water depth. Water depth can then be displayed for the ship operator and used to assist navigation. Some systems also trigger an alarm when it becomes too shallow to safely navigate. Most fathometers cost under \$5,000.

**Gyrocompass.**—The bill would require each tanker to be fitted with a gyrocompass, a device which provides accurate directional or compass heading information with respect to true north and south, rather than magnetic north and south. Magnetic compasses are subject to large variations and inaccuracies under certain conditions. A gyrocompass is a key piece of navigation equipment for most modern ships and is used for long-range and short-range navigation. It is a necessary accessory for such equipment as true-north radars, collision-avoidance systems and other navigation aids. The cost of a gyrocompass is about \$10,000.

**Charts.**—The bill would require each tanker to carry up-to-date charts. It is necessary to safe navigation to have the best possible

charts of the area in which a ship is operating and containing current information on the location of buoys, obstructions, traffic schemes, channel conditions and other pertinent information.

**Segregated ballast systems.**—The bill would require segregated ballast systems for all tankers. It is well-known that ballasting and deballasting operations, as well as tank-cleaning operations, conducted by tankers which carry ballast water in cargo oil tanks during return voyages, contribute the greatest amount to the oil discharged into the oceans. This provision would require each tanker to have separate tanks for carrying ballast water only and thus eliminate the need to mix ballast water and oil cargo. In the past it is estimated that operational discharges around the world amount to one million tons of oil spillage each year. Tankers which operate in U.S. waters are projected to become an ever-growing proportion of the world fleet.

Most of this operational discharge could be eliminated with segregated ballast systems incorporated in each tanker. The 1973 International Pollution Convention specifies that new tankers over 70,000 tons have segregated ballast systems and, even though the international agreement is not ratified, U.S. Coast Guard regulations presently require this for new tankers. The provision in the bill would extend the requirement to existing tankers by not later than June 1983 and to new tankers of smaller sizes. The "phase-in" period is necessary because of limited shipyard facilities.

The cost of retrofitting segregated ballast systems on existing tankers can range from \$750,000 (for a 40,000 ton tanker) to \$1,000,000 (for a 120,000 ton tanker). In addition, lost cargo space because of separate ballast tanks would add to the total transportation cost of crude oil or products. The amount of increase in transportation cost is dependent on many factors such as voyage length and flag of operations. Based on very conservative estimates and current oil prices, if this provision required all existing tankers to be converted, it would add 1 percent–2 percent to the total cost of delivered oil which is carried by tanker to U.S. ports. Since some tankers already have this feature and most new ones are being constructed with segregated ballast, the total cost impact could be considerably less.

**Transponders.**—The bill would require each tanker be equipped with a transponder or other appropriate position-fixing device. Such a device would utilize one of the standard long-range navigation networks such as LORAN-C for position-fixing information. It would also automatically transmit this position data to a shore control station for the purpose of facilitating vessel traffic advisory services. Shore stations operated by the Coast Guard could maintain accurate traffic information in critical offshore regions for the purpose of advising or warning about hazards. Such a system could also be extended to other marine operations in the same region.

**Gas Inerting Systems.**—The bill would require each tanker to be equipped with a gas inerting system for the purpose of reducing the risk of cargo tank explosion which, in the past, has been the major cause of deaths and injuries suffered during tanker accidents. Many modern tankers routinely use inert gas systems.

Inert gas systems operate by injecting an inert gas, such as stack gas from the boiler, into cargo tanks as they are emptied so that no significant amount of oxygen will be present. Certain oxygen levels must be present for an explosion to occur. Much research has been done on systems to reduce explosion hazards. Industry and government authorities have recommended that inert gas systems, properly operated, could significantly reduce the incidence of tanker explosions. The cost of inert gas system varies depending

on the size of the tanker. A complete system is estimated to cost approximately \$1,000,000 for a typical 120,000 ton tanker. Based on conservative assumptions and current prices, this capital cost would add no more than one tenth of one percent to the total delivered cost of oil transported to the U.S. by tanker.

**Double bottoms.**—The act requires that all new tankers constructed after January 1, 1978 be equipped with a double bottom throughout the cargo space. A double bottom refers to two separate but continuous watertight plating structures along the length and width of a ship's bottom beneath the cargo tanks. This usually encloses a compartmented space of up to 10 feet in height. The space can be used for ballast water or left empty.

It is generally accepted that double bottoms will prevent most oil spillage that results from limited intensity hull ruptures due to groundings such as those that have occurred within harbors and near shore areas. In the past groundings have accounted for about 1/4 of the tanker accidents causing oil pollution worldwide. A recent analysis of tanker groundings in U.S. waters during 1969–1973 showed that double bottoms would have prevented over 90 percent of the resulting pollution.

Several new U.S.-flag tankers have been constructed with double bottoms and others are under construction. Since segregated ballast is now required for these ships in any case, utilizing a double bottom for ballast covers two concerns. Double hulls, which include both double bottoms and double sides, have also been fitted in several new tankers. These would extend the accident protection feature as well.

Based on recent shipyard construction figures, it is estimated that double bottoms cost about \$1,000,000 for a typical 40,000 ton tanker and \$2,000,000 for a typical 120,000 ton tanker. This added capital cost would in turn contribute less than 2 percent to the total cost of delivered oil carried to U.S. ports by tanker.

#### 6. Ocean Pollution Research and Monitoring—

The Committee has approved new statutory authority to address the question of ocean pollution research and monitoring. It has been well established that far more needs to be known about oil pollution in the sea, as well as ocean pollution generally. In its report on *Petroleum in the Marine Environment* issued in 1975, a National Academy of Sciences panel concluded:

"In general, much more research regarding the fates and effects of petroleum hydrocarbons in the marine environment is needed. Studies to date indicate that areas polluted with petroleum hydrocarbons 'recover' within weeks or years (depending on local conditions and the characteristics of the petroleum); however, composition of the local biological communities may be altered. The oceans have considerable ability to purify themselves by biological and chemical actions. A basic question that remains unanswered is, 'At what level of petroleum hydrocarbon input to the ocean might we find irreversible damage occurring?' The sea is an enormously complex system about which our knowledge is very imperfect. The ocean may be able to accommodate petroleum hydrocarbon inputs far above those occurring today. On the other hand, the damage level may be within an order of magnitude of present inputs to the sea. Until we can come closer to answering this basic question, it seems wisest to continue our efforts in the international control of inputs and to push forward research to reduce our current level of uncertainty."

More recently, the Congressional Office of Technology Assessment issued an analytic report on *Coastal Effects of Offshore Energy Systems: An Assessment of Oil and Gas Systems, Deepwater Ports, and Nuclear Power-*

plants Off the Coast of New Jersey and Delaware. That report found that very little public research money is allocated to projects that address the unknowns of the effects of oil spills and other pollutants. The report also stated that there is little cooperation among Federal agencies on ocean pollution research.

Under title II of the Marine Protection, Research, and Sanctuaries Act (Public Law 92-532), the Secretary of Commerce is directed to initiate a comprehensive program and continuing program of research with respect to the possible long-range effects of ocean pollution. However, no funds have ever been expended for this kind of a program. Instead, a number of projects undertaken by several Federal agencies are listed as the "comprehensive program" in an annual report by the Secretary. And as the Office of Technology Assessment report indicates, there is little coordination among these agencies. Consequently, neglect and unnecessary duplication has resulted. The purpose of title II of S. 682 is to end this situation.

Finally, in conjunction with the Outer Continental Shelf baseline research programs, the "monitoring" activities of the Federal Government were evaluated. In a report entitled, *The Environmental Quality Monitoring Report* (February 1976), the Task Team proposed the establishment of a monitoring function in the National Oceanic and Atmospheric Administration. It was stated by the team:

"The introduction of pollutants into the marine environment, a result of man's activities, may have severe effects on the Outer Continental Shelf environment. In some areas these contaminants may be hazardous to health through ingestion of seafood products. Potential losses and restricted uses of certain living marine resources suggest economic hardship to portions of the fishing industry. Also, recreational areas may be lost as a result of contamination by high concentrations of pollutants. The Outer Continental Shelf Task Team proposes a monitoring program combined with the necessary R&D and special studies to provide the data to properly assess and monitor the effects of man's activities on the environmental quality of the OCS. The program is proposed to follow two broad, continuous, and parallel streams of action. One will involve the integration and coordination of existing facilities and plans. The other will identify activities that require further development and planning."

Title II of S. 682 addresses this issue as well.

Mr. MAGNUSON. Mr. President, one of the subjects addressed in S. 682 is the practice of transferring cargo at sea—lightering. I ask unanimous consent that a letter from Secretary Brock Adams of the Department of Transportation concerning this practice be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF TRANSPORTATION,  
Washington, D.C., May 16, 1977.

HON. WARREN G. MAGNUSON,  
Chairman, Committee on Commerce, Science  
and Transportation, U.S. Senate, Wash-  
ington, D.C.

DEAR MAGGIE: Thank you for your letter of March 21 requesting departmental comments on the practice of lightering.

Lightering is a relatively new operation that has gained considerable momentum during the past two years. It is a common practice within and outside the United States navigable waters and contiguous zone on the west and gulf coasts, and within the United States navigable waters on the east coast. Enclosure (1) will give you an idea of the frequency of lightering opera-

tions at several places around the United States.

Lightering operations that take place within the navigable waters or contiguous zone (i.e., within 12 miles) are within the jurisdiction of the Federal Water Pollution Control Act (33 U.S.C. 1321) and must be conducted in compliance with the Pollution Prevention Regulations (33 CFR 154-156), which address vessel design, equipment, and transfer procedures. A forthcoming amendment to these regulations will require notifying the Coast Guard Captain of the Port (COTP) of time and place before any transfer of oil may occur in the navigable waters or contiguous zone. Although not addressed specifically in the regulations the COTP presently has the authority to stipulate the time and place for lightering operations if necessary. Beyond the contiguous zone the United States has no authority to regulate lightering operations.

Due to the absence of deepwater ports, in many areas of the United States lightering operations constitute an acceptable alternative for transferring the cargoes of large tankers to shore. The dangers to life and the environment during these operations, similar to those inherent in many commercial operations, are not considered excessive and do not warrant prohibition of the operations. Lightering operations beyond the contiguous zone are presently conducted by the major oil companies to permit maximum utilization of their larger tankers.

It has been the Coast Guard's experience that these operations are conducted in a highly professional manner, in accordance with internationally developed guidelines and generally in compliance with the Pollution Prevention Regulations.

Notwithstanding the favorable experience with lightering to date, such operations do pose dangers, both to the safety of ships and personnel and to the marine environment. Further, lightering could, in some circumstances, be used to circumvent requirements imposed upon ships as a condition of entry into U.S. ports. Therefore, the matter is deserving of the attention of the Congress and of the Senate Committee on Commerce and of the Senate Committee on Commerce, Science, and Transportation.

Sincerely,

BROCK ADAMS.

#### FREQUENCY OF LIGHTERING OPERATIONS

|                | Within 12 mi                   | Beyond 12 mi      |
|----------------|--------------------------------|-------------------|
| Seattle        | 1 per month                    |                   |
| San Francisco  | 10 per month                   |                   |
| Long Beach     | Continuous 2 to 3<br>at a time | 4 to 5 per month. |
| Corpus Christi |                                |                   |
| Galveston      |                                | 1 to 2 per month. |
| New Orleans    | 3 per month                    | 5 per month.      |
| Miami          |                                |                   |
| Baltimore      | Numerous                       |                   |
| New York       | 3 per day                      |                   |

Mr. MAGNUSON. Mr. President, S. 682 does provide for the regulation of lightering. In addition, I will shortly offer an amendment to clarify congressional intent with regard to the provisions on lightering. It is not our intent to prohibit lightering but to regulate the practice. My amendment will make that intent clear.

The debate over the effects of oil pollution of the sea continues. Some would have us believe that oil pollution is a good thing. But anyone who makes such statements is only playing on the fact that very little is known about the effects of oil pollution, particularly the long-term effects. But what little is known is bad. Two recent news articles express it

very well. I ask unanimous consent that an article from the Christian Science Monitor and one from Newsweek magazine be printed at this point in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Newsweek, May 23, 1977]

#### OIL ON THE WATERS

*How much ecological damage does an oil spill really do? After the recent blowout of oil well Bravo 14 in the North Sea, there was a wave of warnings that marine life could be disrupted for years. But a review of three major bills in the past decade turns up surprisingly little evidence of any calamitous long-term effects on the environment.*

The largest and most spectacular spill of all resulted from the wreck of the *Torrey Canyon*, which broke up off England's Cornwall coast in 1967. Some 35 million gallons of oil spewed from the U.S.-owned tanker, fouling miles of British coastline and gradually blowing across the English Channel to the French beaches of Brittany. To dissolve the oil, British Navy ships sprayed 700,000 gallons of detergent into the sea and onto the beaches. That operation was successful as a cleansing measure, but many patients died; the detergent got more blame than the oil for killing more than 50,000 sea birds. Since the *Torrey Canyon* disaster, a British aviary has been established in Somerset to deal exclusively with the problem of oil-drenched birds, and this research has helped repopulate the decimated flocks. Except for small quantities of sardine eggs and phytoplankton, underwater life escaped damage from the oil and detergent, and some organisms apparently thrived on the oil: limpets and other mollusks contributed to the cleanup by feeding on the sludge as if it were a delicacy.

Just last December, 7.6 million gallons of crude oil gushed into the Atlantic off the Massachusetts coast when the Greek-owned tanker *Argo Merchant* ran aground and broke in two near Nantucket island. Thanks to favorable winds and tides, the oil drifted away from the fishing grounds and the tourist beaches, and the glutinous mass soon dispersed. Fewer than 100 birds died in the incident, and fishermen report even more haddock and cod in early waters than were seen in past springs. "The impact so far appears to be small," says Dr. Robert Edwards of the National Oceanic and Atmospheric Administration in Woods Hole, Mass., but he cautions that the findings are still inconclusive. If significant numbers of fish larvae suffocated in the oil—which may or may not have happened—the effect will show up in decreased fish catches in a few years.

The costliest damage so far came in California's Santa Barbara oil spill in 1969. A rupture in a Union Oil Co. offshore well and a resultant fissure in the ocean bottom spewed tons of subterranean goo onto Santa Barbara's sandy beaches. No one is sure exactly how much oil was spilled, but estimates range from 250,000 to as much as 6 million gallons. Union Oil spent almost \$6 million on a cleanup, and litigants collected \$17.6 million in damage claims. The spill shocked the public with its toll of 4,000 dead birds, their feathers soaked with oil. But Walter Putnam of the California Fish and Game Department observes that "we probably lost 100,000 ducks the same year from botulism." The Santa Barbara sea-bird population has since regenerated, as have the mussels, crabs and barnacles along the coast.

None of the three incidents can be taken as definitive. Partly because scientists usually have no measure of the environmental health of an area before a spill and thus have no basis for comparison, the true cost of any oil

spill is hard to gauge. Environmentalists hope that current studies in seashore areas may establish a better base for calculating damage. Until then, they are reduced to the general principle that, as oil expert Tom Charlton of the Environmental Protection Agency puts it, "It's just not a good idea to have oil floating around out there."

[From the Christian Science Monitor,  
May 16, 1977]

**"ARGO MERCHANT"—STILL AN ISSUE**  
(By Douglas Starr)

BOSTON.—Five months after the 7.6-million-gallon Argo Merchant oil spill, scientists are finding that its effects are not as short-lived as originally thought.

A recent University of Rhode Island study reports "very significant sediment contamination" in the wreck area in late February.

"We can determine traces of Argo Merchant oil in the sediment up to 10 miles from the wreck," says Eva Hoffman, a University of Rhode Island (URT) oceanographer and coordinator of the university's oil spill response team. Oil contamination went at least five inches into the seabed, the maximum depth that the URI team dredged.

The finding is significant, Dr. Hoffman says, because the Coast Guard sampled the same area in December and January and did not find any oil at that time. Oil evidently drifted out from the wreck along the bottom with moving sands.

"One of the worst things that can happen is for the sediment to become contaminated," Dr. Hoffman says. The oil can stay there for a long time, breaking down or diffusing for years, the oceanographer says.

Woods Hole Oceanographic Institute biologist Howard Sanders found a "threefold reduction" in the number of bottom-dwelling animals near the spill site. "It would be irresponsible to predict a catastrophe," Dr. Sanders says. "But people without scientific data have said that the spill has had no effect. I'm not happy with these bland self-assurances."

**INSUFFICIENT STUDY**

Much of the debate over the Dec. 21 spill's effects arises from insufficient study of the spill over time.

When the federal government funded a National Oceanic and Atmospheric Administration sampling program immediately after the wreck, scientists expected the program to continue for additional, long-term studies. But funding—deleted from the budget by the White House Office of Management and Budget—ceased.

Now the National Marine Fisheries Service (NMFS) gathers sampling information from regular cruises that patrol much of the Eastern Seaboard and from cooperating Polish, Russian, and East German vessels.

Scientists examining the spill do so on their own time. "We missed a pretty big research opportunity with the Argo Merchant," comments Dr. Hoffman. "But the guys who have the money aren't interested anymore."

Scientists are not sure how oil affects marine life—only that it's highly toxic. Fish larvae, since they are more delicate and cannot swim away from a spill, are affected more than adults. Larvae and eggs trapped in a slick may smother, coated in an oily film that keeps out oxygen. Digested or absorbed, oil may cause poisoning or genetic damage. Dr. Sanders notes that of the fish eggs sampled by the fisheries service, "a tremendous percentage showed abnormalities."

**TEMPORARY EFFECTS**

In preliminary studies the service reported that fish eggs and larvae were affected, but only temporarily. In one sample taken near the spill 98 percent of the pollock eggs and 60 percent of the cod eggs were found dead,

dying, or with deformed embryos. But Dr. Robert Edwards, director of the NMFS Northeast Fisheries Center, says the effects were short-lived. Subsequent egg samples showed no contamination. "The spill had an impact, but it was not measurably significant," he says.

However, the URI team found that the spill's effects are not over. In a 120-square-mile area around the wreck, URI scientists found that oil droplets from the tainted sediment contaminated marine life. Tiny oil droplets were found clinging to the swimming legs and digestive tracts of copepods, the tiny marine animals that young fish eat. "Fishermen will probably not feel the effects of this," Dr. Hoffman says. "But we should investigate what happens in the food chain."

**OIL-COATED GULLS**

In other studies, the Manomet Bird Observatory in Manomet, Massachusetts, reports that its observers saw heavily oiled seagulls at sea until April. "We feel there was a great mortality of birds that did not reach shore and were not counted," said Kathleen Anderson, executive director of the Observatory.

The U.S. Coast Guard investigated two incidents in which thick oil "tar balls" washed up on Massachusetts beaches. In neither case, the Coast Guard reports, was the oil from the Argo Merchant.

Aside from the amount trapped in sediments, scientists say that the oil that once floated over 2,000 square miles of the North Atlantic is heading on the Gulf Stream. "The oil will be in little bitty tar balls that will become part of the tar ball budget of the Atlantic Ocean, which is rather substantial," says Dr. Hoffman. "It will probably end up in Bermuda or in the Sargasso Sea."

Mr. MAGNUSON. Mr. President, I have distributed other articles to Members of the Senate at various times on this subject.

I think it is time the Federal Government began a strong research effort into the effects of oil pollution. Title II of S. 682 has been drafted to create such a program.

I am disturbed and members of the committee are disturbed by the shortsighted decisions of the President's Office of Management and Budget on oil pollution research. It should be our responsibility to understand what happens to public resources, such as fisheries, when a disaster takes place. The Federal Government must also clean up the mess and would help recover damages under legislation proposed by the President. Certainly, a true understanding of oil pollution is basic to all these efforts.

Finally, Mr. President, the Congressional Budget Office provided me with a cost estimate for S. 682 but it was received too late to be printed in the bill report. I ask unanimous consent that this cost estimate be printed at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL BUDGET OFFICE,  
Washington, D.C., May 18, 1977.

HON. WARREN G. MAGNUSON,  
Chairman, Committee on Commerce, Science,  
and Transportation, U.S. Senate, Dirksen  
Senate Office Building, Washington,  
D.C.

DEAR MR. CHAIRMAN: Pursuant to Section 403 of the Congressional Budget Act of 1974, the Congressional Budget Office has prepared the attached cost estimate for S. 682, the Tanker and Vessel Safety Act of 1977.

Should the Committee so desire, we would be pleased to provide further details on the attached cost estimate.

Sincerely,

ALICE M. RIVLIN,  
Director.

CONGRESSIONAL BUDGET OFFICE—COST  
ESTIMATE

1. Bill Number: S. 682
2. Bill Title: Tanker and Vessel Safety Act of 1977
3. Bill Status: As reported by the Senate Committee on Commerce, Science and Transportation
4. Purpose of Bill:

Title I amends the Ports and Waterways Safety Act of 1972 to authorize a comprehensive inspection and enforcement program for increased navigation, vessel safety and protection of the marine environment. Title I of this bill requires the Secretary of Transportation to promulgate regulations and/or establish standards for the following categories: vessel traffic services, waterfront safety, pilotage, investigation of accidents, lightering, bulk carrier construction, manning and training, inspection and enforcement and international agreements. The Secretary is also required to submit a report to Congress within six months after the end of each fiscal year specifying the effects of this legislation. In addition the Secretary is authorized to establish a marine safety information system to store information on every vessel which carries oil or any hazardous material, in bulk, into any United States port.

Title II establishes a comprehensive Federal program of ocean pollution research and monitoring.

5. Cost Estimate:

[In millions of dollars]

|                      | Fiscal year— |        |        |        |        |
|----------------------|--------------|--------|--------|--------|--------|
|                      | 1978         | 1979   | 1980   | 1981   | 1982   |
| Authorization level: |              |        |        |        |        |
| Title I.....         | \$11.8       | \$10.7 | \$10.9 | \$11.1 | \$11.8 |
| Title II.....        | 5.5          | 6.5    |        |        |        |
| Estimated cost:      |              |        |        |        |        |
| Title I.....         | 11.6         | 10.7   | 10.8   | 11.1   | 11.7   |
| Title II.....        | 4.1          | 5.7    | 1.6    | .6     |        |

<sup>1</sup> Title I authorizes for appropriation such sums as may be necessary to carry out the provisions of this title. The figures for fiscal year 1978 through fiscal year 1982 for this title are the projected obligation levels.

Title I costs fall within budget function 400 and title II costs fall within budget function 300.

6. Basis for Estimate:

It is assumed that all of the requirements in Title I of this bill will be carried out by the Coast Guard. Many of these functions are presently being performed by the Coast Guard but at a lower level than mandated in this bill. The Coast Guard operates through 12 District Offices, 9 Marine Inspection Offices, 17 Captains of the Port and 37 Marine Safety Offices. It is projected that an additional 40 people will be needed in the Washington Office to set standards, promulgate regulations and prepare the report to Congress as specified in Title I of this bill. This has an expected cost of \$637,000 in FY 1978 including overhead. Thirty-five additional personnel will be needed in FY 1978 to establish the marine safety information system, which will require computer terminals in 75 United States locations. The data bank would include nine entries on each of the approximately 1600 tankers that annually enter U.S. ports. Gathering and collating this information, setting up the storage and retrieval system, training personnel, leasing equipment, and contracting for computer time is estimated to cost \$925,000 in FY 1978 and \$1,606,000 in FY 1979. The system will be

phased in over a two year period; beyond this period, costs are adjusted for inflation. The inspection and enforcement authority established in this bill would have no direct cost impact, as the owner of any vessel inspected by an officer authorized by the Secretary will reimburse the Secretary for the cost of the inspection. However, it must be expected that there will be additional work for the Coast Guard because of this requirement, and it is assumed that once the regulations, standards and information system have been established, some of the 40 people will remain in the Washington office and others will be shifted into the district offices to administer and monitor the various responsibilities set forth in this legislation.

Outlays are estimated by taking the spend-out rates for the various accounts concerned and applying them to the projected obligation levels. A significant indirect impact of this legislation will result in the payment of more than \$50 million through the Maritime Administration's ship construction program. Section 4 of this bill sets minimum standards for bulk carriers which must be complied with by June 30, 1983. There are 36 U.S. vessels which would not meet these minimum standards; 27 of these would have to be retrofitted and 9 are presently in various stages of construction. It is projected that this would cause an increase of \$10 million in FY 1978 and \$8 million per year thereafter until FY 1983. These costs are included in the estimate above.

Title II establishes an ocean pollution research and monitoring program within the National Oceanic and Atmospheric Administration. This title also requires a study to evaluate various shore-station monitoring systems of vessels, including fishing vessels, within the fishing conservation zone. There is authorized to be appropriated \$5.5 million for Title II in FY 1978 and \$6.5 million in FY 1979. Outlays were estimated using the projected spendout rate of 75 percent in the first year, 15 percent in the second year and 10 percent in the third year.

7. Estimate Comparison: None.

8. Previous CBO Estimate: None.

9. Estimate Prepared By: Jack Garrity (225-7760) JG.

10. Estimate approved by: James L. Blum, Assistant Director for Budget Analysis.

Mr. MAGNUSON. The Congressional Budget Office has approved of the bill as it now stands and of the amount authorized for this purpose.

Shortly after the Senate approves this bill, we will have before the Senate, which was reported out of the Commerce Committee, the Coast Guard bill, which plays a great part in the enforcement of S. 682, by authorizing sufficient funds to do the job that should be done.

Mr. President, the Senator from Alaska (Mr. STEVENS) and the Senator from South Carolina (Mr. HOLLINGS) have some amendments to this bill which, I think, will strengthen the bill.

We have all looked them over. It is a technical bill, it is comprehensive, and I want to compliment them on all the help they gave me, as chairman, and other members of the committee, in working on this problem which is before the country.

They did yeoman work, and the staff did yeoman work. A member of the staff, Mr. Bud Walsh, who worked extremely hard on this bill for a year and a half, happens to be the representative of the committee in London at the IMCO conference, and we thought he might have time to get back here to participate in

this bill. But I am so anxious to get the bill passed and get it moving that when we had the opportunity to bring it up today, we did so.

We have able staff members on both sides. I do not think there is a bill that has received more attention by the staff and the committee members of the Committee on Commerce than this particular bill and the Coast Guard authorization.

I yield to the Senator from Alaska for such statement as he wishes to make, and the amendment he has.

Mr. STEVENS. Mr. President, we are all proud to work with the chairman of our committee, my good friend from Washington, on this issue, as on so many other issues in which he has given us leadership. We have worked on this matter in a nonpartisan basis, with the staff on both sides of the aisle working together to bring before the Senate a bill which we think will deal with this issue the way it should be dealt with.

I express again my appreciation to the chairman for sending his staff along with me to hold hearings in Alaska, where this is a very vital question at this time. We all know that the super-tankers will start moving out of the Valdez Arm, bringing Alaskan oil to the South 48 in July, and the subject of tanker safety is a very serious question to Alaskans.

Mr. President, I join with my good friend and colleague, Chairman MAGNUSON, in support of his safe tanker legislation. The rash of foreign tanker accidents off the coast of the United States, has pointed out the critical need for tanker safety standards.

The tanker accidents of last winter brought this subject into national focus. Tanker safety is not a new issue for Senator MAGNUSON and myself. We worked for many years to develop a safe tanker bill. This bill is the product of thorough, exhausting study by the Senate Commerce Committee.

In July or August of this year, the trans-Alaska pipeline system will begin operation. The State of Alaska will become one of the largest oil-producing States in the country. All of our oil must be shipped by marine tanker. The State of Alaska vitally needs safe tanker legislation to protect our valuable fisheries resources.

Alaska has indeed been fortunate. We are blessed with a myriad of natural resources. Even the greatest of blessings, however, can at times create problems. The State of Alaska is presently seeking to appropriately balance the exploitation of oil and gas, and fisheries. In order to thoroughly exploit the oil and gas which this Nation vitally needs, and which Alaska is willing to provide, we must insure the safe transportation of that product. Those citizens of the State of Alaska who are engaged in commercial fisheries, cannot be asked to unnecessarily endanger their livelihoods so that the rest of the Nation has the fossil fuel which it requires. This Nation must insure that petroleum products are safely shipped from resource-producing States such as Alaska, which will be developing a greater number of proven reserves in the decade ahead.

This timely legislation deals with the critical subject of tanker safety standards. Mandatory safety standards is a timely problem which cannot bear the burden of undue delay. It is not, however, the only solution needed to cure the problem of safe tanker operations, which has been by and large created by the so-called "rust buckets."

Eighty-five percent of the tanker casualties worldwide are caused by human error. American seamen are the finest trained seamen in the world. American vessels have the finest safety record of the vessels of any maritime nation. It is time that this country developed a program of safe tanker preference, which would insure the shipment of petroleum products in safe American tankers. I look forward to developing this legislation with Senator MAGNUSON, who has also been one of the strongest safe tanker preference proponents in the Senate.

In addition to mandatory safety standards, and safe tanker preference, the Senate must complete its legislative proposals dealing with safe tanker operations by passing a comprehensive oil spill liability program. Under the present antiquated laws, American citizens cannot adequately obtain compensation for damages they suffer as a result of tanker accidents.

Sweeping, comprehensive reform of oil spill liability laws is needed to insure that American citizens are adequately compensated for damages resulting from marine tanker casualties. Senator MAGNUSON has taken the forefront in the development of oil spill liability legislation. I have joined him, by cosponsoring his oil spill liability bill, and will work with the Senator to insure its prompt passage in the Senate.

Mr. President, the Senate Commerce Committee has today presented to the full Senate for consideration, amendments to the Port and Waterways Safety Act, which set up minimum oil tanker safety standards. This proposal, which is only part of the full legislative package, the Senate will receive this session dealing with tankers, is vitally needed to preserve our marine resources, and protect our coastlines from the consequences of marine tanker accidents. I would urge each of my colleagues here in the Senate, to favorably vote upon this legislation which this Nation's coastal States urgently need.

Mr. President, I, too, welcome the opportunity to consider the amendments that will be submitted by our good friend from South Carolina and the Senator from Massachusetts. The chairman has some technical amendments to present later. I again say that I do not think a bill such as this, as complex as it is, could simply reach the floor and be in a position where there is practically no controversy. As a matter of fact, I expect no rollcall votes unless there is something that I do not know about at the present time on the amendments that will be presented.

This could not have happened without really thorough staff work and a complete analysis of all the problems and all the testimony we have heard.

I think this bill is in good shape. It is

the type of legislation the country needs to deal with tanker safety.

Mr. PELL. Mr. President, the rash of serious oil spills during the past winter, and particularly the potential catastrophic spill from the tanker *Argo Merchant* on Nantucket Shoals, placed in sharp focus the urgent need for preventive Government action.

The measure before the Senate, S. 682, is responsive to that need, and I support it. There is no question that we must act to protect our coastal areas and marine environment from pollution disasters.

Through this legislation, the United States will be taking a major step toward achieving that protection.

At the same time, we must recognize that ocean pollution is a worldwide problem, and fully effective action to protect our own coastal areas, and the world ocean generally, from pollution requires cooperative international action.

Fortunately, even as we consider this legislation, very substantial progress is being made toward effective international action.

President Carter transmitted to Congress his proposals for improving vessel standards on March 17. His message indicated his intention of soliciting the cooperation of major maritime nations in upgrading vessel standards.

The administration has followed through on initiative. Secretary of Transportation Brock Adams on May 23 formally requested the Council of the Intergovernmental Maritime Consultative Organization, IMCO, an arm of the United Nations, to take action on upgrading vessel standards.

It is my understanding that the Council this week is moving to establish an accelerated schedule for consideration of new provisions, compatible with President Carter's proposals, to the 1973 Marine Pollution Convention. Under this proposal, IMCO's Committees on Maritime Safety and on Marine Environment Protection will be instructed by the Council to complete preparatory work in time for plenipotentiary conference in February of 1978.

As we are all aware, it requires more time to gain the acquiescence of other nations to an effective international agreement than it does for our own Nation, acting alone, to impose our own standards in waters under our jurisdiction. I believe, however, that the administration is indeed making a concerted effort at the earliest possible effective international action, and I commend the President and Secretary Adams on their efforts.

The administration action has also included regulatory action by the Coast Guard. On May 16, the Coast Guard in the Federal Register announced a rule-making procedure for improving vessel standards. Public hearings on those proposals are scheduled for June 16 in San Diego and June 21 here in Washington, and the deadline for comment on the proposals is September 1.

I commend the Senate Committee on Commerce, Science, and Transportation on the vigorous and prompt attention it has given to the urgent problem of pro-

tecting our marine environment from oil spills. I hope that the consideration of this legislation by the Congress will make it clear to other nations that we are very seriously concerned over this problem and that it will help to expedite effective, cooperative, international agreement.

Mr. SCHMITT. Mr. President, I am pleased to add my support to the Tanker and Vessel Safety Act of 1977. If it is passed and signed into law, we can reasonably expect a reduction in the number of at-sea mishaps resulting in the loss of life and property and the pollution of our oceans.

Particularly encouraging in this bill is the commitment to upgrade the level of technology used to prevent collisions and groundings and to detect ocean pollution. Over the past 25 years we have been able to provide for the safe piloting of aircraft flying hundreds of miles per hour in three dimensions. The technology and procedures used are available to us now and can be applied in part to the much slower, two-dimensional problem of controlling merchant ship traffic. An extensive sea traffic control system is at least technically feasible which will accurately plot the location of each ship and hazard to navigation, thus greatly reducing the likelihood of collisions and groundings regardless of weather conditions. Such a system, possibly including air, sea, land, and space components, will be investigated as a consequence of this legislation.

Greatly improved monitoring systems using satellite and other techniques will permit early detection of oil spills aiding not only in rapid control of the spill itself, but also in identifying those responsible for the spill so that they can be swiftly and surely fined.

The issue of standards is more complicated than it appears on the surface. I side with those who believe firm Federal action is needed and that a necessary part of that action is the establishment of mandatory safety standards for all ships, foreign and domestic, which carry hazardous cargoes within our 200-mile limit. No ship has the right of "innocent passage" if it carries with it an undue risk to the rights and safety of other ships or to the maintenance of a pollution-free ocean environment within that limit.

The standards proposed in this bill for tankers are by and large good standards, worthy of the support of each Senator. Of those standards only the requirement for double bottoms is likely to raise much controversy, and even then, we may receive a positive return on our investment. In restricted waters, such as Puget Sound or the Chesapeake Bay, and the reduced ship speeds and weather conditions which prevail in those areas, we can expect double bottoms to reduce the probability of damaging oil spills should a collision or grounding occur. On the other hand, groundings in circumstances such as the *Argo Merchant* sinking will not be helped by double bottoms and may even be complicated by such a fundamental change in ship design and ballasting. With this in mind the committee has recommended in its report that the

Secretary of Commerce specifically evaluate these standards, not only individually, but collectively to insure that as a group the highest level of protection is obtained commensurate with investment. The Secretary may find, for example, that the added benefits—and risks—associated with double bottoms on tankers may not be desirable in view of greatly improved sea traffic control capabilities that largely eliminate collisions.

With these thoughts in mind let me urge all of my colleagues to support this bill as an effective method of dealing with the unreasonable number of tanker accidents we have experienced over the past 2 years.

Mr. MAGNUSON. Mr. President, if the Senator will yield, I might say that many, many Senators who were faced with this problem or who see the problem outside of the committee membership came and urged the committee to do just what we are doing in this bill. I think that in this bill, probably more than with any other bill we have had before the committee, we have had more support from Members of the Senate other than the members of the committee.

Mr. STEVENS. I thank the Senator.

#### AMENDMENT NO. 297

Mr. HOLLINGS. Mr. President, I call up my amendment No. 297 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated. The legislative clerk read as follows:

The Senator from South Carolina (Mr. HOLLINGS) and the Senator from Massachusetts (Mr. BROOKE) propose amendment numbered 297.

Mr. HOLLINGS. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment is as follows:

On page 59, line 22, insert the following and renumber the following paragraphs accordingly:

(7) RETROFIT OF CERTAIN MANDATORY REQUIREMENTS.—(A) On and after July 1, 1980, the Secretary shall not issue a certificate of compliance to any vessel to which subsection (5) applies, unless—

(1) such vessel has a segregated ballast system (as required under subsection (5) (B) (1)) and a gas inerting system (as required under subsection (5) (B) (iii)); or

(ii) the Secretary determines that tanks in such vessel have been designated for, and are used only for carrying ballast water alone; and the owner of such vessel has paid a retrofit incentive fee levied on such vessel by the Secretary.

(B) the Secretary shall determine the amount of the retrofit incentive fee applicable to any vessel (according to classes of vessels based on size, displacement, and configuration) by determining for vessels in each such class the estimated annualized cost of compliance with the requirements of subsections (5) (B) (1) and (5) (B) (iii). The Secretary shall estimate the annualized cost of compliance, based on a retrofit technique that he determines would enable typical vessels in each class to comply with such requirements, taking into account planning and design costs, equipment costs (including purchase, transportation, installation, and start-up or testing), operating and maintenance costs, cost of capital, inflation, taxes, and other relevant costs. The Secretary shall

propose retrofit incentive fees for each class of vessels not later than July 1, 1979, and shall adopt fees, in accordance with section 553 of title 5, United States Code, not later than January 1, 1980. The Secretary may by regulation adjust the fee for a class of vessels if he determines that the fee varies significantly from the actual or probable annualized costs of compliance with such requirements, and he may provide for the automatic adjustment of a fee based on the performance or a suitable index or indices.

(C) Any interested person may seek judicial review of the action taken by the Secretary under paragraph (B) to establish retrofit incentive fees by filing a petition therefor in the Court of Appeals of the United States for the circuit in which such person resides. Such petition shall be filed within ninety days after the date of such action, or, if such petition is based solely on grounds which arose after such ninetieth day, any time thereafter. Action by the Secretary with respect to which review could have been obtained under this paragraph shall not be subject to judicial review in any civil or criminal proceeding relating to enforcement or collection of the fee established by such action. In any action brought under this paragraph, no courts shall grant any stay, injunction or other similar relief before final judgment by such court in such action.

(D) The Secretary shall prescribe, and may from time to time modify or repeal, such regulations as he deems necessary to carry out this subsection. Such regulations may include, but need not be limited to, requirements respecting—

(i) submission of technical and cost information relating to compliance with the requirements of subsections (5) (B) (i) and (5) (B) (iii);

(ii) marking areas designated as ballast areas for easy identification; and

(iii) reporting of information relating to the designation of areas as ballast areas and the installation of segregated ballast and gas inerting systems.

(E) Any retrofit incentive fee which is not paid in a timely basis shall be subject to a late payment penalty in an amount determined by the Secretary, but which shall not be more than 20 percent of the amount of such fee unpaid.

(F) If any person or vessel fails to comply with any provision of this subsection, in addition to denying certification (as provided in paragraph (A) of this subsection), assessing a late payment penalty (as provided in paragraph (E) of this subsection), and assessing a civil penalty (as provided in section 203(a) of the Ports and Waterways Safety Act of 1972), the Secretary may pursue any other appropriate remedy authorized by any other applicable provision of law.

Mr. HOLLINGS. Mr. President, I would like to explain the purpose and effect of my amendment to S. 682.

The proposed modifications have been designed to deal with several problems expected to be associated with the original regulatory proposal.

Because of the costs associated with complying with the regulations, tankers have an incentive to delay retrofit as long as they can. Anyone complying early will be at a competitive disadvantage because he will have to charge somewhat higher transport costs. As a result, very few tankers are likely to be retrofitted before 1983. At that time, a shortage of retrofitted tankers could threaten disruption of oil supplies. In addition, with an absolute prohibition of entry into U.S. ports of noncomplying tankers, there is the possibility of

insufficient capacity on a spot basis to meet U.S. petroleum demand.

The proposed amendments would avoid these problems by:

Providing an incentive for early compliance.

Eliminating the potential problems of serious disruption of U.S. oil imports after the statutory deadline for compliance.

Eliminating the profits and the associated competitive advantage of non-compliance.

#### PROPOSED AMENDMENT

The amendment would provide:

That tankers carrying oil to U.S. ports dedicate, by July 1, 1980, certain cargo space that will be used exclusively for the purpose of carrying ballast, if they are not then in compliance with the requirements for a segregated ballast system (still required by 1983).

That the requirement to install a segregated ballast and gas inerting system would be enforced by a retrofit incentive fee.

#### EXPECTED RESULTS OF PROPOSED AMENDMENT

There are two basic cost elements associated with the segregated ballast and inert gas systems—the initial capital costs and the recurring operating costs. For segregated ballast the major recurring cost is the lost tanker capacity because oil cannot be carried in some portions—approximately 14 percent—of the cargo space.

The requirements for dedicated ballast tanks will eliminate the major cost disadvantage which would otherwise be experienced by tankers which comply. The economic incentives will eliminate the remaining incentives to avoid complying as early as feasible with the regulations, as well as the cost advantages of non-compliance. The amount of the incentive is to be determined by the Coast Guard on the basis of the actual cost of compliance. The use of dedicated ballast tanks will also achieve many of the benefits of reduced pollution associated with the complete segregated ballast system, but 4 years earlier than the original bill.

The use of economic incentives as opposed to a strict regulatory approach will allow more flexibility to the shipowner to determine the most cost effective mechanism for satisfying the requirements of the legislation, and will avoid the problem of an emergency situation disrupting the flow of oil to the United States. It will also serve to insure that ships for which compliance is least expensive will be retrofitted earliest and become dedicated to the U.S. trade, and the ships for which compliance would be more expensive will be kept out of the U.S. trade. Thus, the economic incentives would help to insure that the total cost of compliance, and thus the cost to the American consumer, would be kept to a minimum. The fact that new ships will tend to be dedicated to the U.S. trade will also have the beneficial effects of insuring that the most seaworthy ships are used in U.S. waters, and will make it easier for the Coast Guard to insure that the other requirements of the act are also being satisfied.

#### IMPACTS OF PROPOSED AMENDMENT

On tanker market: The proposed modifications would promote the dedication of the newest, and therefore probably the safest ships to the U.S. trade. It would promote stability in the market, ease the Coast Guard's burden of policing tankers, and by stimulating earlier compliance, would help reduce the problems of excess tanker capacity at an earlier date than the original proposal.

On consumers: The proposed modification would probably lead to an earlier increase in consumer prices by stimulating earlier compliance. To the extent that it leads to more efficient compliance, however, it could reduce the longrun impact on consumer prices. In addition, the impact on consumer prices during an emergency situation would be less under the proposed modification.

Mr. President, I thank our distinguished chairman, the Senator from Washington (Mr. MAGNUSON), and our ranking minority member, the Senator from Alaska (Mr. STEVENS), for their indulgence and consideration in the markup of this bill.

We have a classical feature in S. 682 of an effective date of 1983 when some very serious requirements relative to a segregated ballast system and a gas inerting system would be necessary.

In most instances, the requirement of a segregated ballast system can be handled by the majority of the U.S. fleet because they have already certain portions of the hull that could be used for ballast. For those who do not have that capability, an investment will have to be made, let us say, for a 120,000-ton tanker, of approximately \$1 million. In one sense, it is only 2 percent of the total cost of delivered oil or delivered cargo.

Mr. MAGNUSON. Mr. President, will the Senator yield?

Mr. HOLLINGS. I yield.

Mr. MAGNUSON. I have some figures that I wish to print in the RECORD on the cost. One figure we are definite about now is the latest figure for the cost of the construction of a 120,000-ton tanker, and it is \$65 million.

Mr. HOLLINGS. That is right.

Mr. MAGNUSON. Yes.

Mr. HOLLINGS. Embellishing upon those figures, to retrofit a gas inerting system for a 120,000-ton tanker would cost \$1.2 million. Without some kind of incentive system, the tendency would be to say:

Look, if I can get an economic advantage, if I do not have to put this additional cost into the delivery, because it has to be passed on, if I do not have to include that and I can put it off until the last minute, then I will have an economic advantage, and I will be increasing my business, and we will somehow make out when 1983 comes.

We do not want the actual requirements to be taken advantage of, and that is what this amendment prevents. It prevents that kind of footdragging. On the other hand, from an environmental and safety standpoint, these are the two main actions that must be taken to prevent oil spills like that of the *Argo Merchant*; or, another *Sansinena* blowing up on the west coast.

Furthermore, we want the tanker fleet to move promptly with delivery and not disrupt transportation all at once in 1983, when everyone begins to scramble to comply.

In order to encourage this, the proposed amendment would have the tankers dedicate, by July 1, 1980, certain cargo space for the purpose of carrying ballast, and then the Secretary of Transportation, working with the Coast Guard and its jurisdiction, would factor out retrofit incentive fees.

That is spelled out pretty exactly on page 2 of the amendment where the Secretary determines the annualized cost of compliance; and includes not only the cost of capital, but inflation, taxes, and other relevant costs.

With those in mind, every tanker owner could know immediately, come 1980, that he is either going to have to put up or shut up. He is either going to get tankers retrofitted or is going to pay an equivalent fee that would have been factored out as an annual cost. He is not going to be able to have an economic advantage with respect to the gas inerting system—with respect to the segregated ballast system, I should say. He is then going to have to set aside, in some instances, what is computed to be about 14 percent of the cargo space for ballast. So he cannot have a space advantage as a result of the enactment of S. 682.

I think this does justice and equity. It has been checked out with the Department of Transportation, worked on intensively by Miss Stirling and Mr. Walsh, of our staff, and I think that our distinguished chairman is ready to accept the amendment.

I do not see Senator SCHMITT on the floor. Is he coming?

Mr. STEVENS. Mr. President, will the Senator yield?

Mr. HOLLINGS. I am glad to yield.

Mr. STEVENS. I have just been informed that the Senator from New Mexico has an amendment to the amendment of the Senator from South Carolina.

#### UP AMENDMENT NO. 317

Mr. HOLLINGS. Let me read what has been handed to me by staff.

His proposed amendment would come in on page 3, line 2, at the end of the sentence:

The Secretary may, in his discretion, waive the fee if he determines that a good faith effort has been made to comply with the provisions of this paragraph.

It is just a waiver clause for the Secretary of Transportation. Ordinarily, we do not say do something and waive it at the same time.

However, there are various economic factors considered—there is the makeup of the fleet, makeup of ownership of a particular carrying line, and various other factors that go into it. It could be a matter that did not come to our attention in time or we did not think of.

In that spirit, of course, we would be glad to accept that waiver feature, if the

Senator from New Mexico is coming. I ask unanimous consent to amend my amendment. It has not been voted on. So I ask unanimous consent that my amendment be amended on page 3, line 2, to add the following sentence:

The Secretary may, in his discretion, waive the fee if he determines that a good faith effort has been made to comply with the provisions of this paragraph.

The PRESIDING OFFICER (Mr. INOUE). The Senator has a right to modify his amendment.

Will the Senator send his modification to the desk?

The modification is as follows:

On page 3, at the end of line 2, insert: "The Secretary may, in his discretion, waive the fee if he determines that a good faith effort has been made to comply with the provisions of this paragraph."

Mr. SCHMITT. Mr. President, I have one concern with the amendment offered by the Senator from South Carolina (Mr. HOLLINGS). While I have no specific knowledge of the capability of shipyards to accomplish the modifications referred to in the amendment, that is the installation of a gas inerting system and segregated ballast system, the history of the original 1983 date indicates that it may be physically impossible to complete them by 1980. Earlier drafts of S. 682 established a retrofit completion date of January 1, 1981. After some study, the U.S. Coast Guard recommended a completion date of 1983, based upon a number of factors, including shipyard availability.

Because there is reason to believe that some tanker owners would make a good faith effort to accomplish the prescribed retrofit and still be unable to comply by 1980, I believe it is necessary to allow the Secretary some discretion in levying penalty fees. Accordingly, I am submitting an amendment to the Hollings amendment which would permit the Secretary to forego the imposition of the fee if he had determined that the owner has shown good faith in trying to comply with the provisions of the Hollings amendment.

I would hope that the Secretary would also exercise that discretion to insure that there is a continuing effort by tanker owners to comply with this retrofit provision.

Mr. HOLLINGS. Mr. President, I ask for the adoption of the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment as modified.

The amendment, as modified, was agreed to.

Mr. MAGNUSON. Mr. President, the measure now under consideration will increase the cost of tankers and the cost of oil to the consumer. But I believe that this cost is minimal, representing less than a half a cent for a gallon of gas. The following information has been developed by the Committee on Commerce, Science, and Transportation to show the cost increases for typical design tankers. To give perspective, a 120,000-dead-

weight-ton tanker now costs about \$65 million.

Mr. President, I ask unanimous consent to have printed in the RECORD certain figures regarding the increase in cost pursuant to carrying out these provisions, the minimum standards required by the bill, and what impact there may be on the cost of delivery of oil to the United States.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

#### COSTS OF TANKER EQUIPMENT

The minimum standards required in the bill for tankers will have a range of economic effects. Some vessels now have some or all of these required standards. The following tables show the added costs for incorporating all the major features required for the worst case, i.e. tankers which do not have any of the features at present. The costs are based on current U.S. shipyard experience and typical designs of a 40,000-ton and a 120,000-ton tanker. Freight rates for typical voyages are calculated based on current experience.

#### ESTIMATED COSTS OF MAJOR FEATURES REQUIRED BY THE TANKER SAFETY ACT OF 1977

|  | 40,000-ton tankers | 120,000-ton tankers |
|--|--------------------|---------------------|
| Dual radars with true north.....                         | \$40,000           | \$40,000            |
| Collision avoidance system.....                          | 100,000            | 100,000             |
| Loran C with retransmission.....                         | 60,000             | 60,000              |
| Double bottom (new tankers only).....                    | 1,000,000          | 2,000,000           |
| Double hull (new tankers only).....                      | 1,500,000          | 3,000,000           |
| Segregated ballast retrofit (existing tankers only)..... | 750,000            | 1,000,000           |
| Inert gas system (existing tankers only).....            | 900,000            | 1,200,000           |
| Inert gas systems (new tankers only).....                | 800,000            | 1,000,000           |

#### PERCENT INCREASE IN COST OF DELIVERED OIL FOR FEATURES REQUIRED BY THE TANKER SAFETY ACT OF 1977

|  | Typical existing tanker adding all of the requirements | Added for these systems for new tankers |
|--|--|---|
| 40,000-ton U.S. tanker in Caribbean to east coast trade (refined product)..... | 0.85   | 0.16                                    |
| 120,000-ton U.S. tanker in Alaskan trade (crude).....                          | .80  | .16                                     |
| 120,000-ton foreign tanker in Persian Gulf to U.S. trade (crude).....          | 2.22   | .44                                     |

#### TYPICAL SHIPYARD ESTIMATES TO PURCHASE AND INSTALL VARIOUS SAFETY/ENVIRONMENTAL FEATURES FOR A 40,000-DWT OIL TANKER WITH THE ASSOCIATED AVERAGE ANNUAL COST PER OIL TANKER<sup>1</sup>

| Safety/environmental features  | Existing tanker | New construction |
|--|-----------------|------------------|
| Double bottom <sup>2</sup> .....                                       | NA              | \$1,000,000      |
| Double hull (double bottom and double sides) <sup>3</sup> .....        | NA              | 1,500,000        |
| Retrofit of segregated ballast <sup>4</sup> .....                      | \$750,000       | (*)              |
| Inert gas system.....  | 900,000         | 800,000          |
| Collision avoidance system.....  | 100,000         | 100,000          |
| Loran-C with retransmission capability.....                            | 60,000          | 60,000           |
| Total of safety/environmental features <sup>5</sup> .....              | 1,810,000       | 1,960,000        |
| Average annual cost <sup>6</sup> of safety/environmental features..... | 294,000         | 230,000          |
| Average annual crew training cost <sup>7</sup> .....                   | 40,000          | 40,000           |
| Total average annual cost.....   | 334,000         | 270,000          |

<sup>1</sup> Cost estimates were obtained from shipyards with experience in the installation of the subject safety/environmental features in January 1977.

<sup>2</sup> The cost increase of \$1,000,000 for a double bottom and \$1,500,000 for a double hull utilizes a segregated ballast 40,000-dwt oil tanker design as the base case. It should be noted that these cost figures are for new construction only since the retrofit of a double bottom/double hull is economically unfeasible. If the double hull alternative is desired over the double bottom, add \$500,000 to the total of the safety/environmental features and treat accordingly.

<sup>3</sup> The \$750,000 cost to retrofit segregated ballast assumes a high penalty in the loss of cargo carrying capacity (16 percent); therefore, the retrofit consists primarily of changes to the cargo and ballast piping/pumping systems as opposed to major structural conversions. This is consistent with the U.S. Coast Guard's Advance Notice of Proposed Rulemaking dated May 13, 1976. By increasing the cost to retrofit, it is possible to reduce the loss of cargo carrying capacity; however, this varies with tanker design and must be considered on an individual basis.

<sup>4</sup> Assumed to be required by Coast Guard regulations.

<sup>5</sup> The average annual cost (AAC) assumes a capital recovery factor (CRF) of 0.1627 (an annual rate of return on the subject capital investment of 10 percent over a 10-yr time period) for existing oil tankers and a CRF of 0.1175 (an annual rate of return on the subject capital investment of 10 percent over a 20-yr time period) for newly constructed oil tankers. The residual value of the subject features at the end of the assumed time period was not considered in an effort to present a conservative analysis.

<sup>6</sup> The average annual crew training cost of \$40,000 assumes the training of 8 persons each year at an average cost of \$5,000 per person.

AVERAGE TRANSPORTATION COSTS FOR U.S.-FLAG PRODUCT TANKERS CARRYING REFINED PETROLEUM PRODUCTS TO U.S. PORTS BASED ON A 3,000-NM ROUND TRIP (PER BARREL)

|   | Existing 40-Mdwt dirty ballast tanker | 40-Mdwt tanker with segregated ballast |
|---|---------------------------------------|--|
| Approximate required freight rate (RFR) for 1977.....   | \$0.75                                | \$0.87                                 |
| Assumed cost of refined petroleum products at loading port.....   | 18.00                                 | 18.00                                  |
| Original cost of delivered oil.....   | 18.75                                 | 18.87                                  |
| Approximate increase in RFR to retrofit segregated ballast, inert gas, collision avoidance system (CAS), Loran-C with retransmission capability, and crew training, at a CRF of 0.1627 <sup>2</sup> ..... | .16                                   | -----                                  |
| Approximate increase in RFR to include double bottom, inert gas, CAS, Loran-C with retransmission capability, and crew training, at a CRF of 0.1175 <sup>3</sup> .....                                    | -----                                 | .03                                    |
| The cost of delivered oil with the proposed environmental features.....   | 18.91                                 | 18.90                                  |
| Percent increase in the cost of delivered oil.....  | .85                                   | .16                                    |

<sup>1</sup> The increase in required freight rate (RFR) for segregated ballast includes both the capital cost of retrofit and the loss in deadweight.

<sup>2</sup> A capital recovery factor (CRF) of 0.1627 represents an interest rate of 10 percent over a time period of 10 yr.

<sup>3</sup> A CRF of 0.1175 represents an interest rate of 10 percent over a time period of 20 yr.

#### UP AMENDMENT 318

Mr. MAGNUSON. Mr. President, I send a technical amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON) proposes certain technical amendments.

Mr. MAGNUSON. Mr. President, I ask that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 79, line 7, delete "There", and insert "Beginning October 1, 1977, there".

On page 79, line 12, delete "There", and insert "Beginning October 1, 1977, there".

Mr. MAGNUSON. Mr. President, this technical amendment clarifies that the authorization provided for in the bill for

the Administrator of the National Oceanic and Atmospheric Administration to establish a comprehensive program of monitoring oil spillage and conducting ocean pollution research is not an authorization for fiscal year 1977. It is intended to authorize funds for fiscal year 1978, and this amendment makes that intent clear.

I move the adoption of the amendment.

The amendment was agreed to.

#### UP AMENDMENT NO. 319

Mr. MAGNUSON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON) proposes unprinted amendment No. 319.

Mr. MAGNUSON. Mr. President, I ask that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 57, line 18, delete the word "1978" and insert in lieu thereof the word "1980".

Mr. MAGNUSON. Mr. President, this technical amendment is on page 57.

The purpose of this amendment is to change the date after which new vessels must be constructed with double bottoms under the mandatory requirements of the bill. This date conforms to that suggested by proposed regulations issued by the Department of Transportation last week. This will also allow time for discussions with other nations on the question of mandating this feature.

I hope that this will happen. I have some doubts that it will. But at least we are going to give them that chance to do it.

Mr. MAGNUSON. I move the adoption of the amendment.

The amendment was agreed to.

#### UP AMENDMENT NO. 320

Mr. MAGNUSON. A further amendment has been requested by the staff of the Senate Budget Committee and the Budget Committee to clarify the contract provisions under section 205. Specifying that research grants cannot be let unless funds are provided in appropriation acts seems to be basic. The committee did not intend to provide "back-door" spending authority. This amendment makes that clear.

I send the amendment to the desk.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON) offers an unprinted amendment numbered 320.

Mr. MAGNUSON. I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 76, line 4, after the word "agency" but before the period, insert the words ", to

the extent or in such amounts as are provided in appropriation Acts".

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

#### UP AMENDMENT NO. 321

Mr. MAGNUSON. Mr. President, the next amendment would amend page 51 of the bill.

The purpose of this amendment is to correct an oversight in the bill as reported. The provision which enables the Secretary of Transportation to regulate the practice of lightering—the transfer of oil cargo at sea—was not intended by the committee prohibit the practice. Therefore, this amendment would change the bill to say that after a certain date—June 30, 1978—lightering can only be engaged in as prescribed by the Secretary. The amendment would further direct the Secretary to issue final regulations by that date.

I send the amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON) proposes an unprinted amendment numbered 321.

The amendment is as follows:

On page 51, line 25, strike out the word "No" and insert in lieu thereof the words "After June 30, 1978, no".

On page 52, line 6, after the word "shall" and before the word "prescribe" insert the words ", by June 30, 1978,".

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

#### UP AMENDMENT NO. 322

Mr. MAGNUSON. The last technical amendment is to clarify the intent of the committee. It was intended by the committee, but to make the matter clear in the bill, it was requested by the National Transportation Safety Board to insure that they have sufficient authority to investigate tanker accidents. I send that amendment to the desk, together with a letter from the Safety Board, and ask that reading of the amendment be waived.

Mr. STEVENS. Mr. President, will the Senator make me a cosponsor of this amendment? I would like to sponsor the amendment, also.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Washington (Mr. MAGNUSON), for himself and Mr. Stevens, proposes an unprinted amendment numbered 322.

The amendment is as follows:

Page 48, line 25, insert the following and renumber the following subsections accordingly:

(b) BOARD.—(1) The National Transportation Safety Board may investigate any transportation-related incident, accident, or act which—

(A) results in any loss or destruction of, or damage to, any structure or area referred to in section 102, or any vessel; or

(B) affects, or may effect, transportation or vessel safety in any port, harbor, or the navigable waters of the United States.

(2) Investigations conducted by the Board under this section shall be for the purpose of determining the facts, circumstances, and

the cause or probable cause, of any accident, incident, or act investigated under paragraph (1).

Page 49, line 1, insert the words "the Board" before the word "may".

Page 49, line 4, insert the words "the Board" after the word "Secretary".

Page 61, line 6, insert "(a)" before the words "Section 4442".

Page 62, line 23, delete the words "UNIFORM STANDARDS.—".

Page 62, after line 26, add the following: "(b) Section 304(a)(9)(B) of the Independent Safety Board Act of 1974 (49 U.S.C. 1903(a)(9)(B)) is hereby amended by replacing the final period with a semicolon, and adding: 'or Section 4442 of the Revised Statutes of the United States (46 U.S.C. 214).'"

The PRESIDING OFFICER. Without objection, the amendment is adopted.

Mr. MAGNUSON. Now, the Senator from Alaska has an amendment.

Mr. STEVENS. Mr. President, the Senator from Massachusetts wishes to proceed next.

Mr. MAGNUSON. I yield the floor.

#### AMENDMENT NO. 338

Mr. BROOKE. Mr. President, I call up my amendment No. 338, and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk read as follows:

The Senator from Massachusetts (Mr. BROOKE) proposes an amendment numbered 338.

Mr. BROOKE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 60, line 23, strike the period and insert in lieu thereof "; and".

On page 61, line 1, insert the following:

"(I) suspension of personnel with an unsatisfactory record of compliance with safety and pollution control standards."

Mr. BROOKE. Mr. President, once again I must congratulate the distinguished chairman and the committee on their determination to bring an adequate tanker safety measure through the Senate. I know of Senator MAGNUSON's own deep personal concern over the past years as the Congress and administration failed to enforce the tough standards needed to protect the Nation. And I am keenly aware that since the Commerce Committee began studying various tanker safety proposals, including my own bill, the Spill Prevention and Cleanup Act of 1977, Chairman MAGNUSON and his committee have been subjected to great pressure from both the administration and industry to recede from their determination to legislate tough standards. And I must congratulate them on having offered the Senate an acceptable compromise package which will significantly improve our current systems for regulating the transportation of oil and other hazardous materials.

I must admit to some disappointment that certain specific provisions which were contained in the measure I proposed were not included in the committee's bill. Although I have heard informally of various reasons for a few of these omissions, I wonder if I might just

run over a few of these points with the distinguished floor managers of this measure.

For example, I am most eager to see a strong bill establishing liability to owners of vessels who cause oil spills as well as a comprehensive cleanup fund. I had hoped we could take up both the liability provisions which will act as a deterrent to irresponsible owners and the regulatory provisions which set minimum safety rules. What is the committee's intent with regard to oil spill liability?

Mr. MAGNUSON. Mr. President, before I answer the question of the distinguished Senator from Massachusetts, I want to point out that he has long been not only aware of the need for but also a strong advocate of more tanker safety. He introduced, I think, a very fine bill after the spills we had last fall, the one involving the *Argo Merchant* and all the rest of them; and most of his ideas, or many of his ideas, are incorporated in this bill.

On the matter of oil spill liability, the committee decided that we would make that separate for many reasons, but principally because we share joint jurisdiction on this subject matter with the Environment and Public Works Committee.

We are attempting to work out a schedule for joint hearings commencing in late June. In any case, if we cannot work out these joint hearings, the Committee on Commerce intends to hold hearings on its own, and I assure the Senator that his bill will be considered at that time.

Mr. BROOKE. I thank the distinguished chairman, and I am very pleased to hear that hearings will be held. I am glad the Senator is working on it, and I thank him also for his very kind and generous remarks.

Another issue I feel strongly about is the need for a nationwide computer information system which keeps all vital records on a vessel's ownership history and inspection records. I am delighted that some of these provisions are contained in S. 682. But I do not see in the bill any provision for giving the captain of each port the capability of accessing data immediately as my bill explicitly mandated. Does the committee expect the captains of port to have such systems?

Mr. MAGNUSON. The Coast Guard, informs us, and I know this is correct, that they are putting together a system whereby each captain of a port will have this mechanism—the computer that the Senator is talking about—at his disposal, and I can assure the Senator there is no need to add a statutory provision concerning the matter. In the Coast Guard authorization, which will come up following this bill, we have provided for that contingency.

The Senator from Massachusetts and I, of course, will have to see to it, under the appropriation bill, that the money is available, and see that the money is there for them to do this job.

Mr. BROOKE. I thank the Senator. I am encouraged by the statements that we will have some oversight of this operation within the Appropriations Com-

mittee. I think it is very important that we hold the Coast Guard to doing it. I have great faith in the Coast Guard. I am sure, as the Senator says, that if they are working on it, it will be done, but I am still glad we have that oversight.

Another issue of tremendous concern to me is the reorganization of our marine pollution research efforts. The consolidation of these efforts under the administration of NOAA was also mandated under my proposal and I am delighted we are apparently on the way to having this reform enacted into law. However, I hope that once we have done so, your committee will consider asking the Administration to prepare a longer range plan for marine pollution research getting overall goals and intermediate targets. I put such a provision in my bill S. 898 because I think it is counterproductive to authorize studies of nature which require longer time perspectives than just 1 year at a time. Such a system does not allow the researchers to pace their work nor to attract the best people.

And I am concerned that the research sections of S. 682 do not include any changes in engineering, naval architectural science research. My bill would have created a consolidated program of research into and commercialization of oil spill recovery technology and vessel construction techniques. It was clear to me from our tanker disasters this winter and the hearings that followed that there is no substantial progress in the variety of current efforts underway. The presentations of the several agencies involved in developing and implementing these technologies further persuaded me that strong new direction is needed.

Since that time, Prof. Jerome Milgram of the Massachusetts Institute of Technology's Ocean Engineering Department has published an analysis of our equipment needs. And he calls for the development of total spill cleanup systems as well as individual items, including flotation chambers that can be welded onto ships, new portable fendering systems, equipment for measuring air space and air pressure in the cargo tanks and, of course, new substances to help burn off or disperse spilled oil safely.

That would have been very important in the *Argo Merchant* spill, if we had had some substance which could have burned off or dispersed that oil.

I should add that others advising me, such as the distinguished Capt. Gifford Warner, a salvor from Essex, Conn., have also emphasized the need for new engineering developments like relief valves which close upon grounding or submerging.

I would like to ask the distinguished chairman how the Commerce Committee views the Nation's research program on spill prevention, cleanup equipment and techniques, and how or whether it will recommend to the Senate that we strengthen these.

Mr. MAGNUSON. Mr. President, I say to the Senator from Massachusetts, I share the same feelings. The committee has addressed itself to these matters both in this bill and in the Coast Guard au-

thorization bill. The committee added \$2.8 million to the Coast Guard authorization bill to study oil spill containment in high seas and on fast rivers.

Second, by acting on this bill, we are dealing directly with vessel safety technology. I can assure the Senator that both the Coast Guard and NASA are studying and attempting to develop structural metals that can be used in the construction of oil tankers which will withstand tensions that present metals cannot. Marine technology is moving fast, and we ought to take advantage of it.

Mr. BROOKE. I thank the distinguished chairman.

Mr. President, I ask unanimous consent that Professor Milgram's analysis be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

BEING PREPARED FOR FUTURE ARGO MERCHANTS—BY PROFESSOR JEROME MILGRAM, APRIL 1977

#### INTRODUCTION

The grounding and break-up of the Argo Merchant in December, 1976 and the subsequent oil spill brought to public attention just how inadequately prepared we are for dealing with offshore oil tanker accidents. This lack of preparedness applies both to cleaning up oil from the seas as well as to salvage of the ship and cargo before or during oil spillage.

Although each marine tanker accident is different and requires a somewhat different response, there are a number of relatively common features. Therefore, by knowing the important events of the Argo Merchant incident, the reader can achieve an understanding of what is needed for dealing with such events in the future. Therefore, these events are described here. Then, possible means for dealing with such events, and with similar events, in the future are described.

#### EVENTS OF THE ARGO MERCHANT INCIDENT RELATED TO POLLUTION OF THE SEAS

At approximately 6 a.m. on Wednesday, December 15, 1976 the Argo Merchant ran aground on Fishing Rip, which is a shoal located about twenty-seven miles southeast of Nantucket Island, Massachusetts. The grounding damaged the vessel and flooding of the engine room soon began. This flooding disabled the ship's power-making machinery which resulted in power-driven machinery, such as ship's pumps, being made inoperative. Furthermore, steam could no longer be supplied to the heating coils in the ship's tanks so that the oil began to cool slowly. The Argo Merchant carried No. 6 oil which is so viscous at low temperatures that it is difficult to pump. Therefore, during shipment it is usually kept warm (90° to 120°F) so that it can be pumped off the ship with relative ease when the ship arrives at its destination. Once heating steam is lost from the heating coils in the tanks, the cooling begins. This cooling takes place relatively slowly and generally it would take several days for the temperature of the oil in the ship to reach that of the surrounding sea.

At 7 a.m. on Wednesday the U.S. Coast Guard station in Woods Hole, Massachusetts received a Mayday message from the ship. During Wednesday, the Coast Guard delivered emergency water pumps to the ship and personnel from the Coast Guard cutters Sherman and Vigilant assisted with operating them.

During the day Wednesday, water was pumped out of the engine room by means of the pumps which the Coast Guard had brought aboard. Of course, water was leaking in at the same time because of the dam-

age. The damage to the ship also resulted in some of the cargo of No. 6 oil leaking into the engine room. This oil was cooled off by the cold sea water and the resulting cold oil was so viscous that it fouled the pumps. The estimated sea water temperature in the engine room was about 10°C (outside in the sea the temperature was about 6°C). At 10°C the viscosity of the No. 6 oil carried by the Argo Merchant was about 35,000 centipoise. To give the reader an idea of just how viscous this is, it is remarked that the viscosity of water at room temperature is about 1 centipoise and that of a typical crude oil is about 100 centipoise. The cold No. 6 oil has a consistency not very unlike that of thin peanut butter.

By Wednesday evening, a Coast Guard helicopter had put strike team personnel and one ADAPTS (Air Deliverable Anti-Pollution Transfer System) pumping system aboard the vessel. Three strike teams, one on each of the Atlantic, Gulf, and Pacific coasts, are maintained by the Coast Guard for dealing with oil spills and potential oil spills. An ADAPTS pumping system is designed for offloading oil from a stricken vessel. It consists of a power source, an offloading pump, and hoses. The offloading pump is a submersible type, intended to be submerged in a ship's tank. The pump is driven by an integral hydraulic motor which operates from high pressure hydraulic fluid delivered to it through hoses by the power source. The power source is a self-contained diesel engine, hydraulic fluid pump, and associated machinery. The ADAPTS systems are designed to offload between 1,000 and 2,000 gallons of oil (having a low to moderate viscosity) per minute. In the case of the Argo Merchant, the ADAPTS system was not used for offloading oil, but rather to pump water with some oil out of the flooding engine room, and into the sea. Because of moderately large winds and seas and the dark of night, more ADAPTS systems were not brought aboard during Wednesday evening. Even to get the one ADAPTS system aboard it was necessary for the Strike Force personnel to first cut loose all the ship's antenna wires that ran between the midships and after houses so that a helicopter could safely operate between the houses and lower the ADAPTS components to the ship on a cable. The ship was still the responsibility of the owners who hired the Murphy Pacific Salvage Company to carry out salvage operations, whose representative was brought aboard the ship by Coast Guard helicopter. During Wednesday evening and Thursday, while the single ADAPTS system was pumping water from the engine room, the Coast Guard personnel and the representative of Murphy Pacific studied the situation to determine the best course of action.

At this point, it is appropriate to describe some aspects of the situation in which these people found themselves. They were aboard a damaged and grounded ship with a flooding engine room, and with a heel angle sufficient for the starboard side of the main deck to be nearly awash. Furthermore, the ship had taken on an abnormal trim with the stern lower than normal and the bow higher. With the equipment and facilities that were available, it was impossible to determine the precise nature of the damage. Although the basic design parameters of the ship and even curves of ship stability were available on board, determination of the exact nature of the flooding in various parts of a ship from this information as well as heel and trim is impossible with a vessel which is simultaneously grounded and flooded. If only one of these two situations had existed, grounding or flooding, the basic loads on the vessel could be determined from measurements of the heel and trim and use of the available information. This would yield knowledge about the amount and location of flooding in the case of a damaged vessel or the magnitude

and location of the load on the bottom of a grounded vessel. With the simultaneous existence of grounding and flooding, this determination could not be made. Therefore, measurements of the height of the liquid in a number of tanks were made as well as could be done under the circumstances, with the intent of comparing these with later measurements to then obtain information about the amount of flooding and its distribution. The flooding information about a stricken vessel is generally needed in order to be able to determine the best way to use whatever pumping capacity is available; in other words, to be able to decide which compartments to pump out. In the particular instance of the Argo Merchant, with only a single adequate pump available and with the observed engine room flooding it was obvious that the pump should be used to empty water out of the engine room.

During Wednesday, the Coast Guard had requested that the nearest available empty barge and tug come to the scene to assist in oil offloading operations. A major problem in the rapid use of a barge for offloading a stricken tanker in the presence of large oil offloading operations. A major problem in the rapid use of a barge for offloading a not inflected by waves smashing the two vessels together. The vessel owners did not have large fenders available to them and although the Coast Guard had four, three of these were hundreds of miles away. The Coast Guard made arrangements for two fenders and two more ADAPTS pumping systems to be transported to the Coast Guard Air Station on Cape Cod. The pumping systems arrived at the Air Station later on Wednesday and the fenders arrived there on Thursday.

By Thursday morning, the fifteen knot winds and six to eight foot seas that had existed in the vicinity of the Argo Merchant during Wednesday had diminished. Also, the people aboard the vessel reported that the initial engine room flooding which had reached a height of twenty-two feet, had been reduced to fifteen feet by the single ADAPTS pump. By 8 a.m. on Thursday morning, the two additional ADAPTS systems were aboard the U.S. Coast Guard buoy tender Bittersweet in Woods Hole, Massachusetts along with additional strike team members. Shortly thereafter, the Bittersweet left Woods Hole for the scene of the Argo Merchant.

During early Thursday afternoon, the personnel aboard the Argo Merchant found that the water in the engine room was again rising. These people aboard knew that additional ADAPTS pumping systems would soon be aboard, and there must have been some question in their minds as to how they should be used. Should the additional pumps be used in the engine room to try to lower the water level there? On the other hand, some of the tanks of the vessel (the vessel contained thirty cargo tanks) appeared to be flooding. Since the vessel was heeled to starboard, should the additional ADAPTS pumps be used to pump water out of some of the apparently flooding starboard tanks in order to help right the vessel and possibly float her free of the shoal? If any tank had a large hole in its bottom, no good could be accomplished by pumping out that tank inasmuch as the tank would flood to the waterline level no matter how much water was pumped out of it. If the hole in a flooding tank were so small that water entered through the hole more slowly than water was pumped out of the tank, then the water level could be lowered and additional buoyancy thereby provided. If it could be ascertained that there were some undamaged cargo tanks, additional buoyancy could be provided to the vessel by pumping oil from such tanks overboard. Although this may have been the most appropriate thing to do if undamaged tanks could have been located,

the responsibility for pumping oil overboard could not have been assumed by anybody involved, so nobody would make a decision to do this.

Here, another diversion is in order. Under circumstances that existed aboard the Argo Merchant at this time, or which have and will exist on other ships under similar conditions, there is no decision an individual can take which can do him very much good. On the other hand, there are many possible decisions which can do one much personal harm. Thus, situations like this tend to inhibit decision making when effective response actually requires firm and decisive decision making. The technical matters are difficult enough. Somehow, the social and institutional pressures must be eliminated in order to encourage decision makers to take the best possible action.

The Bittersweet arrived alongside the Argo Merchant at about 3 p.m. on Thursday. The two ADAPTS systems and additional strike force personnel were offloaded and the Bittersweet left the scene. Prior to this time, the responsibility for the Argo Merchant was that of the owners and this was being exercised by the representative of the Murphy Salvage Company. He had decided to use one of the additional ADAPTS systems for pumping water out of one of the starboard cargo tanks which was supposed to have contained no oil when the ship left Venezuela, but which appeared to be flooding. By this time, the heel of the vessel had increased, the sinkage towards the stern was larger, and the sea state was increasing with waves beginning to break onto the deck. This resulted in considerable time being required to set up the ADAPTS system and associated hoses. The reader should try to appreciate how difficult it is for men to handle large, heavy six-inch diameter hoses covered with slippery oil on a tilted deck covered with slippery oil with waves and spray coming down upon them. It was dark by the time the pumping system had been set up on Thursday. When pumping began, it was not water which came out of the tank, but oil. This further increased the uncertainty of the situation. Could it have been that that tank was not empty when the ship began the voyage even though the crew reported that it was empty? Could a bulkhead between that tank and another tank have been damaged in the grounding, resulting in a leak so that oil from an adjacent tank poured into a previously empty tank? Could the condition of the ship before the voyage have been so bad that there was leakage between one tank and another so that an initially empty tank slowly filled up? These questions and others must have been going through people's minds and no answers to them were available.

During Thursday afternoon, the Coast Guard assumed command of the salvage operation under authority of the 1974 Federal Intervention on the High Seas Act. No doubt this was done because the owners of the vessel had not accomplished any positive steps toward salvage. All pumping up until that time had been done by the Coast Guard personnel with Coast Guard equipment. The owners had not made any plans for rapid delivery of barges, fenders, or pumps for offloading cargo, nor had they made any arrangements for cleaning up oil that had spilled or might spill later. The strike team aboard the vessel was informed of the Coast Guard intervention by radio.

At about 7 p.m. Thursday evening, a tug, the Sheila Moran, arrived at the scene and it appears that her assistance had been requested by the Murphy Pacific Company. Since there was nothing she could do to help at that time, she stood by on the scene.

During Thursday evening, the wind strength, which was now from the northwest, increased as did the size of the waves and the amount of waves breaking onto the

main deck of the vessel, whose low (starboard) side was towards the waves. Some buckling of the main deck on the aft portion of the ship had been observed, and leaking of oil from a cargo tank into the engine room around bolts or rivets in a bulkhead could be seen. In the region of this bulkhead, strange sounds were emanating from the ship structure as a result of the loads caused by the seas and the bottom against the grounded vessel. Only the one ADAPTS pump taking water out of the engine room was being used. No one aboard knew how long the ship would last. No one could know. Even though the Coast Guard had assumed command of the salvage operation, both the Coast Guard personnel and the representative of Murphy Pacific were trying to figure out the best thing to do. It was clear that at that time that there was very little that could be done immediately. Many of the ship tanks were inspected by opening cover plates on them and a considerable number of the tanks exhibited much agitation and sloshing of the surface of the oil. This indicated that it was quite possible that the bottom of the ship was torn open in way of many tanks, in which case pumping oil out of them and overboard would most likely not have aided in ship salvage. Water was rising in the engine room and it seemed doubtful that pumping more water from the engine room with additional ADAPTS pumps would "stem the tide". Furthermore, it was deemed by everyone aboard to be extremely dangerous to work in the vicinity of the engine room because the behavior of the deck and the bulkhead between the aftermost pump room which was full of oil and the engine room, together with the sounds the structure was making, indicated that the vessel might break there at any time. As a result, a decision was reached to take the people off the vessel. This was accomplished by Coast Guard helicopters late Thursday evening. When the lights from the helicopters illuminated the scene, it became clear that a substantial rate of oil leakage into the sea had begun. It was uncertain as to how much of this oil was coming out of deck openings and how much was coming out of the damaged bottom at this time.

At about 4:30 Friday morning, the 140,000 barrel barge Nepco 140, towed by the tug Marjorie D. McAllister, finally arrived about forty-seven hours after the grounding. However, seas were about four to six feet high with worse weather predicted and the Coast Guard chose to concentrate on other tasks rather than deliver fenders to the ship and bring the barge alongside the Argo Merchant. There was substantial oil pollution at this time and the author estimates the pollution rate to have been approximately 40,000 gallons per hour.

Personnel of the Coast Guard had realized the pollution threat from the beginning and had brought their high seas oil booms and skimmers to the air station at Cape Cod. Also, the Coast Guard had contracted the Murphy Pacific Company to supervise their salvage effort.

Following the grounding of the Argo Merchant, the heading of the vessel changed from time to time. It is not certain how much of this heading change was due to wave forces and how much was due to forces of the currents. The currents at the location of the grounding are somewhat unique in the sense that they are rotary, not recirculating. Whereas in most locations, tidal currents go in one direction and then switch and go in the opposite direction, on Nantucket Shoals the current direction rotates through all headings.

The salvage plans being generated by Murphy Pacific were to begin with stopping the heading changes of the ship by putting out two bow anchors. Then, plans were to locate a group of heavy moorings, each with

a mooring buoy, around the ship to which barges could be tied. A work vessel was to be brought alongside the Argo Merchant with fendering to be provided by the two large Coast Guard fenders which had arrived at Cape Cod. This work vessel was to contain a steam heater which could be used to pump steam through a portable coil which could be put in one Argo Merchant tank after the other to heat the oil again to a temperature at which it could be pumped.

Conditions on Friday, December 17th, were somewhat rough and work was limited to inspection of the ship since all of the planned equipment for salvage was not yet available. Saturday, December 18th, was even rougher. Wind strength increased to over 40 knots and seas were nine to twelve feet high with almost every wave breaking on the shoals. Although the amount of heeling of the vessel seemed to change as the tide changed, the stern of the vessel was definitely getting lower and lower.

By Sunday morning, December 19th, the wind and seas had abated and conditions were nearly calm. In a combination of effort by Coast Guard Strike Force personnel and the tug Sheila Moran and her crew, one of the bow anchors of the Argo Merchant was put out. In the calmer conditions, the oil leakage rate appeared to be somewhat less than before. Wind and sea conditions were also moderate on Monday, December 20th, but during the night conditions worsened. By the morning of Tuesday, December 21st, strong northwest winds and large seas were again present. At 8:30 a.m. the Argo Merchant split in two and a great deal of oil escaped. By Wednesday morning, the wind strength had reached 45 knots and the seas were about twelve feet high. At about 9 a.m. on Wednesday, a section of the bow which had been afloat broke in two and most of the remaining oil escaped.

From the standpoint of pollution damage, we were all very lucky in the case of the Argo Merchant accident. Although at the time of the grounding the wind was from the southwest, during all of the time that oil escaped from the vessel, all strong winds were from the north or the northwest. This resulted in the oil being driven away from the shore, but to the south of George's Bank. Following the spilling of the oil, only for one short period did the wind blow towards land and although some oil came to within fifteen miles of Nantucket Island, before it got closer the wind direction again changed to the northwest and the oil was blown out to sea.

We will not always be so lucky. Statistics about wind direction indicate that such good fortune can be expected most of the time during winter in the location of the Nantucket shore. However, most of the time does not mean all of the time. In addition, winds toward shore are more prevalent there in the summer. There are, of course, many locations in the United States where the situation is reversed and the most frequent winds blow towards the shore.

If the Argo Merchant oil had been blown onto shore, we would presently be dealing with a coastal disaster of major proportions. Any region which has a large quantity of oil blown onto its shores will have such disaster.

The preceding description of events provides a useful framework for considering optimum equipment, personnel training and planning for diminishing the magnitude of such disasters.

#### PREPAREDNESS FOR RESPONSE TO STRICKEN VESSELS

The technology of the salvage of vessels which are grounded offshore has shown no essential advancements during the past thirty years. A technological advance in this field can be made now if funding and the attention of competent engineers are "focused" on the problem. The subject of regulations to decrease the likelihood of tanker accidents

is not a subject of this report (it is being given much attention elsewhere). However, the subject of regulations intended to make tankers easier to salvage if they run aground is indeed a subject of this report and will be considered here.

The *Argo Merchant* lasted just slightly longer than six days after it grounded. During part of this time, the weather was quite rough. In 1970, the tanker *Arrow* ran aground in Chedabucto Bay, Nova Scotia. The *Arrow* lasted four days before breaking up. The *Torrey Canyon* lasted about one week.

The fact that grounded tankers generally seem to last several days after grounding indicates that the mechanism of breakup is not that of any particular instantaneous load exceeding that which the ship can initially withstand, but rather the process is one of fatigue, whereby reciprocating loads deteriorate either the macrostructure (frames, joints, etc.), the microstructure (metallurgical properties of the steel), or both over a period of several days. A feature of fatigue failure is that for specified loading conditions, a small increase in strength will often greatly extend the number of cycle a structure can withstand before ultimate failure. Since grounded tankers generally seem to last several days before breaking up, it seems quite possible that a relatively small increase in structural strength could result in grounded tankers generally lasting several weeks. Studies to determine whether this would be the case are within the capabilities of present day ship structures experts and such studies should certainly take place. If the expected lifetime of a grounded vessel could be materially increased, many salvage operations could take place which are not possible with an expected lifetime of only a few days. Therefore, if studies indicated that a modest structural strength increase would markedly increase the expected lifetime of a grounded vessel, regulations upgrading the structural standards for tankers entering U.S. waters would be appropriate.

Much has been said and written about the advisability of requiring tankers to have double bottoms to minimize the pollution threat if a tanker should run aground. In the present context, the use of double bottoms could be quite helpful for lengthening the expected longevity of grounded vessels. When a vessel runs aground, the bottom of the vessel is usually damaged. The cross-sectional shapes of large ships of today are such that the beam substantially exceeds the depth. This has been caused by the need to increase cargo holding capacity without increasing ship draft, which would limit the areas the ship could use because of limited water depth. With cross-sectional shapes which are relatively wide and shallow, the ability of the structure to withstand sidewise bending is far greater than the ability to withstand vertical bending. In vertical bending, the maximum loads are carried in the ship's bottom and the ship's deck. If the bottom is damaged upon grounding, one of the primary structural members (the bottom) for withstanding vertical bending is either less efficient or unable to contribute at all to bending restraint. On the other hand, if a vessel had a double bottom and the outer bottom were ruptured, the inner bottom could still contribute a significant amount to the provision of vertical bending restraint.

It is useful to understand the enormous amount of buoyancy which can be required to re-float a grounded vessel. The *Argo Merchant* was a relatively small tanker by today's standards. It could carry approximately twenty seven thousand tons of oil. The weight of the ship itself, exclusive of cargo, was about 18,000 tons. Suppose, for example, that the degree of damage to the ship was such that an external buoyancy equal to half of the weight of the steel of the ship

had to be provided. This would be four thousand tons. One person once asked me why the ship could not have been lifted up high enough to get it off the shoal with helicopters. The helicopters having the largest lifting capacity which I know of (Sikorski Skycranes) can lift about 12 tons. Seven hundred fifty such helicopters simultaneously lifting would be required to lift the weight of half the steel of the *Argo Merchant*. Obviously, that would not be a practical solution. There are more practical possibilities. By far, the most practical of these would be an arrangement whereby a stricken ship could float itself. It was impossible to do this with the *Argo Merchant* with the equipment that was aboard. However, it is feasible to require that all tankers entering waters be capable of sealing all deck openings in a time of one hour or less. Retrofitting existing vessels to meet such a requirement would be entirely practical. Suppose it had been possible to completely seal all deck openings on the *Argo Merchant*. If this could have been done, then if air were pumped into the tanks above the cargo while removing as much cargo as was displaced by the air, the four thousand tons of buoyancy could have been provided by depressing the liquid level in the ship's tanks three feet. This would have been effective if the bottom were ruptured or not. Fittings to accept air lines could be required on the top of each tank. Emergency salvage equipment could include compressors and hoses to supply the air.

Let us consider what this would have involved, had it been possible, in the case of the *Argo Merchant*. First of all, the deck opening seals and the deck structure itself would have to have been strong enough to withstand an internal pressure of approximately two pounds per square inch above atmospheric pressure (a practical requirement). Furthermore, approximately one-seventh of the ship's cargo would have to have been discharged to allow a space for the air. Under the conditions of the grounding, had this even been possible, the only practical way to discharge this cargo (which would amount to about one million gallons) would have been to discharge it overboard.

Authorizing the discharge of one million gallons of oil into the sea is a responsibility which an individual simply cannot take under existing political conditions. In the case of the *Argo Merchant*, the impact of the oil, while severe on certain forms of life, especially sea birds, was the least possible since the oil moved offshore and apparently without damaging Georges Bank. In spite of that, all actions of the Coast Guard were mercilessly and unjustifiably attacked by the Lieutenant Governor and the Secretary for Environmental Affairs of the Commonwealth of Massachusetts. It is not hard to imagine what the nature of these attacks would have been like if the Coast Guard officers had been in a position to save the ship and most of the cargo by discharging one million gallons. It is certain that they would have been even worse than they were in the *Argo Merchant* case, since the public officials could link all the pollution that would then exist to direct actions of the Coast Guard.

A workable procedure for exercising human responsibility must be prearranged in a special way if optimum response to stricken tankers is to occur in the future. For each vulnerable region of the United States coastline, the most appropriate individual should be designated in advance as the one who will have the ultimate responsibility for making decisions regarding stricken vessels in his or her area. Arrangements must be made so that these individuals know in advance that they will not be held accountable for any unpleasant results resulting from well-founded decisions. For example, suppose as in the case of the *Argo Merchant* a northwest wind would blow the oil safely offshore

and that a northwest wind was forecast for at least five days. Further suppose that the deck openings could be sealed and air pumped into the tanks above the oil. The best immediate decision under these circumstances could very well be to pump one million gallons of oil overboard to re-float the ship and tow her free and to safety. Now suppose that one day after pumping one million gallons overboard the wind unexpectedly shifted and the oil were blown ashore. Under no circumstances should the person who made the decision to pump the oil overboard or the weather forecaster be held accountable for this occurrence, and this fact should be a law.

As mentioned in the beginning of this report, every oil tanker accident is different. If a grounded vessel is equipped to be able to close deck openings and withstand internal air pressure, salvage by the means described above might be appropriate in some instances. An example of such an incident is the set of conditions that surrounded the *Argo Merchant* accident. Since the oil was No. 6 and since cargo heating had been lost, the oil could only be moved with relative ease for a few days. One day after the accident the wind began coming from the northwest with the weather forecast being for northwesterly winds of increasing strength for several days. If the tanker had been equipped to close deck openings, discharge some cargo, and fill the resulting spaces above the cargo with air, this action, with the pumping of oil overboard, would have been appropriate for the environmental conditions that existed for many days starting on Thursday morning. In other instances, such a course of action might not be appropriate. Such instances would include those where it would be more practical to offload the oil into barges and those when the prevailing wind would be certain to blow discharged oil ashore. How might a grounded tanker be salvaged under such circumstances? The first thing which would have to be known is the extent of damage. If the tanker had deck openings which could be sealed and deck structures which could stand internal pressure, much could be learned about the condition of the ship structure by measuring the pressure in each tank resulting from air being pumped into it. If there were no openings between the tank and the outside environment, and if a sudden increase in air pressure above the cargo were applied, the pressure would not subsequently slowly drop. If there was a path from the tank to the outside environment, the rise in pressure would slowly diminish after air were suddenly pumped in. Were there broken bulkheads between otherwise intact tanks in the *Argo Merchant*? We will never know for sure. On the other hand, if the deck openings could have been sealed, and if we were prepared with the proper instruments, we could have found out. By first measuring the size of the air space above cargo and then measuring the relationship between the amount of air pumped into a tank and the resulting rise in pressure, it would be possible to determine if the internal bulkheads were intact or broken. We are a long way from being able to do this now. Not only are tankers built without the provision for complete sealing of all deck openings above tanks, but the necessary equipment for rapidly making the aforementioned measurements has not been developed. If the state of damage of a vessel were known and if some time for salvage operations could be expected to be available, the most appropriate steps could be planned and taken. It is useless to try to pump liquid cargo from a tank having a large hole to the sea. Water will enter as fast as it is pumped out. With large pumping capacity, some flotation can be provided by pumping liquid cargo from a tank having only a small hole to the sea. The best way to provide flotation by offloading cargo is to

remove the cargo from intact tanks so the resulting air space will not flood, and hence be able to provide buoyancy. If this were to be done without pumping the cargo overboard, the most rapid technique would be to tie barges alongside with fenders between the barges and the stricken vessel. Doing this rapidly requires the availability not only of barges, but of lightweight rapidly deployable fendering systems. Such systems do not exist now. They could be developed.

In the case of the *Argo Merchant*, it took about forty-seven hours for a barge to reach the scene of the incident, which was only twenty-six miles from land and 90 miles from Providence, the nearest large commercial port. Such response is too slow by at least a factor of 5. What is required for faster response by barges? The answer is that it is necessary for state or federal governments to have contracts with barge operators all around the coastline of the nation to be able to provide a prearranged amount of barge capacity on very short notice. The most appropriate contractual arrangements would appear to be those which provided barge capacity according to a certain schedule. A small amount of capacity would have to be available on very short notice. More capacity would have to be available on somewhat longer notice, and still more capacity would have to be available on still longer notice. Contracts for barge capacity on a "best effort" basis could not be sufficient. It would be necessary for barge operators to continuously demonstrate their ability to meet such contracts by means of "surprise tests" called by the contracting agency.

The individuals who would actually carry out the tasks of salvage operations would necessarily have to be highly trained. Presumably they would be groups something like the existing U.S. Coast Guard Strike Forces and quite logically could be the Strike Forces themselves. How could adequate training be assured? Again, surprise tests would have to be carried out on a frequent basis. The tests would really have to test how well the people could do. For example, at random and unannounced intervals a derelict ship filled with a nonhazardous dye could be towed up on a shoal and the strike forces called. The performance of the forces could be measured by examining how much of the dye escaped into the sea before either the ship was floated free and taken to a prearranged location or the entire cargo of dye was offloaded into barges.

One technique of marine salvage of damaged and grounded vessels is that of supplying external buoyancy to the stricken vessel by means of special flotation tanks taken to the grounded vessel which are subsequently flooded, attached to the vessel, and then pumped out to provide buoyancy. This has never been done on a scale which is appropriate for salvaging as large a ship as a modern tanker. It seems appropriate to study the possibility of developing a technology which could apply this technique on a large scale. Many changes from the smaller scale operations would be needed. For example, the only way that a flotation chamber of sufficient magnitude could be attached to a stricken vessel with sufficient strength would be to weld the chamber to the vessel. Can the technology to do this in the presence of substantial seas be developed? I certainly do not know the answer to this question now. However, we could find out by means of a relatively straightforward feasibility study.

After the grounding of a larger tanker, one possibility which always seems to come to the minds of many people is that of burning the oil. Usually this cannot be done. However, it seems entirely feasible to design, develop, and construct special burners which could be placed aboard a stricken vessel for the purpose of burning the cargo. The questions which must be answered first are: How much air pollution would this cause? and how long

would the burning take? Engineering studies to answer these questions are in order.

#### PREPAREDNESS FOR CLEANING UP SPILLED OIL OFFSHORE

Although the details of the salvage of ships and their cargoes are complicated and difficult, the fundamental technical aspects of a salvage operation are generally easily understood and relatively well-known. This is not the case for the cleanup of oil spilled on the surface of the sea which is a fundamentally more complicated subject. As a result of this, a discussion of the technical aspects of offshore oil cleanup will now be given to aid the reader in gaining a thorough understanding of the problems and the best methods of dealing with them.

First we shall consider basic geometry of an oil spill on the sea. Only rarely does an oil spill form a continuous pool of relatively constant thickness on the surface of the sea. The two factors which most strongly influence the nature of the distribution of the oil in the vicinity of the spill are the details of the way the oil is spilled and the nature of the oil spreading. Each accident has a somewhat different geometry for the spilling of oil. In some accidents, the oil is released relatively slowly and in some accidents, it is released relatively quickly. In the case of tanker groundings, the usual scenario is for a slower leak at the beginning of the process, a large release when the ship breaks up, and then a continuing slow release of oil as the broken components of the ship continue to leak the portion of the oil still aboard. It is important to point out the meaning of the word "relatively" in this context. For the *Argo Merchant*, the best estimate by the author of the leak rate prior to breakup, but after substantial leaking had begun, is 40,000 gallons per hour. This estimate was based on direct observation of the average slick thickness, slick width, and current speed. The case of the *Argo Merchant* demonstrates how the details of the accident can affect the nature of the geometry of the oil on the sea. As mentioned before, the tidal current direction at the location of this wreck rotates through all compass headings; the cycle being made twice each day. Although the ship changed its heading to some extent while it was grounded, this heading change was relatively small so that at different times of each day, the ship encountered currents from nearly each possible direction with respect to its own. When the current was coming from a nearly forward or aft direction, the width of the oil slick near the ship was relatively small; being approximately one hundred fifty to two hundred fifty feet. However, when the current direction was nearly athwartships, the width of the oil slick in the vicinity of the ship was between 600 and 1100 feet.

The effect of the details of oil release on the geometry of the oil are well understood and can be predicted with enough precision to determine their effect on the logistics of how to clean up the oil. This is not the case with the phenomenon of oil spreading, which is the second major effect of the geometry of oil slicks. Although some theories for the spreading of oil have been published in the literature of hydrodynamics and of oil spill effects, we are now quite certain that these theories are not applicable to spilled oil on the sea. One of the major reasons for the inapplicability of these theories is the complexity of the effects of the surface tension in the oil-air interface and the interfacial tension in the oil-water interface which are not taken into account by the theories. Generally, the effect of these tensions and the tension in the water-air interface result in a spreading force on the oil. The response of the oil to this force is extremely complicated. First of all, we must realize that most cargoes of oil are not made up of a single chemical substance, but rather are a mixture of different chemicals. This occurs to an extreme degree in the case

of crude oil which is made up of a vast number of different chemical substances. Often, one or more of the chemical components of spilled oil spread more rapidly under surface tension forces than the remainder of the oil. This spreading can be very rapid and effectively contaminates a large surface area. One effect of this contamination can be to retard the spread of the remaining oil to a degree which would be unexpected if this effect were not first considered. This appears to be a contributing factor to the fact that most oil spills are found to have interspersed regions of a thin layer of oil on the surface and thick layers. The thick layers appear to float around within the thin layers and very slowly spread into the thin layers.

We can give some measures of how fast oil is expected to spread. In the event of a sudden release of a large quantity of oil, the initial stages of spreading are accurately predicted by existing published theories. This is because when the oil layer is thick (one foot thick or more) the spreading is dominated by the forces of gravity and that required to accelerate the horizontal motion of the oil in the pool, these effects being well understood. Typically the speed of the edge of the slick in such a situation is one to two knots. However the oil slick rapidly thins and this effect no longer dominates at distances more than a few hundred feet from the source of the leak. It is never important during a relatively slow leak. In the case of a relatively slow leak or at distances more than a few hundred feet from a sudden oil release, the dominant surface contamination generally appears to be the surface tension spreading of the most rapidly spreading components. Typically this takes place at speeds between 0.25 knots and 1 knot. It is important to realize that under some circumstances this surface contamination can contain very little oil. These are the instances in which it is only one or two molecules in thickness (approximately  $10^{-6}$  inch). Under some conditions such a thin layer may be invisible. Often the thick and thin regions that people see are both much thicker than that described above with the thick regions being 0.05 to 0.4 inches thick and the thin regions being 0.001 to 0.05 inches thick. The spreading of these later thicknesses usually takes place more slowly with spreading rates being on the order of 0.1 knot. For this condition, both the thick regions and the thin contain substantial quantities of oil.

Since a water current either tidal, or wind or wave induced, nearly always exists at the scene of a tanker grounding, most of the oil moves with the current direction. For a relatively slow leak then, we find a track of oil moving away from the ship at about the surface current speed and with a width that is typically between 100 feet and 1500 feet wide. This general picture prevails, with the width slowly increasing, as distance from the stricken ship is increased. The increase in width occurs in two stages. The first comprises that of the most rapidly spreading components which contain extremely little oil. The second comprises the slower spreading of what most people call the thin region of the oil. These thin regions are often "fed" by spreading from the edges of the thick regions which float within the track of the slick.

In the presence of a sudden discharge of oil, we would expect a region containing discharged oil which spreads somewhat more rapidly than oil from a relatively slow discharge until the average thickness of the oil in the region diminishes to approximately  $1/4$  inch. Typically, the more rapid spreading could be expected to exist until the general diameter of this region was between 1,000 and 4,000 feet, depending on the volume of oil that was spilled.

How do the properties of the oil itself affect the distribution of the oil in the sea?

We have already discussed the importance of surface tension for oil spreading. Different cargoes have components of different surface tension. Some oils have oil-air and oil-water tensions that are so high that surface tension actually tends to contract the size of the slick. In this case, the very thin layer of one or two molecules of thickness would be absent and the remaining spreading would be related to the extent to which gravitational spreading forces can overcome viscous and surface tension retarding forces.

Another property which affects the gross spreading of the oil is the oil density. The density does not affect the relatively rapid spreading which takes place immediately after a sudden release of oil, since it affects the gravitational spreading forces and the force needed to accelerate the oil in the same way with the effects exactly counteracting each other. However, during the later stages of spreading, wherein surface tension spreading forces and gravitational spreading forces are basically counter-balanced by the interfacial friction between the oil and the water, the oil density can affect the spreading rate. In particular, the more the oil weighs, the more slowly it will spread. Nearly all oil is lighter than sea water. In fact, if it were heavier than sea water it would sink and spreading would certainly not be a consideration. To understand how increasing the weight of the oil slows down the spreading, one can think of oil that is as heavy as water. In this case, if surface tension forces were ignored, the oil would not spread at all inasmuch as the gravitational effects on this oil would be the same as if the oil were water instead.

Oil properties also affect important phenomena other than spreading. Some will be described here. When oil is spread on the sea, a small portion of it dissolves in the water and some of it evaporates into the air. From the standpoint of cleanup operations, dissolution can be considered to be unimportant since the amount that dissolves is very small although dissolution is certainly important for considerations of oil toxicity.

The evaporation of the oil is highly dependent on oil properties. For a heavy residual oil, like that which came out of the Argo Merchant, evaporation is slow and can be considered negligible over time scale during which cleanup operations would take place. On the other hand, if gasoline were to be spilled on warm water, such as might exist during a warm sunny day in the Gulf of Mexico during the summer, nearly all of the spill could evaporate in one day. All stages of evaporation between these extremes are possible. They depend on the water temperature, the air temperature, wind, and the evaporative properties (vapor pressures) of the components of the cargo.

In addition to the reduction in amount of oil on the water by evaporation, the evaporative process is also an important contributor to what we call "weathering of the oil". This is the change in oil properties with time for oil which is on the surface of the sea. With a cargo containing a mixture of different chemicals, some will evaporate more rapidly than others so that the fractional composition of what remains changes with time.

When breaking ocean waves break on an oil covered surface, oil droplets are dispersed into the water beneath the waves. The density, viscosity, and oil-water interfacial tension have a considerable bearing on this dispersion of droplets into the water column. These properties affect how deeply the droplets will go, how many are formed, and how quickly they will rise to rejoin the slick. Typically, we expect a substantial number of droplets to be dispersed between the surface and a depth equal to about twice the wave height. Lesser quantities of droplets are dispersed at greater depth. This effect

has a bearing on spill cleanup operations since surface equipment cannot encounter droplets which are dispersed to depths greater than that of the equipment.

As the reader can see, the immediate fate of spilled oil is influenced by the properties of the oil itself, the air temperature in the vicinity of the spill, and the sea and current conditions that exist in the spill vicinity. Clearly there are many advantages to optimum rapid cleanup response as this minimizes the extent to which the oil spreads or has been carried by waves and currents. The more the oil spreads and the greater the distance to which it has been carried, the more difficult it is to clean up. One element of being able to generate the optimum logistical plans for cleaning up the spill rapidly is that of knowing the oil properties as well as weather and sea conditions. The appropriateness of requiring prearranged plans to have this information available for every tanker entering U.S. waters should be studied at once.

There are a number of hydrodynamic limitations on oil spill cleanup operations which must be considered. Any device which collects oil moves at some speed with respect to the oil and water. If the oil and water are essentially stationary, the device must move in order to encounter a continuing stream of oil. If the oil and water are moving in a current, the device can either move at some speed or be stationary in order to encounter oil. In either case, there is a relative speed between the liquids and the device. To some extent, any device slows down the speed of at least some of the encountered oil. Considerable research has taken place on the hydrodynamic effects that occur when oil is slowed down in a relative current. For purposes of illustration, we consider here slowing down oil by a simple oil boom. This is just a floating fence as shown in Figure 4. In the presence of a relative current of low speed, the oil is held against the boom as shown in Figure 5. For very low current speeds (less than 0.5 knot) and in the absence of ocean waves, the cross-sectional shape of the oil pool, as viewed from the side, is relatively smooth as sketched in the figure. At a higher speed of about 0.75 knot, the cross-sectional shape of the oil pool forms a lump near its leading edge, as shown in the figure. At a still higher speed of about 1 knot, the size of this leading edge lump, called a headwave, is increased. At an even higher speed (about 1.25 knots), oil droplets are torn off the headwave by the water stream and these droplets are carried below and past the boom or collection device. This particular effect has nothing to do with any details of any device except for the fact that some of the oil is slowed down. The effect results in a natural limitation in the relative speed of any containment or cleanup device of about one knot. Exceeding this limit will result in entrainment of oil in the water with this entrained oil moving under and past the device.

Some development has taken place on cleanup devices that slow down both the water and the oil to an extent that allows some cleanup at relative speeds up to two knots. However, the nature of these devices limits them to low collection rates so that they are not appropriate for large spills on the high seas. Thus, the one knot limit for high seas cleanup of large spills remains.

The limitation in relative speed of one knot affects two areas of oil cleanup operation. The first is that of properly manipulating cleanup devices. Only under relatively rare circumstances can cleanup devices operate efficiently when anchored. These circumstances would be those when the water speed is large enough to carry a substantial amount of oil to the device but still less than one knot. Usually, in the presence of currents of varying strength and direction,

effective oil spill cleanup requires the towing and maneuvering of cleanup devices. Such towing and maneuvering must be done at a relative current speed of 1 knot or less to avoid entrainment of oil in the water column. This limits the types of vessels which can be used to those which can go this slowly and still maintain accurate steering control in the presence of substantial waves. Most vessels have good control at higher speeds, but only few can maintain sufficient steering control to properly tow and maneuver cleanup equipment at speeds of one knot or less.

The second area affected is that of oil encounter rate. The first phases of the Argo Merchant incident provide a good example of typical leak rates in an oil tanker grounding. The estimated leak rate of 40,000 gallons per hour corresponds to 667 gallons per minute. The width of the portion of this slick containing substantial oil in the vicinity of the ship was observed to be between 150 and 1100 feet, depending mainly on the current direction. A typical current velocity was about 1.5 knots in the general area (although it was often larger over localized areas). This current speed, along with the aforementioned leak rates and range of slick widths, corresponds to a range of average thickness from 0.0070 in. to 0.046 in. (0.18 millimeters to 1.18 millimeters). These relatively small mean thicknesses, which are typical, together with the one knot limitation on encounter speed, limit the oil encounter rate of the containment or collection device. For example, for the mean of the two thicknesses given which is 0.026 inches (0.67 millimeters) the encounter rate of a skimming vessel moving at a relative speed of one knot with a skimming width of 75 feet would be 124 gallons per minute. This is only about 19% of the leakage rate in the example and is a very small collection rate for a large skimming device. For the case where the current was crosswise to the ship leading to a slick width of about 1100 feet, the oil encounter rate (which would be the maximum possible collection rate) of a seventy-five foot wide skimming vessel would be only 34 gallons per minute.

The only practical device for encountering a high rate of oil flow which could lead to a high collection rate is a barrier. High seas oil pollution control barriers are made of flexible material and are strong enough to be used in lengths up to thousands of feet. As a result, a towed barrier forms a device for being able to encounter a large oil flow rate. For the example cited above, all of the oil (667 gallons per minute) could be encountered by a barrier. By utilizing a skimming device within the barrier as shown in Figure 6, or skimmers built into the barrier as shown in Figure 7, large collection rates could be achieved.

For the example given above, the current speed was 1.5 knots, whereas it has been stated that the relative speed of collection equipment cannot exceed one knot. This means that even with a barrier based collection system, one system could not handle all of the job. The reason for this is that at a relative speed of one knot, the system would essentially back away from the wreck at an absolute speed over the bottom of one half knot. This means that as the distance of the collection system from the wreck increased, it would be necessary for a second collection system to start near the wreck and slowly back away. The problem of determining the number of cleanup systems and their paths whereby they return without oil to the scene of a wreck after they reach a certain distance away from the wreck is a problem in pre-planned oil spill logistics whose solution could be worked out.

Another hydrodynamic limitation on oil spill cleanup is that imposed by the motion of ocean waves. Most cleanup systems can collect a large volume of oil and only a small volume of water only if they follow the

motion of the waves on the surface of the sea relatively well. Such wave following motion is nearly impossible at the bow of a collection vessel. Under a great number of circumstances, the relative motion, up and down, of the fluid at the bow can be expected to be the same order of magnitude as the wave height. Thus, in a wave that is six feet high, there are many circumstances where the waterline at the bow of a collection vessel would move up and down by six feet. Under these circumstances, efficient collection of oil would be essentially impossible. Some work has been done leading to devices having articulated oil inlet devices at the bow of a vessel so as to adjust, in part, for the relative motion between the fluid and the vessel. This leads to a partial solution for very small waves (three feet or less), but another limitation may make refinement of this technique useless. This is the fact that when a vessel has a large relative motion with respect to the fluid, such as is the case with the vertical motion at the bow of a cleanup vessel, the motion of the vessel generates waves which drive much of the oil away, thereby making effective cleanup impossible.

The oil containment and cleanup devices which have the very best wave following ability can be divided into two categories. The first is that of specially designed high seas barriers which can have skimmers built into them. These barriers are designed to carry much of the sealoads in lines external to the barrier sheets (fabric fences), thereby leaving the barrier sheet relatively free to respond to the motion of the water and oil. The second category is that of skimmers in which the skimming device is relatively small and relatively light. Small and light devices with relatively large water plane areas can follow the surface of the sea to much greater accuracy than large cumbersome devices. A multiplicity of small devices can do a much better job in this regard than a single large device. To provide high collection rates with floating skimmers, they must be used inside a barrier.

Even though barrier based skimming systems appear to be the only feasible way to collect large quantities of oil from the open sea, their use is limited by the size of the waves. No barrier systems yet designed can work effectively in large breaking waves. Tests indicate that the maximum breaking wave height in which barriers now available can contain and collect oil, is about 8 feet. Much larger non-breaking waves (swell) can be accommodated. Larger barriers that could effectively work in larger seas could certainly be designed and constructed, but their size and weight would probably make them impractical for use.

It is useful to speculate on how effective oil barriers could have been in containing or controlling oil from the *Argo Merchant* if they had been used. If appropriate vessels for towing and maneuvering barriers had been available, the limiting factor on barrier effectiveness would have been the sea state. Table I lists sea conditions in the vicinity of Fishing Rip for the period of December 15 to December 31, 1976. The table gives the best estimate of the author (who has participated in many tests of barriers offshore; two being with oil) of how effective the U.S. Coast Guard high seas barriers could have been on each day. Reference to the table shows that totally effective or effective operation of barriers could have been possible on 10 out of 17 days. However, it is important to note that barriers would not have been effective on the days the ship broke up, releasing most of the oil. This highlights the need for being able to collect thin layers of oil after considerable spreading has taken place.

TABLE I—Sea conditions and estimate of how effective U.S. Coast Guard high seas barriers could have been

Date, sea condition, potential effectiveness of barriers, and comments:

Dec. 15: Rough, 10 ft. waves; ineffective; only small leak.

Dec. 16: Calm 1 ft. waves; totally effective; larger oil leak.

Dec. 17: Medium, 4 ft. waves; effective; substantial oil leak.

Dec. 18: Rough, 6-9 ft. waves; ineffective; substantial oil leak.

Dec. 19: Calm, very small waves; totally effective; substantial oil leak.

Dec. 20: Calm, small waves; totally effective; approximate total oil spilled—2 million gallons.

Dec. 21: Rough, 7-9 ft. waves; ineffective; ship broke up, releasing much oil.

Dec. 22: Rough, 10 ft. waves; ineffective; bow section broke, releasing much oil.

Dec. 23: Calm, 3 ft. swells; totally effective.

Dec. 24: Medium, 4 ft. waves; effective.

Dec. 25: Medium, 5 ft. waves; effective.

Dec. 26: Medium, 3 ft. waves; effective.

Dec. 27: Rough, 8-9 ft. waves; ineffective.

Dec. 28: Medium; effective.

Dec. 29: Rough, 4 ft. breaking waves plus 6 ft. swells; partially effective.

Dec. 30: Rough, 7 ft. breaking waves plus 14 ft. swells; ineffective.

Dec. 31: Medium, 2 ft. waves; plus 6 ft. swells; effective.

#### KEY

Totally Effective—Barrier could hold and collect oil with negligible oil loss under or over barrier.

Effective—Barrier could hold and collect oil with small oil loss past barrier on the order of 5 gallons per minute.

Partially Effective—Barrier could hold and collect oil, but oil loss past barrier would be on the order of 40 gallons per minute.

Ineffective—Oil loss past barrier would be on the order of 40 gallons per minute. More if there were a pool of oil inside the barrier.

Barriers were not used in the case of the *Argo Merchant* accident for several reasons. Notable among them is the fact that tow vessels which can maneuver barriers at speeds of one knot or less while maintaining steering control in big waves are very few in number and simply were not available. Furthermore, the question arises as to what one would do with cold No. 6 oil contained in a barrier. It is too viscous to pump by any ordinary methods. Given that condition and the fact that the prevailing currents were carrying the oil out to sea, use of barriers without collection was inadvisable. However, if prevailing currents had been carrying the oil towards land, and had barrier towing and maneuvering vessels been available, it would then have been advisable to use the barriers to contain much of the oil and tow it out to sea with the hope that the wind direction would change before oil which was deposited far out at sea would be blown back on land.

Now we are in a position to consider what is necessary to achieve a state of preparedness which is adequate to collect large quantities of oil from offshore spills and to provide significant protection to land areas from oil which is so viscous that it is not practical to pump it. First, we must consider the means of transportation of equipment and people to the scene of an oil spill. Since maneuvering vessels are going to be needed in any case, waterborne transportation is the method of choice. It should be noted that this is different from some aspects of tanker salvage operation wherein optimum transportation of people and at least lightweight equipment is by helicopter. Waterborne transportation can be expected to have a speed of about

14 knots in moderate weather. The number of locations at which equipment and recovery vessels must be stockpiled depends on the distance, from shore that we wish to be able to work at, as well as the response time. It is sufficient to discuss these matters in approximate terms. Roughly speaking, a response time of five hours for distances up to 25 miles offshore would seem acceptable. This would certainly be much better than we can do now. To protect a stretch of coastline under such conditions would require stations of equipment to be located approximately 130 miles apart. In consideration of the fact that it is impractical to protect the entire United States coastline to this extent, the approximate number of stockpiling stations would have to be about 20. If Great Lakes protection were also to be provided as well, about thirty stockpiling locations would be needed. The items needed at each station shortly upon notification of a spill are barriers with built-in skimmers or separate skimmers, storage vessels, tow vessels, and trained personnel. Each of these will be described in turn.

Barriers are the most highly developed of all of the required items for a complete spill cleanup system. Barriers capable of working on the high seas in breaking waves up to 8 feet high and in very large non-breaking waves exist, although in inadequate numbers. Some of these barriers are available in lengths of about 600 feet packaged in containers with the total loaded package weight of about 15,000 pounds. The United States Coast Guard has developed special sleds on which the packages of barrier can be towed at speeds up to 20 knots. These sleds are expected to be available in the very near future so that the problem of an adequate supply and ability to transport barriers are only those of stockpiling and routine maintenance.

The next element needed for a high seas oil cleanup system is the provision of skimmers that can work effectively together with barriers. At least three different skimmer types have been developed for high seas use. One is designed to be built directly into a high seas barrier so that once a barrier is deployed, the skimmer is automatically also deployed. None of the skimmer types is appropriate for use in a large spill of cold No. 6 oil because of the difficulty of pumping this material, but most oil transported is not No. 6 oil and initially it would seem advisable to forego the possibility of collecting No. 6. None of the seemingly useful types which have been developed for large offshore spills have been thoroughly tested offshore with large quantities of oil. Each has been tested in testing tanks. It is the author's opinion that offshore tests of the most appropriate skimmer types with oil are an absolute necessity so that confirmation of their capabilities will be available in order to aid in planning for cleaning up oil spills.

Packaged barriers and skimmers can be carried to the scene of a spill on high speed planing sleds towed by high speed vessels. For example, the barriers and skimmers whose use is presently being contemplated by the U.S. Coast Guard can all be towed at speeds in excess of fourteen knots by the Coast Guard 82-foot cutters as well as some of the larger Coast Guard vessels. The packaged barriers are especially designed for rapid deployment (it takes about 20 minutes to deploy a 600-foot long barrier from a container and barriers can be connected together to give a longer barrier), so that rapid availability of skimmers and barriers is possible. Rapid availability of collection vessels which can be used to store collected oil does not exist. Several attempts have been made to develop large lightweight rubber bags suitable for this purpose, but tests of these bags have resulted in their structural failure. One ele-

ment which must be developed in order to fulfill the needs of a total spill cleanup system is that of storage capability. A consideration of this subject indicates that two different types of storage capability are needed. The first is that of special newly designed small barges. These would be vessels having an overall length of about 75 feet, which would be stored near stockpiles of barriers and skimmers. These vessels would be designed as lightly as possible in order that they could be towed by the same type of vessels that could be used to tow sleds containing boxes of barriers and skimmers. In effect, the capacity of such a collection barge would be that of the largest barge, which vessels such as Coast Guard 82-foot cutters could tow at speeds of 14 knots or more when empty. Preliminary calculations indicate that vessels of this type could have a storage capacity of about 100,000 gallons of oil which would represent about three hours of oil collection from the barrier skimmer combination that was collecting oil at a rate of approximately 600 gallons per minute. These storage barges should also be designed to achieve gravity separation of oil and water since some water is collected with all skimmers and separation would allow discharge of the water so more oil could be collected.

The second aspect of the storage system is that of the availability of commercial barges. Some organization or agency must take the responsibility for generating contracts with a great many barge operators around the coasts of the United States. These contracts must be arranged so that empty barge capacity is available on a few hours notice. The required capacity could be on a scheduled basis where an initial capacity in each location is provided within a relatively short time (for example, 8 hours) and more capacity is provided over a longer time. By this means, the immediate storage capacity response to an oil spill could be provided by the special small barges which could be towed at high speed, with arrangements made for these barges to be able to offload collected oil into the commercial barges at a later time.

The next needed items for a total spill cleanup system is that of maneuvering vessels. As has been explained previously, it will generally be impractical to moor oil spill cleanup systems in the vicinity of a tanker grounding. Effective cleanup requires towing of barrier-skimmer combinations at a speed of one knot or less. Figure 7 is a sketch of what the author believes will be the most effective total spill cleanup system. Vessels which are capable of towing at speeds of one knot or less and still maintaining steering control in waves of substantial size are few in number. The power requirements for this towing are particularly small; a few hundred horsepower is more than sufficient. The two problems that do exist are the ability to tow continuously at a slow enough speed and the ability to have adequate steering control to properly handle barrier-skimmer combinations at such low speeds. It is quite within our capabilities to retrofit a large number of existing vessels to provide them with this added capability. To date, hardly any such retrofitting has been done. Since several barrier-skimmer-barge combinations can be expected to be needed at the scene of an offshore oil spill, numerous tow vessels must be available at each location. It would be entirely feasible to add the low speed towing capability to the same vessels which were to be used for high speed response with equipment and personnel.

This brings us to the matter of trained personnel. Cleanup of an oil spill offshore is a difficult task and requires personnel who are thoroughly trained in the job that they are to do. Just as is the case with training and practice for salvaging stricken vessels and their cargoes, training and practice of clean-

up personnel are needed as well. Because of the availability of air transportation for people, trained personnel need not be stationed at every location where equipment is stockpiled. The present U.S. Coast Guard Strike Force concept could be used if the number of strike forces were increased in number and if thorough and regular training took place.

This completes the description of what is needed for a total spill cleanup system; barriers, skimmers, storage vessels, tow vessels, and trained personnel. If any one of these elements is absent, essentially no oil cleanup can take place even if all of the remaining items are provided.

Mr. BROOKE. Mr. President, I am grateful for the chairman's thoughtful responses to these points. I realize the committee has, in each of these cases, done the most it could do, given the tremendous pressures that have been generated.

I would like to offer two amendments to the bill, which I believe strengthen the measure.

My first is amendment No. 338, which I have called up.

This amendment adds language to the list of authorities given to the Secretary in establishing the manning and training standards. It gives her or him the power to suspend a licensed officer's license as a sanction against an unsatisfactory record of violations of the safety and/or pollution control standards in this act. I am convinced that this power would be an important addition to the Secretary's ability to insure that the people manning vessels in our waters obey our laws.

I have found that 80 percent of these accidents have occurred, because the personnel manning these ships that come into our waters are just not adequately trained. I believe it is time that we do something about it. It means that personnel would not just fear the fines that might partly be borne by their employers or jail terms that would probably only be levied in extreme cases. It means they also would have to be concerned about their ability to work at all on any vessels. And I think that means that every licensed merchant marine officer and hand will take a personal interest in living by these new standards. There is surely no question in anyone's mind that human error and incompetence are the chief causes of vessel accidents. This amendment would give us one more useful tool for reducing these, and I hope the committee will accept it.

Mr. MAGNUSON. Mr. President, I oppose the amendment. Maybe the amendment sounds all right, but the Coast Guard, of course, has a system whereby they would suspend all American merchantmen for such violations. This type of amendment, I am told, is in violation of IMCO treaties and agreements. As the bill provides, and the present law and treaties require, we must accept the certificate of compliance for foreign vessels and for their crewmembers.

The Senator and I, and I believe all of us are wondering whether we can be assured that the foreign officers meet training standards and take our pollution control and safety law seriously. Of course, we are hoping that this will be

done by the IMCO conference, that they will be reliable and show good faith, and that there will be a tightening up with respect to those who man the ships.

Under the bill, every tanker that enters a U.S. port is required to meet construction, navigation, and operation standards, and not to do so may preclude them from entering our ports.

Regarding the manning standards, the most effective way, of course, is to raise the international standards. I do not know that that is going to happen. I do think we ought to give them a chance. They are now meeting. I hope the Senator will withdraw his amendment to see just what we can do in that particular field.

Mr. BROOKE. Mr. President, does the distinguished chairman see much hope of adoption of stricter international standards in the new talks on the Law of the Sea?

Mr. MAGNUSON. In the Law of the Sea negotiations and in future IMCO talks, of course, they claim they will be issuing manning standards. But I am the last one to answer that question, because I have been so disappointed over the years. The Senator from Alaska and I have been on the Law of the Sea conferences, and these other conferences, and we have almost given up. As a matter of fact, we did give up on the 200-mile thing finally. We took the lead ourselves.

We are doing the same thing in this respect. I am hopeful that this might be a clear lesson to them to do something. Otherwise, we will just have to amend this act and take a separate bill as time goes on.

Mr. BROOKE. The chairman has always spoken with great candor. I remember very well that since I have been in the Senate, and this is my 11th year—the distinguished chairman has been here many years longer than I—we have always been fighting for that 200-mile limit. We were always told not to do anything in this area because the Law of the Sea Conference would take care of it.

If we had waited for the Law of the Sea Conference to take care of it, we would not have the 200-mile fishery zone today. I know the State Department and other departments finally came to terms with the legislation. We passed legislation and they are living with it. It should have been done many, many years ago. Unfortunately, we were always delaying for the promise of international agreements.

Again, I commend the Senator from Washington for his leadership in this area. I understand the difficult position that the committee has been in as a result of its lack of a crystal ball as to the future of international negotiations and of its desire to help the U.S. delegation show a cooperative spirit to other coastal nations.

However, I wonder if, on behalf of the Committee on Commerce, the chairman can agree that we may need domestic unilateral action if international agreements are not forthcoming. I further wonder if the committee will agree that, in the unhappy event that treaties dealing with strict vessel personnel stand-

ards are not signed, there will be hearings later this year for extending domestic authorities further. If I could be assured that these concerns will not die, but, rather, that the committee will formally consider this proposal if the talks do not succeed—and we all hope that they do, of course—I would then feel somewhat more comfortable, though reluctant, in withdrawing my amendment until such later date.

The chairman, as I stated, does not have a crystal ball. He cannot know, and I shall not put that responsibility upon him. We all hope it will work out well. But I would like some assurance from the distinguished chairman that if it does not work that way, we shall immediately hold hearings so we can get on with passing some tough legislation so far as this subject is concerned.

Mr. MAGNUSON. I say to the Senator from Massachusetts that I think the Senator from Alaska and I would be the first ones to take a good, long look at this, in light of what is happening now. If they do not come up with something, we would be the first ones to have some hearings and jump into this matter and say, "Let us bite the bullet and do it ourselves."

Mr. BROOKE. With the Senator's assurance and the assurance of the distinguished Senator from Alaska, I feel personally more assured. I withdraw that amendment.

The amendment was withdrawn.

#### AMENDMENT NO. 339

Mr. BROOKE. Mr. President, I call up my second amendment, No. 339.

The PRESIDING OFFICER. The clerk will state the amendment.

The legislative clerk proceeded to read as follows:

The Senator from Massachusetts (Mr. BROOKE) proposes an amendment.

Mr. BROOKE. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 45, line 17, strike the word "may" and insert in lieu thereof "shall".

On page 50, line 6, insert "or advisory vessel traffic service" after the word "service".

Mr. BROOKE. Mr. President, this amendment extends vessel traffic services to cover wider areas of our territorial waters and of the high seas than do current VTS programs. My own legislation proposes that vessels entering our fishery conservation zone become subject to management by a vessel traffic system. I understand this proposal met with substantial administration opposition, also, because of various issues of international law. The committee's solution was to permit establishment of advisory vessel traffic services, presumably voluntary services. Since it is not my intention to jeopardize the chances for enactment of this measure, my amendment seeks to assure that most traffic in the fisheries zone and the contiguous zone will in fact be using this system.

I am proposing that it be made one more condition of entry to U.S. ports that

vessels wishing to come in shall use the advisory traffic services.

Mr. President, if S. 682 had been law, we might still have had the *Argo Merchant* disaster of last December because nothing in it would force that ship's careless master to use his equipment and to stay out of the Nantucket shoals, which are far outside the waters covered by the VTS in this measure. Furthermore, Massachusetts fishermen have told Congress that tankers habitually take shortcuts through these hazardous waters in the interest of making a fast buck. They must be watched, they must be warned, and when necessary, they must be guided to a new course.

My amendment has one other feature. It mandates, rather than "permits," establishment of the advisory services on the high seas. I offer this change because I want to be sure that the Secretary carries out this mandate of Congress. I do not want the power to establish these high seas services to languish, as so many of the Secretary's powers granted under the Ports and Waterways Act have languished. I hope the committee will accept these changes in the interest of getting these new services established soon and effectively. I believe the traffic services are at least equal in importance to the other major regulations established in sections of this bill, and we should lose no time in pressing for their implementation.

I ask the distinguished chairman if he wishes to comment on this amendment.

Mr. MAGNUSON. This is somewhat similar to the last amendment. Though I am probably not being as wise as I should, I would take these amendments the way they are. But some other considerations are involved.

This type of provision is one that both the State Department and DOD have been vehemently opposed to in the past. Everyone concerned with this bill agrees that any action touching and concerning the high seas should be handled through IMCO. To condition entry into U.S. ports upon compliance with these VTS's may damage U.S. efforts to have these services recognized internationally. I can assure you that if these VTS's on the high seas are not recognized internationally then this committee will be required to initiate a new round of hearings into this matter and possibly amend this legislation to condition entry into U.S. ports upon compliance with these advisory VTS's.

I think we ought to move ahead. If the Senator from Massachusetts would change his amendment by withdrawing the part requiring conditions of entering U.S. ports, then it is acceptable. Does the Senator have "shall" in there?

Mr. BROOKE. Yes.

Mr. MAGNUSON. I understand that, on the wording, if the Senator would amend the bill from "may" to "shall," we can accept the amendment.

Mr. BROOKE. Mr. President, as I have said, it is not my intention to disrupt the delicate balance of forces the committee has assembled in support of this bill. If the committee can assure us that portions of the amendment mandating

the use of advisory traffic systems on the high seas will be included in those hearings which will be held in the event the negotiations fail to resolve these issues, I guess I could drop those portions of the amendment. However, as I have said, I would like the committee to accept the first part of the amendment, which mandates the establishment of the advisory traffic services. The Secretary still has plenty of discretion to decide which are priority areas for setting up services.

I just want to be sure that we really begin moving toward implementation, and that this law does not, like the Ports and Waterways Act, languish because the Secretary may choose whether or not to act. Therefore, in accordance with the suggestion of the distinguished chairman, I shall modify my own amendment by striking all except the first two lines which change the word "may" to the word "shall."

The PRESIDING OFFICER. The amendment is so modified.

The amendment, as modified, is as follows:

On page 45, line 17, strike the word "may" and insert in lieu thereof "shall".

Mr. BROOKE. Will the chairman then accept it as so modified?

Mr. MAGNUSON. Then we can accept it.

Mr. STEVENS. Mr. President, I have no objection to the modification. I hope that the Senator from Massachusetts realizes that we are caught up in the circumstances concerning IMCO and existing treaties and the pending Law of the Sea Conference. We are entirely in accord with his objectives, and we wish to see this matter resolved, if possible, through the international consensus procedures that are underway. If it is not possible to solve them in that way, the Senator has the chairman's assurance that we shall go back and see how far we can go under domestic law to deal with the problem.

Mr. BROOKE. I thank my distinguished colleague from Alaska for his statement of reassurance. As I said earlier, I feel confident with the responses I have received from the distinguished chairman of the committee and the ranking minority member of the committee that we shall keep moving forward. I know the problems and the forces that are at work, and I do not want to do anything to scuttle this important legislation and the important progress which has been made by the Committee on Commerce.

This bill requests real progress. I would be the last to say that it does not, even though I would like it stronger and, as the Senator from Alaska has said, he and the chairman and the committee would like it stronger too. We shall just have to wait for the international tables and see what we must do next. With the understanding that further domestic action will be considered by the committee in the event of any failure to reach international agreements, I must say I feel we have a very good measure, given the point in history at which we are making these decisions. As a member of our congressional delegation to the Law of the

Sea talks. I intend to do everything within my power to persuade other nations' delegates how strongly the American people feel about protecting our marine environment.

I think both the distinguished chairman and the ranking minority member remember well the problems that we experienced last year on their shores, and, certainly, our shores of Massachusetts, New Jersey, California, and elsewhere across this Nation. They and I and some others in Congress have been calling for strong tanker legislation for a long time.

I know I introduced my bill about 2 years ago on this matter, and we could not get enough people to listen. Unfortunately, as in everything else that happens, there had to be a crisis. That was these tremendous spills which were costly in terms of marine life, in terms of our economy, in terms of our safety. I could go on with the ills of these spills.

It took all of that before Congress would address itself to this important issue.

I commend the committee and the chairman and ranking minority members, particularly, for the work they have done.

As I said, as a congressional member of the Law of the Sea delegation, I intend to do everything I possibly can to work to see that other countries recognize how strongly we feel about the importance of this legislation, and the necessity for other legislation if this does not do its job.

I thank my colleagues for the colloquy we have entered into, for accepting the amendment with its modifications, and I assure them that we will give the overview, the oversight, and see to it that these tankers that come into our waters here will be safe, that their personnel will be trained, and that we will do everything humanly possible to avoid these spills.

I thank my colleague.

Mr. STEVENS. Has the Senator's amendment been adopted?

The PRESIDING OFFICER. The question is on agreeing to the amendment, as modified, of the Senator from Massachusetts.

The amendment, as modified, was agreed to.

Mr. STEVENS addressed the Chair.

The PRESIDING OFFICER. The Senator from Alaska.

Mr. STEVENS. Mr. President, I yield to the Senator from Massachusetts.

Mr. KENNEDY. Mr. President, I just want to join in commending the distinguished Senator from Washington and the members of the Commerce Committee for this measure.

Mr. President, I am very pleased to see the Tanker and Vessel Act of 1977 reach the floor. The great appreciation of the people of New England, as well, I am sure, as that of all people who are environmentally sensitive, or whose livelihood depends upon the sea, go to the chairman of the Commerce Committee who guided this legislation to us. His has been a longstanding concern about the problem of oil pollution at sea. If we had heeded his foresight and concern, we would have been spared some real disas-

ters. As I said when testifying before Senator Magnuson in his January hearings of the Commerce Committee, and reiterate here, anyone who reads Senator Magnuson's legislative history and who understands his long-time interest and concern knows that if the administration, if the Coast Guard and if Congress had followed his leadership in this area, our oceans, and therefore we, would have been in better shape today.

Mr. President, it was only last December that a tanker called the *Argo Merchant*, which had already been cited for 18 separate safety related incidents, ran aground off the shore of Nantucket and vomited 7.6 million gallons of oil into the waters off New England. Unfortunately, the *Argo Merchant* incident was not a solo event but rather was a member of the chorus. In the first 9 months of 1976, there were 604 accidents and 62 million gallons of oil were poured into our oceans. With the trend toward increasing imports of oil and thus increasing members of tankers coming into our ports, the need for investigation and action was obvious.

At the time of the *Argo Merchant* tragedy, the Administrative Practice and Procedure Subcommittee, of which I was then chairman, held hearings on oil tanker safety and the whole problem of prevention of ocean pollution. Liability for oil pollution and the problems attendant to cleaning up the mess when it occurred.

These hearings made it crystal clear that executive agencies had not been sufficiently diligent in the area of tanker traffic controls, tanker navigation and construction standards, ownership disclosure and oil spill technology. On the basis of these hearings and other research that we conducted, I introduced S. 182, the Federal Tanker Safety and Marine Anti-Pollution Act of 1977. The first, and most important title of that bill, is very much like title I of the bill currently before us, which the distinguished chairman of the Commerce Committee introduced. I was therefore happy to do whatever I could to assist in its passage. To this end, I testified before the committee in January.

Mr. President, this act would establish construction, maintenance, and operational standards for all tankers entering our ports, regardless of the flags they travel under. It is estimated that this will cover between 80-90 percent of the tankers which come within 200 miles of our coast, and therefore should be quite effective in achieving our safety aims. The bill also provides authority for the Secretary of Transportation to bar substandard vessels from operating in our waters; establishes a system to identify ownership of vessels and those vessels which are substandard; authorizes regulations for controlling lightering; mandates sophisticated communications equipment to avoid collisions and other accidents; commands the installation of a variety of safety features on new boats; creates an expanded enforcement and inspection program; and authorizes promulgation of stricter qualifications for manning of tankers.

I am also pleased to support title II of

this act, which provides for a comprehensive Federal approach to ocean pollution research, and which provides for a study by Transportation to evaluate monitoring systems for vessels.

I expect that these measures will do a great deal to insure that the shameful misuse of the oceans will be severely restrained. The distinguished Senator from Washington deserves great credit for formulating legislation which promises to be so effective and for expeditiously bringing it to us.

I do wish to note one area of continued concern. In S. 182 we had a title to provide for oil pollution liability and compensation. It would have established a \$250 million liability fund with unlimited liability for cleanup, absolute liability for damages in the case of violation of any standards or gross negligence and no-fault damage liability of at least \$50 million. This provision was not included in S. 682 as it passed through committee. I think that such a provision could go a long way to reinforcing the safety precautions incorporated in the bill now before us, and would more equitably assess the costs when future mishaps occur. I think this is an eminently sensible addition to our tanker safety arsenal. It is, first of all, a prophylactic measure. By making the owners of tankers liable for damages we provide them with an incentive to be on the lookout for ways in which they can go beyond legislative mandates to incorporate safety features in the construction and operation of tankers. Rather than requiring administrators to play a cat and mouse game through attempts to update regulations as they discover the existence of new technology—or new ways in which vessel owners are attempting to circumvent existent regulations—we give an economic incentive for the vessel owners to self-regulate in an effective way. Second, it is a matter of simple fairness—those who mess our environment should pay for the cleanup. These people reap the profits of transporting oil and it is only right that they should internalize the costs. So I hope that the chairman will give favorable consideration in this next session to a bill which I will introduce which will incorporate the provisions of the Federal oil pollution liability and compensation title of S. 182.

Mr. President, this legislation is extremely important for the Nation as a whole, but I do not think there is any region of the country where its application can be more important than the New England coast, particularly the Massachusetts coast.

There are many challenges to those that ply the seas, but none are greater than the sand bars, fog and other natural hazards that are visited on the New England coast.

With the increased demand for fuel imports we have the equivalent of an *Argo Merchant* entering a Massachusetts port every single day of the year. The *Argo Merchant* disaster brought home the enormous challenge of establishing safety regulations for tankers. We were extremely fortunate in not having worse tragedies strike.

Mr. President, this legislation is an attempt to really insure that the lessons

of the *Argo Merchant* are well-learned and corrective action is taken.

The chairman of the committee was extremely responsive in commencing hearings, in exhaustively examining the issues involved in tanker safety, and in trying to insure by means of this legislation that similar tragedies do not occur.

I do not think any of us imagine that passing legislation absolutely insures against similar incidents off the New England coast, or in other parts of the country. But the chances will be dramatically reduced if this legislation is passed and if legislation on liability and compensation is implemented—and I understand that will be in the not-too-distant future.

So I join in expressing my appreciation to the chairman of the committee.

Mr. President, there has been legislation on the books for a number of years which would have permitted establishment of many rules and regulations similar to the ones which have been incorporated into this measure. Unfortunately, powerful interests always exercised influence on pressure points in the Government, and we were unsuccessful in getting those particular regulations established. This was not due, obviously, to the desires of the Coast Guard. But when the time finally came to implement adequate regulations powerful interests were always able to hold sway at the top of various departments of Government.

As a result, we came very near the danger of experiencing a major disaster.

But the Senator from Washington, as he has in instance after instance of public policy, has recommended legislation that will be welcome to the people of our State and to the people of our Nation. It should serve as an example to others around the world, of what a country that is seriously concerned about protecting its coastal areas can do in the legislative forum.

So I join in commending the chairman of the Commerce Committee and the Senator from Alaska (Mr. STEVENS), both of whom have made a signal record in recent years for protection of fragile resources both underneath the sea and on the sea.

I join in urging quick action on this measure.

I thank the Senator from Alaska for yielding to me.

Mr. MAGNUSON. Mr. President, both of us thank the Senator from Massachusetts. Of course, he has made a contribution all along on this, that is to take some sort of action similar to this.

I am glad he mentioned the Coast Guard. They now have no excuse if this bill passes—none whatsoever.

I saw the other day that they finally went out and stopped a ship, a rust bucket that was coming in, and said, "You can't come in."

That is something we have not seen for a long, long time. It may be the result of this bill coming along.

Mr. KENNEDY. As the Senator understands, there has not been so much reluctance by the Coast Guard itself.

Mr. MAGNUSON. Not by itself.

Mr. KENNEDY. But they have, in many instances in recent times, been

overruled by the Department, in conflict with the legislation that already exists. But I think we now have the necessary accountability and a good set of explicit directives.

Mr. MAGNUSON. Yes.

Mr. KENNEDY. I know that under the careful review of the Senator from Washington and the Senator from Alaska, it will be fully implemented.

Mr. MAGNUSON. I think the Coast Guard is going to try to do an excellent job on this. I know they will. But as the Senator pointed out, it came from above.

Mr. KENNEDY. That is right.

Mr. MAGNUSON. Now the bill is the congressional intent.

I thank the Senator.

Mr. KENNEDY. I thank the Senator.

Mr. STEVENS. Mr. President, I, too, thank the Senator from Massachusetts for his comments and for his interest.

There is no question that our committee has done everything we can do under the constitutional process and the existing international negotiations to give the Coast Guard the authority it needs to prevent those rust buckets from entering our ports, and, if they enter, to prevent them from discharging any oil through mechanisms that are not modern, safe and pollution free.

Mr. President, I had an amendment, which is amendment No. 77. It, along with the concepts that the Senator from Massachusetts has discussed, sought a different route from that taken by the bill as the committee has reported it.

That amendment would have created a program extending port-State authority to the area over which the Fishery Conservation and Management Act gives us jurisdiction. It also established a system which would have required classification of tankers and awarded priority in the carriage of oil to safe tankers. This program would have been implemented through bilateral governing international tanker agreements.

The classification of tankers would have provided a system for a preference program which would have combined the whole concept of the cargo preference that has been before this body, and the subject of tanker safety and the safe operation of tankers.

I view that amendment as of a warning on the horizon. If the bill we are considering now does not work, we may have to take unilateral action similar to that which we took at the time we established the 200-mile limit.

But realizing the circumstances, and again realizing that negotiations are going on internationally, I ask unanimous consent that the amendment be withdrawn.

The PRESIDING OFFICER. The Senator has the right to withdraw his amendment.

UP AMENDMENT NO. 323

Mr. STENNIS. I have an amendment that I send to the desk, Mr. President.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes unprinted amendment No. 323:

On page 44, line 11, insert between the word "vessel" and the comma the words, "ex-

cept self-propelled fishing or recreational vessels under 300 dead weight tons"

Mr. MAGNUSON. I have taken a look at the amendment of the Senator from Alaska. I think it adds to the bill, because we never intended fishing and recreational vessels.

Mr. STEVENS. That is correct.

Mr. MAGNUSON. We never intended this act to apply to this type of vessel.

Mr. STEVENS. That is correct.

Mr. MAGNUSON. In other words, they might be burdened under the bill, if we did not do this, with a vessel traffic control system, and it would be pretty difficult for them to handle it financially.

Mr. STEVENS. Again that is correct.

Mr. MAGNUSON. Costwise and otherwise.

Mr. STEVENS. At the chairman's authorization, we held hearings in Alaska, and one of the things in particular that was raised at that time—and I am sure it is the same circumstance in Puget Sound—was that there are a number of vessels which are either fishing vessels or private recreational vessels that might come under the scope of this legislation if it were not made clear that they are excepted. We do not however intend to except vessels that are barges or are not self-propelled.

This amendment would except from the coverage of this act those vessels which are self-propelled, that are used for fishing or recreational purposes, and are under 300 deadweight tons.

It was one of the amendments, as I say, that was sought by the fishermen who testified at our Alaska hearings.

Since the amendment is acceptable to the chairman, I move the adoption of that amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Alaska.

The amendment was agreed to.

UP AMENDMENT NO. 324

Mr. STEVENS. Mr. President, I have another amendment I send to the desk.

The PRESIDING OFFICER. The clerk will report.

The legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes unprinted amendment No. 324:

On page 48, immediately after line 6, insert the following: "and (9) the Secretary shall establish procedures for consulting with, and receiving and considering the views of, officials of State and local governments, and persons within the maritime community, who are knowledgeable about and experienced in dealing with local problems of vessel traffic" page 48, line 3 delete "and"

Mr. STEVENS. As the Senator from Washington knows, we had very productive hearings in Alaska. His staff was there, and I think they will attest to the fact that one of the great fears of people in the local communities and the State government expressed was that the views of people who have experience in dealing with the maritime affairs in our great Prince William Sound and in Valdez Arm, would not be considered, as trans-Alaska pipeline system tankers start moving.

This amendment corrects that situation.

I wish to make it clear that this

amendment has been modified to meet the circumstances required by the pending litigation that comes out of the situation in the State of the Senator from Washington. Litigation in which my State is also participating. It does not deal with or in any way raise the question of preemption, as this bill does not deal with preemption. We have no intent of changing the law with regard to the status of Federal preemption in the area under the basic act. This amendment merely states that the Secretary must establish procedures for consulting with, receiving and considering the views of those State and local people who are experienced and knowledgeable in this area.

It is an amendment offered to reassure them of the congressional intent to require the Secretary to consider their views and utilize their knowledge and expertise in making and determining the procedures that will be followed under this act.

Mr. MAGNUSON. Yes, but there is nothing mandatory if we accept it.

Mr. STEVENS. There is nothing here that says he must accept their views. It just says he will consider them.

Mr. MAGNUSON. Because if we do, it would be pretty hard to determine who gives the views in behalf of the people of a given State.

Mr. STEVENS. Yes.

Mr. MAGNUSON. In other words, the people of a State may be divided in their views, but the Secretary should have the benefit of that information. Is that correct?

Mr. STEVENS. That is correct.

The intent of this is to reassure the State and local people, wherever the problem arises, that they will have access to the Secretary and that they will be able to present to him their views on the subject of vessel traffic before the Secretary promulgates regulations.

Mr. MAGNUSON. You might have a State where a legislature and the Governor had different views. But both views, or the views of the people as a whole or a port commission or anyone you could think of, should be looked at. Is that what the Senator is trying to do?

Mr. STEVENS. They all have to be considered; the Senator is absolutely right. I do not know of any subject that typifies the situation. There is no unanimity of opinion in the Senator's State or mine concerning these tankers and their safe operation.

Mr. MAGNUSON. We are only talking about a procedure—I want this established.

Mr. STEVENS. Yes.

Mr. MAGNUSON. And the Secretary would have complete discretion about it.

Mr. STEVENS. The Secretary has the discretion to establish procedures, but everyone will know what the procedures are. The amendment requires the Secretary to consider State and local views. Obviously, it does not tell him in any way that he has to agree with anyone at all.

Mr. MAGNUSON. And this pertains only to traffic control. Is that correct?

Mr. STEVENS. That is correct. It has nothing to do with tanker construction or—

Mr. MAGNUSON. Or siting?

Mr. STEVENS. Or siting.

Mr. MAGNUSON. Or land-based operations?

Mr. STEVENS. No. This is vessel traffic operations.

Mr. MAGNUSON. Or pipeline or anything else?

Mr. STEVENS. Vessel control procedures and problems related thereto.

Mr. MAGNUSON. Whatever tanker might be used, regardless of the size or whatever, it relates only to telling these tankers how to get to a given point.

Mr. STEVENS. Yes, the procedures for dealing with vessel traffic in the area involved.

Mr. MAGNUSON. It is a traffic amendment.

Mr. STEVENS. That is right.

Mr. MAGNUSON. All right.

Mr. STEVENS. In our opinion this amendment is the key to safety in the Prince William Sound and the Valdez Arm area. The amendment is procedural in nature.

Mr. MAGNUSON. It could be a key to safety any place. Of course, the principal purpose of this bill is not only to make the ports safe, but also we are including in the Coast Guard bill the surveillance of ships as they come in. It applies to Puget Sound or to Prince William Sound or the others. In other words, the controls would be set on how to come in and how to go out and how to stop and go, and things of that kind.

Mr. STEVENS. That is true, and where they might be required to lay up, if there is too much traffic entering a particular port.

Mr. MAGNUSON. Yes.

Mr. STEVENS. And the timing of their leaving or their entering the port in relation to the timing of the fishing fleet entering or leaving. This refers to the procedural aspect of dealing with tanker safety. In our opinion, that is the key, as I said, to safe operation in our area.

Mr. MAGNUSON. Let us make a case. What might probably happen under this bill and amendment is that the Coast Guard would probably set some vessel control immediately and then someone who may not like them or who may like them will have a chance to say that that control should be tougher, it should be less, or it should be different—in other words, give them the benefit of their opinion upon what they say. It is a little like rulemaking, is it not?

Mr. STEVENS. That is correct.

Mr. MAGNUSON. It is a little like rulemaking with an independent agency where they call for outside views on a proposed rulemaking.

Mr. STEVENS. Yes, a little more informal.

Mr. MAGNUSON. It can be very informal under this. It could be by letter, or the Senator from Alaska and I could go out to our respective areas and hold a hearing on it for the Secretary of Transportation.

Mr. STEVENS. That is right.

Mr. MAGNUSON. Or things of that nature, so that everyone has their views.

I think the amendment, as modified, is acceptable so long as we clarify the legislative intent that it deals only with traffic control.

Mr. STEVENS. That is correct. On that basis, I offer the amendment. The amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. MAGNUSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. BUMPERS). Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the pending measure be temporarily set aside momentarily and the Senate proceed to the consideration of another matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### COAST GUARD AUTHORIZATION ACT, 1978

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 174, S. 1250.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 1250) to authorize appropriations for the Coast Guard for fiscal years 1978 and 1979 and for other purposes.

THE PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Commerce, Science, and Transportation with an amendment in the nature of a substitute.

Mr. INOUE. Mr. President, I urge passage of S. 1250, as reported by the Committee on Commerce, Science, and Transportation. The bill authorizes appropriations of \$1.25 billion for fiscal year 1978 for the use of the Coast Guard for its procurement of vessels and aircraft, construction and improvement of shore and offshore facilities, alteration and removal of obstructive bridges, aids to navigation, pollution abatement, administrative expenses, and its operating expenses. The bill also authorizes the fiscal year 1978 levels for active duty personnel and military training student loads for the Coast Guard.

While the figure, of \$1.2 billion, may seem large, I can assure the Members of this body that this is a minimum level for the Coast Guard to carry out effectively its responsibilities. This amount contains approximately \$887 million for the necessary expenses for the operation and maintenance of the Coast Guard. I

might add that this is the first year that the Coast Guard has been required to submit an annual request authorizing its operating expenses. The rationale behind this requirement is twofold: one, to subject the total Coast Guard authorization request to the expanded and updated congressional budgetary process; and two, to enable the committee to exercise more readily its oversight functions of the day-to-day activities of the Coast Guard.

Generally, the operating expenses enable the Coast Guard to employ and maintain its 250 multipurpose vessels and 170 aircraft, and shore units strategically located along the coasts and inland waterways of the United States and in selected areas overseas to carry out its duties. These funds are also used to defray the expense of rebuilding through the use of replacements, alterations, and restorations when they involve less than 75 percent of the original facility. Specifically included in this authorization are: Funds to supplement the recent Presidential program of boarding and inspecting all oil tankers entering U.S. ports; to restore to the Coast Guard those funds unforeseeably expended to pay for this past winter's severe storm damages; and funds to provide for additional personnel to enforce the newly effective 200-mile fishery conservation zone.

The \$324 million figure for acquisition, construction, and improvement is the committee's bottom line in stimulating the Coast Guard's replacement programs in order to bring up-to-date its many aging and obsolete vessels, aircraft, and facilities. In order to put this amount in perspective, it is important to keep in mind the broad, all-encompassing, and ever increasing duties and obligations the Coast Guard has been charged with by the Congress. It has the primary responsibility of enforcement, or assisting in the enforcement of all applicable Federal laws on or under the high seas and waters subject to the jurisdiction of the United States, the promotion of safety of life and property in those areas, the maintenance of aids to navigation, ice-breaking and rescue facilities, and engaging in oceanographic research. The Coast Guard has also been charged with the safety of our ports and waterways through the operation of vessel traffic services and port safety controls while also regulating foreign and domestic vessels carrying oil or other hazardous polluting substances. More recently it has been charged with the duty of enforcing the 200-mile fishery conservation zone.

The bill authorizes \$15 million for the alteration or removal of bridges in order to eliminate obstructions to navigation in the navigable waters of the United States. The importance of this program will become evident when we recall the accident this past winter which put out of operation the necessary bridge near Hopewell, Va. It is estimated that this bridge will be out of use to commuters for well over a year.

The bill includes \$25.6 million for the necessary expenses for basic and applied scientific research, development, testing, or evaluation of programs and

activities of the Coast Guard. This specifically provides for the Coast Guard's research and development program encompassing activities related to marine transportation including: Search and rescue systems; environmental protection; vessel safety; aids to navigation; port safety and security; and polar and domestic icebreaking.

The authorization of \$1.25 billion involves approximately \$113 million in additional funds above the President's request. Of this \$113 million, roughly \$78 million is dedicated for the procurement of icebreaking tugs and a large icebreaker to replace the *Westwind* in the Great Lakes. In order for the Great Lakes region to realize its full potential in maritime commerce and traffic it will require reliable icebreaking assistance so that this traffic will move expeditiously and not face the continual threat of being thwarted by ice conditions in which commercial vessels cannot operate without icebreaking assistance in severe situations. Presently, the two vessels supplying most of the icebreaking assistance are the *Westwind* and the *Mackinac* both of which were constructed nearly 30 years ago. It is clear that the Coast Guard must supplement this program with more modern multipurpose vessels of a greater icebreaking capacity.

The committee also added funds and personnel, over and above the administration request, to supplement the recent Presidential program of boarding and inspecting oil tankers entering U.S. ports; funds for the reactivation of Coast Guard cutters to be used as backup vessels in the enforcement of the 200-mile fishery conservation zone; funds and personnel added for the enforcement of the Fishery Conservation and Management Act of 1976; funds and personnel in order to create a search and rescue mission capability at the Portage, Mich., Coast Guard station; to restore to the Coast Guard those funds unforeseeably expended arising from this winter's storm damages; funds for the procurement of radar and other equipment for a continuation of various vessel traffic systems; and funds for the study of oil spill containment in high seas and on fast rivers.

Mr. President, the committee has exercised budgetary constraint in its proposed additions. I believe firmly that every addition can be justified, and that, in clear conscience, we could have proposed further additions.

UP AMENDMENT NO. 325

Mr. STEVENS. Mr. President, I have an amendment at the desk and I ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alaska (Mr. STEVENS) proposes unprinted amendment No. 325.

Mr. STEVENS. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 5, line 23, strike the number "10" and insert in lieu thereof "12", and strike

the amount "\$89,076,000" and insert in lieu thereof "\$94,876,000".

On page 6, line 1, strike the amount "\$19,803,000" and insert in lieu thereof "\$21,603,000".

On page 7, line 8, strike the word "and". On page 7, line 10, strike the period and insert in lieu thereof "; and".

On page 7, line 11, add "(q) Cordova, Alaska—Construction of shelter for a barracks-hangar to house two additional short-range recovery helicopters."

On page 8, line 11, strike the amount "\$887,021,000" and insert in lieu thereof "\$887,521,000".

On page 8, line 25, strike the number "39,129" and insert in lieu thereof "39,145".

Mr. STEVENS. Mr. President, the amendment will authorize appropriations for the procurement of two short-range recovery helicopters that will be designated for the search and rescue station at Cordova, Alaska. It will authorize appropriations for the construction of a shelter for a barracks-hangar to house the aircraft to be permanently stationed at Cordova, Alaska.

The amendment will authorize appropriations for the operating expenses so that there will be sufficient funds for the necessary expenses for the employment and maintenance of this aircraft. Lastly, the amendment will authorize the necessary additional active duty personnel to be stationed at Cordova, Alaska.

I point out that at the time we started into the program of preparing for the movement of the vessel tanker traffic out of Prince William Sound, I discussed at length with the Coast Guard, at hearings and with members of the committee and with others, the problem of the coverage of the area of Prince William Sound from the point of view of search and rescue, and pollution control. We initiated a program of designating a helicopter to be rotated from the Coast Guard station at Kodiak, over to Cordova for a short-term period until the tanker traffic commenced.

The tanker traffic will start, as I said, in July of this year. This amendment will authorize the establishment of the Coast Guard station to maintain the helicopters at Cordova that will be necessary to assist in the event of any incident regarding the operation of the tankers or any accident involving the fishing fleet or the recreation vessels that are in this great Prince William Sound area.

Operating from Cordova, they will have a greater range than if they were operating from Valdez. This is the area from which, as I understand it, the Coast Guard agrees that these helicopters should operate. However, to my dismay, I found that they did not have an inventory of helicopters to man the station in accordance with the understanding that we have previously reached. The intent of this amendment is to provide for the acquisition of those helicopters, their operation, and the small barracks-type hangar that would protect them while they are stationed at Cordova.

Mr. INOUE. Mr. President, this amendment has been discussed with members of the committee, and I am authorized by the committee to accept this amendment.

The amendment was agreed to.

Mr. INOUE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. INOUE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. The question is on agreeing to the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, was read the third time, and passed.

Mr. INOUE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. INOUE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

(The following proceedings occurred later in the day:)

Mr. ALLEN. Mr. President, H.R. 6823, Calendar Order No. 191, was passed earlier today. I was in the Rules Committee, marking up various resolutions for the committees of the Senate, when this matter was brought up.

I had an amendment that I wanted to offer. I have cleared with the distinguished majority leader and the distinguished minority leader, with the chairman of the committee, and with the ranking Republican member of the committee the bringing up of this matter again, in order that I might offer this amendment.

I, therefore, ask unanimous consent, Mr. President, that the vote by which H.R. 6823 was passed be reconsidered, and further, that the bill be considered to be at the stage prior to third reading, in order that the bill might be open to further amendment.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. Mr. President, reserving the right to object, I will not object with the understanding that the only further amendment that will be in order at this time will be the amendment by Mr. ALLEN.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 6823) to authorize appropriations for the United States Coast Guard for fiscal year 1978, and for other purposes.

Mr. ALLEN. I offer my amendment.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Alabama (Mr. ALLEN) offers an unprinted amendment numbered 330.

Mr. ALLEN. I ask unanimous consent CXXIII—1041—Part 14

that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Add the following new section at the end of the bill:

Section . (a) The Commandant of the Coast Guard is authorized to assist the Department of Health, Education, and Welfare, in providing medical emergency helicopter transportation services to civilians. Any resources provided under this section shall be under such terms and conditions, including reimbursement, as the Commandant of the Coast Guard deems appropriate and shall be subject to the following specific limitations:

"(1) Assistance may be provided only in areas where the Coast Guard units able to provide such assistance are regularly assigned, and Coast Guard units shall not be transferred from one area to another for the purpose of providing such assistance.

"(2) Assistance may be provided only to the extent that it does not interfere with the performance of the Coast Guard mission.

"(3) The provision of assistance shall not cause any increase in funds required for the operation of the Coast Guard.

(b) No individual (or his estate) who is authorized by the Coast Guard to perform services under a program established pursuant to subsection (a), and who is acting within the scope of his duties, shall be liable for injury to, or loss of property or personal injury or death which may be caused incident to providing such services."

Mr. ALLEN. Mr. President, this amendment is identical to the language with reference to Department of Defense operations that appears in Public Law 93-155, section 2635. All it does is authorize the Commandant of the Coast Guard to assist the Department of HEW in providing medical emergency helicopter transportation services to civilians.

It would be entirely optional with the Commandant of the Coast Guard. It specifically provides that the provision of assistance will not cause any increase in funds required for the operation of the Coast Guard; second, that assistance may be provided only to the extent that it does not interfere with the performance of the Coast Guard mission; and further, that assistance may be provided only in areas where the Coast Guard units able to provide such assistance are regularly assigned. Coast Guard units shall not be transferred from one area to another for the purpose of providing such assistance.

My distinguished colleague in the House of Representatives, Mr. JACK EDWARDS, had planned to offer this amendment in the House, but the measure was before the House under an agreement that no amendments be offered, and he requested that I offer the amendment here, which I am doing. I ask that the Senate agree to the amendment.

The PRESIDING OFFICER. The Chair would observe that to achieve the Senator's objective, the Senate would have to revert to the consideration of S. 1250. Does the Senator so request?

Mr. ALLEN. Yes. I ask unanimous consent that S. 1250 be laid before the Senate.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 1250) to authorize appropriations for the Coast Guard for fiscal years 1978 and 1979, and for other purposes.

The PRESIDING OFFICER. Without objection, S. 1250 is amended and as amended is considered read a third time, and H.R. 6823 will have all after the enacting clause stricken and the language of the Senate bill as amended inserted.

Mr. ALLEN. Very well. The Senate bill, then will be considered as having been before the Senate at the time of the offering of the amendment; is that correct?

The PRESIDING OFFICER. The Senator is correct. The question is on the engrossment of the amendments and the third reading of the House bill, H.R. 6823.

The amendments were ordered to be engrossed, and the bill to be read a third time and passed.

Mr. ALLEN. I ask unanimous consent that S. 1250 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, consideration of the Senate bill (S. 1250) is postponed indefinitely.

Mr. ALLEN. Mr. President, I move to reconsider the most recent action of the Senate with respect to this measure.

Mr. SCHMITT. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ALLEN. Mr. President, I ask unanimous consent to have printed in the RECORD section 2635 of Public Law 93-155, to show the identical nature of this amendment with the present law with respect to the other services.

There being no objection, the statute was ordered to be printed in the RECORD, as follows:

PUBLIC LAW 93-155—Nov. 16, 1973

"§ 2635. Medical emergency helicopter transportation assistance and limitation of individual liability

"(a) The Secretary of Defense is authorized to assist the Department of Health, Education, and Welfare and the Department of Transportation in providing medical emergency helicopter transportation services to civilians. Any resources provided under this section shall be under such terms and conditions, including reimbursement, as the Secretary of Defense deems appropriate and shall be subject to the following specific limitations:

"(1) Assistance may be provided only in areas where military units able to provide such assistance are regularly assigned, and military units shall not be transferred from one area to another for the purpose of providing such assistance.

"(2) Assistance may be provided only to the extent that it does not interfere with the performance of the military mission.

"(3) The provision of assistance shall not cause any increase in funds required for the operation of the Department of Defense.

"(b) No individual (or his estate) who is authorized by the Department of Defense to perform services under a program established pursuant to subsection (a), and who is acting within the scope of his duties, shall be liable for injury to, or loss of property or personal injury or death which may be caused incident to providing such services."

Mr. INOUE. Mr. President, I ask unanimous consent that the action taken by the Senate in passing S. 1250 be vitiated, and that the Senate proceed immediately to the consideration of calendar No. 191, H.R. 6823.

The PRESIDING OFFICER. Without

objection, it is so ordered. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 6823) to authorize appropriations for the United States Coast Guard for fiscal year 1978, and for other purposes,

Mr. INOUE. I ask unanimous consent that all after the enacting clause be stricken, and that the text of S. 1250, as amended, be substituted in lieu thereof.

The PRESIDING OFFICER. Without objection, it is so ordered. The question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed, and the bill to be read a third time.

The bill (H.R. 6823) was read the third time, and passed, as follows:

That this Act may be cited as the "Coast Guard Authorization Act of 1978".

## SEC. 2. AUTHORIZATION OF APPROPRIATIONS.

The following funds are hereby authorized to be appropriated in the amounts indicated for the fiscal year ending September 30, 1978, for use of the Coast Guard:

(1) For procurement of 10 port safety boats, 1 medium endurance cutter replacement, 1 icebreaking tug, and 30 search and rescue boats: \$85,506,000.

(2) For procurement of 12 medium-range surveillance aircraft and 12 short-range recovery helicopters: \$94,876,000.

(3) For the repairs, replacement, renovation, or improvements of existing shore units: \$21,603,000, which shall be used for construction at—

(A) Rockland, Maine—Phase I of rehabilitation of Rockland Station;

(B) Edgartown, Massachusetts—Improvements to Menemsha Station;

(C) Curtis Bay, Maryland—Coast Guard Yard sewage system;

(D) Alexandria, Virginia—Construction of barracks at Coast Guard Station;

(E) Saint Petersburg, Florida—Phase II of relocation and renovation of Group/Station;

(F) Fort Myers, Florida—Rebuild Fort Myers Beach Station;

(G) West Palm Beach, Florida—Upgrade search and rescue facilities;

(H) Bayfield, Wisconsin—Rehabilitate Bayfield Station;

(I) Traverse City, Michigan—Phase II of rebuilding air Station;

(J) Alameda, California—Replace training center infirmary;

(K) Seattle, Washington—Phase III of relocation of Coast Guard units to Piers 36/37;

(L) Kodiak, Alaska—Phase V of renovation and consolidation of Kodiak Support Center;

(M) Sitka, Alaska—Sanitary improvements;

(N) Elizabeth City, North Carolina—Phase II of improving paint stripping hangar at Aircraft and Supply Center;

(O) Charleston, South Carolina—Construction of replacement pier at Base Charleston;

(P) Juneau, Alaska—Construction of Auke Bay moorings; and

(Q) Cordova, Alaska—Construction of shelter for a barracks-hangar to house two additional short-range recovery helicopters.

(4) for procurement and improvement of aids to navigation: \$27,208,000, including—

(A) funds for Phase II for the establishment of the vessel traffic system at New Orleans, Louisiana;

(B) funds for the repair, replacement, renovation, or improvement of existing projects as follows:

(i) Phase I of improvement of the radio beacon system;

(ii) The waterways aids to navigation project;

(iii) The Lighthouse Automation and Modernization Program;

(iv) The Loran-C National Implementation Plan; and

(C) funds for the procurement of radar and other equipment for the continuation of installing vessel traffic systems at various locations.

(5) For pollution control: \$8,600,000.

(6) For public family quarters: \$1,311,000.

(7) For property acquisition, design, and administration: \$10,096,000.

(8) For procurement of two 140-foot ice-breaking tugs and one large icebreaker: \$78,000,000.

(9) For the necessary expenses for the operation and maintenance of the Coast Guard including those relating to the Capehart housing debt reduction: \$887,521,000.

(10) For the completion of alteration or removal of four bridges commenced under previous years' funding and to continue with the next phase of two additional bridges: \$15,100,000.

(11) For the necessary expenses for basic and applied scientific research, development, testing, or evaluation of programs and activities of the Coast Guard: \$25,600,000.

(12) For the reactivation of appropriate Coast Guard vessels for the enforcement and monitoring of the United States Fishery Conservation Zone: \$5,000,000.

## SEC. 3. END YEAR STRENGTH FOR ACTIVE DUTY PERSONNEL.

For fiscal year 1978, the Coast Guard is authorized an end-year strength for active duty personnel of 39,145; except that such number shall not include members of the Ready Reserve called to active duty under the authority of section 764 of title 14, United States Code.

## SEC. 4. MILITARY TRAINING STUDENT LOADS.

For fiscal year 1978, average military training student loads for the Coast Guard are authorized as follows:

(a) recruit and special training, 3,852 students;

(b) flight training, 109 students;

(c) professional training in military and civilian institutions, 415 students; and

(d) officer acquisition, 1,110 students.

## SEC. 5. MERGER OF OBLIGATED BALANCES WITH CURRENT APPROPRIATIONS.

(a) Chapter 17 of title 14, United States Code, is amended by inserting at the end thereof the following new section:

"§ 659. Merger of obligated balances with current appropriations.

"Amounts equal to the obligated balances against appropriations for use by the Coast Guard for operation and maintenance and reserve training purposes for the two fiscal years preceding the current fiscal year shall be transferred to and merged with current fiscal year appropriations for 'Operating Expenses' and 'Reserve Training' respectively. Obligated balances for the period commencing on July 1, 1976, and ending on September 30, 1976, may be merged into their respective accounts for fiscal years 1977 and 1978. Such merged appropriations shall be available as one fund for payment of obligations properly incurred against such prior year appropriations and against the current fiscal year appropriations. The Coast Guard shall reflect fiscal year identity of the merged obligated balances until such obligated balances are transferred to a consolidated account as prescribed in the first section of the Act entitled 'An Act to simplify accounting, facilitate the payment of obligations, and for other purposes' approved July 25, 1956, as amended (31 U.S.C. 701)."

(b) The chapter analysis of chapter 17 of title 14, United States Code, is amended

by inserting at the end thereof the following new item:

"659. Merger of obligated balances with current appropriations."

## SEC. 6. ACQUISITION, CONSTRUCTION, AND IMPROVEMENTS FUNDS DESIGNATED FOR SEWAGE TREATMENT PLANT.

Notwithstanding the provisions of any other law, available funds appropriated to or for the use of the Coast Guard for acquisition, construction, and improvements may be used to pay for part of the construction and other capital costs of a sewage treatment plant to be built, operated, and owned by the North Marin County Water District (California) and to be used by the Coast Guard at the facilities located in the vicinity of Port Reyes Station, California.

## SEC. 7. AUTHORIZATION TO ACCEPT AND RETAIN FUNDS FROM THE CITY OF BALTIMORE, MARYLAND.

The Coast Guard is authorized to accept and retain funds from the city of Baltimore, Maryland, in payment for the Coast Guard facilities to be removed by the city incident to the improvement of Hawkins Point Road. The funds shall be available until expended for the construction of replacement facilities. Any funds not obligated by the end of fiscal year 1980 shall be paid into the Treasury.

## SEC. 8. EXEMPTION OF CERTAIN VESSELS ENGAGED IN THE FISHING INDUSTRY FROM THE REQUIREMENTS OF CERTAIN LAWS.

(a) The last sentence of section 4426 of the Revised Statutes of the United States (46 U.S.C. 404), as amended, is further amended by striking out "July 11, 1978" and inserting in lieu thereof "January 1, 1983".

(b) The first section of the Act of June 20, 1936 (relating to certain seagoing vessels) (46 U.S.C. 367), as amended, is further amended by striking out "July 11, 1978" and inserting in lieu thereof "January 1, 1983".

(c) Subsection (b) of the first section of the Act of August 27, 1935 (relating to load lines for certain vessels) (46 U.S.C. 88(b)), as amended, is further amended by striking out "July 11, 1978" and inserting in lieu thereof "January 1, 1983".

## SEC. 9. MEDICAL EMERGENCY HELICOPTER TRANSPORTATION SERVICES TO CIVILIANS.

(a) The Commandant of the Coast Guard is authorized to assist the Department of Health, Education, and Welfare, in providing medical emergency helicopter transportation services to civilians. Any resources provided under this section shall be under such terms and conditions, including reimbursement, as the Commandant of the Coast Guard deems appropriate and shall be subject to the following specific limitations:

(1) Assistance may be provided only in areas where the Coast Guard units able to provide such assistance are regularly assigned, and Coast Guard units shall not be transferred from one area to another for the purpose of providing such assistance.

(2) Assistance may be provided only to the extent that it does not interfere with the performance of the Coast Guard mission.

(3) The provision of assistance shall not cause any increase in funds required for the operation of the Coast Guard.

(b) No individual (or his estate) who is authorized by the Coast Guard to perform services under a program established pursuant to subsection (a), and who is acting within the scope of his duties, shall be liable for injury to, or loss of property or personal injury or death which may be caused incident to providing such services.

The title was amended so as to read:

A bill to authorize appropriations for the Coast Guard for fiscal year 1978, and for other purposes.

Mr. INOUE. Mr. President, I ask unanimous consent that S. 1250 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. INOUE. I move to reconsider the vote by which H.R. 6823 was passed.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. INOUE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### RECESS UNTIL 1:42 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess for 20 minutes.

There being no objection, the Senate, at 1:22 p.m., recessed until 1:42 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. BUMPERS).

#### COMPREHENSIVE EMPLOYMENT AND TRAINING ACT AMENDMENTS OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the tanker safety bill continue to be temporarily laid aside for the time being and that the Senate proceed to the consideration of Calendar Order 147.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 2992) to authorize appropriations for fiscal year 1978 for carrying out the Comprehensive Employment and Training Act of 1973.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Human Resources with an amendment in the nature of a substitute.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### MAJ. GEN. JOHN K. SINGLAUB

Mr. STENNIS. Mr. President, I shall briefly refer to the remarks made by Maj.

Gen. John K. Singlaub regarding his opinion as to what would be the results of the removal of our military ground forces from Korea.

First, the point involved at this time does not relate to the question of the wisdom or lack of it as to the removal of these troops. The question involved now does not really relate to the "degree of punishment" imposed upon General Singlaub by President Carter in his order removing the general from his post.

The question for consideration now relates to whether or not General Singlaub's remarks constituted a military impropriety. I refer, of course, to his remarks, which he agrees he made, that the removal would lead to war in Korea.

Clearly, the remarks made by General Singlaub were a military impropriety by a Chief of Staff of U.S. Forces in Korea, on duty in this highly important and sensitive position. Section 2 of article II of the Constitution of the United States provides:

The president shall be commander in chief of the army and navy of the United States \* \* \*

As Commander-in-Chief, the President, of course, could not ignore General Singlaub's unfortunate and untimely remarks. Instead, he was under a positive constitutional duty to take notice thereof. I do not think this question of it being a military impropriety will be seriously questioned. The principle involved is so well known and must be kept well known, that I do not believe that any officer, up for nomination and promotion, would advocate the right by an officer to make remarks of the type made by General Singlaub. If he did before our committee, I do not believe he would be approved for promotion by the committee or by the Senate.

In my years of service on the Armed Services Committee, I have never heard an officer in private or official conversation, on or off the record, claim or assert to the contrary. On the other hand, it is to their credit that they will quickly affirm that the President of the United States is the Commander-in-Chief of the military services, and, of course, must be considered at all times in that position by the officers.

Let us not be confused by the use of the term that I have noted in the press, "muzzling the military." I have been through hearings of that kind where it was charged that a former President was muzzling the military. Certainly, there is no element of that issue involved. It is well known that members of the military are citizens of the United States and, of course, most of them are very fine citizens. As such, they have their avenues of expression, including their opinions on military matters.

It is clear to me that the President of the United States has his duties and responsibilities in incidents of this kind, and each Member of the Senate has his duty and responsibility, too. In this case, it is very clear indeed to me that the President clearly acted within the scope of his direct authority. I think the facts not only justified intervention but demanded it. The degree of the punish-

ment imposed is a matter of judgment and is really not an issue before us.

At some future time I would expect there will be full discussion in the Congress on the policy questions involved in the general overall question of ground troop removal from Korea and, of course, those discussions will certainly be in order.

Mr. President, I thank the Chair.

Mr. HART. Mr. President, will the Senator yield?

Mr. STENNIS. Yes; I yield to Senator from Colorado.

Mr. HART. Mr. President, I commend the committee chairman for his remarks. This is an extremely important issue involving not only this Nation's security but, also, and equally important, the form and structure of our Government.

The principle of civilian control of the military, as the chairman has noted, is firmly engrained in our Constitution and in 200 years of our history. If that principle is eroded, then I think we are faced with a possible change or shift in the structure and form of our Government which would affect the lives of all of our citizens.

The committee chairman has exercised his usual good judgment and, I think, sound advice and recommendations to all of us in handling this serious question, and I join with him in the remarks he has made and commend them to all of our colleagues.

Mr. STENNIS. I certainly thank the Senator for his very fine remarks. His concern is not a surprise to me, and his interest is not, either. I appreciate that he does have concern and he has expressed it here.

Mr. President, I yield the floor.

#### ORDER OF BUSINESS

Mr. NELSON addressed the Chair.

The PRESIDING OFFICER. The Senator from Wisconsin.

Mr. NELSON. I ask unanimous consent to yield to the Senator from Maine without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### AUTO EMISSIONS FACT SHEET

Mr. MUSKIE. Mr. President, the Clean Air Act Amendments of 1977 will be considered by the Senate during the week of June 6. As many Members will recall, 1976 Clean Air Amendments were approved by this body on August 5, 1976, only to be killed by filibuster after a conference agreement had been reached.

This year the committee has reported a bill which is similar to last year's Senate-passed bill, in the interest of consistency and in the interest of presenting the Senate with familiar legislation.

The issue of auto emission standards and deadlines has been debated on numerous occasions in this Chamber since 1965, when the first Federal mobile source pollution control program was authorized. Once again, auto emission standards are the focus of extensive debate and intensive lobbying. I believe that the Senate Environment and Public Works Committee has resolved the auto

emissions questions in a way which will guarantee clean cars and provide adequate leadtime for the auto industry to accomplish that goal.

Many questions have been raised about the effects of various auto emission standards and deadlines on public health, fuel economy, cost, and employment. I am placing in the RECORD today a fact-sheet on auto emission issues in order to provide Members with the information which led the committee to its decisions. The fact-sheet contrasts the Senate committee bill with the provisions of S. 919, a package of amendments to the Clean Air Act introduced by Senators GRIFFIN and RIEGLE.

I emphasize that the Griffin-Riegle bill deals with a number of issues other than auto emissions and deadlines, which would undo the basic framework of the existing Clean Air Act. Most of these provisions have not been explained or defended. My fact-sheet includes an analysis of these provisions.

I ask unanimous consent that the fact-sheet and summary be printed in the RECORD at this point.

There being no objection, the fact-sheet was ordered to be printed in the RECORD, as follows:

#### TECHNOLOGICAL FEASIBILITY

The auto industry can meet the requirements of the Senate bill.

The more stringent 1979 standards in the Senate Committee bill for hydrocarbons and carbon monoxide have already been met by a number of 1977 California models of cars, in EPA's Federal Test Procedure. The test results showed that a number of models actually had emissions below the 1980 standards in S. 252, without even being adjusted to meet those levels.

These cars include American Motors' Pacer and Matador, Chrysler's Aspen, Ford's Maverick and General Motors' Caprice, Impala, Monza, Sunbird, and Skyhawk. It is important to note that this list includes a variety of weights, sizes, engines and manufacturers, and that these standards were achieved without trying.

All of the U.S. auto companies have stated that they can meet the final 1980 standards in S. 252. One company stated in February, 1977, that it could meet the 1980 standards on 100% of their cars in 1980. In fact, two of the U.S. companies plan to use the 3-way catalyst, the most promising new technology on some of their 1978 California models as a major production trial. This is the traditional way in which the auto industry has phased-in new technologies. The 1979 requirements are a logical progression to the ultimate statutory standards in 1980.

#### HEALTH IMPACT

The Griffin-Riegle bill would relax the carbon monoxide and nitrogen oxide standards, resulting in a severe adverse effect on public health.

#### NITROGEN OXIDE STANDARD

Nitrogen oxides react with hydrocarbons to form oxidant, and thus is associated with the health hazards of oxidant. Nitrogen dioxide alone, however, is known to produce adverse health effects such as acute respiratory illness, increased bronchitis morbidity in children, decreased lung functions in children, and increased susceptibility to respiratory infection.

At the 2.0 grams per mile NO<sub>x</sub> standard of S. 919, even in the year 2000, one million excess attacks of respiratory disease are projected to occur in children. This health impact is almost halved by the adoption of the 1.0 NO<sub>x</sub> standard of the Committee bill.

The Griffin-Riegle bill would also cause

almost 2 million excess days of restricted activity from lower respiratory disease in children. This health impact is also approximately halved by adoption of the Committee bill.

#### OXIDANT STANDARD

Health effects associated with oxidant are aggravation of asthma and lung disease, respiratory irritation in healthy persons, increased eye irritation and changes in heart and lung function in healthy persons. Of the 313 air quality control regions in this country, 170 regions still have not achieved the air quality standard for oxidant set at a level to protect public health from adverse effects.

#### CARBON MONOXIDE STANDARD

Carbon monoxide is the most harmful of the pollutants emitted by the automobile. In sufficiently high concentrations, it can cause death. Carbon monoxide exposure also affects the central nervous system, the heart, human reflexes, hearing, and exacerbates the incidence of heart disease. Eighty air quality control regions still have not attained the carbon monoxide standard at which adverse health effects occur. Monitoring data from New York shows carbon monoxide levels 200%-400% above the health standard.

The Griffin-Riegle 9.0 carbon monoxide standard will cause between 65% and 130% more violations of the health standard between 1980 and 2000 than the Senate Committee bill. By the year 2000, the Senate standard leaves only five urban areas in violation of the health standard, while the Griffin-Riegle standard leaves twelve areas in violation of the health standard.

#### EMPLOYMENT

Future emission controls will not lead to unemployment or poor sales either. EPA projections indicate that 185,000 new jobs in the U.S. auto industry would be created through increased sales between now and 1985 if the Senate Committee standards are adopted.

#### FUEL ECONOMY

The Griffin-Riegle bill proposes final standards of .41, 9.0, 2.0 for the avowed purpose of allowing the auto companies to continue to use the existing, inefficient technology now in use to meet the 1977 California standards of .41, 9.0, 1.5. The average fuel penalty of these cars was 11% worse than 1977 Federal cars. This illustrates the result of standards which can be met by adding on equipment to existing technology. The auto industry will do only the technological minimum when a jump to more advanced emission control technology is not required, but is a voluntary option. One must associate that fuel penalty with the Griffin-Riegle proposal, since it cannot be assumed in the absence of statutory impetus, that the manufacturers will go to a higher level of technology voluntarily.

In contrast to the 11% fuel economy penalty of existing technology, the Ford Motor Company estimates that the Senate standards could result in a fuel penalty of 5% in 1980, the first year, but better fuel economy or at least no fuel penalty in 1981.

#### COST

The Senate bill will save the consumer money over the lifetime of a car.

The 1977 Volvo 3-way catalyst system sold this year which has exceeded both California and Federal emission standards has cost the customer \$25-\$50. This car has been sold in California throughout 1977. Lifetime savings due to 10% better fuel economy exceed this initial first cost by \$275-\$300. This is similar to the advanced technology which the domestic auto manufacturers have stated they will use to meet the Senate standards in 1980.

The Senate Committee bill will result in substantial savings to the consumer. The current technology which the auto companies have stated they would use to meet the Riegle-Griffin standards carries an 11% fuel

economy penalty. Advanced technology which must be used to meet the Senate Committee standards could improve the average 1977 fuel economy by 10%. The 21% improvement results in a \$650 lifetime savings to the car owner. After deducting the EPA's estimated \$250 first cost of the equipment, the Senate standards result in a net savings of \$400 to the consumer. This is a conservative savings figure, since the EPA equipment cost estimate includes items which may not be needed, such as a \$70 start catalyst.

#### AUTO EMISSION STANDARDS

The following table compares the auto emission standards in the bill reported by the Committee on Environment and Public Works, S. 252; the Griffin-Riegle bill, S. 919; and existing law:

|          | Existing law |     |                 | S. 252 |     |                 | S. 919 |    |                 |
|----------|--------------|-----|-----------------|--------|-----|-----------------|--------|----|-----------------|
|          | HC           | CO  | NO <sub>x</sub> | HC     | CO  | NO <sub>x</sub> | HC     | CO | NO <sub>x</sub> |
| 1977.... | 1.5          | 15  | 2.0             | 1.5    | 15  | 2               | 1.5    | 15 | 2               |
| 1978.... | .41          | 3.4 | .4              | 1.5    | 15  | 2               | 1.5    | 15 | 2               |
| 1979.... |              |     | .41             | 3.4    | 2   | 1.5             | 15     | 2  | 2               |
| 1980.... |              |     | .41             | 3.4    | 1   | .41             | 9      | 2  | 2               |
| 1981.... |              |     |                 |        | .41 | 9               | 2      |    |                 |
| 1982.... |              |     |                 |        | .41 | 9               | 2      |    |                 |

<sup>1</sup> 10 percent of the cars must meet 1 NO<sub>x</sub> in 1979.

<sup>2</sup> Waiver to 2 NO<sub>x</sub> of unlimited duration.

#### Statement

S. 919 will enable production of 1978 and 1979 automobiles.

#### Fact

S. 252 will also enable production of 1978 and 1979 cars.

The 1978 standards of S. 252 are identical to those in S. 919.

The more stringent 1979 standards in S. 252 for the HC and CO have already been met by a number of 1977 California models of cars, in EPA's Federal Test Procedure. The test results showed that a number of models actually had emissions below the 1980 standards in S. 252, without even being adjusted to meet those levels.

These cars include American Motors' Pacer and Matador, Chrysler's Aspen, Ford's Maverick and General Motors' Caprice, Impala, Monza, Sunbird, and Skyhawk. It is important to note that this list includes a variety of weights, sizes, engines and manufacturers, and that these standards were achieved without trying.

All of the U.S. auto companies have stated that they can meet the final 1980 standards in S. 252. One company stated in February, 1977, that it could meet the 1980 standards on 100% of their cars in 1980. In fact, two of the U.S. companies plan to use the 3-way catalyst, the most promising new technology on some of their 1978 California models as a major production trial. This is the traditional way in which the auto industry has phased in new technologies. The 1979 requirements are a logical progression to the ultimate statutory standards in 1980.

#### Statement

Emission standards of S. 919 will provide the most desirable air quality and health improvement standards when measured against statutory fuel economy requirements and costs to the consumer.

#### Fact

The automobile is a significant contributor to the unhealthy air pollution levels across the country; however, the net changes in total automotive emissions since the passage of the Clean Air Act in 1970 have been rather modest of 14% for hydrocarbon, 16% for carbon monoxide and an increase of 16% in nitrogen oxides.

Hydrocarbon standard: Hydrocarbons emitted into the air from automobiles react with nitrogen oxides (also emitted into the air by the auto and regulated by law) in the atmosphere to form photochemical oxidant (smog).

Health effects associated with oxidant are aggravation of asthma and lung disease, respiratory irritation in healthy persons, increased eye irritation and changes in heart and lung function in healthy persons. Of the 313 air quality control regions in this country, 170 regions still have not achieved the air quality standard for oxidant set at a level to protect public health from adverse effects.

There is general agreement that the .41 hydrocarbon standard should be imposed as rapidly as possible to mitigate the pervasive smog problem. Even with that stringent standard, a strong vehicle inspection and maintenance program, and control of hydrocarbons from stationary sources such as refineries, the health standard for oxidant (smog) will still be violated in 26 or more air quality control regions in the year 2000.

The Griffin-Riegle timetable which delays imposition of the .41 hydrocarbon standard will cause 4% more violations of the oxidant health standard between 1980 and 1990 than the Senate Committee bill.

There is no reason to delay the final statutory auto emission standard of .41 grams/mile beyond 1970, as S. 919 would, given the availability of technology now to meet the .41 grams/mile standard, and the critical need to control hydrocarbons now, in order to achieve healthy air.

**Carbon Monoxide Standard:** Carbon monoxide is the most harmful of the pollutants emitted by the automobile. In sufficiently high concentrations, it can cause death. Carbon monoxide exposure also affects the central nervous system, the heart, human reflexes, hearing, and exacerbates the incidence of heart disease. Eighty air quality control regions still have not attained the carbon monoxide standard at which adverse health effects occur. Monitoring data from New York City shows carbon monoxide levels 200%-400% above the health standard.

The Griffin-Riegle bill proposes to almost triple the ultimate statutory carbon monoxide standard from 3.4 grams per mile to 9.0 grams per mile, based on theoretical calculations that every city will meet the ambient CO standards by 1990, even at 9.0 grams per mile. This is an unrealistic projection, since test data from autos on the road show that carbon monoxide emission levels are double the amount permitted by the current standards on the average. In some cases, carbon monoxide emissions have been almost as high as those from uncontrolled cars because of carburetor maladjustments. The air quality projections used by the proponents of relaxation do not take this severe deterioration into account.

The Griffin-Riegle 9.0 carbon monoxide standard will cause between 65% and 130% more violations of the health standard between 1980 and 2000 than the Senate Committee bill. By the year 2000, the Senate standard leaves only five urban areas in violation of the health standard, while the Griffin-Riegle standard leaves twelve areas in violation of the health standard.

This argument for relaxation of the carbon monoxide standard surfaced only in January, 1977 despite the ongoing debate on this subject for seven years. The National Academy of Sciences and the Environmental Protection Agency agree that the 3.4 grams per mile standard contained in the Committee bill is necessary to protect public health.

**Nitrogen Oxide Standard:** Nitrogen oxides react with hydrocarbons to form oxidant, and thus is associated with the health hazards of oxidant. Nitrogen oxide alone, however, is known to produce adverse health effects such as acute respiratory illness, increased bronchitis morbidity in children, decreased lung functions in children, and increased susceptibility to respiratory infection.

The original statutory NO<sub>x</sub> standard was set at .4 grams/mile in order to protect public health. During the past seven years, the exact level of nitrogen oxide control required

has been a matter of much debate. The Committee determined on the basis of scientific data that a revised standard of 1.0 grams/mile would meet public health needs, and also stimulate new, improved control technology.

The Griffin-Riegle bill would relax the NO<sub>x</sub> standard an additional 100%, to 2.0 grams/mile, on top of the relaxation of 2½ times in the Committee bill. Although the Griffin-Riegle bill allows for the possibility of a 1.0 NO<sub>x</sub> standard eventually, in 1982, any auto company may apply for waivers to the current 1977 standard of 2.0 indefinitely. If past history is any guide, one must assume a 2.0 NO<sub>x</sub> standard indefinitely, as the auto companies have received every waiver they have applied for from EPA.

At the 2.0 grams per mile NO<sub>x</sub> standard of S. 919, even in the year 2000, one million excess attacks of respiratory disease are projected to occur in children. This health impact is almost halved by the adoption of the 1.0 NO<sub>x</sub> standard of the Committee bill.

The Griffin-Riegle bill would also cause almost 2 million excess days of restricted activity from lower respiratory disease in children. This health impact is also approximately halved by adoption of the Committee bill.

The sponsors of S. 919 base their NO<sub>x</sub> waiver on the uncertainty as to the level of NO<sub>x</sub> control needed to protect public health. The uncertainty surrounds the necessity for a .4 NO<sub>x</sub> standard; to the knowledge of the Committee, no scientific or medical body contends that a level as high as the 2.0 NO<sub>x</sub> standard would satisfy public health requirements. S. 252 accommodates this uncertainty by maintaining the .4 NO<sub>x</sub> level as a research objective. Auto manufacturers must submit prototype cars at this NO<sub>x</sub> level to EPA annually. Should the EPA Administrator determine the necessity for a standard more stringent than 1.0 grams per mile NO<sub>x</sub> of S. 252, the existing law provides authority to tighten the standard.

Air quality projections show that even with stringent stationary source controls total NO<sub>x</sub> emissions will rise over the next 20 years at any automotive emissions standard above .4 grams per mile. At the 2.0 NO<sub>x</sub> standard of Griffin-Riegle, the number of urban areas not meeting the public health standard can more than double by the year 2000. If a short-term ambient air quality standard is adopted in the range being considered by the World Health Organization, there will be widespread violations in almost all areas of the country even at the most stringent automotive standards. The number of violations would be cut substantially only at the .4 level.

#### Statement

The implementation of the auto emission standards of the bill reported by the Senate Committee on Environment and Public Works, will result in massive job losses in the motor vehicle and related industries, and negative effects on the entire national economy.

#### Fact

These assumptions of a catastrophic decline in auto sales and resultant layoffs have no basis in past history. In 1973, the industry set a record for retail sales of 11.5 million cars. 1974 sales dipped 23% in the midst of a national recession, an oil embargo, dire projections that the gas shortage was permanent, and that gasoline would either be rationed or become prohibitively expensive.

The case was never made that the decline in sales and job losses were due to emission control requirements. Subsequent sales data indicate, to the contrary, that auto sales are most sensitive to the general health of the economy, and to the disposable income of consumers.

For example, by 1976, auto sales had once

more climbed to over 10 million units. For 1977 models, the nitrogen oxide standard was tightened by 33%, yet sales for this year are substantially higher than those for model year 1976. The most recent figures show a 12.5% increase for the month of April, compared to April, 1976. Henry Ford, Chairman of the Ford Motor Company, has predicted 1977 auto sales of 11.2 million units, the second highest sales in the history of the industry.

Future emission controls will not lead to unemployment or poor sales either. EPA projections indicate that 183,000 jobs in the U.S. auto industry would be created through increased sales between now and 1985 if the Senate Committee standards are adopted.

#### FUEL ECONOMY Statement

The requirement of auto emission standards at the levels in the Senate Committee bill will result in fuel economy penalties and will prevent the development of alternative, fuel efficient technologies.

#### Fact

There is no inherent relationship between fuel economy and emission control. Actual fuel economy depends on the choice of technology chosen as evidenced by the examples below:

The most significant tightening of auto emission standards to date occurred in model year 1975. Although Chrysler Corporation testified that these standards would cause a fuel penalty, their cars realized a 12% fuel economy gain.

General Motors estimated a substantial gain, and their actual experience was twice the fuel economy improvement predicted.

In model year 1977, the NO<sub>x</sub> standard was tightened by 33%. The auto industry has always claimed that this standard would cause the greatest fuel economy penalty. Chrysler estimated a 7% fuel economy loss; the actual loss was zero. General Motors estimated a 5% loss. The actual change was a 9% improvement between 1976 and 1977 model years.

The history of automobile fuel economy over the past 20 years evidences this lack of a detrimental relationship between emission control and fuel economy. The chart below illustrates the decline in fuel economy long before the advent of emission controls. It also indicates that the biggest improvement occurred in 1975 (13.5% over 1974) when the standards were significantly tightened and the industry used a new, more advanced emission control technology. In 1976, at the same standards, there was an additional 10% improvement, and in 1977, another 3.3% improvement for a total of 26.8% increase over the fuel economy of 1974 models.

|                         | Actual gas mileage of U.S. auto fleet <sup>1</sup> | Auto emission standards |      |                 |
|-------------------------|--|-------------------------|------|-----------------|
|                         |  | HC                      | CO   | NO <sub>x</sub> |
| 1957.....               | 16.5   |                         |      |                 |
| 1958.....               | 17.0   |                         |      |                 |
| 1959.....               | 16.7   |                         |      |                 |
| 1960.....               | 16.1   |                         |      |                 |
| 1961.....               | 16.3   |                         |      |                 |
| 1962.....               | 16.8   |                         |      |                 |
| 1963.....               | 15.2   |                         |      |                 |
| 1964.....               | 16.7   |                         |      |                 |
| 1965.....               | 15.7   |                         |      |                 |
| 1966.....               | 15.6   |                         |      |                 |
| 1967.....               | 15.5   |                         |      |                 |
| 1968 <sup>2</sup> ..... | 15.0   |                         |      |                 |
| 1969.....               | 14.7   |                         |      |                 |
| 1970 <sup>2</sup> ..... | 15.1   | 4.1                     | 34.0 |                 |
| 1971.....               | 14.7   | 4.1                     | 34.0 |                 |
| 1972 <sup>2</sup> ..... | 14.5   | 4.1                     | 34.0 |                 |
| 1973.....               | 14.0   | 3.0                     | 28.0 | 3.1             |
| 1974.....               | 13.9   | 3.0                     | 28.0 | 3.1             |
| 1975 <sup>2</sup> ..... | 15.6   | 1.5                     | 15.0 | 3.1             |
| 1976.....               | 17.8   | 1.5                     | 15.0 | 3.1             |
| 1977 <sup>2</sup> ..... | 18.6   | 1.5                     | 15.0 | 2.0             |

<sup>1</sup> Combines city and highway use.

<sup>2</sup> In these years, emission standards became more stringent.

The Griffin-Riegle bill proposes final standards of 41, 9.0, 2.0 for the avowed purpose of allowing the auto companies to continue to use the existing, inefficient technology now in use to meet the 1977 California standards of 41, 9.0, 1.5. The average fuel penalty of these cars was 11% worse than 1977 Federal cars. This illustrates the result of standards which can be met by adding on equipment to existing technology. The auto industry will do only the technological minimum when a jump to more advanced emission control technology is not required, but is a voluntary option. One must associate that fuel penalty with the Griffin-Riegle proposal, since it cannot be assumed in the absence of statutory impetus, that the manufacturers will go to a higher level of technology voluntarily.

The Senate Committee bill, on the other hand, sets standards which require the auto manufacturers to go to the next level of technology, which is more efficient, and more effective to control emissions. The only way the fuel penalty of the 1977 California cars can be avoided with the Griffin-Riegle standards in effect is if the manufacturers choose to use the next level of technology, as would be required to achieve the standards in the Senate bill in 1980.

In contrast to the 11% fuel economy penalty of existing technology, the Ford Motor Company estimates that the Senate standards could result in a fuel penalty of 5% in 1980, the first year, but better fuel economy or at least no fuel penalty in 1981.

EPA has stated that the impact of the Senate standards on fuel economy would range from plus 2 miles per gallon to minus two miles per gallon, depending on the technology chosen.

The advanced technology which already exists to meet the Senate Committee standards improves the average 1977 fuel economy by 10%. This is a savings of 105,000 barrels of oil a day.

The 1.0 NO<sub>x</sub> standard in the Committee bill will also allow production of alternative, fuel-efficient engines. The National Academy of Sciences has identified five technologies that can meet the Senate Committee standards (0.41/3.4/1.0): dual catalyst or three-way catalyst on conventional engines, CVCC stratified charge (Honda), CCS stratified charge (Ford), and diesel. These are in addition to longer-term alternative engines which can also meet the Senate Committee standard, including Sterling cycle, Rankine cycle, gas turbine and electric or hybrid engines.

As for the diesel, the National Academy of Sciences' assessment that they can meet 1.0 NO<sub>x</sub> is confirmed by a 1977 VW Rabbit diesel which has already achieved 0.8/1.0/0.8 in certification tests. Teledyne Continental Motors has studied the diesel for ERDA and finds that they can achieve 30 miles per gallon on the city cycle with a 3000 pound car, while meeting emissions levels of (0.24/1.2/0.2). And General Motors has been working with Opel on diesel development. Using electronic exhaust gas recirculation, they obtained emissions of (0.27/1.30/0.71) with fuel economy of 26 miles per gallon and no fuel penalty. Thus, at this early stage of commercial development of diesels for passenger cars, there is already strong evidence that they can meet the Senate Committee standards without undue difficulty.

#### COST OF NEW AUTOMOBILES

##### Statement

The cost of emission control has greatly increased the price of cars in the past, and the emission requirements of the Senate Committee bill will raise the price of cars to an even more unreasonable level.

##### Fact

The sticker price increase of cars due to emission controls have not been unreasonable,

even as auto standards have become stringent. Bureau of Labor Statistics data since the inception of the Federal emission control program bear this out.

| Model year        | Cumulative price increase of automobiles | Cumulative price increase due to emission controls | Percent of increase due to emission controls |
|-------------------|--|--|--|
| 1967              |  | (0)  |  |
| 1968 <sup>1</sup> | \$88                                     | \$11   | 13   |
| 1969              | 129                                      | 11   | 9  |
| 1970 <sup>2</sup> | 236                                      | 17   | 7  |
| 1971              | 456                                      | 36   | 8  |
| 1972 <sup>2</sup> | 475                                      | 43   | 9  |
| 1973              | 565                                      | 70   | 12   |
| 1974              | 1,065                                    | 71   | 7  |
| 1975 <sup>2</sup> | 1,451                                    | 191  | 13   |
| 1976              | 1,650                                    | 198  | 12   |
| 1977              | 2,032                                    | 212  | 10   |

<sup>1</sup> No controls.

<sup>2</sup> In these years, emission standards became more stringent.

Source: Bureau of Labor Statistics.

A recent example bears out this trend. The California Air Resources Board has stated that the 1977 Volvo 3 way catalyst system sold this year which has exceeded both California and Federal emission standards has cost the customer \$25-50. This car has been sold in California throughout 1977. Lifetime savings due to 10% better fuel economy exceed this initial first cost by \$275-\$300. This is similar to the advanced technology which the domestic auto manufacturers have stated they will use to meet the Senate standards in 1980.

The Senate Committee bill will result in substantial savings to the consumer. The current technology which the auto companies have stated they would use to meet the Griffin-Riegle standards carries an 11% fuel economy penalty. Advanced technology which must be used to meet the Senate Committee standards could improve the average 1977 fuel economy by 10%. The 21% improvement results in a \$650 lifetime savings to the carowner. After deducting the EPA's estimated \$250 first cost of the equipment, the Senate standards result in a net savings of \$400 to the consumer. This is a conservative savings figure, since the EPA equipment cost estimate includes items which may not be needed, such as a \$70 start catalyst.

#### WARRANTY OF EMISSION CONTROL SYSTEMS

##### Statement

Reduction of the existing 5 year or 50,000 mile performance warranty for emission control systems is necessary to improve the competitive position of the independent parts and service dealers.

##### Fact

The performance warranty was included in the 1970 Clean Air Act to protect the consumer and to assure continued air quality improvement by requiring that a vehicle will continue to meet the applicable emission standards over 5 years or 50,000 miles, one-half of the average life of a car on the road.

Reduction of the performance warranty to 18 months or 18,000 miles (less than one-fifth of the average life of a car) will not achieve the stated objectives and will do serious harm to other objectives.

It is anti-consumer because it would shift the burden and expense of repairing a faulty emission control system from the manufacturer to the consumer whose car fails a State inspection after 18,000 miles.

It eliminates any financial incentive for manufacturers to produce an emission control system which functions for the car's life since their financial exposure would only be for 18,000 miles.

The Federal Trade Commission has recommended two actions to prevent any possible

anti-competitive effect of the existing warranty. S. 252 adopts these recommendations and three other measures to avoid any anti-competitive effects of the warranty. These provisions include:

- (1) requiring all owners' manuals to contain instructions that maintenance does not have to be performed by the dealer or with the manufacturer's own parts;
- (2) making illegal any warranty provision that attempts to tie coverage to the use of the dealer's service and parts;
- (3) establishment of a program which will enable aftermarket parts manufacturers to certify that their parts perform as well as the auto manufacturer's (the auto manufacturers have no role in approving such certification);
- (4) specifying that a car owner may go anywhere to have required maintenance performed;

(5) a Federal Trade Commission study of any possible anti-competitive effect.

The 50,000 mile performance warranty has been law for seven years now. Independent dealers now hold 80%-85% of the service and parts business, and that proportion has actually increased since 1970 when the warranty provision became law.

The United Auto Workers are in favor of maintaining the 5 year 50,000 mile performance warranty. President Leonard Woodcock stated in February, 1977: "We are basically in support of the 50,000 miles (performance warranty)."

The Consumer Federation of America is "strenuously opposed to this anti-consumer amendment" to reduce the performance warranty to 18 months or 18,000 miles.

Consumer's Union, publisher of Consumer's Reports, states in opposition to the reduction of the performance warranty to 18 months or 18,000 miles:

"In response to the five-year warranty requirement promulgated by EPA, auto manufacturers have designed the control devices, and the various parts related to the performance of these devices, for substantially longer endurance than would be the case under a one year warranty.

"... a reduction in designed durability would mean an increased incidence of repair for such devices and parts. This would add substantially to the consumer's cost of maintaining emission control devices to EPA performance standards."

#### Defects Warranty

This production, or defects warranty requires that each element of the vehicle related to emissions must be designed and built so as to conform to auto emission standards at the time of sales, and must be free from defects which would cause the vehicle to fail to meet emission standards over the life of the vehicle. The consumer is thus protected if a specific part fails within 5 years or 50,000 miles, and it is shown to be defective at the time it fails.

The Griffin-Riegle bill would make the production-defects warranty of existing law meaningless. S. 919 would require a consumer to prove that a defect in an emission control system, which occurred at any time prior to 50,000 miles, existed at the time of sale of the vehicle. This means that the consumer who discovered at 45,000 miles that a piece of equipment had ceased to operate, would have to prove that that defect also existed when the car was purchased. This is an impossible burden of proof to sustain, it is counter to the thrust of the Moss-Magnuson Act, and it goes against the established principles of products liability law.

The Griffin-Riegle warranty amendments benefit only one party—the auto industry. The consumer would pay for an emission control system to deal with an air pollution problem which lasts the life of the car but for which the auto industry would have no

financial responsibility whatsoever. The aftermarket industry would lose much repair and maintenance work because none could be required of the car owner after 18,000 miles or 18 months under the terms of the warranty; and the public would have cars which can legally violate emission standards after 18,000 miles, and the resultant adverse health effects from dirty cars.

#### HIGH ALTITUDE Statement

The Griffin-Riegle provision dealing with emissions from automobiles in high altitude areas remedies the inequities of the current EPA regulations.

#### Fact

The Riegle-Griffin bill does not come to grips with the high altitude problem. The Committee bill adopts a solution to the problem of the inferior operation of automobiles which is far preferable to deal with consumer and air quality needs.

The major problems now are: (1) the availability of only 50% of all car models in urban high altitude areas; (2) the inferior performance of those high altitude cars; and (3) the loss of business by dealers in urban high altitude areas to nearby dealers who have all models available.

The Griffin-Riegle bill proposes to solve these problems by simply exempting the adjustment of emission control systems of high altitude vehicles from anti-tampering requirements of the law.

It maintains a separate requirement for cars in high altitude (about 3% of total sales) which ensures that minimal effort will be directed toward improvement of that technology by the auto manufacturers.

The separate high altitude requirements do not alleviate the problem of a high altitude dealers' loss of business to dealers who have all models available.

The Committee bill prohibits all differential treatment for high altitude areas so that all low altitude models can be sold everywhere in the country.

From 1978 to 1980, all high altitude requirements are suspended, so that the auto manufacturers do not have to do anything additional for high altitude model cars; all model cars can be sold everywhere.

After 1980, all cars must comply with applicable auto emission standards at all altitudes. This provides two years for the perfection of existing technology which automatically compensates for any altitude change.

#### ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

#### Statement

The Griffin-Riegle bill sets up new administrative procedures and a new standard of judicial review for major regulatory actions related to the auto emissions standards established under the Clean Air Act, including promulgation or revision of emission standards, the consideration of a waiver application, the consideration of California's application for imposition of more stringent standards, and the establishment of test procedures for new cars. These changes are necessary to correct shortcomings in the current law.

#### Fact

These changes benefit solely the auto companies at the expense of protecting the public health and welfare, and may have a disastrous effect on the industry the sponsors of the amendment propose to assist.

The Griffin-Riegle bill establishes a separate set of procedures and a new standard of review for one category of regulations, auto emissions, creating a confusing dual set of procedures under the Act, the need for which has not been established.

The regulatory actions to which these new procedures apply are precisely those for which unnecessary delay can be catastrophic

for the auto industry. Any change in the auto emission standards, the certification tests, or the selective assembly line testing car determine the technology to be used. Long delays may result in inability to manufacture cars which meet the standards. The new procedures apply also to the California waiver. It is equally important that the industry know these standards as soon as possible, in order to certify new cars for that State. A delay in the granting of the California waiver could be equally catastrophic, resulting in a possible inability to supply 10% of the new car market because of belated knowledge of the standards.

There is no evidence that the existing procedures have proved inadequate in the promulgation of auto emission regulations. Under current law, the Administrator has the option of holding a public hearing on any proposal. When the last waiver of standards was granted by EPA in 1975, 3 weeks of public hearings were held. Under S. 919, if one interested party desired to make an oral presentation, EPA would be required to hold a public hearing.

In addition, the required opportunity for cross-examination would transform the EPA hearing process into a more formal trial-type proceeding. The danger of the use of this provision as a dilatory tactic far outweighs its usefulness, taking into account the Administrator's existing discretion to hold a hearing, which has been used frequently in the past.

EPA presently establishes rulemaking dockets for its proposed regulations which contains most of the documents specified in S. 919. The only documents not regularly included in the docket are the draft proposals to OMB, and interagency comments on them.

EPA also currently includes in all proposals the statement of the purpose of a rule, the factual data supporting it and responses to significant criticism of it.

A change in the standard of review now, seven years into the implementation of the Clean Air Act, and for only one category of regulations, could result in only confusion. The courts have thus far applied the arbitrary and capricious standard to their reviews of EPA actions under the Clean Air Act. This has resulted in extraordinarily close scrutiny of the regulations, and it is unclear why a change is thought to be necessary.

The authorization to the Administrator to extend unilaterally the deadlines specified in the law defeats the purpose of establishing legally enforceable deadlines by delegating legislative authority to an executive agency. This provision also will result in uncertainty for those parties regulated under the Act.

Mr. NELSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. NELSON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### COMPREHENSIVE EMPLOYMENT AND TRAINING ACT AMENDMENTS OF 1977

The Senate continued with the consideration of the bill (H.R. 2992) to authorize appropriations for fiscal year 1978 for carrying out the Comprehensive Employment and Training Act of 1973, as amended.

Mr. NELSON. Mr. President, I ask unanimous consent that the following staff members be accorded the privilege

of the floor during consideration of H.R. 2992 and S. 1242.

Richard E. Johnson, Scott Ginsburg, Martin Jensen, Jim O'Connell, and Babette Polzer of the Human Resources Committee;

Jon Steinberg of the Veterans' Affairs Committee;

Tom Williams of the Energy and Natural Resources Committee; and

Bill Buechner of the Joint Economic Committee.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, the Comprehensive Employment Training Act Amendments of 1977 (H.R. 2992) extends the authorization for the Comprehensive Employment and Training Act for 1 year—through fiscal year 1978.

On March 29, 1977, the House of Representatives passed H.R. 2992, authorizing the appropriation of such sums as may be necessary for the fiscal year ending September 30, 1978, for carrying out the Comprehensive Employment and Training Act.

The Subcommittee on Employment, Poverty, and Migratory Labor held hearings on this legislation, in conjunction with hearings on S. 1242, the Youth Employment and Training Act of 1977, on April 20, 21, and 22.

The subcommittee ordered an amended version of the bill reported May 4, and the full Committee on Human Resources ordered the legislation reported to the Senate on May 10.

The committee-reported version of the bill contains the following provisions:

First, the committee-reported bill extends the authorization for all titles of the Comprehensive Employment and Training Act for 1 additional year, authorizing the appropriation of such sums as may be necessary through fiscal year 1978.

Second, the committee-reported bill also extends through the end of fiscal year 1978 the amendments to title VI of CETA—made by the Emergency Jobs Programs Extension Act of 1976—under which each prime sponsor of a public service employment program under title VI may use its allocation, first, to sustain its existing number of public service jobholders under the act; and, thereafter, shall fill any additional public service jobs with low-income persons unemployed for 15 or more weeks who have been receiving or are ineligible for unemployment compensation, or welfare recipients. Also 50 percent of vacancies occurring in title VI public service jobs by attrition must meet those eligibility requirements, but the remaining 50 percent may be filled under the original title VI requirements—15 days unemployment in areas having 7 percent or higher unemployment rates, and 30 days unemployment in other areas.

Third, the committee-reported bill provides for waiving for fiscal year 1977 and 1978 the limitation in section 4(e) of CETA preventing more than 20 percent of funds appropriated for CETA to be used for title III—Secretary's responsibilities—and title IV—Job Corps.

Fourth, the committee-reported bill provides that the Secretary of Labor

shall take appropriate steps to increase participation in training and job opportunities under CETA for disabled veterans and Vietnam-era veterans under 27 years of age.

Fifth, the committee-reported bill provides that, in filling teaching positions in elementary and secondary schools with financial assistance under title II or VI of CETA, each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under CETA.

#### SUMMARY OF COMPREHENSIVE EMPLOYMENT AND TRAINING ACT

The Comprehensive Employment and Training Act—CETA—was signed into law on December 28, 1973. As set forth in the statement of purpose of the act, it is the purpose of CETA to provide training, employment, and other services leading to unsubsidized employment for economically disadvantaged, unemployed and underemployed persons.

Title I establishes a nationwide program of comprehensive employment and training services—including training, employment, counseling, testing, and placement—administered by prime sponsors which generally are States and units of general local government of 100,000 or more population.

Title II authorizes a program of public service employment in areas with 6.5 percent or higher unemployment for 3 consecutive months.

Title III provides for nationally sponsored and supervised training and job placement programs for such special groups as youths, offenders, older workers, persons of limited English-speaking ability, Indians, migrant and seasonal farmworkers, and others with particular labor market disadvantages, as well as research, demonstration, and evaluation programs to be administered by the Secretary of Labor.

Title IV provides the authorization of the Job Corps, a program of intensive education, training, and counseling for disadvantaged youths, primarily in a residential setting.

Title V establishes a National Commission for Manpower Policy, an advisory group that has been assigned the tasks of examining the Nation's manpower needs and goals and suggesting to the Secretary of Labor and to Congress particular means of dealing with them.

Title VI authorizes an emergency program of public service employment to provide useful jobs to unemployed persons in all areas of the Nation during times of high national unemployment.

Title VII contains general provisions, applicable to all titles including definitions, conditions of work and training, prohibitions against discrimination and political activities, and administrative procedures for the orderly management of programs under the act.

#### PRIME SPONSORSHIP SYSTEM

Under CETA, prime sponsors are units of State and local government responsible for carrying out programs within their communities. States may act as balance-of-State prime sponsors for

smaller—usually rural—areas within their boundaries that are ineligible to become prime sponsors in their own right. Cities or counties with populations of 100,000 or more are eligible to become sponsors after determining that they have a special capacity for carrying out CETA programs within certain labor markets or rural areas with high unemployment.

Finally, section 102 of the act provided that a limited number of concentrated employment program grantees that were serving rural areas with high unemployment and had demonstrated high capabilities for carrying out the employment and training programs in these areas could be designated as prime sponsors.

A total of 444 prime sponsors are now designated.

One of the distinctive and critically important aspects of CETA is the built-in flexibility that encourages responsiveness to the diverse needs of the various geographic and socioeconomic areas. The value of this flexibility is apparent in the ways in which prime sponsors have been able to design and implement programs that combine traditional employment and training efforts with more experimental and innovative approaches.

#### TITLE I—COMPREHENSIVE MANPOWER SERVICES

Title I authorizes comprehensive employment and training services, including remedial education and skill training, employment, counseling, and supportive services. Under title I, 80 percent of the authorized funds are distributed to prime sponsors, with the remaining 20 percent distributed as follows: 5 percent for grants to Governors for vocational training services; 4 percent to Governors for flexible State activities; up to 5 percent for consortia incentives; and the remaining 6 percent for the Secretary's discretionary use.

The funds distributed to prime sponsors are allocated so that 50 percent is allotted on the basis of the prime sponsor's manpower allotment in the preceding fiscal year, 37½ percent on the basis of relative numbers of unemployed, and 12½ percent on the basis of the relative numbers of adults in low-income families.

The funds appropriated for title I in fiscal year 1977 totaled \$1.8 billion, and the President's budget request for fiscal year 1978 is the same.

The proportion of enrollees in each of the activities under title I of CETA varies somewhat from one year to the other. For example, the proportion of enrollees in work-experience programs was 54 percent in fiscal 1975 and 48 percent in fiscal 1976. Work experience is subsidized employment in the public sector and in private nonprofit agencies. In contrast to transitional public service employment, the work situations are temporary and are not necessarily expected to result in unsubsidized employment for the participants. The purpose of such employment may be to provide the participants with experience on a job, to develop occupational skills and good work habits and occupational opportunities. About 32 percent of title I participants were enrolled in classroom training in fiscal 1976 and 28 percent in fiscal 1975, while about 10 percent each of those

years were registered in specialized on-the-job training for a specific job.

During fiscal year 1976, about 1,731,000 individuals enrolled in title I activities. Of that total number, 514,000 persons were enrolled in classroom training, 144,000 in on-the-job training, 63,000 in transitional public service employment, 756,000 in work experience, and 108,000 in other activities.

#### TITLE III—SPECIAL FEDERAL RESPONSIBILITIES

Title III of CETA requires that the Secretary of Labor provide special programs for segments of the community that are in need of additional services beyond the scope of title I program sponsors. Among the target groups are youth, older workers, offenders, persons of limited English-speaking ability, and others determined by the Secretary to be at a particular disadvantage in the labor market.

#### SUMMER PROGRAM FOR YOUTH

In the regular HEW-Labor appropriations bill for fiscal year 1977, Congress appropriated \$595 million under section 304 of CETA for operation of the summer youth employment program for economically disadvantaged youth this summer. These funds are distributed by formula to prime sponsors to provide short-term jobs for about 1 million youths aged 14 through 21. In the past years, participants have worked in such places as schools, libraries, community service organizations, hospitals, and private nonprofit agencies. Typical positions include nurse aide, typist, school maintenance aide, cashier, library aide, clerk, nutrition aide and day-care aide.

#### SUPPORT FOR COMMUNITY-BASED ORGANIZATIONS

The Department of Labor provides funding under title III to selected national community-based organizations—CBO's—in order to assist them in improving the quality of the services that their community-based affiliates provide and in encouraging their affiliates to participate more fully in the programs developed by CETA title I prime sponsors. In fiscal 1976, \$5 million was made available to the national offices of opportunities industrialization centers—OIC's; Jobs for Progress, known as service, employment, and redevelopment—SER; and the National Urban League.

According to the employment and training report of the President, January 12, 1977, an estimated \$90 million in title I funds was also provided to local community-based organizations by prime sponsors. The local community-based organizations served about 110,000 persons, or approximately 6.4 percent of 1,731,000 CETA participants served under title I.

#### INDIANS AND ALASKA NATIVES

Indian and Alaska native communities are a major recipient of CETA assistance. A total of \$75.4 million was allotted for programs to serve them in fiscal 1976. About two-thirds—\$50.6 million—of this amount was allocated by statutory formula for title III employment, training, and related service programs under section 302 of CETA. Section 302 grants are awarded to federally recognized Indian tribes, bands, or groups and those

prime sponsors or organizations working with nonreservation Indians which meet specific requirements of the Secretary of Labor. The remainder were made available to eligible sponsors under titles II—\$7.8 million—and VI—\$8.2 million—and the summer youth program—\$8.8 million. Total enrollments in all Indian and Alaska Native programs during fiscal 1976 were 60,000, including 700 under title II; 2,600 under title VI; 41,600 under title III, section 302; and 15,700 under the summer youth program.

Funds appropriated for Indian and Alaska native programs for fiscal year 1977 totaled \$79.2 million, and the Administration's budget request for such programs for fiscal year 1978 is \$91 million.

#### MIGRANT AND SEASONAL FARMWORKERS

The aim of title III programs for migrant and seasonal farmworkers is to improve living and working conditions for those who wish to continue in the agricultural labor market, while assisting others to obtain more stable employment in other occupations.

During fiscal year 1976, the funding level for those programs was maintained at \$63.2 million, meeting the statutory requirement set forth in section 303 of CETA, that an amount equal to 5 percent of the amount allocated to State and local prime sponsors under title I be spent for such activities. Through a competitive process, 62 sponsors were selected to provide services to farmworkers in 47 States and Puerto Rico. In addition to classroom training, on-the-job training, work experience, and placement assistance, program participants could be provided such supportive services as medical and dental care, child care, and nutritional services. Another 24 grants were awarded to provide self-help housing projects, high school equivalency and college training programs, and technical assistance.

For fiscal year 1977, a total of \$79.2 million has been appropriated for migrant and seasonal farmworker programs under section 303 of CETA, and the administration's budget request for such programs for fiscal year 1978 is \$111.2 million.

#### TITLE IV—JOB CORPS

Now in its second decade of operation, Job Corps is working to expand training opportunities in existing centers while continuing to search for innovative education techniques that can be used in preparing corps members for the labor market. Initially authorized as part of the Economic Opportunity Act of 1964 and later included as title IV of the Comprehensive Employment and Training Act of 1973, the Job Corps program consists of two principal components—basic education and vocational skills training. Residential living—a characteristic that other employment and training programs have not shared—is also an important part of the Job Corps experience, although in recent years nonresidential training has also been available at some—usually urban—centers.

The purpose of the Job Corps is to assist disadvantaged youth, aged 16 to 21 years, to become more responsible, employable, and productive citizens. All par-

ticipants in the program are out of work and out of school and in need of additional education, vocational training, counseling, and other services to help them obtain employment, return to school, qualify for other training programs, or enlist in the Armed Forces.

The Job Corps program received funds totaling \$140 million in fiscal year 1976 to support 20,700 training slots during fiscal 1976 at 60 centers located in 31 States and the Commonwealth of Puerto Rico. The total includes 27 civilian conservation centers administered by the Departments of Agriculture and the Interior in national parks and forests and other public lands; 31 centers operated under contract with business firms, non-profit organizations, or State and local government agencies; and 2 extension centers. From the inception of the program in 1965 until June 30, 1976, Jobs Corps has enrolled 567,195 corps members from all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Trust Territory of the Pacific Islands.

The appropriation for the Job Corps for fiscal year 1977 was \$197 million, providing a 10-percent expansion over 1976.

As a part of the Administration's program for 1978, President Carter proposed more than a doubling of the Job Corps appropriation, to a total of \$487 million. This will enable enrollments to rise from the current level of 20,000 to about 40,000 enrollments.

#### PUBLIC SERVICE EMPLOYMENT PROGRAMS

There are two titles of CETA authorizing public service employment programs.

Title II authorizes financial assistance to enable State and local prime sponsors to provide public service jobs in areas of substantial unemployment having rates of unemployment equal to or exceeding 6½ percent. Eighty percent of title II appropriations are allocated in proportion to the number of unemployed residing in such areas of substantial unemployment. The remainder is distributed in the Secretary's discretion. For fiscal year 1976, the title II appropriation was \$400 million, supporting about 50,000 public service jobs.

Title VI was originally added to CETA by the Emergency Jobs and Unemployment Assistance Act of 1974 (Public Law 93-567), signed by President Ford on December 31, 1974. Under title VI of CETA, approximately 60,000 previously unemployed persons have been hired in jobs meeting locally determined public service needs. The programs are administered by State and local government prime sponsors—including States, units of general local government, and combinations thereof. Funds are distributed to areas throughout the Nation according to a formula which is based 50 percent upon the numbers of unemployed, 25 percent upon the numbers of unemployed in areas having 6½ percent unemployment, and 25 percent upon the numbers of unemployed in excess of 4½ percent unemployment in each area.

During the last session of Congress, the Emergency Jobs Programs Extension Act of 1976 was enacted into law (Public Law 94-444, signed October 1, 1976), extending the authorization for public serv-

ice employment programs under title VI of the Comprehensive Employment and Training Act—CETA—through the fiscal year ending September 30, 1977. The legislation authorized the appropriation of such sums as may be necessary in fiscal year 1977.

The 1976 amendments provided that each prime sponsor of a public service employment program under title VI may use its allocation, first, to sustain its existing number of public service jobholders under CETA; and, thereafter, must fill any additional public service jobs with long-term unemployed persons—persons unemployed for 15 or more weeks or welfare recipients. Under the 1976 amendments, 50 percent of vacancies occurring in public service jobs by attrition must also meet these eligibility requirements, but the remaining 50 percent may be filled under the original title VI requirements—15 days unemployment in areas having 7 percent or higher unemployment rates, and 30 days unemployment in other areas.

The 1976 amendments authorized not to exceed 15 percent of funds allocated for public service employment programs under title II and title VI of CETA to be used for necessary supplies and administrative expenses and also provided for a 2-percent set-aside of title VI funds for public service employment programs carried out by Indian tribes.

Before its adjournment, the last session of Congress passed a continuing appropriations resolution providing sufficient funding to sustain the existing number of title VI public service jobs—approximately 260,000—through September 30, 1977 (Public Law 94-473).

The Economic Stimulus Appropriations Act of 1977 (Public Law 95-29) was signed by President Carter on May 13, 1977. Under that appropriations act, additional funds for public service employment programs under title II of CETA have recently been allocated totaling \$1,140,000,000, and additional funds for public service employment programs under title VI of CETA have been allocated totaling \$5,363,000,000. The total number of public service jobs will be increased from the current level of 310,000 jobs—260,000 under title VI, and 50,000 under title II—to 725,000 jobs—600,000 under title VI and 125,000 under title II—with in the next few months under this appropriation.

#### SPECIAL VETERANS PROVISIONS

Section 4 of H.R. 2992, as reported from committee, contains an amendment which directs the Secretary of Labor to take appropriate steps to provide increased job training and public service categories of veterans. These categories are defined in the provision as: First, disabled veterans who have a service-connected disability rating of 30 percent or more; and second, Vietnam-era veterans who served for more than 180 days—receiving other than a dishonorable discharge—and who are under 27 years of age.

The President proposed the provision of increased opportunities for those disabled and young Vietnam-era veterans in public service jobs under the Comprehensive Employment and Training Act

of 1973, as amended—CETA. The enactment of the Economic Stimulus Appropriation Act (Public Law 95-29) provides funds for an additional 415,000 public service jobs—PSE—under CETA through fiscal year 1978. The President's proposed legislation for a 1-year extension of CETA included a provision to require that in employing individuals to fill these new PSE jobs a preference be given to certain qualified unemployed disabled and young Vietnam-era veterans, with a proposed national goal that 35 percent of all new CETA PSE hires be these veterans. The House-passed bill does not include the "preference" concept in its version of this legislation.

During the hearings on this extension legislation, Secretary Marshall and Assistant Secretary Green stated, in response to a question, that legislation was definitely necessary in order for the Department to achieve its national goal for the employment of these priority categories of veterans. Therefore, the provision in section 4 of the committee bill has been worked out in close cooperation with the administration and members of the subcommittee on Employment, Poverty, and Migratory Labor as a substitute for the administration's "preference" proposal.

The committee provision does not provide a statutory preference about which many reservations have been expressed. Instead, the alternative language set forth in section 4 is designed to provide ample latitude and flexibility and not to hamstring prime sponsors or others involved in the delivery of job and job-training opportunities.

The committee provision specifies many of the steps which the Secretary shall take in serving the employment needs of these veterans, but this list is by no means to be considered exclusive. Among the specific steps is providing for individual prime sponsors to develop their own local goals, taking into account the number of eligible veterans in the area served by the prime sponsors, for the placement of such eligible veterans in job vacancies occurring in PSE programs. The Secretary is also directed to insure full utilization of the provisions of clauses (2) and (5) of section 205(c) of the act—relating to providing jobs for significant segments of the population to be served and providing special consideration in filling jobs to special Vietnam-era veterans—and the provisions of subclause (E) of section 105(a) (3) of the act, requiring prime sponsors to make maximum feasible use of apprenticeship and other on-job training—OJT—opportunities available under section 1787 of title 37, United States Code.

#### SUMMARY

Mr. President, the enactment of this legislation is necessary in order to enable appropriations for the CETA programs to be included in the regular Labor-HEW appropriations bill. The total appropriations request included in the administration's budget is \$4.294 billion. The total enrollment in all titles of CETA for training and employment opportunities is approximately 2 million persons. I believe that it is important to enact this

legislation as soon as possible so that State and local governmental prime sponsors can plan their activities for fiscal year 1978.

Mr. President, I have a section-by-section analysis of the act. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

#### SECTION-BY-SECTION ANALYSIS

##### Section 1. Short Title

This section provides that this legislation may be cited as the "Comprehensive Employment and Training Act Amendments of 1977".

##### Section 2. Authorization for Fiscal Year 1978

This section extends the authorization for the Comprehensive Employment and Training Act for one additional year, through September 30, 1978.

##### Section 3. Waiver of Limitation on Funds for Titles III and IV

This section provides that section 4(e) of the CETA shall be deemed ineffective with respect to fiscal years 1977 and 1978.

##### Section 4. Special Veterans Provisions

This section provides that, with respect to programs carried out with funds appropriated after January 1, 1977, for fiscal years 1977 and 1978, under CETA, the Secretary of Labor shall take appropriate steps to provide for the increased participation in public service employment programs and job training opportunities of qualified disabled veterans and Vietnam-era veterans under twenty-seven years of age. The Secretary shall make necessary funds and personnel available to carry out his responsibilities and report thereon to the Congress within sixty days of enactment. The Secretary shall carry out his responsibilities in consultation with the Deputy Assistant Secretary for Veterans Affairs, and shall also consult with and solicit the cooperation of the Administrator of Administration.

##### Section 5. Special Consideration

This section amends titles II and VI of CETA to provide that, in filling teaching positions in elementary and secondary schools, each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under the provisions of each such title.

Mr. NELSON. Mr. President, I yield the floor.

Mr. JAVITS. Mr. President, the minority in the committee supported this extension for 1 year.

Mr. President, as the ranking Republican member of the Human Resources Committee and a coauthor of the Comprehensive Employment and Training Act I am a strong advocate of the concept it embodies.

The enactment of CETA represented, I believe, a fundamental shift of the focus and thrust of our Nation's manpower and employment policy. Prior to CETA, the Manpower Development and Training Act authorized a categorized, national delivery system to mount employment and training programs. CETA, on the other hand, instituted a decategorized and decentralized approach, and relied upon a network of prime sponsor local governments to deliver our manpower programs. In effect, CETA transferred control of Department of Labor manpower programs to State and local officials.

As might be expected, so fundamental a shift could not be effected without

some controversy. No one has ever pretended that the Comprehensive Employment and Training Act of 1973 could be a perfect solution to the myriad of problems that had developed under the proliferation of Federal manpower programs before CETA. Yet questions have been raised about, among other things, the administration of local programs, the changing role of the nonprofit private sector, the equity of the various allocation formulae and the degree to which programs should be targeted at those who are most in need.

I believe, however, that all things considered, the experience under CETA's decentralized system has been excellent. I often need to remind people that when CETA became law on December 28, 1973, the national unemployment rate was 4.8 percent. From that point on, the unemployment rate increased inexorably and was 5.5 percent even when CETA took effect 6 months later on July 1, 1974. The economy deteriorated as rapidly and so seriously that by December 1974, the unemployment rate exceeded 7 percent and by May 1975, was nearly 9 percent. Furthermore, in some prime sponsor labor market areas such as New York City, the unemployment rate exceeded 10 percent, as the private sector job market suffered a collapse of major proportions. In most of these heavily impacted areas, the hemorrhage of job opportunities continues relentlessly and may go on for the rest of the decade. In its infancy, therefore, the CETA prime sponsor system was completely overwhelmed by the most catastrophic recession since the Great Depression of the 1930's. Is it any wonder, then, that some problems were encountered in respect of the placement of CETA trainees, the long term benefits to individuals of participation in some programs and the degree of efficiency associated with local administration?

In my opinion, the performance of the prime sponsors has been remarkably good, given the difficult circumstances in which the system has begun. I am sure that with the resumption of economic prosperity and high employment, the prime sponsor system will perform even better in the coming years.

While the aggregate unemployment rate seems to be falling nationally, it remains intolerably high in some areas of our country, especially in the older cities of the Northeast and Midwest. For this reason, there is a need to design a public service employment program targeted to the structurally unemployed, especially in the high unemployment areas of our country, and, I had intended to address myself to the more endemic and structural character that U.S. unemployment has taken on since 1975, and to introduce a CETA bill for this purpose. While the recently enacted economic stimulus appropriations bill provides funding for 725,000 public service jobs under titles II and VI through fiscal year 1978, there is a need to consider soon a fundamental redesign of these programs so as to target them more directly upon those areas and upon those individuals more deeply affected by persistent structural unemployment.

I am convinced that the U.S. economy has entered into a new epoch in its evolutionary process. All of the external and internal shocks of the 1970's have affected the economy I believe in a profound and as yet unmanifested way. We may now be moving into an era in which high structural unemployment persists because the traditional aggregate expansionary fiscal and monetary policies ignite inflation or inflationary expectations at a much higher unemployment threshold. If true this would mandate new and different public service employment programs for those individuals and areas which the Federal Government dares not try to reach with general economic policies.

The precedent we have in title VI, to wit: eligibility only for the low-income, long-term unemployed, is a good one upon which to build. Certainly every State in the United States has its share of endemic and structural unemployment, and we should try to develop a public service jobs program tailor-made to these needs.

There are many creative approaches that could be proposed to deal with these problems. During my work with Senator HUMPHREY in developing S. 170, the Comprehensive Youth Employment Act of 1977, for example, we tried to link the private sector into our program of work experience and training. I thought of a provision which would have permitted the Federal Government to subsidize the wages of workers employed by those for-profit companies located in poverty areas and wholly or partly owned by community development corporations funded under title VII of the Community Services Act. Although we did not include this concept in our bill because we felt it somewhat untested, I believe it does have merit and should be proposed, at least on a demonstration basis.

I understand the Secretary of Labor is now developing the public service jobs component of the administration's welfare reform program. This is yet another example of the new dimensions that our programs might include in coming years. I am informed, also, that Secretary Marshall is considering a plan, modeled after the "GI bill," which would guarantee some period of post-secondary education for young adults who are enrolled in public service job programs. So, Mr. President, it is clear that many imaginative ideas are now circulating for the redesign of our public jobs programs.

But I decided, finally, that it would be premature to propose new comprehensive CETA reauthorization legislation just when the new administration was getting underway. I thought it reasonable, therefore, to extend CETA in its present form for 1 year to give the new officials at the Labor Department an opportunity to examine the program in depth and consider how best to revise the existing legislation. Knowing as I do the distinguished Secretary of Labor, Dr. Ray Marshall, and his able Assistant Secretary for Employment and Training, Ernest Green, I am sure Members of Congress will be fully consulted in the development of the CETA revision later this year, and given an opportunity to

express their own ideas respecting its provisions.

I look forward to working closely with my good friend and subcommittee chairman, Senator NELSON, and with our full committee chairman, Senator WILLIAMS, in consideration of these policies. I urge my colleagues in the Senate to approve this 1-year extension and continue, as I will, to study ways in which it can be improved for consideration next year.

We feel that while we are still under the very serious crunch of roughly a 7-percent unemployment rate, we need to have a little more time in order to consider the nature of those improvements. As it is now very clear, because the Senator supported it both in the budget resolution and in appropriations, that we consider public service jobs, youth jobs, and other jobs as a vital component of any economic stimulus program, we feel that the extension for 1 year is the right way to go.

Mr. President, there are reasons why we would also feel that it is best to have this bill stand strictly as a 1-year extension so that it may move on through the other body without any amendments.

Nonetheless, there are two extraneous matters, relatively speaking, in this bill now. The provisions respecting veterans and the provisions respecting the filling of teaching positions. And it may be that we can deal with those in the course of the debate.

Also, other Members may have amendments here, and we will simply have to encounter them as we meet them.

But I think the summation of the thing is that the prime sponsor plan of the CETA program, which gives us only about 400 prime sponsors—whereas under previous manpower training programs we had some thousands—seems to have worked better. I would not say it is optimum. But it has worked better. Therefore, we believe that it is the way to go for the present continuance. This is an essential element in dealing with continuing serious unemployment. The refinements and improvements which any of us may have in mind, and there are a number of those which are very appealing, had best be given more deliberate consideration which this 1-year extension would permit us to do.

For all those reasons, Mr. President, as the ranking member of this subcommittee and the Human Resources Committee, I favor the 1-year extension of CETA which is the essence of this bill.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### GENERAL SINGLAUB

Mr. GOLDWATER. Mr. President, I doubt if any Members of the Senate would seriously question a President's

right as Commander in Chief of the Armed Forces to recall and reassign a military commander in the field. However, I am disturbed by the treatment accorded Maj. Gen. John K. Singlaub who was removed from his Korean command for disagreeing with President Carter.

Mr. President, the official announcement by the Pentagon said that public statements by General Singlaub to the effect that withdrawal of American troops from Korea might result in war were "inconsistent with announced national security policy." What I would like to know is where was this official policy defined and announced by the President, or by the Pentagon. I cannot find such a policy declaration. It has not been presented to the Senate Armed Services Committee of which I am a member and so far as I know, it has not been presented to the Committee on Foreign Affairs.

I feel this is a very important point. I do not believe commanders in the field should be required to take campaign promises or press conference answers as announced official policy. This being the case, I feel that General Singlaub was within his rights to voice his opinion on a course of action which he felt was only being speculated upon in official circles. I should like to know if the General was officially notified by Washington that troop withdrawal from Korea had become official policy by the U.S. Government. If not, I find nothing wrong in his offering an opinion based on his experience as a military man in Korea. If he were advised of official policy to this effect then, of course, he was wrong to question that policy in public.

Mr. President, whatever the circumstances, I would hope that President Carter, having dispensed with the services of General Singlaub in Korea, would not ignore the warning the General issued.

Mr. President, I yield the floor.

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### COMPREHENSIVE EMPLOYMENT AND TRAINING ACT AMENDMENTS OF 1977

The Senate continued with the consideration of the bill (H.R. 2992) to authorize appropriations for fiscal year 1978 for carrying out the Comprehensive Employment and Training Act of 1973, as amended.

Mr. ZORINSKY. Mr. President, I ask unanimous consent that Mr. Chip Terrill, of my staff, be granted the privileges of the floor during the debate on the pending measure.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ZORINSKY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered. Is the Senator from New Mexico seeking recognition?

Mr. DOMENICI. Yes, Mr. President.

The PRESIDING OFFICER. The Senator from New Mexico is recognized.

UP AMENDMENT NO. 326

Mr. DOMENICI. Mr. President, I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The legislative clerk proceeded to read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposed unprinted amendment No. 326.

Mr. DOMENICI. I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill add the following:  
SEC. 2. (a) Section 203 of the Comprehensive Employment and Training Act of 1973 is amended by adding at the end thereof the following new subsection:

"(c) Notwithstanding any other provision of this title each eligible applicant shall provide assurances that one-third of the jobs provided by that applicant under this title in any fiscal year will be public service jobs with local educational agencies located in the area under the jurisdiction of that eligible applicant."

(b) Section 602 of such Act is amended by adding at the end thereof the following new subsection:

"(f) Notwithstanding any other provision of this title each eligible applicant shall provide assurances that one-third of the jobs provided by that applicant under this title in any fiscal year will be public service jobs with local educational agencies located in the area under the jurisdiction of that eligible applicant."

Mr. DOMENICI. Mr. President, jobs under the Comprehensive Employment and Training Act are provided to local governments for the dual purpose of serving the unemployed and to provide relief from the recession to units of local government. Approximately one-half of all local government employees are school district employees. However, school districts have not shared equally in the CETA jobs money, and it has been estimated that only 10 percent or less of the jobs are in local education agencies.

Municipal, county, and State governments have received antirecession aid from the Federal Government through a variety of sources—revenue sharing and public works as well as CETA. Our Nation's school districts, also hit hard by the recession, have received very little Federal antirecession assistance.

We have seriously neglected the economic plight of our schools during the recession. Local school districts are the major local government employer. The

demand for productive new positions exists, and funds to pay for those positions cannot be raised without local property tax increases. Therefore, it is difficult to understand how public employment can best serve the economic recovery without the direct involvement of local school districts.

In the past 2 years, Congress has passed several Federal laws which mandate increased education services without fully funding these services. The S. 504 requirements to remove architectural barriers for the handicapped, the individualized programs required under the Education of Handicapped Act (Public Law 94-142), and the extension of Unemployment Compensation to Public Employees (Public Law 94-566) have placed additional burdens on our schools.

I believe it is time to recognize the financial plight of our local education agencies. I therefore have offered an amendment to CETA titles II and VI which requires prime sponsors to redirect not less than one-third of their total CETA grants to local school districts located within their respective areas. While a one-third share is not fully representative, given the proposed expansion of the program from 310,000 to 725,000 jobs, it should open up school employment without disrupting existing job commitments for prime sponsors—including those prime sponsors who are currently providing only minimal assistance for local school districts.

Education agencies can provide meaningful employment through the public service jobs program. Education agencies are accustomed to supplementary Federal programs, and therefore are not likely to substitute local funds with Federal funds, thus greatly diminishing the effects of substitution in the total program. Local education agencies provide training for employees, thus making them more employable after the publicly supported job is terminated. And finally, local education agencies have a great need which I believe Congress has a responsibility to address.

Mr. President, I believe the distinguished manager of this bill and the ranking Republican are aware of this amendment and the concern that prompts its introduction today. I appeared before the committee and spoke to the issue, which I think is very important with reference to CETA public sector jobs.

I have a little experience and background as to how CETA came into being, in that its origins came from my home city, the city of Albuquerque. I was then the mayor of that city, leaving the office, when we had a number of job training programs, as the manager of the bill remembrers. We had some under Model Cities, we had some coming out of various departments of the Government. We were all trying to get some manpower training into our municipalities. Each was run separately, and, in many instances, they were run by separate secretaries of the U.S. Government, or subsections of the Department of Labor, the Department of Health, and the like.

CETA has done a tremendous job of trying to consolidate those manpower

thrusters into one department of Government, with a consolidated series of laws. The one thing that evolved in the consolidation was the notion of prime sponsors. Where we had cities, the notion came across very strongly that a mayor or the chief executive officer of a community ought to have a very vital role in determining the implementation of the CETA manpower programs under the prime sponsors. I believe that, from the very beginning, it was assumed that the public schools in that region would be a vital part of the implementation of the CETA program. By that I mean that I think people were of the frame of mind that, when the prime sponsor looked around in a community, it would have seen to it that the public schools got a reasonable percentage of these public service jobs.

That has not happened. That is the reason my amendment is introduced. The evidence is that a very small percentage of the jobs that we give to a public sector employer—a city, a county, a special district—have gone to the public schools in our country.

One might assume that that is justified because we might think of our schools as not having job opportunities for this kind of trainee. That is not true, Mr. President. Evidence is that a full 30 percent of the jobs in our public schools are non-professional-type jobs. In other words, they are not educators, they are not teachers, they are not administrators who are professional. Thirty percent are the very same kind of jobs that our cities and our counties, and our States—where they are prime sponsors—are giving to the people that come within the purview of the CETA program.

In this day and age, when we are very concerned about job opportunities for those who have had difficulty finding work or getting the proper training, we have also had a genuine concern about our cities, in these recessionary times, having difficulty with their tax base. We have passed countercyclical revenue-sharing and other kinds of tools, and we have done very little during the recession to help our public schools.

I think the evidence is that if our cities are having financial problems, so are our public schools.

My amendment merely says that, in every State in the Union, each prime sponsor within that State will set aside one-third of the jobs that they are allocated for the public schools—meaning that, as we place trainees, once my amendment is passed, we shall be coordinating with our public schools and we shall find one-third of the jobs within their particular employment sector and see to it that they receive some of the benefits that flow from these kinds of people, men and women, helping that local unit of government with its public work for our people.

It appears to me that we would not have to do this; we would not have to mandate any local mix if, as a matter of fact, there had been better performance, if they had taken into consideration the needs of the public schools and brought them into the prime sponsor policymaking so that they would have gotten

their share. Then we would not need this amendment.

Or, if the Secretary of Labor agreed that the public schools are not getting their fair share and made a strong commitment that maybe a third is not right—but certainly, what we have today is not right. We have some cities where 3 and 4 percent of all of the manpower trainees and people that we are placing in the public sector are going to the public schools in the community. If there were some way that we could assure that the word would get down to those prime sponsors and Governors, where they are the prime sponsors, that we do not want the public schools given this kind of treatment in terms of opportunities, in terms of allowable employment opportunities, then there would be no need for this amendment.

I ask either the ranking Republican or the floor manager this question: Is it the intent of the Senate that prime sponsors work with local education agencies in creating public service jobs?

Mr. JAVITS. If the Senator will yield to me, it has always been my thought that prime sponsors would work at public education agencies in respect of public service jobs.

We must remember that not every local school district has a need, or the greatest need, for any of these jobs. Nonetheless as a prime sponsor, and within our concept of local governmental responsibility in that regard, I would certainly expect that they would work closely in the public school area.

I hope very much that the Senator does not intend by this amendment this rigidity which would deal with one-third of the jobs. The danger there always is that they get frozen, and even if not used, they are taken out of the mainstream, which I know the Senator would not wish to see done.

But I agree with the Senator that we should zero in on the possibilities which the schools offer.

Of course, the Senator has most creatively worked with me and Senator HUMPHREY, Senator McCURE, Senator BELLMON, and others, to include a very firm concept to this effect in the youth employment bill which we will, hopefully, deal with tomorrow.

So that I would certainly state unequivocally that we expect prime sponsors, as far as I am concerned, to be knowledgeable about and work with their local school district in order to see the public service jobs are as available to them as to anyone else, indeed, even more than anyone else, to facilitate the problems which are inherent in youth in respect of employment and jobs.

I am very sympathetic to the idea and, certainly, as it is refined and developed, we will confer in an affirmative way with our colleague to see if there is any appropriate specific provision that should be written in.

Mr. DOMENICI. I thank the Senator from New York.

I ask the manager of the bill, the Senator from Wisconsin, did the Senator hear my question and the concern I have as to the present status and could he

give me his views on where we should be going with this legislation in terms of our public schools?

Mr. NELSON. I think the prime sponsors should work together with local educational agencies. I agree with the general concept expected by the distinguished senior Senator from New Mexico.

As a matter of fact, as he well knows, only about 12 percent nationally of these funds have gone to educational agencies. I am happy to say that in Wisconsin they advise us that 20 percent have gone to educational agencies.

I am of the view that a larger percentage should be directed toward the local educational agencies, although I am not prepared to say I would want to earmark a specific mandatory percentage. But I do agree that more funds should be used to provide jobs with educational agencies.

I think it might be helpful to the Senator's cause if he sent a little copy of the dialog out to some prime sponsors, to indicate it would be better if they sat down and looked over the opportunities, rather than have a big push for some mandatory figure.

Mr. President, I ask unanimous consent that the excerpts from the committee report (S. Rept. No. 95-174) be printed at this point in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

#### LOCAL EDUCATIONAL AGENCIES

During the hearings, testimony was received urging that prime sponsors should make substantially greater use of local educational agencies as employing agencies to provide work for unemployed individuals, both with respect to educational and non-educational jobs in the school systems. The 1976 Amendments specifically included local educational agencies in the definition of project applicants, for the purpose of carrying out public service employment projects. In view of the fact that the Economic Stimulus Appropriations Act of 1977 has just been enacted, the Committee will in its oversight function carefully review the extent to which prime sponsors accept project applications from local educational agencies in the coming year.

Mr. NELSON. This is a 1-year extension, as the Senator knows. We took notice on page 25 of the committee report, to the testimony respecting allocations to local educational agencies. We were referring to the testimony that was given to the subcommittee by the Senator from New Mexico.

We state, in the committee report that the committee will, in its oversight function next year, carefully review the extent to which the prime sponsors accept project applications from local educational agencies in the coming year.

We did not try to mandate any specific allocations for local educational agencies since we were dealing with a 1-year extension. The hope and expectation has been that there would not be any amendments and we would review this issue and other suggestions for changes in CETA in our oversight hearings in the next year.

Mr. JAVITS. If the Senator will yield for one further observation, I assume he

is clear that when we speak of local educational agencies, we mean public as well as private, nonprofits, too.

There are an enormous number of young people who go to schools which are not public schools.

Mr. DOMENICI. Yes, indeed.

I do want to say to the Senator from New York, I sense in his response to me that he sees some relationship between the student population that he keeps speaking to and these public service jobs that I am referring to.

Now, there may or may not be.

Mr. JAVITS. That is correct.

Mr. DOMENICI. I am talking about the nonstudents we are hiring in cities and, if they hire 5,000, most of them are going to work for the city.

The purpose of my discussion is to make sure somebody says what the needs are of the schools in that area for the same type of work the city is putting them to.

Mr. JAVITS. I understand.

Mr. DOMENICI. It is in this context, I offered the amendment.

Mr. JAVITS. I understand.

Mr. DOMENICI. Let me ask the manager of the bill as to his suggestion that perhaps some prime sponsors ought to become familiar with the dialog and the nature of the amendment so that it might have an impact on their working with the public schools.

I wonder if I might consider, in lieu of my amendment, some language—and I think I can draw it out quickly—which would sort of be in the nature of a resolution asking the Secretary of Labor to encourage the prime sponsors to give more consideration and to take into the process of allocation the needs of local public schools, just by way of a resolution that the Secretary of Labor shall, because I think if it came down from him, I say to my good friend, the manager of the bill, because he thought we were serious about it, it might get a better national kind of participation by the prime sponsors.

Would there be any objection to that kind of resolution?

Mr. JAVITS. If the Senator will yield to me, our problem is that we have talked with a number of Members about not amending this particular extension today. We will have a youth bill up tomorrow. It, too, can take amendments to CETA. If the Senator feels he wants a sense-of-Congress resolution on this score, it will give him a chance to do so and give us a chance to consider it.

But I would hope very much we could just strip this of anything but a 1-year extension, it is extremely important, there is a lot at stake, and move it right over to the House and get the approval.

Mr. DOMENICI. I thank the Senator from New York and the manager of the bill.

With their expressions of concern and responses to my question, Mr. President, I withdraw my amendment.

Mr. JAVITS. I thank the Senator very much.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. NELSON. Mr. President, I have

no amendment, and I am not aware of any further amendment.

Mr. DOMENICI. I have another amendment.

The PRESIDING OFFICER. The Senator from New Mexico.

UP AMENDMENT NO. 327

Mr. DOMENICI. I send to the desk an unprinted amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report the amendment.

The legislative clerk read as follows:

The Senator from New Mexico (Mr. DOMENICI) proposes unprinted amendment No. 327.

The PRESIDING OFFICER. Does the Senator ask unanimous consent to dispense with the reading of the amendment?

Mr. DOMENICI. If I did not, I do it at this point.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

At the end of the bill, add the following new section:

DEMONSTRATION GRANTS FOR IMPROVED PROGRAM MANAGEMENT

SEC. 6. Part B of title III of the Comprehensive Employment and Training Act of 1973 is amended by adding at the end thereof the following new section:

"IMPROVED PROGRAM MANAGEMENT DEMONSTRATION GRANTS

"SEC. 316. The Secretary is authorized to make grants to prime sponsors and to State and local public agencies particularly educational agencies and institutions, for the purpose of consolidating the management of programs and coordinating the services available to individuals participating in programs, assisted under this Act. In making grants under this section the Secretary shall give special consideration to demonstration projects involving programs assisted under this Act and other federally assisted programs of a similar character, including vocational education, employment services, social services, vocational rehabilitation, and special programs for youth and for the elderly."

Mr. DOMENICI. When the Comprehensive Employment and Training Act was passed in 1973, it consolidated a number of manpower programs and decentralized administration through the creation of prime sponsors. I am a strong supporter of this concept. In fact, prior to CETA, a demonstration project to see how such a concept would work was created in Albuquerque, N. Mex., while I was mayor. The successful New Mexico experiment was an important factor leading to the CETA legislation.

While the consolidation of manpower services in CETA has improved the effectiveness of manpower programs, many States and localities are restrained from further coordination of services to individuals because of divisions in administrative responsibilities for various types of social services which are available to the same or overlapping population.

These divisions are brought about by both State and Federal law regarding administrative jurisdiction in these social programs. A number of States including New Mexico, are taking steps to coordinate delivery of services to overlapping clientele. In the same spirit of providing more efficient and effective

services that prompted the original CETA demonstration project, a number of State agency heads in New Mexico are exploring a unified approach to the provision of allied services. Programs which often serve overlapping clients include CETA, employment services, vocational education, social services, vocational rehabilitation, and special programs for older Americans and youths. It is my understanding that such dialogs are in the formative stages in a number of local jurisdictions around the country and in a few other States.

I am hopeful that movement in this direction can be escalated by provision from the Federal level for demonstration projects which encourage coordination of service delivery and allow whatever modification in the Federal law and regulations that is necessary to achieve such ends.

Demonstration or pilot projects of this nature are of particular importance in light of the welfare reform issue. Training, job placement, public service employment, and social services for those in need should be an integral part of welfare reform.

The amendment that I am offering to the CETA extension will direct the Secretary of Labor to fund such demonstration projects from discretionary funds provided in title III of CETA. I believe such action should be taken at this time.

Mr. President, I want to speak about this amendment for a few moments, and I understand the Senator from New York has a very serious time problem. He is aware of what I am talking about in my amendment and in my statement, so let me just ask him a question.

Does the Secretary of Labor, in the Senator's opinion, now have authority to fund a demonstration project under title III that would permit various overlapping manpower training programs with overlapping clientele—such as the employment services, vocational education, vocational rehabilitation, the Older Persons Act—does the Secretary have jurisdiction to permit and fund a demonstration project that would bring those closer together in administration and simplify the management of these various kinds of manpower training approaches?

Mr. JAVITS. He does, and he has this authority under title III of the CETA measure. The authority is contained in subsection (b) of section 311, part B research, training, and evaluation, and it gives the Secretary broad authority as follows:

(b) The Secretary shall establish a program of experimental, developmental, demonstration, and pilot projects, through grants to or contracts with public or private non-profit organizations, or through contracts with other private organizations, for the purpose of improving techniques and demonstrating the effectiveness of specialized methods in meeting the manpower, employment, and training problems, and so on.

Also, under subsection (c):

(c) The Secretary is authorized to conduct, either directly or by way of contract, grant, or other arrangement, a thorough evaluation of all programs and activities conducted pursuant to this Act to determine the effectiveness of such programs and activities

in meeting the special needs of disadvantaged, chronically unemployed, and low-income persons for meaningful employment opportunities and supportive services to continue or resume their education and employment and to become more responsible and productive citizens.

Mr. President, I state that CETA is so closely related to other employment services, vocational education, social services, vocational rehabilitation that an effort to deal with overlapping in those programs and to coordinate them more effectively comes expressly, in my opinion, within the provisions of subsections (b) and (c) of section 311 of the CETA law in which the Secretary has broad authority for contracts for the purpose of development, demonstration, and pilot projects.

Mr. DOMENICI. I would then just ask the Senator, with that authority being there, would it be the view of the Senator from New York that if the Secretary of Labor finds areas where this could benefit their approach to manpower training, and if he was requested by local government, would it be the Senator's thought that he ought to encourage and help with those kinds of demonstration projects to improve coordination and administration?

Mr. JAVITS. I cannot commit the Secretary of Labor to particular parts of demonstration projects, but I certainly concur with the Senator that this is a most desirable way of using his authority respecting developmental experiments and pilot projects.

Mr. DOMENICI. I thank the Senator from New York.

My amendment would just merely have directed the Secretary of Labor to use such funds for the kind of demonstration projects I have described here and in my prepared remarks.

Mr. President, I withdraw my amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

UP AMENDMENT NO. 328

Mr. NELSON. Mr. President, I send an amendment to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The clerk will report the amendment.

The assistant legislative clerk read as follows:

The Senator from Wisconsin (Mr. NELSON) proposes unprinted amendment No. 328.

Mr. NELSON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

Strike all from page 2, line 13, through page 6, line 8.

Mr. NELSON. Mr. President, the purpose of this amendment is to strike out of the CETA extension bill all of the provisions other than the simple extension of the CETA authorization.

The members of the House Education and Labor Committee believe that we can avoid a conference on the simple extension if it contains no other provisions.

When the youth employment bill (S. 1242) is brought before the Senate,

the language I am now proposing to strike will be included in that bill, and will go to conference with the House on that legislation.

Those provisions are as follows:

As section 4 of the committee-reported bill providing that the Secretary of Labor shall take appropriate steps to increase participation in training and job opportunities under CETA Vietnam-era veterans under 27 years of age and for disabled veterans; and section 5 of the committee-reported bill providing that, in filling teaching positions in elementary and secondary schools with financial assistance under title II or title VI of CETA, each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under CETA.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. NELSON. Yes, I yield.

Mr. JAVITS. I am well aware of this amendment, and I think it is what we should do. But I was not prepared to agree to it until I was convinced that in the conference with the other body—which must ensue on the youth employment bill, as there are many points which we will have to settle—there will not be any effort to deal with the two propositions which are taken out of this bill by the amendment—to wit, the consideration of unemployed veterans and the problems of teacher replacements, on any basis of a quid pro quo for other aspects of the youth employment bill. The conference negotiations will be conducted upon these two items strictly on their own, without any unilateral reference to other elements of the youth employment bill, and it is on that basis that I have no objection to the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Wisconsin.

The amendment was agreed to.

Mr. NELSON. Mr. President, I have no further amendments.

The PRESIDING OFFICER. If there be no further amendments to be proposed, the question is on agreeing to the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

Mr. MUSKIE. Mr. President, the Comprehensive Employment and Training Act provides job training and employment opportunities for economically disadvantaged, unemployed, and underemployed persons through a decentralized system of Federal, State, and local programs. Titles II and VI provide for public service employment jobs administered by prime sponsors at the State and local level. While title II was originally intended to counter structural unemployment and title VI cyclical unemployment, new participant targeting and projects criteria added to title VI cause it to be more focused on the structurally unemployed.

Titles I, III, and IV provide some direct employment but mostly training slots. While title I allows maximum local discretion through the prime sponsor system, titles III and IV allow the Secretary of Labor to directly attack those employ-

ment problems best administered on a national level such as youth unemployment.

Public service jobs funded under CETA titles II and VI are of special interest to the Budget Committee. The committee's responsibilities to set forth macroeconomic targets and recommend budgetary strategies to reach them include a responsibility to provide adequate overall stimulus and to target job spending on people who are unlikely to benefit from more general approaches to stimulation of the economy. The targeting provisions in both CETA titles II and VI are the major Federal vehicles to insure direct job creation in those jurisdictions with high concentrations of the unemployed.

As originally enacted, title VI was intended as a response to the employment needs of those who are temporarily unemployed because of the recession. Targeting provisions since included deemphasize the original countercyclical purpose and tend to focus the program increasingly on the structurally unemployed. Projections of economic activity suggest that, even at full employment, as much as 5.5 percent of the labor force will remain out of work due to imbalances in the labor market. Because the economy would be operating at full capacity at that time, general stimulus would increase jobs only at the cost of rapid price increases. Accordingly, a targeted public service jobs program is the least inflationary and least costly means for responding to the structural unemployment problem.

Public service jobs such as those funded under CETA title VI are also of interest to the budget committee because they tend to target on current recipients of Federal transfer payments such as unemployment benefits, food stamps, and welfare payments. As much as 42 percent of the cost of public service jobs may be covered through savings in income transfers and revenue increases. The relationship between targeted public service jobs and transfer programs will be especially important as Congress begins to consider strategies to provide work for employable people who are current recipients of unemployment benefits and welfare payments.

CETA title VI is the obvious model for any program that might be enacted as a work component of welfare reform. The President is now considering proposals to forge such a link between jobs and welfare programs.

Jobs funded under titles II and VI of CETA are an integral part of the economic stimulus appropriation, representing almost half of the total spending passed in that appropriations bill. According to the Congressional Budget Office CETA will provide the quickest and greatest increase in jobs for the least net budget cost of any of the various job creation strategies available to the Congress. According to the Department of Labor the jobs funded in the economic stimulus appropriation will be created at a rate of at least 60,000 per month. That means at least 100,000 new jobs by the end of June. The Budget Committee assumed sufficient forward funding in its third budget resolution to accommodate

the 725,000 jobs funded in 1977 appropriations.

In the first resolution for fiscal year 1978, Congress has assumed forward funding of \$3.8 billion for public service jobs in fiscal 1979 to facilitate program management at the local level through a more certain funding pattern than has been the experience in the past. The total budget authority assumed for all CETA programs in the 1978 resolution is \$7.9 billion. Any appropriations action over that level will, of course, put pressure on other programs in the education, training, employment, and social services budget category.

Mr. President, the CETA program is an important part of congressional budget policy and I will vote in favor of this authorization.

Mr. RIEGLE. Mr. President, I rise in support of both S. 1242, the Youth Employment and Training Act of 1977, and H.R. 2992, the Comprehensive Employment and Training Act Amendments of 1977. As our Nation struggles to recover from the effects of the most devastating recession since the 1930's, we desperately need employment and training programs to help restore a healthy job climate for all members of our national labor force.

As a member of the Human Resources Committee's Subcommittee on Employment, Poverty, and Migratory Labor, I have been deeply concerned with the need for both these bills. The national unemployment rate for April was 6.9 percent; although this rate reflects a substantial drop in unemployment over recent months, the continuing high joblessness illustrates the need for an expanded national commitment to develop good jobs for all our citizens. CETA programs have in the past shown considerable potential for expanding job opportunities for many; they must be continued to find jobs for the millions of other unemployed Americans.

For teenagers, the situation is even worse. With 16.9 percent of the teenage labor force unable to find jobs, youth unemployment has reached the level of a national tragedy. Although these two bills are by no means the solution to the unemployment problem, they are essential if we are to try to restore economic health to the United States. I urge all my colleagues to join in support of these bills to help confront the continuing crisis in our labor market today.

Mr. CULVER. Mr. President, I support the pending legislation, H.R. 2992, authorizing fiscal year 1978 appropriations for the Comprehensive Employment and Training Act of 1973.

This act has provided a number of vital services to communities in Iowa. One section of the bill highly praised by Iowans is the Summer Youth Employment program for Economically Disadvantaged Youths funded under title III-A of CETA.

Funds under this title have provided short-term summer jobs for 5,200 economically disadvantaged youths—aged 14 to 21—in 87 Iowa counties and 880,100 disadvantaged youths across the country. Participants in 1976 provided useful community service as school library and school maintenance workers, nurse

aides, typists, cashiers, clerks, and nutrition and day-care assistants.

Mr. President, the summer youth employment program goes beyond merely providing part-time jobs for youths to obtain quick spending money. The main purpose of the program is to introduce youths to the world of work, an employer-employee relationship and provide guidance in career selection.

As chairman of the Senate Judiciary Subcommittee to Investigate Juvenile Delinquency, I am especially pleased by the attention summer youth employment pays to juvenile offenders.

Procedures have been established to insure that eligible offenders are provided with drug dependency rehabilitation, health care, as well as attempting to divert youths accused of nonviolent crimes from the criminal justice system into employment and training programs.

Reports indicate that participants in the program show a better grasp of self-awareness and a renewed interest in education, thereby eliminating decreasing numbers of school dropouts.

Mr. President, expanding job opportunities for the less fortunate youths of this Nation is essential. I believe that the summer youth employment program is an integral and important part of providing this expansion.

Mr. WILLIAMS. Mr. President, I strongly support passage of the 1-year extension of CETA authorized in H.R. 2992.

The CETA system has been laboring since its inception in 1974 under difficult conditions, most of which derive from the worst economic recession in 40 years. The system was in its formative stages when the recession struck. Congress transferred a tremendous responsibility onto the local prime sponsors at a time when numbers of unemployed workers were growing rapidly.

Congress has acted to reinforce the ability of local administrators to provide necessary services through CETA, and to minimize any abuses that were brought on by local governments' budget problems. We have authorized additional funds for administrative purposes. We have provided special countercyclical revenue-sharing funds for the explicit purpose of helping local treasuries weather the recession. We have directed that new jobs be developed in worthwhile community projects, employing only the long-term unemployed. Now in its fourth year, the system is proving its potential for delivering essential services and aid to the Nation's recovery program.

Part of the temptation to misjudge the worth of CETA arises when it is viewed as simply a jobs program. It is much more. It provides training, education, skill development, counseling, job search, work experience, and otherwise foreclosed opportunities to the jobless. These activities are vital to the millions of unskilled and low-skilled men and women, particularly young men and women, who are searching for a meaningful place in society.

The Committee on Human Resources has developed a new title VIII under CETA specifically designed to meet the complex structural difficulties youth

face in the job market. This title when combined with other initiatives, such as expanding the opportunities for public service jobs, provides a sound program to stimulate economic recovery.

This 1-year extension of CETA will permit greater strides to be made against persistent unemployment. It will carry forward the new youth employment and training, skill development, apprenticeship, and other programs provided for in the Economic Stimulus Appropriations Act.

It will provide the necessary time to make a comprehensive review of the system, to examine its role in a national manpower policy, and to make the needed changes that surface with experience.

A fully coordinated manpower policy is something we have never achieved. It is an extremely complex and confounding challenge with issues involving the careful coordination of education, welfare reform, employment discrimination, full employment, wage standards, and wholesome working conditions. In my view, an important part of the framework is being built in the CETA system.

The provisions of H.R. 2992, as amended by the Committee on Human Resources, embody more than a simple extension, however. The act, as originally enacted, contains authority for forward-funding and advance funding in a fiscal year for activities to be carried out in the following fiscal year. It was under this authority that the Congress provided nearly \$8 billion earlier this year for a dramatic expansion of the public service employment programs under CETA, to be carried through the end of fiscal 1978.

The 1-year extension in H.R. 2992 establishes legal authority for repeating this forward-funding option in fiscal 1978 appropriations bills, with the funds to be spent in fiscal 1979. I believe it would be wise to do so at a program level that is yet to be determined.

During the expansion period for public service jobs—a period that has just begun—we shall learn something about the optimum level of the program, and what we learn will help Congress decide in the months ahead how much to appropriate for public service employment in fiscal 1979.

The first concurrent resolution on the Budget assumes the appropriation of \$3.8 billion for this purpose. This may well prove to be an accurate estimate of the optimum scope of public service employment in a year that begins 16 months from now. But I believe Congress will want to reassess this question later this year, or early next, after the build-up has occurred. We on the Committee on Human Resources will be monitoring the expansion and preparing a recommendation as to the appropriate amount of forward-funding that should be appropriated for public service employment during fiscal 1978 for providing jobs in fiscal 1979 to those who can find no other work.

Mr. President, the continued success of CETA is essential during this crucial period. Millions of America's unemployed are relying on our support for this bill. With the 1-year extension, we can face the challenge of developing the best possible program in the context of a more

comprehensive manpower policy. I look forward to meeting this challenge.

The PRESIDING OFFICER. The question is on the engrossment of the amendments and third reading of the bill.

The amendments were ordered to be engrossed for a third reading and the bill to be read the third time.

The bill was read the third time.

The PRESIDING OFFICER. The question is: Shall the bill pass?

The bill (H.R. 2992), as amended, was passed.

Mr. JAVITS. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. NELSON. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### ORDER OF BUSINESS

The PRESIDING OFFICER. What is the pleasure of the Senate?

Mr. JAVITS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. RIEGLE). Without objection, it is so ordered.

#### YOUTH EMPLOYMENT AND TRAINING ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 146, S. 1242.

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 1242) to provide employment and training opportunities for youth.

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Human Resources with an amendment in the nature of a substitute.

Mr. NELSON. Mr. President, the Youth Employment and Training Act of 1977 S. 1242 now pending before the Senate, was ordered reported by a unanimously favorable rollcall vote of the Human Resources Committee. This is the committee-reported version of the measure submitted to Congress by the administration on April 6, which I introduced on that date.

Mr. President, I ask unanimous consent that the names of the Senator from Oklahoma (Mr. BELLMON) and the Senator from Maryland (Mr. MATHIAS) be added as cosponsors of S. 1242, the Youth Employment and Training Act of 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Cosponsors who joined me in introducing the bill were Senators JAVITS, WILLIAMS, CRANSTON, HUMPHREY, JACKSON, KENNEDY, RANDOLPH, STAFFORD, HATHAWAY, RIEGLE, CHAFFEE, HATCH,

DOMENICI, METZENBAUM, BELLMON, and MATHIAS.

The Youth Employment and Training Act of 1977 would add a new title VIII to the Comprehensive Employment and Training Act of 1973. Such sums as may be necessary would be authorized to be appropriated to carry out the new title. Actual funds available for the programs authorized by this legislation will be decided in the appropriations process. President Carter's budget request of \$1 billion in fiscal year 1977 was included in the Economic Stimulus Appropriations Act—Public Law 95-29—and he included an additional \$500 million for youth employment programs in his fiscal year 1978 budget requests. Therefore, the total contemplated by the administration for the youth employment and training programs under this legislation is \$1.5 billion through September 30, 1978, estimated to provide a total of 203,000 employment and training opportunities.

Part A of the proposed new title VIII creates a National Young Adult Conservation Corps to provide work for unemployed youths in the Nation's parks and forests. The Corps would be administered by the Secretary of Labor through interagency agreements with the Secretaries of the Interior and Agriculture. The administration's budget for activities authorized by part A is \$350 million, to provide about 35,000 jobs over the next 18 months.

Part B authorizes "Youth Community Conservation and Improvement Projects," to put unemployed youths to work on the rehabilitation or improvement of public facilities, neighborhood improvements, weatherization and basic repairs to low-income housing, and conservation, maintenance, or restoration of natural resources on non-Federal public lands. The administration's budget for activities authorized by Part B is \$300 million, to provide about 30,000 jobs over the next 18 months.

Part C authorizes support for a broad variety of employment and training programs designed to enhance job prospects and career opportunities for young persons, including activities involving useful work experience opportunities in community betterment, and appropriate training and services such as outreach, counseling, occupational information, institutional and on-the-job training, and transportation assistance. The administration's budget for activities authorized by part C is \$900 million, to provide about 138,000 employment and training opportunities over the next 18 months.

The Subcommittee on Employment, Poverty, and Migratory Labor held 3 days of hearings on youth employment and training legislation on April 20, 21, and 22. Witnesses included Secretary of Labor Ray Marshall, Undersecretary of the Interior James Joseph, Assistant Secretary of Agriculture Rupert Cutler, Assistant Secretary of Health, Education, and Welfare Mary Berry, ACTION Director Sam Brown, as well as State and local officials and witnesses from interested organizations and the general public.

#### PART A.—NATIONAL YOUNG ADULT CONSERVATION CORPS

Part A of the new title VIII would create a National Young Adult Conservation Corps designed to provide youths ages 16 to 23, inclusive, with opportunities to perform useful work in the Nation's parks and forests. The Secretary of Labor would administer the Corps through interagency agreements with the Secretaries of the Interior and Agriculture.

The Secretary of Labor would be responsible for making arrangements to refer candidates for the Corps from the public employment services, CETA prime sponsors, and other appropriate agencies.

The committee-reported bill requires the Secretary of Labor to undertake to assure that, in referring eligible youths for the Corps, an equitable proportion of candidates shall be referred from each State, with no less than one-half of 1 percent from any one State. Within each State, preference shall be given to enrollees in both rural and urban areas with substantial youth unemployment. The maximum period for which individuals could be enrolled in the Corps would be one continuous 12-month period, or for 3 or fewer periods which total 12 months.

Youths are eligible to participate in the Young Adult Conservation Corps if they are unemployed, whether or not they are from disadvantaged backgrounds. It is the committee's intent that the requirement that eligible youths be unemployed could still be met if a youth has a limited amount of part-time employment.

The Secretaries of the Interior and of Agriculture would be responsible for the management of the centers on public lands and waters under their respective jurisdictions.

At least 30 percent of the funds will be earmarked for State and local programs and special projects in State and local parks and forests. Corps members would be used in forest management and protection, wildlife management, range management, constructing and maintaining recreation trails and facilities, boundary marking and fencing projects, grounds maintenance, erosion control, drought damage and other natural disaster repair, and other conservation measures.

#### PART B.—YOUTH COMMUNITY CONSERVATION AND IMPROVEMENT PROJECTS

Part B of the new title VIII authorizes support for Youth Community Conservation and Improvement Projects. Under this part, the Secretary of Labor would provide funds to employ unemployed youths ages 16 to 19, inclusive, on community improvement projects, to perform work which would not otherwise be carried out, including the rehabilitation or improvement of public facilities, neighborhood improvements, weatherization and basic repairs to low-income housing, and conservation, maintenance, or restoration of natural resources on non-Federal public lands.

Projects would be carried out by State

and local governments and public or private nonprofit agencies submitting project applications to prime sponsors under the Comprehensive Employment and Training Act. The Secretary of Labor would make allocations of the funds on a statewide level so that not less than 75 percent of the funds would be allocated in accordance with each State's relative numbers of unemployed persons as compared to the total number of unemployed persons in the entire Nation, but no State would receive less than one-half of 1 percent of the funds available for this part. The remainder would be allocated at the discretion of the Secretary of Labor, except that 2½ percent would be reserved for Native American youth programs and 2½ percent for migrant youth programs.

Each prime sponsor would submit to the Secretary of Labor, for final selection of projects to be approved, those project applications it approves as well as all those approved by program agents in the area it serves. Program agents are units of general local government serving populations of 50,000 or more within a prime sponsorship area.

Project applications would go through the prime sponsor and would be reviewed by the prime sponsor's planning council for its recommendations. The prime sponsor would indicate the priority it attaches to each project application. Final approval of project applications submitted under part B would be made by the Secretary of Labor.

The goal of part B is to provide constructive work for youths ages 16 to 19 on projects having lasting and beneficial community impact. The program is designed to provide jobs and early work experience for youngsters still in school, as well as drop-outs and recent high school graduates.

Young people in this age bracket face the prospect of being the very last group in our society to be hired. Even if unemployment were reduced to under four percent, the prospect is that youngsters between 16 and 19 would still have a tragically high unemployment rate.

Activities funded under this program can be used to help restore community facilities in both urban and rural communities. Part B projects can also assist in repair work on houses for low-income families. There are urgent needs in every community to weatherize housing for low-income persons, including the elderly. Maximum flexibility is given each local community to select projects that will respond to individual community needs at the same time that they produce jobs.

To assure that these are useful projects, and not make-work activities, the funds can be used for equipment and supplies necessary to perform the work, as well as materials used in the project. Applicants are encouraged to use other programs and funds to supplement and provide materials; but, where this is not possible, needed materials would be funded under the program.

Section 851(j) of the new title VIII provides with respect to rates of pay

under parts B and C that, in the case of projects to which Davis-Bacon provisions otherwise apply, the Secretary of Labor is authorized, for projects of under \$5,000, to prescribe rates of pay for youth participants which are not less than the applicable minimum wage but not more than the wage rate of the entering apprentice in the most nearly comparable apprenticeable trade, and to prescribe the appropriate ratio of journeymen to such participating youths.

Since this authority applies to projects under \$5,000, it is important to note that the use of the word "project" in this context does not refer to the applicant's entire program but refers to each of the separate distinct activities that make up the total plan.

**PART C—COMPREHENSIVE YOUTH EMPLOYMENT AND TRAINING PROGRAMS**

Part C of the proposed new title VIII would authorize funds for a broad variety of employment and training programs designed to enhance the job prospects and career opportunities of young persons. Eligible youths would include youths ages 16 to 21, inclusive, but the Secretary would be authorized to prescribe regulations permitting youths to participate at ages 14 and 15 as well as those who are ages 22 and 23.

In addition to useful work experience opportunities in community betterment activities, part C would support appropriate training and services such as outreach, counseling, occupational information, institutional and on-the-job training, and transportation assistance.

While the National Young Adult Conservation Corps under part A and community improvement projects under part B would be open to both disadvantaged and nondisadvantaged youths, eligible participants for comprehensive employment and training programs under part C must be persons who are not members of families whose family incomes exceed 70 percent of the Bureau of Labor Statistics lower living standard budget, except that the Secretary would be authorized to permit limited participation by youths above that income level in supportive services and training activities in accordance with guidelines established by regulation.

Under the proposed legislation as reported by the committee, 75 percent of the total funds available for part C would be allocated to the States and to prime sponsors to be used as follows: First, 10 percent of the total funds available for part C would be made available for special statewide youth services;

Second, 15 percent of the total funds available for part C would be made available for programs for in-school youth pursuant to agreements between prime sponsors and local educational agencies; and third, 50 percent of the total funds available for part C would be made available for the use of prime sponsors for any of the youth employment and training activities or services described in section 832.

For each of the purposes described in the preceding paragraph, funds would be allocated among the States under the following formula: 37.5 percent in ac-

cordance with each State's share of the total number of unemployed persons in the Nation, 37.5 percent in accordance with each State's share of the total number of unemployed persons in areas having 6.5 percent or higher unemployment rates—title II CETA areas—in the Nation, and 25 percent would be allocated in accordance with each State's share of the total number of individuals in low-income families in the Nation.

In the case of those States where such formula would otherwise provide less funding, a minimum of one-half of 1 percent of the funds so allocated would be guaranteed to each State.

The 10-percent reservation of funds for special statewide youth services would be allocated only to the State level. But the reservation of 15 percent of part C funds for in-school programs, as well as the 50 percent which is allocated for use at the discretion of each prime sponsor, would be allocated, out of the statewide allocation, to the prime sponsorship level in accordance with the same three factors used in making allocations to the State level.

The remaining 25 percent of part C funds would be used as follows: 2½ percent would go for Native American youth programs, 2½ percent for programs for youths in migrant and seasonal farm-worker families, 10 percent would go for discretionary grants to prime sponsors by the Secretary of Labor, and the remaining 10 percent would be available for any public or private nonprofit agencies—including transfer of funds to other Federal departments and agencies.

Part C authorizes funds to enable sponsors to provide any of a broad variety of activities and services aimed at enhancing employment opportunities for youth.

In the 16 to 23 age bracket, most youths are just beginning the transition from their school years to their working years. One of the greatest needs is for work experience, and most youth employment and training programs are expected to have a substantial work experience component.

Work experience programs generally consist of subsidized employment with public agencies and with private nonprofit agencies. In contrast to transitional public service employment, the work situations are temporary and are not necessarily expected to result in unsubsidized employment for the participants. The purpose of such employment is to provide the participants with experience on a job, to develop occupational skills and good work habits, and to expose them to various occupational opportunities.

Short-term employment is the main component of a youth work experience program. Employment may be provided in part-time or full-time jobs.

A work experience program is not necessarily intended to make enrollees ready for a specific job upon completion. Where the program's principal goal is a general exposure to the world of work or simply to provide youths with income until they return to school, training might be limited to the basics. Where the goal is instead to assist out-of-

school youths who may not return to school, more extensive training may be provided, either classroom training in a vocational institution or specialized on-the-job training for specific skills.

**COMMUNITY-BASED OPERATIONS**

A significant amendment added to the bill in the Human Resources Committee provides that Opportunities Industrialization Centers (OIC), the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, and other similar organizations, which have demonstrated effectiveness in the delivery of employment and training services, are to be given special consideration by prime sponsors and the Secretary in carrying out certain programs under part C of the bill.

First, prime sponsors receiving funds under section 833(b)(3) must give special consideration to community-based organizations in providing employment training, and supportive services.

Second, prime sponsors receiving discretionary funds from the Secretary for the conduct of experimental and innovative programs must give special consideration to community-based organizations in carrying out such programs.

Third, the Secretary must give special consideration to community-based organizations in carrying out his discretionary authority to fund innovative and experimental programs directly with public or private nonprofit agencies.

The committee believes these three provisions should insure an active and prominent role for community-based organizations in the delivery of comprehensive employment and training services to youths. Many prime sponsors currently utilize community-based organizations in carrying out programs under other titles of CETA.

According to the Employment and Training Report of the President (January 12, 1977), an estimated \$90 million in title I funds was provided to local community-based organizations by prime sponsors in fiscal year 1976. The local community-based organizations served about 110,000 persons, or approximately 6.4 percent of the 1,731,000 CETA participants served under title I.

In enacting a major new effort to enhance opportunities for youths to attain useful employment, the committee believed it important to add these new provisions requiring prime sponsors and the Secretary to give special consideration to community-based groups under part C of the new title VIII. The committee expects that prime sponsors and the Secretary will provide an increased role for the involvement of community-based organizations in the delivery of employment and training services for youths.

**PROGRAMS FOR IN-SCHOOL YOUTH**

Under the committee bill, 15 percent of the funds available for part C of the net title VIII are allocated to each prime sponsor to be used only for programs for in-school youth who are eligible participants under part C. These programs, which include employment opportunities and training and supportive services, are to be carried out pursuant to an agree-

ment between a prime sponsor and a local educational agency or agencies located within the prime sponsor's jurisdiction.

On the basis of these agreements, arrangements may be made with postsecondary institutions to serve eligible participants who are enrolled in junior or community colleges or technical or trade schools.

During the subcommittee hearings, Dean Seymour Wolfbein of Temple University testified as to the need for the kind of cooperative programs between prime sponsors and educational agencies. He stated:

The combination of work and study is one of the key elements of all successful youth programs, whether they are conducted under the aegis of Federal employment and training legislation or under regular academic context. These programs go by different names—work-study, cooperative, education, coupled training, etc. Their common denominator is the synchronized bringing together of classroom training and on-the-job experience.

These programs result in a number of major advantages to everyone concerned. They assure a connection, a series of transactions between the education and training constituencies and the employing institutions, so that both understand the problems and opportunities of each other. Classroom instruction becomes alive in being put to use in the real world for which academic credit can also be given. Students can also get a wide range of work done; they run the gauntlet of the actual job market and they get a chance to try out different fields of work. Employers also can be compensated for any extra costs entailed and they also get the chance to see a young person's work and even get first crack at employing that person when he or she is finishing with training.

#### NATIONAL OCCUPATIONAL INFORMATION COORDINATING COMMITTEE

The committee bill includes authority for a transfer of not less than \$3 million and not more than \$5 million for discretionary funds under CETA to the National Occupational Information Coordinating Committee established under section 161 of the Vocational Education Act.

The National Occupational Information Coordinating Committee consists of the Assistant Secretary of Labor for Employment and Training, the Commissioner of the Bureau of Labor Statistics, the Administrator of the National Center for Education Statistics, and the Commissioner of Education. The purpose of the Committee is to improve coordination between vocational educators and manpower administrators, to develop a national occupational information system, and to assist the States in using the data acquired from the system.

An important purpose of the National Occupational Information Coordinating Committee is to assist States in the development of reliable occupational supply and demand data, so that education programs and employment and training programs can be based upon reasonable expectations of available career opportunities.

#### SPECIAL STATEWIDE YOUTH SERVICES

The committee bill provides that 10 percent of the part C funds shall be used for special statewide youth services.

Programs financed under this set-aside

should be coordinated at the State and local levels with other established programs for educating, training, counseling, and employing youth.

This set-aside is expected to be used for joint projects which will coordinate the efforts of the State education system, welfare system, employment service, rehabilitation and correction services, youth services, apprenticeship programs, Federal and State forest and park projects, and other employment and training activities within each State. The set-aside could be utilized, for example, to establish programs for youths in State foster care programs or to create programs conducted by several State agencies which would be geared to youth with special needs.

#### YOUTH COUNCILS

The committee bill contains a provision which requires that eligible applicants establish youth councils. These councils are to function as subcommittees of the prime sponsors' planning council established under title I of the act and are responsible for planning and reviewing activities under parts B and C and making recommendations for the planning of such activities.

The committee bill requires representation on the youth council by the local educational agency, local vocational education advisory council, junior and community colleges, business, unions, the public employment service, local government and nongovernment agencies and organizations which are involved in meeting the special needs of youths, the community served by the applicant, the prime sponsors' planning council, and youths themselves.

#### NEED FOR LEGISLATION

There is no more urgent problem facing this Nation than the problem of youth unemployment. For the past year and a half, there have been over 1.6 million jobless youths aged 16 to 19, an unemployment rate of close to 20 percent. There have been an additional 1.5 million jobless youths aged 20 to 24, for an unemployment rate in that age category of 11 or 12 percent. Minority teenage unemployment is close to 40 percent. Over the next 6 years, 4.3 million youths will reach the age of 21.

The problem of youth unemployment is not limited to this Nation. At the recent summit conference in Europe, the leaders of the industrialized nations of the Western world in their joint communique pledged to "promote the training of young people in order to build a skilled and flexible labor force so that they can be ready to take advantage of the upturn in economic activity as it develops."

Economic experts believe that the problems of youth unemployment are structural and will not disappear with improved general economic conditions alone.

That is why it is so important that Congress and the administration move together to attack the youth unemployment crisis.

Mr. President, I have a section-by-section analysis of the act. I ask unanimous consent that it be printed in the Record.

There being no objection, the analysis was ordered to be printed in the Record, as follows:

#### SECTION-BY-SECTION ANALYSIS

##### Section 1—Short Title

This section provides that the act may be cited by the short title: "Youth Employment and Training Act of 1977."

##### Section 2

This section amends the Comprehensive Employment and Training Act of 1973 by adding at the end thereof a new title VIII.

#### TITLE VIII—YOUTH EMPLOYMENT AND TRAINING

##### Section 800. Authorization of appropriations

This section authorizes the appropriation of such sums as may be necessary for fiscal year 1978 to carry out the provisions of the new title VIII.

#### PART A—NATIONAL YOUNG ADULT CONSERVATION CORPS

##### Section 801. Statement of purpose

This section sets forth the purpose of part A to establish a National Young Adult Conservation Corps to provide youth employment in conservation and other work on Federal and non-Federal public lands and waters.

##### Section 802. Establishment of National Young Adult Conservation Corps

This section provides for the establishment of a National Young Adult Conservation Corps to carry out projects on Federal or non-Federal public lands and waters. The Secretary of Labor is to administer this part through interagency agreements with the Secretaries of the Interior and Agriculture, who are to have responsibility for the management and program of each corps center.

##### Section 803. Selection of enrollees

Subsection (a) of this section provides that enrollees of the corps shall be selected by the Secretaries of the Interior and Agriculture only from candidates referred by the Secretary of Labor.

Subsection (b) provides that membership in the corps shall be limited to unemployed individuals who are 16 to 23 years old, inclusive;

Subsection (c) provides that the Secretary of Labor shall make arrangements for obtaining referral of candidates for the corps from the public employment service, prime sponsors and sponsors of Native American and migrant programs under the Act, the Secretaries of the Interior and Agriculture, and such other agencies and organizations as the Secretary of Labor deems appropriate. The Secretary of Labor shall undertake to have an equitable proportion of candidates referred from each State, with no less than one-half of 1 percent of the total number of referrals from any one State.

Subsection (d) provides that in referring candidates from each State, preference shall be given to rural and urban areas within the State which have substantial youth unemployment, including areas having unemployment rates of 6.5 or greater.

Subsection (e) provides that no individual may be employed in the corps for a total period of more than 12 months.

##### Section 804. Activities of the Corps

Subsection (a) of this section provides that, consistent with each interagency agreement, the Secretary of the Interior or Agriculture (as appropriate) shall determine the location of each residential or nonresidential campsite, in consultation with the Secretary of Labor. This subsection lists types of conservation and natural resource work which could be performed.

Subsection (b) provides that the Secretaries of the Interior and Agriculture shall undertake to assure that projects are consistent with the Forest and Rangeland Renewable Resources Planning Act of 1974, as amended by the National Forest Management

Act of 1976 (the renewable resource program), as well as such other standards as each Secretary shall prescribe consistent with the provisions of Federal law.

Subsection (c) provides that, to the maximum extent practicable, appropriate projects shall be highly labor intensive, be projects for which work plans can be readily developed, be able to be initiated promptly, be projects likely to have a lasting impact both as to the work performed and the benefit to the youths participating, provide work experience to participants in skill areas needed in work on projects, be located (if a practical program) where existing residential facilities are available, be similar to activities of persons employed in seasonal or part-time work for specified Interior and Agriculture Department agencies.

Subsection (d) provides that the Secretaries of the Interior and Agriculture may provide for such transportation, lodging, subsistence, medical treatment, and other appropriate services, supplies, equipment, and facilities. Wherever economically feasible, existing but unoccupied or underutilized Federal, State, and local government facilities, and equipment of all types (including military facilities and equipment) shall, where appropriate, be utilized for purposes of the Corps work camps with the approval of the Federal agency, State, or local government involved.

#### *Section 805. Conditions applicable to Corps members*

Subsection (a) of this section provides that members of the Corps shall not be deemed Federal employees except for purposes of compensation for work injuries, of the Federal Tort Claims Act, and title II of the Social Security Act.

Subsection (b) provides that the Secretary of Labor shall, in consultation with the Secretaries of the Interior and Agriculture, establish standards for rates of pay (which shall be at least the minimum wage rate set forth in section 6(a)(1) of the Fair Labor Standards Act); for reasonable hours and conditions of employment; for safe and healthful working and living conditions.

Subsection (c) provides that Corps members shall be assigned to projects as near to their homes as practicable, to minimize transportation costs.

#### *Section 806. State and local programs and special projects*

Subsection (a) of this section provides that, consistent with inter-agency agreements with the Secretary of Labor, the Secretaries of the Interior and Agriculture may make grants or enter into arrangements to carry out projects under this part with any State agency or institution, any unit of general local government, any public agency or organization, or any private nonprofit agency or organization which has been in existence for at least 2 years.

Subsection (b) provides for reserving for projects under this part not less than 30 percent of the funds available for this part.

#### *PART B—YOUTH COMMUNITY CONSERVATION AND IMPROVEMENT PROJECTS*

##### *Section 811. Statement of purpose*

This section sets forth the purpose of part B to establish a program of community conservation and improvement projects to provide work and training opportunities for eligible youths for a period not to exceed 12 months.

##### *Section 812. Definitions*

This section defines terms for purposes of part B:

(1) "eligible applicant" means prime sponsors and sponsors of Native American programs and migrant programs under the act;

(2) "project applicant" has the same meaning as in section 701(a)(15) of this act;

(3) "eligible youths" means unemployed individuals ages 16 to 19, inclusive;

(4) "community improvement projects" means projects providing work which would not otherwise be carried out, including rehabilitation or improvement of public facilities; neighborhood improvements; weatherization and basic repairs to low-income housing; and conservation, maintenance, or restoration of natural resources on publicly held lands other than Federal lands.

##### *Section 813. Allocation of funds*

Subsection (a) of this section provides that funds for part B shall be allocated so that not less than 75 percent shall be allocated among the States on the basis of the relative number of unemployed persons within each State as compared to all States. No State would be allocated less than one-half of 1 percent, and one-half of 1 percent would be allocated in the aggregate for Guam, the Virgin Islands, American Samoa, the Northern Marianas, and the Trust Territory of the Pacific Islands.

Subsection (b) provides that of the funds for part B, there would be made available 2½ percent for projects for Native American eligible youths for a period not to exceed 12 for eligible youths in migrant and seasonal farmworker families.

Subsection (c) provides that the remaining part B funds are to be allocated as the Secretary deems appropriate.

##### *Section 814. Community conservation and improvement youth employment program*

This section authorizes the Secretary of Labor to enter into agreements with eligible applicants to pay the costs of community improvement projects to be carried out by project applicants employing eligible youths and appropriate supervisory personnel.

##### *Section 815. Project applications*

Subsection (a) of this section provides that project applicants shall submit applications from funding of projects under part B to the appropriate eligible applicant.

Subsection (b) requires that project applications provide descriptions and assurances with respect to projects.

##### *Section 816. Project agreements*

Subsection (a) of this section provides that any eligible applicants desiring funding under part B shall submit a proposed agreement to the Secretary and shall make available to the Secretary all project applications approved by the eligible applicant and by any program agents in the area served by the eligible applicant.

Subsection (b) provides that the proposed agreement shall describe the method of recruiting youths and a description of job training and skill development opportunities.

Subsection (c) provides for review of all project applications by the prime sponsor's planning council prior to being submitted to the Secretary.

##### *Section 817. Approval of agreements*

Subsection (a) of this section provides that the Secretary may approve or deny on an individual basis any of the project applications submitted by an eligible applicant.

Subsection (b) provides that assurances must be satisfactory to the Secretary that programs will permit in-school youths to coordinate their jobs with classroom instruction and, to the extent feasible, to permit youths to receive credit from the appropriate educational agency, postsecondary institution, or particular school involved.

##### *Section 818. Work limitation*

This section provides that no eligible youth shall be employed for more than 12 months in work financed under this part, except as provided by the Secretary.

#### *PART C—COMPREHENSIVE YOUTH EMPLOYMENT AND TRAINING PROGRAMS*

##### *Section 831. Statement of purpose*

This section sets forth the purpose of part C to establish comprehensive programs to enhance the job prospects and career opportunities of young persons.

##### *Section 832. Programs authorized*

This section authorizes the Secretary to provide financial assistance to enable eligible applicants to provide employment opportunities and appropriate training and supportive services for eligible participants.

##### *Section 833. Allocation of funds*

Subsection (a) of this section provides that 75 percent of the funds available for part C shall be allocated in accordance with subsection (b).

Subsection (b) provides that 10 percent of total part C funds shall be made available to States for special statewide services under subsection (d), that 15 percent of total part C funds shall be made available to prime sponsors for in-school programs under subsection (e), and that 60 percent of total part C funds shall be available to prime sponsors for programs authorized by section 832.

Subsection (c) provides that amounts available for each of the purposes described in subsection (b) shall be allocated among the States so that 37.5 percent shall be allocated according to the relative number of unemployed persons in each State, 37.5 percent in accordance with the relative number of unemployed persons in areas having unemployment rates of 6.5 percent or greater, and 25 percent in accordance with the relative number of persons in low-income families. However, not less than one-half of 1 percent shall be allocated for each State, and not less than one-half of 1 percent in the aggregate for Guam, the Virgin Islands, American Samoa, the Northern Marianas, and the Trust Territory of the Pacific Islands. Amounts available to each of the programs in subsection (b), except statewide services, are to be allocated to the prime sponsors within each State, in accordance with the factors described in the preceding paragraph.

Subsection (d) sets forth a description of purposes for which a special statewide youth services plan may be used.

Subsection (e) provides that of the funds allocated to each prime sponsor in accordance with the provisions of subsection (c), not less than 15 percent shall be utilized for programs authorized under section 832 and carried out pursuant to agreements between prime sponsors and local education agencies.

Subsection (f) provides that prime sponsors, in utilizing funds available to them, shall give special consideration to community-based organizations, such as the Opportunities Industrialization Centers, the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, and other similar organizations which have demonstrated effectiveness in the delivery of employment and training services, in carrying out programs authorized under section 832.

Subsection (g) provides that the remaining 25 percent of part C funds shall be available so that 2½ percent shall be available for Native American youths, 2½ percent for youths in migrant and seasonal farmworker families, and the remaining 20 percent shall be available for innovative and experimental programs (Secretary's discretionary funds) under section 838.

##### *Section 834. Eligible applicants*

This section provides that eligible applicants for this part are prime sponsors, sponsors of Native American programs, and sponsors of migrant and seasonal farmworker families under the act.

*Section 835. Eligible participants*

Subsection (a) of this section provides that eligible participants for programs under part C shall be persons who are either unemployed or in school; who are ages 16 to 21 (inclusive), unless the Secretary by regulation, authorizes participation of 22 and 23 year-olds and 14 and 15 year-olds, and whose families have incomes at not more than 70 percent of the lower living standard income level.

Subsection (b) defines the term "lower living standard income level" as based on the "lower living standard budget" issued by the Bureau of Labor Statistics.

*Section 836. Conditions for receipt of financial assistance*

Subsection (a) of this section provides that the Secretary shall not provide financial assistance to an eligible applicant under section 832 unless it has provided a description of the program to be provided to eligible participants, has provided assurances of coordination with related agencies and organizations, and has provided assurances that effective means will be provided to enable participating youths to acquire job skills, education, and training. Paragraph (7) of this subsection provides that the funds available under section 833(c) shall be used to provide programs authorized under section 832 for in-school youth who are eligible participants; these programs shall be carried out pursuant to agreements between prime sponsors and local education agencies and through arrangements to be carried out by a local education agency or agencies, which may include a postsecondary educational institution or institutions.

Subsection (b) provides for establishing a youth council to make recommendations to the prime sponsor's planning council with respect to the planning and review of activities under part C and part B.

Subsection (c) provides that no work experience for in-school youth program shall be entered into unless an agreement has been made between the prime sponsors and a local education agency or agencies. Each agreement shall be administered, under contracts with the prime sponsor, by a local educational agency or agencies or a postsecondary educational institution or institutions. Certain assurances are required to be set forth in the agreement.

*Section 837. Review of plans by secretary*

This section provides that provisions in title I of the act with respect to the review of plans by the Secretary shall apply to programs and activities under section 832.

*Section 838. Innovative and experimental programs*

Subsection (a) of this section authorizes the Secretary of Labor to support innovative and experimental programs to test new approaches for dealing with the unemployment problems of youths.

Subsection (b) provides that one-half of the funds available under section 833(g) (2) (i.e., 10 percent of part C funds) shall be provided to prime sponsors and that eligible applicants receiving such assistance shall give special consideration to community-based organizations.

Subsection (c) provides that the remaining funds available under section 833(g) (2) (i.e., 10 percent of part C funds) shall be used to enable public and private agencies to carry out innovative and experimental programs for eligible participants. The Secretary shall give special consideration to community-based organizations. Funds under this subsection may be transferred to other Federal departments and agencies to carry out functions delegated to them pursuant to agreements with the Secretary of Labor.

Subsection (d) provides that, in carrying out its responsibilities under this subsection and under section 161 of the Vocational Education Act, the National Occupational Infor-

mation Coordinating Committee shall give special attention to the problems of unemployed youths. The subsection sets forth activities which the committee is expected to assist and encourage and provides that all funds available to the committee under CETA and under section 167 of the Vocational Education Act may be used by the committee to carry out any of its functions and responsibilities authorized by law.

*Section 839. Academic credit*

This section provides that, in carrying out part C, appropriate efforts shall be made to encourage the granting by the educational agency a school involved of academic credit to eligible participants who are in school.

*PART D—GENERAL PROVISIONS**Section 851. Special conditions*

This section sets forth maintenance of effort, labor standards, participant protections, and similar requirements.

*Section 852. Special provisions for parts B and C*

Subsection (a) of this section provides that appropriate efforts shall be made to insure that youth participating under parts B and C shall be youths experiencing handicaps in obtaining employment.

Subsection (b) of this section sets forth reallocation authority with respect to funds under parts B and C.

*Section 853. Education credit, counseling and placement services, and basic skills development*

Subsection (a) of this section provides that the Secretary of Labor shall work with the Department of Health, Education, and Welfare to make suitable arrangements with appropriate State and local education officials whereby academic credit may be awarded to participating youths.

Subsection (b) provides that all activities funded under this title shall provide appropriate counseling and placement services.

*Section 854. Evaluation*

This section provides that programs under this title shall be subject to continuing performance evaluation under section 313(a) of CETA.

*Section 855. Training and technical assistance*

This section provides that training and technical assistance may be provided to eligible applicants under parts B and C in accordance with section 315 of CETA.

*Section 856. Relation to other provisions*

This section provides that the provisions of title VII of CETA apply to this title, except to the extent any such provision may be inconsistent with the provisions of this title.

*Section 4. Transition Provision*

This section provides that the Secretary of Labor shall use funds available from appropriations under the Economic Stimulus Appropriations Act of 1977 for youth employment and training activities, to the maximum extent consistent with law, in such a manner as to be in accordance with the provisions of the new title VIII.

*Section 5. Transfer of Funds to National Occupational Information Coordinating Committee*

This section amends section 4(e) of CETA to provide that the Secretary of Labor shall transfer no less than \$3 million and no more than \$5 million of discretionary funds available to the Secretary under CETA in any fiscal year to the National Occupational Information Coordinating Committee, which has been established under section 161(b) of the Vocational Education Act of 1963.

*Section 6. Native American Programs*

This section amends section 302 of CETA to include eligibility for Hawaiian natives in addition to Indians and Alaskan natives, for

Native Americans employment and training programs under such section.

*Section 7. Waiver of Limitation on Funds for Titles III and IV*

This section provides that section 4(e) of CETA shall be deemed ineffective with respect to fiscal years 1977 and 1978.

*Section 8. Effective Date*

This section provides that the provisions of this legislation shall become effective upon enactment.

Mr. SCHWEIKER. Mr. President, I support S. 1242, the Youth Employment and Training Act of 1977. I believe enactment of this measure will be a major step toward reducing the staggering unemployment rate among this Nation's youth. Many Members of this body, particularly my distinguished colleagues from Wisconsin (Mr. NELSON) and New York (Mr. JAVITS), are to be commended for their clear recognition of the need to address the problem of youth unemployment and for their efforts in developing this legislation. I would like to comment in particular on the role of community-based organizations in the delivery of employment and training services under this bill.

During full Human Resources Committee consideration of S. 1242, I offered an amendment to add as an additional title to the bill a revised version of S. 175, the Opportunities Industrialization Centers Skills Training and National Community Based Organizations Job Creation and Employment Act of 1977. This amendment would have directed the Secretary of Labor to enter into contracts with OIC and with other national community-based organizations to provide jobs, training, and comprehensive employment services to unemployed individuals, especially unemployed youths.

There was considerable support for my amendment in the committee stemming from recognition of the great contributions community-based organizations have made to this Nation's efforts to combat unemployment. For example, OIC, during the period 1964-75 trained 353,485 individuals and placed 250,002 of them in unsubsidized employment. 212,500 of those placed were still on the job 6 months later. OIC's placement rate of 72 percent and retention rate of 85 percent testify to the quality of the services provided and to OIC's effectiveness in reaching the unemployed. Moreover, OIC is able to train and place one worker for an average cost of \$1,500. This cost is considerably less than the costs of training and placement under title I of CETA.

Despite the sentiment for establishing a special program of financial assistance for community-based organizations in order to encourage their growth and resolve some of the problems which have plagued them under CETA, such as fragmentation of services, some concern was expressed with regard to the categorical nature of the program contemplated by the amendment. The establishment of a categorical program would be a significant departure from the decategorization embodied in CETA.

In response to this concern a compromise was adopted by the committee. Under the final version of the amendment, community-based organizations

such as Opportunities Industrialization Centers, Inc.—OIC—the National Urban League, SER-Jobs for Progress, Mainstream, Community Action Agencies, union-related organizations, and other similar organizations which have demonstrated effectiveness in the delivery of employment and training services, are to be given special consideration by prime sponsors and the Secretary in carrying out certain programs under part C of the bill.

First, prime sponsors receiving funds under section 833(b)(3) must give special consideration to community-based organizations in providing employment, training, and supportive services authorized under section 832.

Second, eligible applicants receiving funds for the conduct of experimental and innovative programs under section 838(b) must give special consideration to community-based organizations in carrying out such programs.

Third, the Secretary must give special consideration to community-based organizations in carrying out his authority to fund innovative and experimental programs under section 838(c).

Mr. President, I believe these three provisions should insure an active and prominent role for community-based organizations in the delivery of comprehensive employment and training services to youths. Although many prime sponsors currently utilize community-based organizations in carrying out programs under other titles of CETA, these new provisions require prime sponsors and the Secretary of give special consideration to these groups under part C of the new title VIII. I believe prime sponsors and the Secretary should observe this requirement diligently and should note that it is deliberately substantially stronger than current law with respect to the role of community-based organizations in the delivery of manpower services.

I feel very strongly that the success and efficiency of community-based organizations in meeting the needs of the unemployed both justifies and demands the provision of special consideration under part C of this bill.

Mr. President, the authorization for this new title under CETA extends only through fiscal year 1978. Later this Congress, the Senate is expected to undertake a comprehensive review of CETA and consider substantive amendments to the act. At that time, I hope extensive study will be devoted to the role of community-based organizations in this Nation's manpower delivery system. I believe they have an important part to play in our continuing efforts to combat unemployment and that ways should be found to accommodate community-based organizations more fully within the structure of CETA. S. 1242 is an important first step.

Mr. NELSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### RECESS UNTIL 4:21 P.M.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in recess for 1 hour.

There being no objection, the Senate, at 3:21 p.m., recessed until 4:21 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. ANDERSON).

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ADDITIONAL COURT JUDGES—S. 11

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that notwithstanding the third reading and passage yesterday of S. 11, the omnibus judgeship bill, the following amendments be made in the bill:

On the calendar print of S. 11, in section 1(a) on page 7, commencing at line 17, after the word "Oregon", change the following phrase to read:

two additional district judges for the middle district of Pennsylvania

In section 2 of the bill, on page 11 of the calendar print at the end of line 1 and after the word "the" insert the words "advice and".

Mr. President, this will permit the insertion of the descriptive term "district" in the phrase authorizing two additional judges for the middle district of Pennsylvania. It will also permit the insertion of two missing words in the first sentence of section 2, which contemplates that the appointments made by the President will be made "by and with the advice and consent of the Senate".

The PRESIDING OFFICER. Without objection, it is so ordered.

#### FISHERMEN'S PROTECTIVE ACT OF 1967—S. 1184

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that notwithstanding the third reading and passage yesterday of S. 1184, a bill to amend section 7(e) of the Fishermen's Protective Act of 1967, as amended, the following amendments be made in the bill:

On page 1, immediately after line 7, insert the following:

"Sec. 2. The Fishermen's Protective Act of 1976, as amended, is further amended by adding at the end thereof the following new section:"

Amend the title so as to read:

"To amend section 7(e) of the Fishermen's Protective Act of 1967, and for other purposes."

The PRESIDING OFFICER. Without objection, it is so ordered.

#### NATIONAL AERONAUTICS AND SPACE ADMINISTRATION AUTHORIZATIONS

Mr. ROBERT C. BYRD. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on H.R. 4088.

The PRESIDING OFFICER (Mr. ANDERSON) laid before the Senate a message from the House of Representatives announcing its disagreement to the amendment of the Senate to the bill (H.R. 4088) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and requesting a conference with the Senate on the disagreeing votes of the two Houses thereon.

Mr. ROBERT C. BYRD. I move that the Senate insist upon its amendment and agree to the request of the House for a conference, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. MAGNUSON, Mr. HOLLINGS, Mr. STEVENSON, Mr. FORD, Mr. GOLDWATER, and Mr. SCHMITT conferees on the part of the Senate.

#### ENDANGERED SPECIES ACT AUTHORIZATIONS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 160.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

The bill (S. 1316) to authorize appropriations for fiscal years 1978, 1979, and 1980 to carry out State cooperative programs under the Endangered Species Act of 1973.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill (S. 1316) which had been reported from the Committee on Environment and Public Works with an amendment on page 1, beginning with line 10, strike through and including page 2, line 2, and insert the following in lieu thereof:

"(2) \$9,000,000 to the Secretary of the Interior through the period ending September 30, 1980; and

"(3) \$3,000,000 to the Secretary of Commerce through the period ending September 30, 1980."

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 6(1) of the Endangered Species Act of 1973 (16 U.S.C. 1535(1)) is amended to read as follows:

"(1) APPROPRIATIONS.—For the purposes of this section, there are authorized to be appropriated not to exceed the following sums:

"(1) \$10,000,000 through the period ending September 30, 1977.

"(2) \$9,000,000 to the Secretary of the Interior through the period ending September 30, 1980; and

"(3) \$30,000,000 to the Secretary of Commerce through the period ending September 30, 1980."

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. HAYAKAWA. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### WATER RESOURCES RESEARCH AND TECHNOLOGY DEVELOPMENT ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 161.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 846) to provide for a continuing program for water resources research and development.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill (S. 846), which had been reported from the Committee on Environment and Public Works with amendments as follows:

On page 16, line 20, strike "reverse osmosis and crystallization (Freezing), vapor compression distillation, and membrane processes" and insert "membrane process, such as reverse osmosis and electrodialysis, and phase change process such as freezing and distillation";

On page 24, line 10, following "During" insert "each of";

So as to make the bill read:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Water Resources Research and Technology Development Act of 1977".*

#### TITLE I—GENERAL WATER RESOURCES RESEARCH

SEC. 101. It is the purpose of this title to assist the States and the Nation to provide a supply of water sufficient in quantity and quality to meet the Nation's expanding needs and to preserve and enhance water resources and the water-related environment by taking certain measures to promote comprehensive planning and research dealing with water resources and water quality; identify and find practicable solutions to the Nation's water and water-related problems; promote the training of scientists, engineers, and other skilled personnel in fields related to water; and foster and supplement present programs for the conduct of research and experimentation in improved and innovative water resources planning, management, conservation, and operating practices.

SEC. 102. (a) The Secretary of the Interior (hereinafter in this Act referred to as the "Secretary") is hereby authorized and directed to assist in establishing and carrying on the work of a competent and a qualified water research and technology institute, center, or equivalent agency (hereinafter referred to as "institute") at one college or university in each State, which college or university shall be a college or university established in accordance with the Act approved July 2, 1862 (12 Stat. 503; 7 U.S.C. 301ff), entitled "An Act donating public lands to the several States and territories which may provide colleges for the benefit of

agriculture and the mechanic arts" or some other institution designated by Act of the legislature of the State concerned: *Provided*, That (1) if there is more than one such college or university in a State established in accordance with said Act of July 2, 1862, funds under this section shall, in the absence of a designation to the contrary by act of the legislature of the State, be paid to the one such college or university designated by the Governor of the State to receive the same, subject to the Secretary's determination that such college or university has, or may reasonably be expected to have, the capability of doing effective work under this title; (2) two or more States may cooperate in the designation of a single institute or regional institute, in which event the sums assignable to all of the cooperating States shall be paid to such institute; (3) a designated college or university may, as authorized by appropriate State authority, arrange with other colleges and universities within the State to participate in the work of the institute.

(b) It shall be the duty of each such institute to plan and conduct and/or arrange for a component or components of the college or university with which it is affiliated to conduct competent research including investigations, and experiments of either a basic or practical nature, or both, in relation to water resources, to promote dissemination of the nature and results of these efforts, and to provide for the training of scientists and engineers through such research, investigations, and experiments. Such research, investigations, experiments, and training may include, without being limited to, aspects of hydrologic cycle; supply and demand for water; conservation and best use of available supplies of water; methods of increasing such supplies; and economic, legal, social, engineering, recreational, biological, geographic, ecological, and other aspects of water problems; scientific information dissemination activities, including identifying, assembling, and interpreting the results of scientific and engineering research deemed potentially significant for solution of water resource problems; and providing means for improved communication regarding such research results, including prototype operations and ascertaining the existing and potential effectiveness of such for aiding in the solution of practical problems and training qualified persons, having due regard to the varying conditions and needs of the respective States, to water research and development projects being conducted by agencies of the Federal and State Governments, the agricultural experiment stations and others, and to avoidance of any undue displacement of scientists and engineers elsewhere engaged in water resources research and development. The annual programs submitted by the State institutes to the Secretary for approval shall include assurances, satisfactory to the Secretary, that such programs were developed in close consultation and collaboration with leading water resources officials within the State to promote research, training, and other work meeting the needs of the State.

(c) There are hereby authorized to be appropriated to the Secretary, for the purpose of implementing this section, such sums annually as are sufficient to provide an amount not to exceed \$500,000 each year to each participating institute, beginning with the fiscal year ending September 30, 1978, and continuing through the fiscal year ending September 30, 1982.

SEC. 103. (a) There is further authorized to be appropriated to the Secretary, for each of the fiscal years ending September 30, 1978 and 1979, the sum of \$10,000,000 to match, on a dollar-for-dollar basis, funds made available to the institutes by the States or other non-Federal sources to meet the necessary expenses of specific water resources

research projects which could not otherwise be undertaken. Not more than 40 per centum of the amount appropriated for either such year may be expended for planning and participating in regional water resources research projects.

(b) Each application for a grant, pursuant to subsection (a) of this section, shall among other things, state the nature of the project to be undertaken, the period during which it will be pursued, the qualifications of the personnel who will direct and conduct it, the importance of the project to the water economy of the Nation, the region and the State concerned, its relation to other known research projects previously conducted or currently being pursued, the procedures by which the results can be disseminated, and the extent to which it will provide opportunity for the training of water resources scientists and engineers. No grant shall be made under this subsection except for projects approved by the Secretary and all grants shall be made upon the basis of the merit of the project, the need for the knowledge which it is expected to produce when completed, and the opportunity it provides for the training of water resources scientists and engineers.

SEC. 104. Sums appropriated pursuant to sections 102 and 103 of this title shall be paid to the designated institutes at such times and in such amounts during each fiscal year as determined by the Secretary and upon vouchers approved by him. Funds received by an institute pursuant to such payment may be used for any allowable costs within the meaning of the Federal procurement regulations that establish principles for determining costs applicable to research and development under grants and contracts with educational institutions. Each institute shall have an officer appointed by its governing authority who shall receive and account for all funds paid under the provisions of this title and shall make an annual report to the Secretary on or before the 1st day of December of each year, in a manner and form prescribed by the Secretary, which report shall include work accomplished and the status of projects underway, together with a detailed statement of the amounts received under any of the provisions of this title during the preceding fiscal year, and of its disbursement. If any of the moneys received by the authorized receiving officer of any State institute under the provisions of this title shall, by any action or contingency, be found by the Secretary to have been improperly diminished, lost, or misapplied, it shall be replaced and until so replaced no subsequent disbursement of Federal funds shall be made to any institute of such State.

SEC. 105. Moneys appropriated pursuant to this title, in addition to being available for expenses for research, experiments, and training conducted under authority of this title, shall also be available for printing and publishing the results thereof and for administrative planning and direction. The institutes are hereby authorized and encouraged to plan and conduct programs financed under this title in cooperation with each other and with such other agencies and individuals as may contribute to the solution of the water problems involved, and moneys appropriated pursuant to this title shall be available for paying the necessary expenses of planning, coordinating, and conducting such cooperative research.

SEC. 106. (a) The Secretary is hereby charged with the responsibility for the proper administration of this title and, after full consultation with other interested Federal agencies, shall prescribe such rules and regulations as may be necessary to carry out its provisions. He shall require a showing that institutes designated to receive funds have, or may reasonably be expected to have, the capability of doing effective work. He shall furnish such advice and assistance as will best promote the purposes of this title, par-

participate in coordinating research initiated by the institutes under this title, indicate to them such lines of inquiry as to him seem most important and encourage and assist in the establishment and maintenance of cooperation by and between the institutes and between them and other research organizations, the United States Department of the Interior, and other Federal establishments.

(b) On or before the 1st day of January in each year after the enactment of this Act, the Secretary shall ascertain whether the requirements of subsection (a) have been met as to each institute, whether it is entitled to receive its share of the annual appropriations for water resources research under section 102 of this title and the amount which it is entitled to receive.

Sec. 107. Nothing in this title shall be construed to impair or modify the legal relation existing between any of the colleges or universities under whose direction an institute is established and the government of the State in which it is located, and nothing in this title shall in any way be construed to authorize Federal control or direction of education at any college or university.

Sec. 108. (a) The Secretary is authorized to make grants to, and finance contracts and matching or other agreements with, qualified educational institutions, private foundations, or other institutions, with private firms and individuals whose training, experience, and qualifications are, in his judgment, adequate for the conduct of water research projects and with local, State, and Federal Government agencies, to undertake research into any aspect of water-related problems which he may deem desirable in the national interest and which are not otherwise being studied.

(b) There is authorized to be appropriated to the Secretary, for carrying out the purposes of this section, for each of the fiscal years ending September 30, 1978 and 1979, the sum of \$10,000,000 to remain available until expended: *Provided*, That not more than 50 per centum of the amount appropriated pursuant to this section in any fiscal year may be used to finance contracts or make grants to educational institutions.

Sec. 109. The Secretary is authorized to conduct a research assessment and transfer program which transfers research results to other organizations and individuals for further development, demonstration, and practical application to water and water-related problems. The Secretary may enter into agreements with the State and local governments and with other public and private organizations and individuals, including cost-sharing or cost-participation agreements, for the demonstration, transfer, or application of research results for the solution of water-related problems and to further the transfer developed by programs authorized under this title. The Secretary may issue transfer publications and may conduct seminars, conferences, training sessions, or use other such techniques he deems necessary to expedite the transfer of research results and technology development.

Sec. 110. The Secretary is authorized to maintain a Center for Data, dealing with all areas of water resources research and technology development and to disseminate information acquired by the Center. Each Federal agency engaged in water resources research and technology development shall cooperate by providing the Center with documents and information. The Center shall maintain for general use a collection of water resources information provided by Federal and non-Federal government agencies, colleges, universities, private institutions, and individuals.

Sec. 111. The Secretary may issue publications or utilize other media to disseminate research data for the purposes of this Act; enter into agreements with public or private

organizations or individuals to stimulate research and development in neglected areas, thus contributing to a comprehensive, nationwide program of scientific and technical information dissemination in water research, which avoids duplication.

Sec. 112. The Secretary shall, in addition to such other actions as may be authorized or required, make generally available abstracts and other summary type information concerning water-related research accomplishments by all Federal agencies and by non-Federal agencies, private institutions, and individuals, to the extent such information can be obtained and reports completed on research projects funded under provisions of this Act, including any direct publication of research information undertaken by the institutes.

Sec. 113. Water resources research programs carried out in accordance with this title may include, without being limited to irrigation and other water use efficiencies; water and related planning, operations, management, and legal systems; protection and enhancement of the water-based environment; institutional arrangements; salinity management; and economic, social, and environmental impact assessment. Due consideration shall be given to priority problems identified by water and related land resources planning data acquisition, and like studies conducted by other agencies and organizations.

Sec. 114. (a) The Secretary shall cooperate fully with the Administrator of the Environmental Protection Agency and shall obtain the continuing advice and cooperation of all agencies of the Federal Government concerned with water problems, of State and local governments and of private institutions and individuals, to assure that the programs conducted under this title will supplement and not duplicate other water research and technology programs, will stimulate research and development in neglected areas and will provide a comprehensive, nationwide program of water resources research.

(b) The President shall, by such means as he deems appropriate clarify agency responsibilities for Federal water resources research and provide for interagency coordination of such research, including the research authorized by this title. Such coordination shall include (1) continuing review of the adequacy of the Government-wide program in water resources research and identification of technical needs in various water resources research categories, (2) identification and elimination of duplication and overlaps between two or more agency programs, (3) recommendations with respect to allocation of technical effort among the Federal agencies, (4) review of technical manpower needs and findings concerning the technical manpower base of the program, (5) recommendations concerning management policies to improve the quality of the Government-wide research effort, and (6) actions to facilitate interagency communication at management levels.

Sec. 115. To carry out the water resources research programs authorized by this title, the Secretary may:

(a) Foster and participate in conferences relating to water resources research and other water-related topics, and provide information, advice and assistance to local, State, Federal, and other agencies and organizations in the solution of water and water-related problems.

(b) Maintain an awareness through onsite inspection of promising projects and facilities and cooperate and participate when the purposes of this title will be served thereby.

(c) Accept financial and other assistance from any local, State, Federal, and other agency in connection with studies or surveys relating to water problems and facilities and enter into contracts with regard to such assistance.

Sec. 116. The Secretary shall report to the President and Congress on or before April 1 of each year, showing the disposition during the preceding fiscal year of moneys appropriated to carry out each section of this title, the results expected to be accomplished through projects financed during that year and the conclusions reached in, or other results achieved by, those projects which were completed during that year. The report shall also include an account of the work of all institutes financed under section 102 of this title and indicate whether any portion of an allotment to any State was withheld and, if so, the reasons therefor.

Sec. 117. Excess personal property acquired by the Secretary under the Federal Property and Administrative Services Act of 1949, as amended, for use in furtherance of the purposes of this title may be conveyed by the Secretary to a cooperating institute, educational institution, or nonprofit organization, with or without consideration, under such terms and conditions as the Secretary may prescribe.

Sec. 118. As used in this title, the term "State" includes the Commonwealth of Puerto Rico, the District of Columbia, the Virgin Islands, and Guam.

Sec. 119. Contracts or other arrangements for water resources work authorized under this title with an institute, educational institution, or nonprofit organization may be undertaken without regard to the provisions of section 3648 of the Revised Statutes (51 U.S.C. 529) when, in the judgment of the Secretary, advance payments of initial expenses are necessary to facilitate such work.

Sec. 120. There are authorized to be appropriated to the Secretary, to remain available until expended, not to exceed \$1,000,000 each year beginning with the fiscal year ending September 30, 1978, and continuing through the fiscal year ending September 30, 1982, to carry out the sections of this title other than those for which special specific authorizations are made.

Sec. 121. With respect to patent policy and to the definition of, title to, and licensing of inventions made or conceived in the course of, or under any contract or grant pursuant to this title, and notwithstanding any other provision of law, the Secretary shall be governed by the provisions of sections 9 and 10 of the Federal Nonnuclear Energy, Research, and Development Act of 1974 (Public Law 93-577, 88 Stat. 1234; 42 U.S.C. 5908): *Provided, however*, That subsections (1) and (n) of section 9 of such Act shall not apply to this title.

Sec. 122. The Water Resources Research Act of 1964 (Public Law 88-379, 78 Stat. 329; 42 U.S.C. 1961 et seq.) is hereby repealed. Nothing else in this title is intended to repeal, supersede, or diminish existing authorities or responsibilities of any agency of the Federal Government concerning water resources.

## TITLE II—RESEARCH AND ENGINEERING DEVELOPMENT OF SALINE AND CHEMICALLY CONTAMINATED WATER

Sec. 201. This title may be cited as the "Saline Water Conversion Act of 1977".

Sec. 202. The Congress in consideration of the Federal responsibility for water resource conservation by means of comprehensive planning, planning and construction of water resource development projects, and maintenance of water quality standards for the beneficial use of water from any source, finds that the technology for the conversion of saline and other naturally or unnaturally, chemically contaminated waters is vital to these areas of responsibility. It is the policy of the Congress, therefore, to provide for the development and demonstration of practicable means to convert, by means of desalination technology, water of these types from any source to a quality suitable for municipal, industrial, agricultural, and other beneficial uses.

Sec. 203. The Secretary is authorized and directed to—

(a) conduct, encourage, and promote basic scientific research and fundamental studies to develop effective and economical processes and equipment for the purpose of converting saline and other naturally or unnaturally, chemically contaminated water into water suitable for beneficial uses, and such processes shall include, but not necessarily be limited to, membrane process, such as reverse osmosis and electrodialysis, and phase change process such as freezing and distillation;

(b) pursue the findings of research and studies authorized by this title having potential practical applications to matters other than water treatment to the stage that such findings can be published in an effective form for utilization by others, and such work shall include application of desalting to other supply sources such as brackish aquifers, staged development, interim or conjunctive use, and with interruptible energy supplies;

(c) conduct engineering and technical work including the design, construction, and testing of pilot plants, test beds, and modules to develop desalting processes and plant design concepts to the point of demonstration on a practical scale;

(d) study methods for the recovery and marketing of byproducts resulting from the desalination of water to offset the cost of treatment and to reduce impact on the environment from the discharge of brines into lakes, streams, and other waters;

(e) undertake economic studies and surveys to determine present and prospective costs of producing water for beneficial consumptive purposes in various parts of the United States by the saline water processes as compared with other standard methods, and by means of mathematical models or other methodologies prepare and maintain information concerning the relation of desalting to other aspects of State, regional, and national comprehensive water resources planning: *Provided*, That, in carrying out this function, the Secretary shall coordinate these studies with planning being performed under the provisions of title I of this Act; and

(f) initiate and carry out two demonstration projects whose objectives will be to evaluate the applicability of desalination technology to the development of brackish groundwater aquifers for irrigation, energy development, domestic and other uses.

Sec. 204. (a) The Secretary is authorized and directed to conduct preliminary investigations and to explore potential cooperative agreements with non-Federal utilities and governmental entities in order to develop recommendations for Federal participation in the construction operation and maintenance of prototype plants utilizing desalting technologies for the production of water for consumptive use. Such recommendations shall be presented to the Congress before December 31, 1979, in the form of a ten-year plan for technology transfer. This plan shall set forth a schedule of cooperative undertakings with non-Federal utilities government agencies and private interests to apply desalination technology to the commercial production of water. It will be devised so as to provide the Congress with an instrument for tracking and assessing the progress of desalination technology development and transfer.

(b) In carrying out the provisions of this section the Secretary shall utilize the expertise of the water and power marketing agencies of the Department of the Interior or of other Federal agencies to insure that the recommended prototype plant and the supporting agreements are fully integrated and compatible with the water and power systems of the region.

(c) The Secretary is authorized to accept financial and other assistance from any State or public agency in connection with studies or surveys relating to saline water conversion problems and facilities and to enter into contract with respect to such assistance.

Sec. 205. In carrying out his functions under this title, the Secretary may—

(a) make grants to educational institutions and scientific organizations, and enter into contracts with such institutions and organizations and with industrial or engineering firms;

(b) acquire the services of chemists, physicists, engineers, and other personnel by contract or otherwise;

(c) utilize the facilities of Federal scientific laboratories;

(d) establish and operate necessary facilities and test sites to carry on the continuous research, testing, development, and programing necessary to effectuate the purposes of this title;

(e) acquire secret processes, technical data, inventions, patent applications, patents, licenses, land and interests in land (including water rights), plants and facilities, and other property or rights by purchase, license, lease, or donation;

(f) assemble and maintain pertinent and current scientific literature, publications, patents, licenses, land and interests in land (including water rights thereto);

(g) cause onsite inspections to be made of promising projects, domestic and foreign, and in the case of projects located in the United States, cooperate and participate in their development when the purposes of this title will be served thereby;

(h) foster and participate in regional, national, and international conferences relating to saline water conversion;

(i) coordinate, correlate, and publish information with a view to advancing the development of low-cost saline water conversion projects; and

(j) cooperate with other Federal departments and agencies, with State and local departments, agencies, and instrumentalities, and with interested persons, firms, institutions, and organizations.

Sec. 206. (a) Research and development activities undertaken by the Secretary shall be coordinated or conducted jointly with the Secretary of Defense to the end that developments under this title which are primarily of a civil nature will contribute to the defense of the Nation and that developments which are primarily of a military nature will, to the greatest practicable extent compatible with military and security requirements, be available to advance the purposes of this title and to strengthen the civil economy of the Nation.

(b) The Secretary shall cooperate with the Administrator of the Environmental Protection Agency to insure that research and development work performed under this title makes the fullest possible contribution to the improvement of processes and techniques for the treatment of saline and other naturally or unnaturally, chemically contaminated waters and to avoid the duplication of the experience, expertise, and data regarding desalting technologies which have been acquired.

(c) The Secretary shall cooperate fully with the Administrator of the Energy Research and Development Administration, the Secretary of Health, Education, and Welfare, the Secretary of State, and other concerned officials and agencies in the interest of achieving the objectives of this title.

(d) Relative to the definition of, title to, and licensing of inventions made or conceived in the course of or under any contract or grant pursuant to this title, and notwithstanding any other provision of law, the Secretary shall be governed by the provisions of sections 9 and 10 of the Federal Nonnuclear Energy, Research, and Develop-

ment Act of 1974 (42 U.S.C. 5908): *Provided*, however, That subsections (1) and (n) of such section 9 shall not apply to this title.

(e) The Secretary may dispose of water and byproducts resulting from his operations under this title. All moneys received from dispositions under this section shall be paid into the Treasury as miscellaneous receipts except where such operations may be undertaken as a part of a Federal reclamation project in which case the financial provisions of the reclamation laws (32 Stat. 388 and Acts amendatory thereof and supplementary thereto) shall govern.

(f) Nothing in this title shall be construed to alter existing law with respect to the ownership and control of water.

Sec. 207. The Secretary may issue rules and regulations to effectuate the purposes of this title.

Sec. 208. As used in this title—

(a) the term "Secretary" means the Secretary of the Interior, acting through the Office of Water Research and Technology;

(b) the term "saline water" includes seawater, brackish water, mineralized ground or surface water, and irrigation return flows;

(c) the term "other naturally or unnaturally, chemically contaminated waters" refers to waters which contain chemicals susceptible to removal by desalting processes;

(d) the term "United States" extends to and includes the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, Guam, the Virgin Islands, and the Trust Territory of the Pacific Islands;

(e) the term "pilot plant" means an experimental unit of small size, usually less than one hundred thousand gallons per day capacity, used for early evaluation and development of new or improved processes and to obtain technical and engineering data;

(f) the term "test bed" means an intermediate-sized, experimental desalting plant of up to two million gallons per day capacity, used for further evaluation and refinement of processes in the field and designed to facilitate the incorporation of experimental features for performance testing and to permit process changes and improvements as required;

(g) the term "module" means a section or integral portion of a desalting plant which is used initially to study large-scale technology and critical design features in preparation for subsequent prototype construction;

(h) the term "prototype" means a full-size, first-of-a-kind production plant used for the development, study, and demonstration of full-sized technology, plant operation, and process economics;

(i) under the terms in definitions (b) and (c) above, such terms are intended to include waters from any source—sea, ground, or surface—where desalting technology can be applied to convert them to a quality suitable for municipal, industrial, agricultural, and other beneficial uses.

Sec. 209. (a) There is authorized to be appropriated to carry out the provisions of this title during each of the fiscal years ending September 30, 1978 and 1979, the sum of \$35,000,000 to remain available until expended. The categories for which such funds are authorized are as follows:

- (1) research expense;
- (2) development expense; and
- (3) administration and coordination.

The funds appropriated pursuant to such authorization shall be distributed to the foregoing categories as determined by budgetary priorities prevailing with not less than \$10,000,000 for brackish ground water demonstration projects.

(b) Not more than 5 per centum of the funds to be made available in any fiscal year for research under the authority of this title may be expended, subject to the approval of the Secretary of State to assure that such activities are consistent with the

foreign policy objectives of the United States, in cooperation with public or private agencies in foreign countries for research useful to the program in the United States.

Sec. 210. The Saline Water Conversion Act of 1971 (85 Stat. 159) is repealed.

The amendments were agreed to.

Mr. DOMENICI, Mr. President, we have before us today the committee bill S. 846, the Water Resources Research and Technology Development Act of 1977. I was privileged to introduce the original bill back in February.

Of the many legislative efforts in which I have been directly involved during the 95th Congress, I consider this to be among the most important. I say this because it is my firm belief that our current water research programs are inadequate to the water shortages we now face and the crisis we will face in the future. The bill is responsive to these concerns.

S. 846, as reported out by the Committee on Environment and Public Works, consolidated two former laws, the Water Resources Research Act, and the Saline Water Conversion Act. It retains the authority for implementation of both laws within the Office of Water Research and Technology of the Department of Interior.

Title I addresses general water resources research. It expands and reaffirms the critical role of the Water Resources Research Institutes. These institutes, one in each State, are the backbone of water research in this country and it is essential that they be fully funded and supported by the Congress and the administration. The philosophy of the State institutes is in concert with my own beliefs that regional problems are most effectively addressed by regional people, with financial support at the Federal level if necessary.

Title II deals with saline water conversion. The saline water research program is of special importance to us in the West, Mr. President. We have developed nearly all of our reservoir capacity and have mined our fossil water aquifers to the point that, in some regions, the entire economy is being driven away from irrigated agriculture. Desalting is the only viable remaining option for significantly augmenting our water resource base in the near-term.

For reasons which escape me, the administration has continually reduced its commitment to saline water conversion research since the enactment of the 1971 Saline Water Conversion Act. To support this point I submit the following information: In 1971, the saline program, carried out by the Office of Saline Water, was supported at a level of \$28,000,000, employed 144 persons, and operated 5 demonstration plants. In 1974, the office was abolished and the saline water program was absorbed by the Office of Water Research and Technology. Today the total saline program employs about seven persons on a budget of between \$4 million and \$7 million annually. In addition, only two of the original five demonstration plants remain in operation, and these on a mere maintenance basis. The committee bill, S. 846, authorizes a return to nearly the original funding level for the program.

Let me also comment briefly on the provision of the bill which authorizes the construction and operation of two facilities to demonstrate the applicability of desalting technology to brackish ground water deposits. To illustrate the magnitude of this opportunity, Mr. President, permit me to offer the following data from a recent New York Times article, March 13, 1977:

Of all the water on Earth, only 0.65% is not locked up in the polar ice caps or the oceans. Of this 0.65%, fully 97.6% is groundwater. About two-thirds of this groundwater is brackish and therefore not useable with current technology.

In simple terms, we are sitting on top of a virtual sea of brackish groundwater of a virtual sea of brackish groundwater—enough to satisfy our needs for centuries—and much of it is located in the Rocky Mountain West where it is most desperately needed. Yet we are unable to use this resource, simply because we cannot economically separate the salt from the water. I wish to emphasize the word "economically." The fact is, we now have several effective processes for desalting brackish water, especially reverse osmosis and electrodialysis, which offer great promise and await only demonstration of economic feasibility. I believe that it is entirely within reason to expect production costs for desalted water to reach 50 or 60 cents per thousand gallons within 4 to 5 years if we press forward with these technologies. Eventually, it may be possible to deliver desalted water for as little as 35 to 40 cents per thousand, which would be competitive with freshwater supplies in the West. The committee bill authorizes \$10,000,000 to fund two demonstration projects to economically convert brackish groundwater to usable freshwater.

During the subcommittee hearings on water resources we heard testimony from two nationally recognized experts on the subject of water research. Brig. Gen. William Whipple, retired, testified on behalf of the Universities Council on Water Resources, which represents 86 major universities. Dr. William Walker, vice chairman of the National Association of Water Institute Directors, testified on behalf of that group. Both witnesses expressed strong support for S. 846 and disappointment in the administration's lack of interest in water research in general and saline research in particular. Following these hearings, S. 846 was approved unanimously by both the Water Resources Subcommittee and the full Committee on Environment and Public Works.

Today we have an opportunity to approve a bill which would extend, strengthen, and broaden an ongoing program of water research and technology transfer. This bill, if approved, will contribute in a significant and positive manner toward our ability to meet future water needs in this country. I urge my colleagues to vote favorably on this legislation.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed

for a third reading and to be read the third time.

The bill was read the third time.

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 196, H.R. 4746.

The PRESIDING OFFICER. Without objection, it is so ordered.

The bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 4746) to extend certain authorities of the Secretary of the Interior with respect to water resources research and salting water conversion programs, and for other purposes.

The PRESIDING OFFICER. Without objection, the Senate will proceed immediately to the consideration of the bill.

Mr. ROBERT C. BYRD, Mr. President, I move that all after the enacting clause be stricken and that the text of S. 846, as amended, be inserted in lieu thereof, and that H.R. 4746, as amended, be considered as having been read the third time and passed.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from West Virginia.

Without objection the motion was agreed to.

Mr. ROBERT C. BYRD, Mr. President, I move to reconsider the vote by which H.R. 4746 was passed, and I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that S. 846 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD, Mr. President, I move that the Senate insist upon its amendment and request a conference with the House of Representatives and that the Chair be authorized to appoint conferees on behalf of the Senate.

Without objection the motion was agreed to; and the Presiding Officer appointed Mr. GRAVEL, Mr. BENTSEN, and Mr. DOMENICI conferees on the part of the Senate.

#### WATER RESOURCES PLANNING ACT AMENDMENTS

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 198.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (H.R. 6752) to amend the Water Resources Planning Act (79 Stat. 244), as amended.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

The bill was ordered to a third reading, was read the third time, and passed.

Mr. ROBERT C. BYRD, Mr. President, I ask unanimous consent that Calendar Order No. 166, a companion bill, be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

## DEATHS IN UGANDA

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 201.

The PRESIDING OFFICER. The resolution will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 175) expressing the sense of the Senate with respect to recent deaths in Uganda.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 175) was agreed to.

The preamble was agreed to.

The resolution, with its preamble, reads as follows:

Whereas there has been a history of murders in Uganda by officials of the government of President Idi Amin;

Whereas the Uganda Government has condoned a series of violations of human rights of its citizens and residents;

Whereas the Anglican Archbishop, Janani Luwum, and two government officials were reported killed under suspicious circumstances February 16 after having been arrested by Uganda authorities; and

Whereas such incidents have been of such frequency as to affront the sensibilities of the world; Now, therefore, be it

Resolved, That—

(1) it is the sense of the Senate that the actions of the current regime in Uganda deserve condemnation by the world community, by the Organization of African Unity, and that the Senate urges those nations supplying lethal arms to Uganda to halt all such deliveries of weapons; and

(2) that the United States Ambassador to the United Nations should request that the situation be investigated by an appropriate agency of the United Nations.

## TRANSFER OF MEASURES TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, the following calendar orders have been cleared for passage by unanimous consent. I ask that the clerk transfer them to the Unanimous Consent Calendar: Nos. 142, 206, 207, 208, and 209.

The PRESIDING OFFICER. They will be so transferred.

## TECHNICAL AND MISCELLANEOUS AMENDMENTS TO PROVISIONS RELATING TO HIGHER EDUCATION CONTAINED IN THE EDUCATION AMENDMENTS OF 1976

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House on H.R. 6774.

The PRESIDING OFFICER laid before the Senate H.R. 6774, an act to make certain technical and House amendments to provisions relating to higher education contained in the Education Amendments of 1976, which was read twice by its title.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its consideration.

Mr. PELL. Mr. President, H.R. 6774 makes technical and miscellaneous amendments to those portions of Public Law 94-482, the Education Amendments of 1976, which relate to higher education programs. It includes corrections of typographical errors, effective dates, and omissions in the agreed-upon text of the legislation. It passed the House of Representatives on May 9 by a vote of 382 to 1.

Two amendments are proposed to correct the text of this technical amendment bill. The first contains language, suggested by the Department of Health, Education, and Welfare as technical assistance to the Congress, which will assure that administrative cost allowances for the national direct student loan program will be treated in the same fashion as those for the supplemental educational opportunity grant program and the college work-study program, as intended by the conferees on Public Law 94-482.

The second amendment merely corrects a misnumbering of paragraphs in the effective date section for the various provisions of the guaranteed student loan program.

These amendments have been worked out in conjunction with the minority and the House. I assure my colleagues that they are strictly technical in nature. However, expeditious passage of these amendments is essential, so that colleges, lenders, and program administrators will be able to implement the Education Amendments of 1976 fully.

## UP AMENDMENT NO. 329

Mr. President, I send to the desk the two technical amendments. I ask that the clerk state them.

The PRESIDING OFFICER. Without objection, the clerk will state the amendments.

The legislative clerk proceeded to read as follows:

The Senator from Rhode Island (Mr. PELL) proposes certain technical amendments as unprinted amendment No. 329.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that further reading of the amendments be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments are as follows:

On page 12, beginning with line 25, strike out through line 2 on page 13 and insert in lieu thereof the following:

(40) (A) The first sentence of section 493 (a) of such Act is amended by—

(i) striking out "part A or C" and inserting in lieu thereof "subpart 2 of part A, part C or part E";

(ii) striking out "either" and inserting in lieu thereof "any"; and

(iii) striking out "in lieu of reimbursement for its expenses during such fiscal year in administering programs assisted under such part" and inserting in lieu thereof "for the purposes set forth in subsection (c)".

(B) The second sentence of such section 493(a) is amended by adding before the period at the end thereof a comma and the following: "plus (C) the principal amount of loans made during such fiscal year from its student loan fund established under part E".

(C) Section 493(b) of such Act is amended to read as follows:

"(b) The aggregate amount paid to an institution for a fiscal year under this section may not exceed \$325,000."

On page 17, line 17, strike out "(16)" and insert in lieu thereof "(17)".

On page 17, line 17, strike out "(19)" and insert in lieu thereof "(20)".

On page 17, line 18, strike out "(20)" and insert in lieu thereof "(21)".

On page 18, line 3, strike out "(19)" and insert in lieu thereof "(20)".

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the amendments be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendments were agreed to en bloc.

The amendments were ordered to be engrossed and the bill to be read the third time.

The bill was read the third time and passed.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

## EXECUTIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider two nominations that have been reported from the Committee on the Judiciary, both of which are with respect to nominations affecting the State of North Dakota.

There being no objection, the Senate proceeded to the consideration of executive business.

Mr. ROBERT C. BYRD. The nominations are as follows: James R. Britton of North Dakota to be U.S. attorney for the district of North Dakota; and Harold C. Warren of North Dakota to be U.S. marshal for the district of North Dakota.

It is my understanding that both Mr. BURDICK and Mr. YOUNG want these nominations confirmed today.

I have discussed this with the distinguished minority leader and I believe he is in accord.

Mr. BAKER. Mr. President, if the majority leader will yield—

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. These nominations are both cleared on this side of the aisle. We are happy to join in the request for the confirmation.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader.

I ask unanimous consent that the Senate proceed to the consideration of the two nominations en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

The nominations will be stated.

#### THE JUDICIARY

The legislative clerk read the nominations of James R. Britton of North Dakota to be U.S. attorney for the district of North Dakota; and Harold C. Warren of North Dakota, to be U.S. marshal for the district of North Dakota.

The PRESIDING OFFICER. Without objection, the nominations are considered and confirmed en bloc.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of the nominations.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### LEGISLATIVE SESSION

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### AUTHORIZATION FOR FOREIGN TRAVEL COSTS OF MEMBERS AND EMPLOYEES OF THE SENATE

Mr. ROBERT C. BYRD. Mr. President, on behalf of Mr. BAKER and myself, I submit a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 179) authorizing payment from the contingent fund for transportation costs and travel expenses incurred by Members and employees of the Senate when engaged in authorized foreign travel.

The PRESIDING OFFICER. Is there objection to the immediate consideration of the resolution?

There being no objection, the resolution was considered and agreed to, as follows:

S. Res. 179

Resolved, That until otherwise provided by law or resolution of the Senate, the contingent fund of the Senate is made available, as provided in this resolution, to defray the costs of transportation and the ordinary and necessary travel expenses of Members and employees of the Senate when engaged in authorized foreign travel. The Secretary of the Senate is authorized to advance funds, under authority of this Resolution, in the same manner provided for committees of the Senate under the authority of Public Law 118, Eighty-first Congress, approved June 22, 1949.

Sec. 2. (a) Transportation costs and ordinary and necessary travel expenses incurred

by a Member or employee engaged in authorized foreign travel shall be paid upon certification of such Member or employee, and upon vouchers approved by the Senator who authorized such foreign travel.

(b) Transportation costs and ordinary and necessary travel expenses which are incurred for a group of Members or employees engaged in authorized foreign travel shall be paid upon certification of the Member who is chairman of such group (or, if no chairman has been designated, upon certification of the ranking Member of such group) or, if the group does not include a Member, upon certification of the senior employee in such group, and upon vouchers approved by the Senator who authorized such foreign travel.

(c) The reports of the Secretary of the Senate setting forth amounts paid from the contingent fund under authority of this resolution shall, at the request of the chairman of the Select Committee on Intelligence, omit any matter which would identify the foreign countries in which Members and employees of the Select Committee traveled on behalf of the Select Committee.

Sec. 3. Payment of transportation costs and ordinary and necessary travel expenses may not be paid under this resolution to the extent that appropriated funds or foreign currencies under section 502(b) of the Mutual Security Act of 1954 are utilized to defray such costs and expenses. Such funds and currencies shall be used to the maximum extent possible.

Sec. 4. For purposes of this resolution—

(1) The term "foreign travel" means travel outside the United States and includes travel within the United States which is the beginning or end of travel outside the United States.

(2) The term "authorized foreign travel" means foreign travel on official business on behalf of the Senate or a committee of the Senate which is authorized—

(A) in the case of foreign travel on behalf of the Senate, by the President pro tempore, Majority Leader, or Minority Leader of the Senate; and

(B) in the case of foreign travel on behalf of a committee of the Senate, by the chairman of that committee.

(3) The term "committee of the Senate" includes all standing, select, and special committees of the Senate and all joint committees of the Congress whose funds are disbursed by the Secretary of the Senate.

(4) The term "employee of the Senate" includes an individual (other than a Member) whose salary is disbursed by the Secretary of the Senate or who is treated as an employee of the Senate for purposes of the Senate Code of Official Conduct.

(5) The term "ordinary and necessary travel expenses" includes, in the case of a group of Members engaged in authorized foreign travel, such special expenses as the chairman (or, if there is no chairman, the ranking Member) deems appropriate, including to the extent not otherwise provided, reimbursements to any agency of the Government for (A) expenses incurred on behalf of the group, (B) compensation (including overtime) of employees of such agency officially detailed to the group, and (C) expenses incurred in connection with providing appropriate hospitality.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. BAKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### SWEARING-IN CEREMONY OF MICHAEL J. MANSFIELD AS AMBASSADOR TO JAPAN

Mr. BAKER. Mr. President, I rise to express my regret and sorrow that it was not possible for me to attend the swearing-in ceremony of our former colleague and now Ambassador, Senator Mansfield, which occurred this afternoon at 3:45. It had been my full intention to attend that ceremony and offer my personal congratulations to Senator Mansfield for this accomplishment and for this further chapter in a long series of chapters relating to his service to his country.

Another matter arose that prevented my attending. I take this opportunity to express my congratulations to Ambassador Mansfield and to Mrs. Mansfield, who is known to most of us and is counted as a distinguished American and a great friend, as her husband is, to wish them well in their new undertakings and duties, and to reiterate my regret that I was not present at that historic moment.

I recall that on yesterday I suggested to the distinguished majority leader that, in view of the great investment of time and energy and dedication that our former colleague had given in this Chamber to the future of the Senate and its efficiency and its effectiveness, it might be possible to conduct the swearing-in ceremony here.

Unfortunately, the majority leader explained that the plans already had been made for that ceremony to occur at another place.

I wish, however, Mr. President, to express my congratulations and best wishes to Ambassador and Mrs. Mansfield and to wish them well in the new assignment.

#### QUORUM CALL

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### HOUSE CONCURRENT RESOLUTION 229—ADJOURNMENT OF HOUSE AND RECESS OF SENATE

Mr. ROBERT C. BYRD. Mr. President, I ask that the Chair lay before the Senate a message from the House of Representatives on House Concurrent Resolution 229.

The PRESIDING OFFICER. The concurrent resolution will be stated by title. The legislative clerk read as follows:

H. Con. Res. 229, a concurrent resolution providing for an adjournment of the House and a recess of the Senate.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its immediate consideration.

Mr. ROBERT C. BYRD. Mr. President, I ask that the clerk read the resolution.

The PRESIDING OFFICER. The clerk will read the resolution.

The legislative clerk read as follows:

*Resolved by the House of Representatives (the Senate concurring).* That when the House adjourns on Thursday, May 26, 1977, it stand adjourned until 12 o'clock meridian on Wednesday, June 1, 1977, and that when the Senate recesses on Friday, May 27, 1977, it stand in recess until 12:30 o'clock post-meridian on Monday, June 6, 1977.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 229) was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the concurrent resolution was agreed to.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

#### QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ORDER FOR RECESS TO 10 O'CLOCK TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 10 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ORDER FOR CONSIDERATION TOMORROW OF S. 1242, YOUTH EMPLOYMENT AND TRAINING ACT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the two leaders of their designees have been recognized under the standing order, the Senate resume consideration of the Youth Employment and Training Act, Calendar Order 146, S. 1242.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ORDER FOR CONSIDERATION TOMORROW OF S. 682, TANKER AND VESSEL SAFETY ACT OF 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at no later than 1:30 p.m. tomorrow, the Senate

resume consideration of the tanker bill, Calendar Order 149, S. 682.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business.

The PRESIDING OFFICER. Without objection, it is so ordered.

Is there morning business?

Mr. BAKER. Mr. President, I take this brief moment, during the time for morning business, only to say that I observe that shortly, the distinguished majority leader and certain of his colleagues on the other side of the aisle may attend a political occasion with social overtones and implications. Having come fresh from such a celebration on this side of the aisle only last week, I wish him well. I am sure he will enjoy that evening, as we Republicans enjoyed our festivities a week ago.

I must say, as I remarked on yesterday, that we Republicans were deprived of the distinguished entertainment that is in store for the Democrats tonight. I have tried all day to resist saying that I hope my Democratic colleagues tonight, as they watch the performance of the distinguished majority leader, are not reminded that he is fiddling while the party burns. [Laughter.]

The PRESIDING OFFICER. The Chair will observe that the Democrats have as good a time at a cheaper price.

Mr. BAKER. The Senator from Tennessee appreciates the observation of the Chair.

#### MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the Senate by Mr. Chirton, one of his secretaries.

#### EXECUTIVE MESSAGES REFERRED

As in executive session, the Presiding Officer laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the Committee on Foreign Relations.

(The nominations received today are printed at the end of the Senate proceedings.)

#### REPORT OF THE NATIONAL ADVISORY COUNCIL ON ECONOMIC OPPORTUNITY—MESSAGE FROM THE PRESIDENT—PM 84

The PRESIDING OFFICER laid before the Senate the following message from the President of the United States, which was referred to the Committee on Human Resources:

*To the Congress of the United States:*

I am transmitting herewith the Ninth Annual Report of the National Advisory Council on Economic Opportunity.

The report is based on the activities of the Council prior to my term of office.

The recommendations of the Council will be considered as this Administration reviews the role of the Community Services Administration.

JIMMY CARTER.

THE WHITE HOUSE, May 25, 1977.

#### MESSAGES FROM THE HOUSE

At 12:21 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that:

The House disagrees to the amendment of the Senate to the bill (H.R. 4088) to authorize appropriations to the National Aeronautics and Space Administration for research and development, construction of facilities, and research and program management, and for other purposes; requests a conference with the Senate on the disagreeing votes of the two Houses thereon; and that Mr. TEAGUE, Mr. FUQUA, Mr. ROE, Mr. LLOYD of California, Mr. MILFORD, Mr. WYDLER, and Mr. WINN were appointed managers of the conference on the part of the House.

The House has agreed to the concurrent resolution (H. Con. Res. 229) providing for an adjournment of the House from May 26 to June 1, and a recess of the Senate from May 27 to June 6, 1977.

#### COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC-1386. A letter from the Assistant Secretary for Congressional Relations of the Department of State transmitting a draft of proposed legislation to implement the Agreed measures for the conservation of Antarctic fauna and flora of the Antarctic Treaty and for other purposes (with accompanying papers.)

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that a communication from the Department of State, relative to the Antarctic Conservation Act of 1977, be referred jointly to the Committees on Commerce, Science, and Transportation; Environment, and Public Works; and Foreign Relations.

The PRESIDING OFFICER. Without objection, so ordered.

EC-1387. A letter from the Secretary of the Air Force transmitting, for the information of the Senate, notice of the Air Force decision to close Richards-Gebaur Air Force Base, Missouri, and report all but the facilities required for the 442nd Tactical Airlift Wing, Air Force Reserve, to the General Services Administration for disposal and civilian re-use (with accompanying papers); to the Committee on Armed Services.

EC-1388. A letter from Acting Assistant Secretary of the Army, Civil Works, transmitting a draft of proposed legislation to terminate further construction of the Cross Florida Barge Canal Project (with accompanying papers); to the Committee on Environment and Public Works.

EC-1389. A letter from the Comptroller General of the United States transmitting, pursuant to law, a list of reports of the General Accounting Office for the Month of April 1977 (with an accompanying report); to the Committee on Governmental Affairs.

EC-1390. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Federal Deficiency Payments Should Not be Made for Crops not Grown" (CED-77-77) (with an accompanying report); to the Committee on Governmental Affairs.

### REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. CANNON, from the Committee on Rules and Administration:

Without amendment:

H. Con. Res. 162. A concurrent resolution providing for the printing of twenty thousand additional copies of the subcommittee print of the Subcommittee on Consumer Affairs of the Committee on Banking, Finance and Urban Affairs entitled "Give Yourself Credit: Guide to Consumer Credit Laws" (Rept. No. 95-230).

S. Res. 154. A resolution authorizing the printing of the committee print entitled "U.S. Participation in International Organizations" as a Senate document (Rept. No. 95-231).

### EXECUTIVE REPORTS OF COMMITTEES

The following executive reports of committees were submitted:

By Mr. EASTLAND, from the Committee on the Judiciary:

James R. Britton, of North Dakota, to be U.S. attorney for the district of North Dakota.

Harold C. Warren, of North Dakota, to be U.S. marshal for the district of North Dakota.

(The above nominations were reported with the recommendation that they be confirmed, subject to the nominees' commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.)

### INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated:

By Mr. SCHWEIKER:

S. 1601. A bill to amend the Immigration and Nationality Act to protect American workers from the adverse impact of illegal alien employment; to the Committee on the Judiciary.

By Mr. MATHIAS:

S. 1602. A bill for the relief of Hermelinda Benitez; and

S. 1603. A bill for the relief of Susana Elena Felipa; to the Committee on the Judiciary.

By Mr. McCURE:

S. 1604. A bill to provide that the availability of citizens for agricultural employment as a prerequisite for the certification of temporary alien workers shall be determined by the Governor of each respective State; to the Committee on the Judiciary.

By Mr. TOWER:

S. 1605. A bill to provide for review of risks relating to regulations pertaining to cotton dust; to the Committee on Human Resources.

By Mr. ANDERSON (for himself and Mr. HUMPHREY):

S. 1606. A bill to amend the Internal Revenue Code of 1954 to treat the conducting of certain games by tax-exempt organizations as not being an unrelated trade or business; to the Committee on Finance.

By Mr. MATSUNAGA (for himself and Mr. INOUE):

S. 1607. A bill to amend title 10 of the United States Code relating to Junior Reserve Officers' Training Corps; to the Committee on Armed Services.

By Mr. METCALF (for himself and Mr. STEVENSON):

S. 1608. A bill to abolish the Joint Committee on Congressional Operations, and for other purposes; to the Committee on Rules and Administration.

By Mr. SPARKMAN:

S.J. Res. 61. A joint resolution to authorize and request the President to issue a proclamation designating the last week in August of each year as "National Grade Crossing Safety Week"; to the Committee on the Judiciary.

### STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. SCHWEIKER:

S. 1601. A bill to amend the Immigration and Nationality Act to protect American workers from the adverse impact of illegal alien employment; to the Committee on the Judiciary.

Mr. SCHWEIKER. Mr. President, I am pleased to introduce today a bill to amend the Immigration and Nationality Act to protect American workers from the adverse impact of illegal alien employment.

Unemployment in the United States today is our most urgent domestic problem. The administration, Congress, the governments of our States, and the American people have properly focused great attention on efforts to put the economy back on track and alleviate the personal hardships of unemployment. One step we can take in the right direction is to protect American workers from the unfair competition of illegal aliens who take jobs which should be held by American citizens and those lawfully in the United States and depress prevailing wage rates and working conditions we in Congress have worked so hard to guarantee.

Action in this area will certainly not solve all of our economic problems, but I have concluded it is a necessary step. Although we do not have reliable statistics on how many illegal aliens there now are in the United States, estimates range from 4 to 8 million. The Commissioner of the Immigration and Naturalization Service estimates that as many as 1 million jobs are improperly being held by aliens not authorized to work. The adverse impact of these figures is obvious. Moreover, the magnitude of the problem illustrates a great distortion to our immigration policy, probably the most compassionate in the world. In fiscal year 1975, Immigration authorities caught about twice as many illegal aliens as the number lawfully admitted that year for permanent residence. By all estimates, many more go undetected.

The primary drawing card for aliens seeking to illegally enter the United States is the greater economic opportunity here than in the nations from where they come. These illegal alien workers can successfully compete with American workers as they will often work for lower wages and under unfavorable working conditions. There is simply no way Im-

migration officials can adequately deal with this problem as long as the enticement of employment in the United States remains. We must, therefore, close off these attractive opportunities by first, making it unlawful for an employer to knowingly hire an illegal alien, and second, by providing effective sanctions against employers who choose to violate the law.

I commend the chairman of the Senate Judiciary Committee, Senator EASTLAND, for the leadership he has shown in developing legislation in this area, and I fully support his efforts.

I would like to mention several aspects of my proposal. First, a ban on knowingly employing illegal aliens will be less than fully effective without strong and efficient sanctions for violations. Although I share the fear of some that a flat rate civil penalty will not effectively deter some employers, I do not advocate criminal penalties, primarily due to several problems of practical application. First, because only the knowing employment of an alien not lawfully admitted into the United States for permanent residence or not authorized to work is a violation of law, the Government will have the very difficult burden of proving beyond a reasonable doubt that an employer knowingly employed an illegal alien. Because there exists no fool-proof identification of the citizenship or immigrant status of a prospective employee, it appears there will often be enough plausible deniability by the employer to constitute a reasonable doubt. Second, given the already heavy burdens upon U.S. attorneys across the country, I have doubts that many criminal prosecutions would ever occur. Finally, many might doubt the actual likelihood, when convictions are obtained, of prison sentences being given. For these reasons, I fear that if we rely only upon criminal penalties for a violation of the ban, whether it be the first violation of the employer or subsequent ones, we will end up with a paper tiger. On the other hand, I feel we must be sure the sanctions are severe enough to deter the potential flagrant abuser. I, therefore, propose that the legislation provide an arsenal of civil penalties, increasing in severity with each additional violation.

A second aspect of this bill I wish to highlight deals with the issue of whether we wish to allow States to also legislate in this field. I believe Congress should not preempt the field, and should say so in the act. Although the adverse impact of illegal alien employment is national in scope, it certainly is more serious in some areas of the country than in others, and is manifested in different job markets in varying geographical areas. Not only can State legislatures better deal with the nuances of the problem within their State, the States can also provide needed enforcement personnel resources to deal with the overall problem. Of course, no State legislation may conflict or be inconsistent with the congressional enactment.

A third aspect of this bill I wish to highlight is one which creates a private cause of action for enjoining violations

of the ban, in addition to power of the Government to seek an injunction. In view of the enormity of the effort required by the Government to deal with the problem which exists, I feel the Government should welcome the cooperation of the private sector. Such plaintiffs could include competing businesses, labor unions, private individuals, and others adversely affected by illegal alien employment.

A fourth point I wish to note is a proposal aimed at easing the direct expense to the taxpayer for enforcement of these and other provisions of the Immigration and Nationality Act. It has been estimated that any effective attack on illegal alien employment will cost an additional \$12 million each year. As a means of attempting to partially hold down the appropriations for the Immigration and Naturalization Service, I suggest that all administrative and civil penalties, such as those assessed for knowingly employing illegal aliens, paid into the Treasury under the act be counted as a credit under the Service's appropriation for that year. I feel it is entirely appropriate to have those individuals who perpetuate the problem directly pay part of the expenses required to solve it.

Mr. President, I hope my colleagues will seriously consider this and other proposals which have been made to make available to American workers jobs which have been illegally taken by violators of our immigration laws.

I ask unanimous consent that the bill be printed in the RECORD at this point.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

#### S. 1601

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That section 274 of the Immigration and Nationality Act (8 U.S.C. 1324) is amended by deleting the proviso in paragraph 4 of subsection (a) and by redesignating subsection (b) as subsection (f) and adding subsections (b), (c), (d), and (e) to read as follows:

"(b)(1) It shall be unlawful for any employer or any person acting as an agent for such an employer, or any person who, for a fee, refers an alien for employment by such an employer, knowingly to employ, continue to employ, or refer for employment any alien in the United States who has not been lawfully admitted to the United States for permanent residence, unless the employment of such alien is authorized by the Attorney General.

"(2) If, on evidence or information he deems persuasive, the Attorney General, after affording an opportunity to respond to and rebut such evidence or information, reasonably concludes that an employer, or a person acting as an agent for such an employer, or any person who, for a fee, refers an alien for employment by such an employer, employs, continues to employ, or refers for employment any alien in the United States who has not been lawfully admitted for permanent residence, or any alien whose employment has not been authorized by the Attorney General, the Attorney General may serve a citation on the employer, agent, or referrer containing a notification that the alien's employment is not authorized and a warning of the penalties and injunctive remedies set forth in this section. The procedure prescribed by and the

provisions of chapter 7 of title 5, United States Code, shall apply to and shall be the sole and exclusive procedure for the judicial review of a citation served by the Attorney General. An action for judicial review of a citation may be filed in the appropriate judicial district not later than sixty days from the date of issuance of the citation.

"(3) If, in a proceeding initiated within two years after the service of such citation, the Attorney General finds that any employer, agent, or referrer upon whom such citation has been served has thereafter violated the provisions of paragraph (1), the Attorney General shall assess a penalty of not less than \$500 or more than \$1,000 for each alien in respect to whom any violation of paragraph (1) is found to have occurred.

"(4) A civil penalty shall be assessed by the Attorney General only after the person charged with a violation under paragraph (3) has been given an opportunity for a hearing and the Attorney General has determined that a violation did occur, and the amount of the penalty which is warranted. The hearing shall be of record and conducted before an immigration officer designated by the Attorney General, individually or by regulation, and the proceedings shall be conducted in accordance with the requirements of title 5, section 554, of the United States Code.

"(5) If the person against whom a civil penalty is assessed fails to pay the penalty within the time prescribed in such order, the Attorney General shall file a suit to collect the amount in any appropriate district court of the United States. In any such suit or in any other suit seeking to review the Attorney General's determination, the suit shall be determined solely upon the administrative record upon which the civil penalty was assessed and the Attorney General's findings of fact, if supported by substantial evidence on the record considered as a whole, shall be conclusive.

"(c) If an employer or person who has been assessed a civil penalty under subsection (b)(3) which has become final thereafter violates subsection (b)(1) the Attorney General shall assess a civil penalty of not less than an amount twice the minimum amount assessable in the last previous proceeding against such employer or person where a civil penalty has been assessed under subsection (b)(3) or this subsection which has become final or more than an amount twice the maximum amount assessable in such last proceeding for each alien in respect to whom any violation of this subsection occurs.

"(d) The district courts of the United States shall have jurisdiction to enjoin violations of subsection (b)(1). Such actions may be brought by the Attorney General or any person, corporation, or association adversely affected by such violation in any United States district court for a district wherein any act, omission, or transaction constituting the violation occurred, or any such court for the district wherein the defendant is found or transacts business.

"(e) Nothing in this section shall be deemed to exempt or relieve any person from any liability, duty, penalty, or punishment provided by any present or future law of any State or political subdivision of a State, other than any such law which purports to require or permit the doing of any act which would be unlawful under this section."

Sec. 2. Section 286 of the Immigration and Nationality Act (8 U.S.C. 1356) is amended to read as follows:

"All moneys paid into the Treasury to reimburse the Service for expenses paid from the appropriation for the enforcement of this chapter and all monies received in payment of fees and administrative and civil fines and penalties shall be credited to the appropriation for the enforcement of this chapter for the fiscal year in which the expenses were incurred."

By Mr. McCURE:

S. 1604. A bill to provide that the availability of citizens for agricultural employment as a prerequisite for the certification of temporary alien workers shall be determined by the Governor of each respective State; to the Committee on the Judiciary.

Mr. McCURE. Mr. President, a great deal of attention has been given to the illegal alien problem in the United States in recent months. This is not a new problem; nor is it a simple one.

President Carter is expected to present an illegal alien legislative package in the near future which, it is rumored, will call for criminal sanctions against those who knowingly hire an illegal alien. This to me seems markedly unfair since many of the employers of illegal alien workers are farmers who are virtually forced into that position, knowingly or unknowingly, by the policies of the Federal Government, in order to save their crops.

Admittedly there are many jobs in this country filled by illegals which could and should be held by Americans—and certainly the situation should be corrected. We cannot overlook, however, the fact that there are many jobs vital to the Nation's economy—particularly in agriculture—which American workers are simply not willing to fill. For one thing, we in Congress and the Government bureaucracy have made unemployment and welfare benefits so readily available and comparatively lucrative, that few if any of our unemployed are willing to give them up to accept these menial jobs. It is no accident that illegal aliens are relied upon so heavily in my own State of Idaho to move irrigation pipe, for example. The obvious truth is simply that as important as moving irrigation pipe is to the success of agricultural crops, in most cases, if farmers do not hire aliens to do the work, it will not get done.

It seems obvious the law should provide for this kind of situation. There should be a way needed alien workers can come into the United States temporarily to fill these jobs legally. Theoretically, there is such a provision—the Immigration and Nationality Act does provide for labor certification of temporary alien workers. However, it also gives the Department of Labor the right to withhold such certification unless American workers are found to be unavailable not only within the area where the jobs exist, but within the entire United States, including Puerto Rico, Hawaii, and Alaska. Moreover, the Labor Department has also been responsible for issuing regulations which a farmer must meet in order to qualify for certified alien workers.

This is where our problems really begin, since the difficulty if not impossibility of complying with these regulations, their inflexibility and lack of responsiveness to the needs of farming operations where time can make the crucial difference between a successful crop and failure, have left farmers with little alternative but to hire available, willing labor without concern as to the legality of their presence in the United States. What is even more disturbing, the diffi-

culty of meeting the requirements of the certification process in fact compounds the problems and conditions of foreign entrants into the United States who are exploited and abused by those who actually traffic in bringing them into the country outside the law.

It is easy for Government bureaucrats thousands of miles away from the small farmer in Idaho to dictate everything an employer should offer from salaries to sanitary facilities—with little idea of the actual effects of such regulations. It is also very difficult for Department of Labor officials—who are constantly faced with high unemployment rates and pressure from above to cut unemployment—to realize that there are vacant jobs which will not be filled by the American unemployed. An unemployed factory worker in Detroit simply is not going to be willing to move to Idaho to herd sheep. It is unrealistic to think he will, even if the employer provides housing for his entire family, as the Department of Labor regulations would require. The ranchers in Idaho know from experience not even family housing will attract unemployed Americans to herd sheep, and yet they are required to go through the charade of seeking out employees throughout the entire Nation.

It seems to me those in the agricultural industry in places like Idaho are faced with a classic example of bureaucratic bungling which has made their efforts to be successful farmers and ranchers much more difficult—and in many cases, has even threatened their livelihood.

Not only commonsense, but experience as well, points to the conclusion that labor shortages in particular industries are localized in nature. The final determination that alien workers are necessary in a particular locality should not be left in the hands of the Federal Government based on a nationwide search for available workers. The absence of available workers within the State and the immediately surrounding area should be sufficient to qualify for alien workers.

Farmers and ranchers should not have to meet standards set by nonfarmers and ranchers thousands of miles away who know nothing about farming and ranching, the economy of the State or the realistic capabilities of the agricultural industry.

Today I am introducing a bill which will amend the Immigration and Nationality Act and the Wagner-Peyser Act of 1933, to put the responsibilities of determining need and proper employment conditions for temporary alien agricultural workers where they should be—in the hands of the State government. This proposal will allow that, in the case of agricultural labor, the Governor of each State will have the responsibility to determine whether or not there is a shortage of labor sufficient to require the use of alien workers. It also provides that the Governor of each State will be responsible for establishing rules and regulations governing labor certification for temporary alien workers in his State. The Governor is in a much better position to determine the realities of the labor market in his area. The Governor certainly can more fairly judge the proper housing, salary,

benefit requirements, et cetera which will be fair both to the worker and to the employer.

Recently an editorial regarding the alien labor situation was printed by the Idaho Daily Statesman. I was pleased to note the editorial advocates something quite similar to the bill I had prepared, and I would like to direct the attention of the Senate to this editorial. I ask that it be printed in full as part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### THE ILLEGAL ALIEN QUAGMIRE

The situation with illegal aliens in this country is a tangled mess, one of which there is no easy answer.

Perhaps the only winners now are those who exploit the aliens: the coyotes who smuggle them into the country, the transporters who get them where they are going, unscrupulous farmers who pay them low wages and provide unsanitary working conditions, and those who take advantage of their underground status to bleed them dry.

President Carter has proposed a five-part legislative package to correct the problem, but his plan does not adequately deal with the other side of the coin: assuring a labor force for jobs that many American citizens will not accept.

In Idaho, for instance, there is little that can be done to make such jobs as moving irrigation pipe attractive enough to entice citizen laborers.

We must ask if there is not a means of attacking the problems that result from the influx of aliens and still insure an adequate labor force.

We do not have a definitive answer, but we do feel a program could be developed that would avoid the exploitive aspects of the present alien situation, yet allow Mexicans to enter this country to work in specific agricultural fields. Such a program would be a compatible addition to Carter's proposal.

For example, perhaps state labor departments could certify that American laborers were not available to fill certain jobs, such as moving irrigation pipe. Such certification, and an estimate of the number of laborers needed, could be forwarded to a joint U.S.-Mexican labor center in the southwest. Mexican laborers who have applied for and been granted permission to work in this country could be dispatched to fill those jobs as long as they last.

State labor departments would be responsible for policing those employers certified to hire aliens and for keeping tabs on the aliens, with enforcement powers to assure that proper wages are paid and proper living facilities are made available. Mexico should be asked to help fund the program.

If such a program were sensitively and efficiently implemented along with the other points in Carter's plan, it could solve the alien problem in a way that would be beneficial to both Mexicans who wish to work in the United States and U.S. agriculture interests who have a need to hire them.

In research for The Statesman's recent series on aliens, two points became clear:

Idaho employers for the most part have treated the aliens well, and the aliens themselves are proud, aggressive people who want a chance to make it. It is only the illegality of the situation and resulting exploitation that spoil what could be a productive relationship between these two groups of people.

Mr. McCLURE. The farmers and ranchers of Idaho, as well as other parts of the country, need this legislation. The present system is based on theory rather than reality, and is failing in practice.

I urge very careful consideration of this piece of legislation.

By Mr. TOWER:

S. 1605. A bill to provide for review of risks relating to regulations pertaining to cotton dust; to the Committee on Human Resources.

Mr. TOWER. Mr. President, I am introducing a bill today which is of extraordinary importance to my State of Texas, and to every State in which cotton is grown, processed, and manufactured into consumer goods.

This bill would require a 2-year study by a specially appointed panel of experts of the effects of cotton dust on workers and the costs of implementing strategies for preventing worker exposure to such dust.

The Occupational Safety and Health Administration has done a great deal of work in this area and has proposed standards for possible implementation. Their research, based on the work of the National Institute of Occupational Safety and Health, supposedly justifies these very stringent and costly standards. However, there is considerable question as to the extent of danger to workers in the various parts of the cotton industry, and there is considerable concern about the impact of costs required to implement the OSHA standards.

There is no singular "cotton industry." The so-called industry is made of numerous and very different operations ranging from the production of cotton to its delinting to its spinning to its manufacture into consumer products. The exposure to possible danger for workers in these various segments differs radically. This is particularly true of those workers in ginning operations, where there has not been one single case of brown lung disease ever reported.

Despite the total lack of evidence correlating exposure from various cotton processing operations with the disease, and despite any understanding of the nature of the industry's many different segments, OSHA has promulgated standards which will have a devastating effect on cotton-producing States.

Most recently, studies within the State of Texas have established that almost half of all gin operators would not be able to afford the cost of implementing the standards required by OSHA, and would likely have to shut down operations should these regulations go into effect.

The history of cotton production in Texas and other States shows clearly that when gins shut down, cotton production in adjacent areas also ceases. In some cases in the panhandle of Texas, more than half the agricultural economy could be eliminated as a result of such shutdowns.

Mr. President, nothing is totally one way or the other, as we all know. There is evidence of brown lung disease among workers in textile mills in the southeast which may be related to the exposure of those workers to cotton dust in the mills where they are employed. But the cases which have been verified, and the potential for continued health hazards do not extend to other stages of cotton produc-

tion and processing as OSHA would have us believe, and the danger is neither as widespread as OSHA says it is, nor as minimal as many mill owners would claim.

I do not believe we risk grave danger by deferring the regulations which OSHA has proposed. My bill calls for a 2-year study, which I understand to be the time required to do a thorough job. However, should the study be completed earlier nothing in the bill precludes the panel from reporting its findings and recommendations earlier.

The panel will be composed of experts from the health field as well as from the industry. The Secretary of Agriculture is required under the bill to work with the Secretary of Labor in establishing the panel. No one is trying to load the deck here, but I am trying to insure that when we suggest safety and health standards that the proponents understand the industry affected and the cost of their actions. This has not been done with OSHA and it will not be in the future unless we insist on it.

I am sick and tired of having some joker at OSHA, who has never been closer to a farm than when he goes to the grocery store, write regulations which have a profound effect on the agricultural economy of my State.

I am not talking about a small group of farmers; I am talking about a billion dollars worth of cotton production and related activity just in my own State. When some of my colleagues here talk about the need for jobs, and the need for economic stimulus, I just hope they will stop and think about a billion dollars worth of jobs represented by Texas cotton producers. I do not believe that those at OSHA are concerned at all about the effect of their actions. These are the same people who proposed putting a portable john within 5 minutes walk for every farm worker, which would require a john on every 11 acres of ground—a total of more than 21 million portable johns in the state of Texas alone.

These are the same people who wasted taxpayer money to tell farmers in a farm safety booklet that cow manure is slippery and that accidents are caused by hazards.

The litany of OSHA sins goes on and on. It is the most bungling, inept, obnoxious agency of Government that has ever existed. And I wish the new administration a lot of luck in its efforts to straighten OSHA out.

But, Mr. President, we in Texas cannot wait for the Carter administration to get around to putting OSHA's house in order; frankly I think that will never happen.

Despite the glib promises of new directions for OSHA which were predicted by Dr. Marshall and his staff at the Department of Labor, OSHA persists in trying to implement these regulations concerning worker exposure to cotton dust. Congress cannot stand still to allow those standards to go into effect, and my State cannot stand still either.

I hope that the Senate will expend its newly found energy this session on immediate hearings on this bill, because time

is critical. We have found the will to push through tax legislation, and economic stimulus jobs bills, and a farm bill, and a host of other major legislative items. I very strongly believe that we can do the same for this bill. I would urge my colleagues to support it, and I would urge OSHA to take heed to the message which I would hope the Congress will send it in this regard.

Mr. President, I ask unanimous consent that a copy of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

#### S. 1605

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) there is established an independent Panel consisting of 12 members appointed by the Secretary of Agriculture, in conjunction with the Secretary of Labor, to investigate the safety and health implication of cotton dust exposure to workers in all industries where exposure to cotton dust exists, including ginning; warehousing; compressing of cotton lint; classing and marketing of cotton lint; manufacturing of yarn, threads and fabric; reclaiming and marketing of textile manufacturing waste; delinting of cotton seed; marketing and converting of linters; reclaiming and marketing of gin motes; and baling, yarn, and felt manufacturing using waste cotton fibers and by-products.*

*(b) Of the 12 members appointed to the Panel established under subsection (a), 3 shall be appointed from persons nominated by the Director of the National Institutes of Health, 3 shall be appointed from persons nominated by the Director of the National Academy of Sciences, and 6 shall be appointed from among persons representing industry.*

*(c) (1) The Board shall submit a report to the President for transmittal to the Congress not later than December 31, 1979 containing the recommendations of the Panel with regard to regulations which are designed to protect workers in relation to their exposure to cotton dust. The Panel shall make no recommendation in its report except by majority vote of the members of the Panel.*

*(2) Members of the Panel who are not officers or employees of the United States shall receive for each day they are engaged in the performance of their duties compensation at rates not to exceed the daily equivalent of the annual rate in effect for GS-18 of the General Schedule, including travel time; and all members, while so serving away from their homes or regular places of business, may be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as such expenses are authorized by section 5703 of title 5, United States Code, for persons in the Government service employed intermittently.*

*(d) In making its determination the Panel shall consider—*

*(1) the risk of danger to workers from exposure to cotton dust in present operations in all sectors of the cotton industry, except those areas which are clearly farming operations such as production, ginning, compressing of cotton lint, and delinting of cotton seed;*

*(2) the availability of existing technology to combat serious safety and health consequences of such exposure;*

*(3) the costs of implementing technology and procedures to reduce risk associated with such exposure, and the probable long-range effects those costs have on the number of persons employed in affected operations;*

*(4) the responsibility of individual work-*

*ers to adhere to safety and health procedures presently recommended by employers.*

*(e) No regulations shall be promulgated or caused to be promulgated by an agent of the Federal government except if such regulations shall be consistent with the recommendations of the Panel created under this section.*

*(f) There are authorized to be appropriated to carry out the purposes of this Act \$1,000,000 for the fiscal year ending September 30, 1978, and \$1,000,000 for fiscal year ending September 30, 1979.*

*SEC. 2. Proposed standards for exposure to cotton dust (Federal Register, volume 14, No. 250, Tuesday, December 28, 1976) shall be suspended until the conclusion of the investigation required under section 1 of this Act.*

By Mr. ANDERSON (for himself and Mr. HUMPHREY):

S. 1606. A bill to amend the Internal Revenue Code of 1954 to treat the conducting of certain games by tax-exempt organizations as not being an unrelated trade or business; to the Committee on Finance.

Mr. ANDERSON. Mr. President, I am pleased to introduce today with my colleague from Minnesota, Senator HUMPHREY, legislation to provide that the proceeds from the operation of certain games by nonprofit organizations would not be subject to the unrelated business income tax. Under the present law, organizations such as the Veterans of Foreign Wars, the American Legion, and Knights of Columbus, which are otherwise tax exempt, must pay Federal income taxes on the proceeds from bingo and other regularly conducted games, if the organization pays workers to operate the games. The proceeds from the games are used for worthwhile charitable purposes, such as the purchase of uniforms and equipment for youth sports activities. The present tax liability assessed to these groups, if not amended as provided in my bill, could cause them to significantly reduce their sponsorship of many youth activities.

Originally the tax on income from unrelated business conducted by such organizations was imposed because taxpaying businesses complained of unfair competition. Since the operation of games by otherwise tax-exempt organizations does not compete with commercial activities, taxing their proceeds is not necessary, in my judgment, under the general purpose of the law.

The legislation Senator HUMPHREY and I are introducing today would only apply to games which are not prohibited by State or local law. In addition, the operation of the games could not be in competition with profitmaking businesses. The exempted proceeds would also have to come from games which usually have the wagers placed, the winners determined and the prizes or other property distributed in the presence of all persons placing wagers in the game.

The taxation of the proceeds of these games is an unnecessary obstacle for organizations performing important civic activities. It's a burden for their members and an injustice to the people they are trying to serve.

Mr. President, I request that the text of S. 1606 be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1608

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a)* section 513 of the Internal Revenue Code of 1954 (defining unrelated trade or business) is amended by adding at the end thereof the following new subsection:

"(f) CERTAIN GAMES.—

"(1) IN GENERAL.—The term 'unrelated trade or business' does not include any trade or business which consists of conducting qualified games.

"(2) QUALIFIED GAME.—For purposes of paragraph (1), the term 'qualified game' means any game—

"(A) of a type in which usually—

"(i) the wagers are placed,

"(ii) the winners are determined, and

"(iii) the distribution of prizes or other property is made,

in the presence of all persons placing wagers in such game.

"(B) the conducting of which is not an activity ordinarily carried on on a commercial basis, and

"(C) the conducting of which does not violate any State or local law."

(b) The amendment made by subsection (a) shall apply to taxable years beginning after December 31, 1969.

By Mr. MATSUNAGA (for himself and Mr. INOUE):

S. 1607. A bill to amend title 10 of the United States Code relating to Junior Reserve Officers' Training Corps; to the Committee on Armed Services.

Mr. MATSUNAGA. Mr. President, I am introducing today a bill that will extend to the high school students of American Samoa the opportunity to participate in Junior Reserve Officers' Training Corps programs.

As my colleagues are aware, the people of American Samoa are not American citizens, but are classified under law as U.S. nationals. As a result of this classification, American Samoans are sometimes excluded from participation in certain Federal programs designated by the law to be available only to American citizens. Although Congress has, over the past several years, sought to revise many of the statutes that exclude American nationals from Federal programs, some of these inequities still remain in the law. This is the case with regard to the establishment of a Junior ROTC program in American Samoan high schools.

Last year, the Department of Education of the Government of American Samoa approved the inclusion of a Junior ROTC program in the curriculum of American Samoa's high school system. A formal program application was submitted to the U.S. Army Fourth ROTC Region in Fort Lewis, Wash.

While the Army responded favorably to the concept, the Government of American Samoa was informed that Junior ROTC units could not be established in the Territory due to the fact that the statutes governing the Junior ROTC program require that the program participants must be citizens of the United States.

In a communication addressed to the Honorable A. P. Lutali, the elected Washington Representative of the Govern-

ment of American Samoa, the Department of the Interior recommended that legislation be introduced in Congress to amend the section of the United States Code relating to Junior ROTC programs in order to make American nationals eligible to participate.

In a letter to Congressman MELVIN PRICE, chairman of the House Armed Services Committee, Acting Assistant Secretary of Defense Carl W. Clewlow indicated that the Department of Defense strongly endorses Samoan Delegate Lutali's proposed legislation, particularly because American Samoans have made, and continue to make, an invaluable contribution to the defense of the United States. Recently, Congressman RICHARD WHITE, a member of the House Armed Services Committee, introduced a bill virtually identical to the bill that I am introducing in the Senate, designed to remove the legal restrictions that prevent American Samoan schools from being eligible for Junior ROTC units.

Mr. President, the bill that I am introducing today, at the request of Delegate Lutali, amends the United States Code to make American nationals eligible to participate in Junior ROTC programs. The establishment of a Junior ROTC unit in Samoan high schools is important, in view of the large number of Samoan students who are recruited, directly out of high school, into the various branches of the armed services. A Samoan Junior ROTC program would enable Samoan students to prepare themselves for careers in the U.S. Armed Forces.

Mr. President, I am hopeful that my colleagues will consider my bill favorably, for while it proposes to make a small change in the law governing Junior ROTC programs, it promises to do a great deal of good for our friends in American Samoa.

Mr. President, I ask unanimous consent that the text of my bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1607

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2031(b)(1) of title 10, United States Code (relating to Junior Reserve Officers' Training Corps) is amended by striking out "citizens of the United States" and inserting in lieu thereof "citizens or nationals of the United States".*

SEC. 2. This Act shall be effective on the date of enactment of this Act.

By Mr. METCALF (for himself and Mr. STEVENSON):

S. 1608. A bill to abolish the Joint Committee on Congressional Operations, and for other purposes; to the Committee on Rules and Administration.

Mr. METCALF. Mr. President, the bill that I am introducing today is intended to implement the Committee Systems Reorganization Amendments of 1977, with respect to termination of the Joint Committee on Congressional Operations.

As Senators will recall, section 201(d) (1) of the amendments required the

appropriate standing committees of the Senate, not later than July 1, 1977, to report legislation terminating the statutory authority of specified joint committees:

This bill repeals that part of the Legislative Reorganization Act of 1970 which authorizes the Joint Committee on Congressional Operations.

The report on the committee amendments makes it clear that the duties and responsibilities which had been assigned to the joint committee are now within the jurisdiction of the Senate Committee on Rules and Administration. To insure that functions of the joint committee relating to the personnel placement office and office management assistance—including preparation and issuance of the Senate Congressional Handbook—as well as identification of court actions of vital interest to the Senate can be continued cooperatively, the bill also authorizes the Rules and Administration Committee to carry them out jointly with any committee of the House which provides similar services.

It is my intention, Mr. President, to wind up the affairs of the joint committee as of July 1, and I have so advised the vice chairman, Representative JACK BROOKS. I hope that the legislation necessary to repeal its statutory authority can be handled expeditiously in both Houses.

I ask unanimous consent that the text of my bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 1608

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, effective July 1, 1977—*

(1) part 1 of title IV of the Legislative Reorganization Act of 1970 is repealed; and

(2) the table of contents of such Act is amended by striking out the matter relating to such part.

SEC. 2. (a) This section is enacted—

(1) as an exercise of the rulemaking power of the Senate, and as such it shall be considered as part of the rules of the Senate and such rule shall supersede other rules only to the extent inconsistent therewith; and

(2) with full recognition of the constitutional right of the Senate to change such rule at any time, in the same manner, and to the same extent as in the case of any other rule of the Senate.

(b) The Committee on Rules and Administration of the Senate shall—

(1) Upon request, assist Members, committees, and officers of the Senate seeking competent personnel with specified qualifications and furnish advice and information with respect to office management procedures; and

(2) Identify any court proceeding or action which in the opinion of the Committee on Rules and Administration, is of vital interest to the Congress, or to the Senate, as a constitutionally established institution of the Federal Government and call such proceeding or action to the attention of the Senate.

In providing such services, the Committee on Rules and Administration is authorized to cooperate with, or act jointly with, any committee of the House of Representatives which provides similar services.

By Mr. SPARKMAN:

Senate Joint Resolution 61. A joint resolution to authorize and request the President to issue a proclamation designating the last week in August of each year as "National Grade Crossing Safety Week"; to the Committee on the Judiciary.

Mr. SPARKMAN. Mr. President, for some reason too many people throughout our Nation are simply ignoring stop signs at railroad grade crossings. Last year at least 12,032 accidents occurred because people ignored these stop signs. Hundreds of people were killed.

A member of my staff reports to me that at nearly every grade crossing for which he has stopped, he has been in danger of being run down from behind and that people have chastised him for stopping, all of this, despite the fact that there are clearly visible stop signs at these crossings.

I feel that there is need for a national, cohesive action to emphasize the danger of this situation. Both the National Safety Council and the Association of American Railroads have expressed an interest in congressional leadership to caution the Nation about this danger. Accordingly, I am introducing a joint resolution to authorize and request the President to issue a proclamation designating the last week in August of each year as "National Grade Crossing Safety Week."

I urge my colleagues to support this resolution. I feel that Senate passage of this resolution, appropriately publicized, will stimulate better driving at grade crossings and better enforcement by State and local police of traffic laws relating to grade crossings.

#### ADDITIONAL COSPONSORS

S. 76

At the request of Mr. STONE, the Senator from West Virginia (Mr. RANDOLPH) was added as a cosponsor of S. 76.

S. 123

At the request of Mr. INOUE, the Senator from South Dakota (Mr. ABOUREZK) was added as a cosponsor of S. 123.

S. 247

At the request of Mr. GOLDWATER, the Senator from Utah (Mr. HATCH) and the Senator from Idaho (Mr. MCCLURE) were added as cosponsors of S. 247.

S. 532

At the request of Mr. INOUE, the Senator from South Dakota (Mr. ABOUREZK) was added as a cosponsor of S. 532.

S. 1140

At the request of Mr. HART, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 1140.

S. 1237

At the request of Mr. BAKER, the Senators from Pennsylvania (Mr. SCHWEIKER and Mr. HEINZ) were added as cosponsors of S. 1237.

S. 1242

At the request of Mr. NELSON, the Senator from Oklahoma (Mr. BELLMON) and the Senator from Maryland (Mr. MATHIAS) were added as cosponsors of S. 1242.

S. 1556

At the request of Mr. HANSEN, the Senator from Alaska (Mr. STEVENS) was added as a cosponsor of S. 1556.

S. 1585

At the request of Mr. MATHIAS, the Senator from California (Mr. HAYAKAWA) was added as a cosponsor of S. 1585.

AMENDMENT NO. 340

At the request of Mr. ROTH, the Senator from Louisiana (Mr. JOHNSTON) and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of amendment No. 340, to be proposed to S. 961.

#### AMENDMENTS SUBMITTED FOR PRINTING

##### HOUSING AND COMMUNITY DEVELOPMENT ACT—S. 1523

AMENDMENT NO. 342

(Ordered to be printed and to lie on the table.)

Mr. BURDICK submitted an amendment intended to be proposed by him to the bill (S. 1523) to amend the Housing and Community Development Act of 1974.

AMENDMENT NO. 343

(Ordered to be printed and to lie on the table.)

Mr. TOWER (for himself, Mr. STONE, and Mr. CRANSTON) submitted an amendment intended to be proposed by them jointly to the bill (S. 1523), supra.

Mr. TOWER. Mr. President, I want to offer this amendment to S. 1523, the Housing and Community Development Act of 1977, for Senators CRANSTON, STONE, and myself. It is a very simple amendment.

It would make distressed "areas" of cities and urban counties eligible for assistance under the proposed urban development action grant, UDAG, program. Under the proposal contained in S. 1523, only distressed cities and urban counties are eligible to receive assistance under UDAG. No one knows which cities or counties will be eligible, at this time, as the Secretary of HUD will decide this in the future after considering such factors as age and condition of housing stock, abandonment, population outmigration, average income, and stagnating tax base.

Rather than apply these factors to a city or county to determine its eligibility, we would apply these factors to areas within a city or county. Unless this is done, many of our severely depressed neighborhoods will never see a penny of this money, because even though the neighborhood might be considered to be poverty stricken, the city or county within which it is located is not considered to be "distressed." As we read this, cities such as Denver, Miami, and Atlanta, probably would not be defined by the Secretary as being distressed, even though different areas of those cities would certainly contain factors such as those mentioned above. Clearly, the areas would be ones which could be termed "distressed."

Why should certain cities and counties be discriminated against when they con-

tain areas just as much in need as other cities? It is completely unfair to the residents of these areas to be denied the ability to receive these funds.

This amendment still allows all the funds to be allocated at the discretion of the Secretary. Its sole purpose, however, is to make distressed "areas" of cities and urban counties, rather than only the category "distressed cities and urban counties," eligible to receive UDAG funds.

#### ADOPTION OPPORTUNITIES RESEARCH ACT—S. 961

AMENDMENT NO. 344

(Ordered to be printed and to lie on the table.)

Mr. HAYAKAWA submitted an amendment intended to be proposed by him to the bill (S. 961) to promote the healthy development of children who would benefit from adoption by facilitating their placement in adoptive homes, and for other purposes.

#### CLEAN AIR ACT AMENDMENTS—S. 252

AMENDMENT NO. 345

(Ordered to be printed and to lie on the table.)

##### CLEAN AIR—AUTO EMISSION STANDARDS

Mr. BAKER. Mr. President, I send to the desk to be printed an amendment to S. 252 which would modify the automobile emission standards contained in section 20 of that bill.

In my individual views filed with the committee report, I outlined my feeling with regard to the auto emission standards and the need to provide stability in these standards so that industry could transfer its research efforts to meeting fuel efficiency goals. I ask unanimous consent that those views be printed in the Record following these remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. The amendment which I have just introduced would provide for the following schedule of emission standards.

|      | HC  | CO   | NOx  |
|------|-----|------|------|
| 1978 | 1.5 | 15.0 | 2.0  |
| 1979 | 1.5 | 15.0 | 2.0  |
| 1980 | .4  | 3.4  | *1.0 |
| 1981 | .4  | 3.4  | *1.0 |
| 1982 | .4  | 3.4  | 1.   |

\* A waiver is provided up to 2.0 gpm of NOx for vehicles which utilize new engine systems or nonprecious metal catalyst emission systems.

This schedule is designed to accomplish three major objectives. First, it gives industry another year at current emission rates in which to further develop technologies to meet statutory standards. Second, it establishes a final statutory framework in 1980 and beyond so that the industry may transfer research efforts to the development of fuel efficient engines. And third, it provides a waiver from the NO<sub>x</sub> standard to encourage the development of new fuel efficient engine systems, such as the diesel or stratified charge engines, or emissions systems not based on precious metal catalysts.

I believe that this proposal balances the needs of industry for additional development time and the interests of public health and welfare by moving expeditiously to the lowest practicable standards. I hope my colleagues will consider this proposal carefully.

#### ADDITIONAL VIEWS OF MR. BAKER

I voted to report S. 252, the Clean Air Act Amendments of 1977, to the Senate because I feel that on the whole it is a sound effort to respond to pressing environmental issues. However, there are two issues considered by the committee which I believe warrant further attention and on which I shall propose amendments to the course taken in the bill. I would like to discuss these briefly.

#### AUTOMOBILE EMISSION STANDARDS

The Clean Air Act of 1970 required that, beginning with model year 1975, emissions of hydrocarbons and carbon monoxide be reduced by 90 percent from precontrol levels and that oxides of nitrogen be reduced by a like amount beginning with model year 1976. These ultimate standards were converted into emission rates by the Environmental Protection Agency and are expressed: .41 grams/mile for hydrocarbons, 3.4 grams/mile for carbon monoxide, and .4 grams/mile for oxides of nitrogen.

The concept of establishing an arbitrary percentage reduction embodied in the 1970 Act is referred to as a "technology forcing" standard. The standard was based neither upon known control technologies or upon any precise relationship to ambient pollutant concentrations. It was undertaken by Congress in the expectation that industry could achieve the reductions in these dangerous pollutants through the development of new control technologies.

I believe that course of action, given the state of our knowledge in 1970, was wise and courageous. Over the years since its adoption, we have made substantial progress toward the goal of clean automobiles. It has been an arduous undertaking as many of us who have served on the Committee on Environment and Public Works since 1970 can attest.

Several extensions have been necessary in the original schedule of compliance because the evolution of technology has been slower than originally anticipated. But in 1977 we have achieved a reduction of 85% in emissions of hydrocarbons and carbon monoxide and over 40% in oxides of nitrogen.

The schedule of emission controls adopted in S. 252 calls for a one-year extension of present controls for model year 1978; it then provides one year at an interim level (0.4 for HC, 3.4 for CO and 2.0 for NO<sub>x</sub>); and in 1980 the bill requires final statutory compliance.

This is the schedule which the Senate approved last year. While I sympathize with the concern for human health and welfare which has motivated the Committee to continue pressing for increments of progress toward our ultimate goal, I do not believe that the concept of forced increments of progress is still necessary.

I believe we stand now on the verge of achieving most of what we sought in the Clean Air Act of 1970. It is time to abandon forced increments of progress and instead to consider the establishment of a final timetable for compliance and to adjust the statutory standards in light of scientific data regarding ambient effects and technological and industrial limitations. The demands upon the automobile industry to develop new energy-efficient automobiles dictates that further emission control efforts be simplified as much as possible in order to allow a greater commitment of resources to our energy goals.

I believe the industry can with evolving technological systems, including the three-

way catalyst, meet statutory standards in 1980, and they should do so. The imposition of additional control levels or the forcing of the use of developing technologies before they are sufficiently proven will not significantly enhance environmental quality and will result in substantial energy and economic penalties.

From the various schedules of emission standards which have been offered during the debate on this issue this year, it is apparent that many of us have become habituated to the "increments-of-progress" approach. Like the frog in the riddle, we seem determined to jump always halfway to the wall.

We are close to our goal. I do not believe we need to continue jumping halfway to it.

Additionally, I believe the final statutory scheme should provide flexibility for a period beyond 1980 to accommodate various evolving technologies which will have difficulty meeting the NO<sub>x</sub> emission standard. Control of NO<sub>x</sub> is a difficult problem from the environmental standpoint and a difficult proposition from the standpoint of new engine technology.

Strict adherence to the 1.0 gpm standard may tend to freeze industry into the three-way catalyst technology. Because this system depends on platinum and rhodium, precious metals available primarily from foreign sources of supply, I believe it would be unwise not to encourage exploration for and development of alternatives.

Administrative flexibility should be built into the emission schedule in such a way as to insure that evolving technologies will meet our fuel efficiency targets.

I intend to explore during floor consideration the possibility of devising a schedule of emission standards which embodies the thoughts I have presented here. The gravamen of this effort will be to finally conclude the perennial issue of auto emission standards. With our energy problems requiring more of the time and efforts of Congress and the energy-related industries, we need to establish stability in environmental control requirements in order to free resources for our energy efficient efforts.

#### NOTICE OF HEARINGS

##### NOMINATION BEFORE THE JUDICIARY COMMITTEE

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Wednesday, June 8, 1977, at 10:30 a.m., in room 2228 Dirksen Senate Office Building, on the following nomination:

Finis E. Cowan, of Texas, to be U.S. district judge for the southern district of Texas vice James L. Noel, Jr., retired.

Any persons desiring to offer testimony in regard to this nomination shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

#### ADDITIONAL STATEMENTS

##### IF WINN-DIXIE COULD BAG MINIMUM WAGES

Mr. HELMS. Mr. President, the American consumer is often unaware that the highly competitive grocery industry operates on a very low margin of profit. To illustrate this point graphically, the Winn-Dixie Corp., based in Jacksonville, Fla., uses grocery bags which show the

consumer where every penny of the average dollar goes when he makes a purchase at the store.

Printed on the side of the bag is the picture of the dollar. It is broken down into segments and shows that 85 cents of the customer's dollar goes for the cost of merchandise, supplies, and services. Ten cents represents the cost of labor. Three cents represents the tax burden the store must bear, and only 2 cents represents the store's net profit. The following inscription below the picture points out:

If you give your son 25 cents to go to our store, to buy a \$10 order for you, he has made more on the order than Winn-Dixie.

Mr. James E. Davis, chairman of the board of Winn-Dixie, recently sent me one of these interesting grocery bags, along with a letter that I would like to share with my colleagues. In this letter, Mr. Davis makes the important point that minimum wage laws have already forced Winn-Dixie to cut back its carry-out services because it cannot afford, under its low-profit margin, to pay the high salaries that are demanded by Federal regulations. As a result, jobs for young men have been eliminated and the customers are without a service they would otherwise enjoy.

Such are the effects of minimum wage legislation. It strikes me as odd that the administration proposes to spend billions of dollars of the taxpayers' money to create make-work jobs for our young people, while simultaneously endorsing minimum wages that will destroy productive jobs in the private sector. There is, indeed, no surer way to create unemployment than to peg wages at a level higher than the people and businesses can afford to pay.

Mr. President, I ask unanimous consent that Mr. Davis' letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD as follows:

WINN-DIXIE STORES, INC.,  
Jacksonville, Fla., May 18, 1977

Senator JESSE A. HELMS,  
Russell Senate Office Building,  
Washington, D.C.

DEAR SENATOR HELMS: About three years ago, we sent each member of Congress a bundle of "cash and carry" bags for the office, thinking they might be useful. We have had some inquiries from the staff of other Congressional people, indicating that these bags have been depleted.

We have taken advantage of this bag by printing our margin of profit on it to counteract misunderstandings of margins in the food field. Our profit last year was 1.9% on sales, which would be 19¢ on a \$10.00 order. This could easily be wiped out by any number of changes in government regulations. The minimum wage for our bag boys is \$2.30 an hour. Most of them make more than that now. If it were raised to \$3.00 an hour, their pay would be 5¢ a minute. It is not impossible to spend 10 minutes wheeling a basket of groceries out and unloading them into an automobile.

We have almost eliminated the "carry out" service already. This has eliminated a lot of jobs for boys at the age where meeting the public, learning to sell and exercising discipline is paramount.

Anyhow, we hope these bags will be useful.

Sincerely,

JAMES E. DAVIS.

## SPECIAL OLYMPICS

Mr. BENTSEN. Mr. President, today, the opening ceremonies of the Ninth Annual Special Olympics will be held in the Memorial Stadium of the University of Texas at Austin. Over 2,300 athletes, 300 volunteers and 900 coaches and parents from throughout the State will be present at the ceremony that starts off 3 days of unique competition.

The competition at these olympics is a model for all Americans of just how much can be accomplished by those with a desire to win no matter what the obstacles. These olympics are special because the competitors are mentally handicapped individuals—and although they will break no world records in the competitive games, their personal performances will rival any records of courage and determination that have ever been set.

The competitors at these olympics range in age from 10 to 63 and they were chosen to compete in this statewide event as a result of their performances at district meets held throughout the State.

The special olympics are sponsored nationally by the Joseph P. Kennedy Foundation and the Texas competition is under the auspices of the Texas Association for Retarded Children. The goal of these special olympics is to give those with handicapped skills an opportunity to perform to the best of their ability in the company of those with similar abilities. It is an important development in an overall national effort to afford the handicapped the training and the forums which will encourage them to more fully participate in our society.

Mr. President, I want to add that I visited with the Texas delegation to the White House Conference of Handicapped Individuals yesterday and I found their pride and their spirit a model for all of us to emulate. All handicapped groups in this country are beginning to take effective strides toward assuring that their thinking is heard and their needs are met. I fully support their efforts and admire their courage.

## IN RECOGNITION OF NATIONAL SMALL BUSINESS WEEK

Mr. SCHMITT. Mr. President, I would like to take just a few minutes of the Senate's time to recognize this week as having been designated as National Small Business Week by the President. We in Washington often tend to overlook the contributions made to the Nation's economy by small businesses, mostly because the large commercial firms grab most of the headlines. Small businesses, however, represent the economic ideal of responsive, efficient, and competitive provision of the Nation's goods and services. Americans, particularly American minorities, have always striven to be a part of this basic sector of the free enterprise economic system. We often take our small businessmen and women for granted, and often generate pieces of legislation which impact on them adversely. Their flexibility and responsiveness usually manages to over-

come the roadblocks which we sometimes throw in their path.

It is also a pleasure for me to congratulate the persons selected by the Small Business Administration as Small Business Persons of the Year in New Mexico. They are Matias and Connie Martinez, owners of Martinez Oil and Gas Co. of Las Vegas, N. Mex. They had previously been chosen as Minority Small Business Persons of the Year for New Mexico. My congratulations go out to them for having received this honor. They represent the thousands of small businesses in our State which are making a constant and usually unheralded contribution to the economy of our State and the Nation.

## FUTURE ROLE FOR U.S. OIL INDUSTRY

Mr. HART. Mr. President, on May 22, 1977, the Washington Post published an article entitled, "U.S. Oil Industry Stakes Out Role for the Future," by William Greider.

This article is on a most important subject. It points to the increasing horizontal integration by oil companies of alternative sources of energy. The increasing concentration of economic power by the major oil companies heightens my concern that a few giant corporations will be able to exercise control over all energy production and over the legal and social environment within which they operate. This factual article deserves the attention of us all.

I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

## U.S. OIL INDUSTRY STAKES OUT ROLE FOR THE FUTURE

(By William Greider)

It is in the nature of great empires, history tells us, to proclaim their own immortality, then proceed to decline and ruin.

But the world's greatest industrial empire—the American oil industry—intends to accomplish the opposite. It periodically predicts its own demise, while it quietly arranges for permanent hegemony over America's energy business.

The United States might run out of oil someday. But there will always be an Exxon.

And a Mobil and a Gulf and a Texaco and so on down the list of "majors" and "lesser majors" who comprise the awesome corporate mass of American oil companies. Here is what the future looks like:

If the early promises of nuclear power are ever fulfilled, uranium will be mined and milled, perhaps enriched and reprocessed, by oil companies.

If America shifts from oil to coal as its principal source of energy, the importance of the oil companies will multiply—not shrink—because of their vast holdings in coal. In the not-so-distant future, when new technology converts coal to gas or liquid fuel or even a gasoline substitute, oil companies will make it and market it, from the ground to the gas station.

Oil shale, tar sands, geothermal power—oil companies have established futures in these sources, too.

And, yes, even in solar energy. Exxon and Mobil and Gulf cannot acquire the sun, but they have invested in the hardware and

technology which someday may make sunshine a saleable commodity, either through home heating units or large-scale power-generating plants.

This future is already emerging, sanctioned and encouraged, to some extent, by the federal government. Despite the occasional outbursts of anti-oil rhetoric in Congress, the government acts more like a partner than an adversary. It leases its coal and oil shale to the all-energy companies, provides legal clearance for their mergers and acquisitions, even pays for most of the research which will usher in the future fuels.

As a chapter in U.S. industrial history, it is a bit breathtaking. Here are corporate managers who are planning, not five years or eight years in advance, but for a full generation beyond. They are hedging against that time they keep warning us about—when oil and gas are gone. They are staking out strong positions for their companies, perhaps dominance, in the energy age beyond petroleum.

"The big problem is only the next 15 years," a Mobil vice president said confidently. "If we can get through the next 15 years and we aren't dopes about coal and nuclear, we should get back to an era where energy is no problem."

Whether one shares that robust optimism depends largely on how you feel about oil companies. If they are dynamic and creative components, trustworthy stewards, then their transformation into all-energy corporations is logical, even encouraging. If you see the oil industry as a web of partners, which has stifled competition and warped America's priorities, then the future looks downright scary.

People have been warning us for years that this was going to happen, that someday oil would own it all if the government did not intervene. But the case for making oil give up its acquisitions in other fuels—known as horizontal divestiture—has never been able to generate much power in Congress. Jimmy Carter, as candidate, expressed a lot of sympathy for the idea. As President, he has backed away from it.

The fear, of course, is that once oil companies have established leverage in alternative fuels they will be able to manipulate freely supply and price and profit. But this case rests on future facts which cannot be proven in the present. And, besides, the idea of divesting all those companies of all that wealth scares politicians, too.

So here is where things are now: oil companies have a majority position or very close to it in both coal and uranium. They are leaders in the technology that will open up the future alternatives, particularly the synthetics from coal. Their hedges cover virtually every other possibility, from sunshine to garbage-burning.

Some 24 oil and gas companies now control at least 77 billion tons of U.S. coal reserves. That represents approximately 44 per cent of all the coal leased or owned by private companies of any kind. If one leaves aside the coking coal which is reserved for steel-making, then oil's share of all the leased reserves is about 50 per cent.

Like other energy issues which depend upon corporate reporting for the vital statistics, it is impossible to determine the precise share of oil-owned coal. These estimates were derived from corporate annual reports, industry surveys and confidential filings with the Federal Trade Commission.

Most previous surveys have put the oil industry's coal reserves at 40 billion to 50 billion tons. Oil's share is understated further by comparing it to the total U.S. reserve figure of 437 billion tons. It is more relevant to compare what oil controls to the coal reserves controlled by all coal producers in the near-

ketplace. According to an estimate by Exxon, that coal is roughly 174 billion tons. This is the coal which will be mined in the coming generation and oil controls almost half of it. For some reason, the Carter energy plan reports that oil owns only 5 per cent of U.S. reserves—which is lower than the oil industry's own estimate of 12 per cent.

Whatever the precise number, the last decade produced a hungry acquisition campaign by oil companies. Six of the top 10 holders of U.S. coal reserves are now oil companies; 14 of the top 20. An American Petroleum Institute study estimates that 25 companies have invested "in excess of \$6.5 billion" in coal.

Their future position is most dramatic in the West where the coal seams lie close to the surface and coal development will be crucial to national energy production. According to 10-year production plans reported by the Federal Energy Administration, oil and gas companies will control 50 per cent of it.

In some vital areas, their control is much higher. The hottest coalfield anywhere is the federally owned acreage in Campbell County, Wyoming, where more than a dozen huge strip mines are planned for the next decade. In Campbell County, 90 per cent of the planned coal production is owned by oil and gas.

Down the road away, petroleum companies have established a pre-eminent position on the technology to convert coal into synthetic fuels—a low-grade gas, a liquid industrial oil, even perhaps a synthetic gasoline. Conoco, Gulf, Exxon, and Shell are leaders. From 1964 to 1974, seven petroleum companies were granted 49 of the 52 patents covering synthetic gas and oil from coal.

In uranium production, a realm where fewer firms compete and corporate grith is more important, the oil companies have a potential leverage which is probably greater. Oil and gas companies—mainly Kerr-McGee, Gulf, Continental, Getty and Exxon—control 51 per cent of the U.S. uranium reserves. Oil companies control 52 per cent of the uranium milling capacity, the process which converts ore to a fuel concentrate.

Several majors, including Exxon, Atlantic Richfield, Gulf and Shell, are seeking entry into other refining processes which will be important elements in the future of nuclear power—uranium enrichment which is now monopolized by the U.S. government and the processing of spent fuel from nuclear reactors.

These building-block stages of the future all-energy company are dominated by the familiar corporate names, but the idea has not been lost on others. Two of the new oil companies in the APT's Top 30 list are the Union Pacific and Santa Fe railroads. Santa Fe has oil, gas and coal. Union Pacific has oil, gas, coal and uranium.

Another sideways entry is Utah International, a major mining company, which also has a petroleum subsidiary, plus major holdings in coal, the seventh-largest uranium reserves, the third-largest uranium milling capacity. Now Utah International has merged with General Electric, one of the principal manufacturers of nuclear reactors. Thus, one corporation has the skeleton for the ultimate all-energy production—from the mines to the power plants.

It does not require much imagination to see where the major oil companies are headed—toward the vertical integration of production, refining, marketing in coal and uranium, not very different from their vertical control of petroleum which has often been criticized as anti-competitive. Mines will replace wells. Milling plants will replace refineries. But, if things work out, maybe they can use some of the same pipelines and gas stations.

In the long run, almost anything is possible in the future of energy. America could

decide to run its cars on corn. And it could feed oil to the cattle. Or maybe Americans will skip cattle altogether and just eat steaks made from oil.

Don't laugh. The technology already exists. Methanol, distilled from corn or any other feed grains, will run an automobile (the state of Nebraska which grows a lot of grain is pushing that idea). British Petroleum has an experimental feedlot where it is raising cows on hydrocarbon feed derived from oil. Oil steaks are said to taste a lot better than they sound.

Some of these ideas may never become economically feasible (or palatable), but the point they illustrate is that the oil majors have their eye on a future much more broadly defined than the current back-and-forth over oil prices and government regulation and all that.

"Most people are looking for us to run out of oil," said Wally Seward, a planning expert with the American Petroleum Institute. "I don't expect that at all. Using oil for heat and steam power is outmoded. The future is petrochemicals and animal feed stocks and other higher uses."

They used to burn whale oil in the lamps of America but, when the whales were depleted as a mass source of energy, sperm oil became a highly prized lubricant—also very expensive. Something like that will probably happen to petroleum in the next 40 years, only the refined uses will be must more exotic.

Some of the majors are also dabbling in "exotic" fields outside energy. Mobil, the most serious about nonenergy diversification, bought Montgomery Ward and Container Corporation of America.

Gulf was dickering on a merger with Rockwell International, the aerospace giant, but the deal soured, according to one source, when it became clear that Gulf wanted to absorb it as Gulf's Rockwell, not Gulf-Rockwell.

Exxon has created a venture capital division which invests seed money in small and diverse entrepreneurs who have a bright idea about future technology, from machines that grade school tests to computer-guided typewriters. Exxon has spent modest millions on these ventures and hopes they will make money, but one Exxon executive explained: "In the overall picture they don't even show up on our balance sheet."

Exxon's balance sheet, remember, is \$48 billion a year. It is always No. 1—three times larger than IBM. But then all of the American oil industry is staggering in size. On the Fortune 500, four of the top eight are oil, 10 of the top 20, 17 of the top 50.

And oil is still where their hearts lie. "The oil industry is still largely conservative," said one industry authority. "If it were possible just to go on punching holes in the ground for oil, eight out of 10 executives would go punch holes all over the place."

In other words, the foresight that led oil companies into coal and uranium and other alternatives was spread very unevenly across the industry. Continental, a lesser mogul in domestic oil and natural gas, jumped in early and has become a major player in coal (No. 1 in reserves) and uranium (No. 4). But two of the eight majors do not yet have a position in uranium.

These complications begin to shape the industry's arguments for allowing the future to happen—for not making them sell off their alternative holdings or freezing them out of future acquisitions. Divestiture would hurt the wise ones most, especially the smaller companies that got into other fields.

There are deeper questions: If the oil companies are blocked from buying into alternative fuels, what should they buy? Department stores or newspapers? The tax structure encourages a corporation to direct profits into new acquisitions rather than distribute them to stockholders and this makes conglomerate

growth an inevitable feature of the U.S. business structure. So what should oil companies become, assuming they do not intend to shrink with the world supply of oil?

"Hedging your bets is basically the name of the game," said Jim Atkin, a lawyer who heads API's lobbying efforts on the divestiture issue. "If we drill Atlantic offshore and hit zilch, as we did down in Florida, why not hedge on some other fuel sources?"

"Oil companies have tremendous cash flows and if the government comes along and says, 'Okay, you're in the oil business, you can't go into coal,' so what do you do with cash flow? You can go into the car industry or the airplane industry or whatever, or you can pass that cash flow out to your stockholders and that's awful painful because the stockholder pays a second tax on it."

Another, more important question for the nation is: if the oil companies cannot mine coal and uranium, who will? The petroleum giants have awesome corporate resources, the cash flow which allows them to invest in long-term projects without running to the bank and, in some areas, the geological expertise which would be useful.

A Gulf task force on divestiture had this to say about uranium:

"New entrants can move into uranium production easily provided they have the required entrance fee—technological and management capability plus financial 'staying power.'"

The "entrance fee" talk is precisely what alarms the critics, the handful of senators and congressmen and energy groups which argue that oil companies will manipulate or retard the development of alternative fuels, based on their own profit strategy, not on national energy requirements.

It may already be too late, some fear. If major oil companies, with their huge capital resources and their multiple leverage in the marketplace, hold the major positions, other smaller fish may be reluctant to swim in that pond. If oil scares away smaller competitors, that increases oil's influence on prices and production.

"Exxon has to realize that coal and oil substitute for one another and they have to develop a total fuels marketing strategy," said David Schwartz, an antitrust consultant.

"If you accelerate coal production to the point where it begins to erode prices in other fuels you control, then you have to balance it off. They wouldn't necessarily say that \$20 a ton is a damn good price for coal. They might look down the road and say it may hit \$40 again, so let's wait. You don't have that option if you're an independent producer."

The antitrust laws are not much help. The classic tests of concentration—overwhelming market power held by a few companies—always give the oil industry a clean bill because so many different companies are involved. By that scale, oil is much more competitive than steel or cars or newspapers, for that matter.

Antitrust law does produce some puzzling results. When Kennecott Copper tried to acquire Peabody Coal, the nation's largest coal producer, the government made it back off. But there were no objections when Atlantic Richfield Oil swallowed up Anaconda Copper, one of Kennecott's main rivals. Presumably Exxon or Mobil or Gulf could buy Kennecott to even things up.

Beyond the antitrust arguments, there is a difference in the oil industry. According to critics like Sen. James Abourezk (D-S.D.), it produces "a community of interest" on crucial issues of supply and price—without the need for secret collusion. The difference is that practically all of the oil companies, large and small, are partners with each other.

Exxon is partners with Mobil in 62 joint ventures. Gulf is partners with Shell in 19 deals. Shell is partners with Standard of California in 22 ventures. Phillips is partners

with Continental 8 times. Continental is partners with Texaco 11 times.

And so on through hundreds of interlocking joint ventures. This is called "risk sharing" in the industry—a way to spread the play on oil drilling, oil and oil shale leases, pipelines and whatever else oil companies do. The practice has even spread to the new ventures in alternative fuels. Gulf and Shell are partners now in nuclear-fuel processing and solar energy, among other things. Ashland and Hunt Enterprises share ownership in Arch Minerals, the nation's seventh-largest coal producer.

"This type of joint venturing is unique," said Schwartz. "Everyone is joint-venturing with everyone else. It's one big happy family. What would happen if U.S. Steel and Bethlehem built a joint plant and said, 'You take so much and we'll take so much.' You'd call it collusion."

The advocates of divestiture believe that breaking up the oil companies, vertically or horizontally or both ways, would ensure price competition in the emerging era of scarcity, encourage new ideas and new fuels like solar, rather than link them to the status quo of oil.

But the arguments for more competition in energy collide with embarrassing realities: the federal regulation of energy already controls oil prices and, under the Carter plan, it would direct buyers like public utilities to select a certain fuel—coal or nuclear. Carter's energy measures are designed to raise fuel prices, not lower them, in order to curb the appetites of consumers.

You cannot have it both ways, of course. There is another argument for divestiture which does not rest on economics. It suggests that what the oil companies are achieving by their diversification resembles a political-social cartel which will be more powerful than government attempts to regulate energy development.

"The oil industry maintains a formidable level of political activity," former Bureau of Mines Director John F. O'Leary testified at a Senate hearing two years ago. "It understandably uses its economic and political strength to advance its own interests, and these interests do not always coincide with those of the public at large. The acquisition wave extended this potential for massive political operations to the coal industry."

"Second, and closely related, the oil industry has an extremely long tradition of seeking the development, particularly at the raw materials end of the business, of institutions that essentially eliminate price competition."

O'Leary said the oil industry has "used its political strength to create, by statute, a result that other industries only could have approximated by collusive action."

O'Leary is now federal energy administrator—on the receiving end of that political power.

In the short run, the future is going to be very bumpy for American consumers. Maybe for oil companies too. Oil and gasoline prices are going to rise, so will coal prices and probably uranium prices.

In the past, when oil prices shot upward, the public got angry and the politicians turned that wrath on the oil industry. Next time around, the oil companies may be blamed for more than the rising of gasoline.

The future use of coal is the clearest, most important test of how these all-energy corporations will behave. In recent years, critics have assailed the oil companies for sitting on the vast coal reserves they had acquired, holding back on production. An FTC survey of 24 petroleum companies with major coal reserves found only eight that had actually mined any coal.

Now the Carter administration's energy plan envisions a massive growth in coal production to offset oil—from 600 million tons a

year to more than one billion by 1985. Can it be done? The oil companies now have a major hand in the outcome.

To add incentive, the Carter plan is "making a market" for coal, ordering public utilities and other industries to convert to coal. The plan anticipates rising coal prices—perhaps even as high as the Mideast crude oil level—which would take contract coal from \$20 a ton to nearly \$45 a ton.

That sounds like plenty of incentive to mine coal, but some economists and social critics are extremely skeptical about the oil companies' intentions. They suggest several dark scenarios on how the oil industry may manipulate coal prices and production for maximum profit in conflict with the nation's energy goals.

Their scripts run like this: oil-owned coal will proceed with the development of the new strip mines in the West, but the actual production will be geared to rising prices, pushing upward the investment return on coal toward the higher return made on oil. Why sell your coal on long-term contracts for \$25 or \$30 a ton if there is a prospect it may hit \$45 in a few years? An independent coal producer, they point out, does not have the same options.

What if coal prices do not increase sufficiently? Then, say the critics, the oil companies will continue to sit on their reserves, waiting for the more distant future when coal synthetics—gas or liquefied coal or whatever—are fully feasible, the future when they can "refine" coal and distribute it more or less like their first love, petroleum.

But if climbing coal prices do stimulate the full-throttle production, that might have the opposite effect of stalling the development of coal synthetics. "If you have coal prices pegged to oil prices," said former director Tom Woodruff, "it's better for the oil companies not to have synthetics enter the market and perhaps bring down the price of oil."

These examples crudely illustrate the complaint of those who would like Congress or somebody to get oil firms out of the other fuels: a company with a broad spectrum of energy markets can develop a unified profit strategy which may conflict with what the country needs.

The all-energy companies, understandably, have a different scenario for the future. Roughly summarized, their promise is to go full tilt on developing everything—coal mining, coal synthetics, nuclear—if only the government and its regulators will get out of the way.

"Despite official projections," an API report warned, "future coal demands is very uncertain . . . Coal demand will also depend upon the future price of oil and of nuclear energy, both of which may fluctuate greatly."

The federal government does not know what to think, judging from the reports it issues on future coal production. In the six Western states where oil-owned coal is strongest, the Interior Department's estimate of future tonnage is about half of the Federal Energy Administration's bullish projections. Interior says many lease-holders plan no production before 1990. FEA is much more optimistic. Since both federal agencies are basing their estimates on what the companies tell them, it is a bit difficult to get at the truth.

The critics, again, suggest that the bullish coal projections are really political statements, not economic forecasts, designed to stir up support for the coal slurry project which the oil companies are seeking and also to serve as a general warning against zealous environmental enforcement. The presumed message is: here is the abundance of coal that we can mine for America if the government will stay off our backs.

Whatever their intentions, both the oil and the coal industries oppose the mandatory conversion proposal in the Carter plan,

even though it would dramatically increase the demand for coal. Their fear is that in the long run it will lead to government control of coal—government price-setting for their market as tricky as the system for oil.

As a long-term prediction, that industry fear is sound. What the nation is liable to wind up with in energy is not the increased competition or lower prices which the divestiture advocates seek or the free hand which the companies want. What seems more likely is more regulation—the government and the oil industry dancing grimly together in the coalfields.

The future, whatever it looks like, belongs to the people who master the ideas—the know-how that converts laboratory technology into a marketable commodity, whether it is gasoline derived from coal or electric power generated from the sun.

The federal government is helping the oil companies to develop that know-how, particularly in the coal synthetics and nuclear fields. This is another way of ensuring that there will always be an Exxon, no matter what happens to the natural supplies of petroleum. The Energy Research and Development Administration has contracts totaling \$211,570,800 with a dozen or so oil companies and their subsidiaries (which is more than the companies are spending themselves).

Gulf, Exxon, Shell, Mobil, Ashland, Continental are among the leading beneficiaries of this federal "R&D" money. The big money is on coal conversion plants, but the federal sponsorship covers solar and oil shale and other "exotics." ERDA also hires oil and gas companies to do research on oil and gas—active contracts totaling \$51,118,200.

Government-financed research dwarfs the oil industry's, particularly in the alternative fuels. Overall, ERDA will spend about \$3.6 billion on energy research this fiscal year compared with \$443 million by 23 oil companies, according to an industry survey cited by API. Most of the industry's \$443 million is for oil and gas research. In coal, the oil companies are spending \$42.6 million; the federal government is spending \$409 million. In solar, oil companies will spend \$2.4 million; the government will spend \$290 million.

In total, the 23 oil companies are spending only \$113 million on fuel research outside oil and gas. By way of comparison, six oil majors will spend \$70 million this year on TV and newspaper advertising to improve their public images.

Government research money, of course, encourages companies to do things they might not do with their own money. Government research money also tends to drive out private money. Why should any private corporation pick up the tab for developing marginal ideas if the government is willing to gamble the taxpayers' money?

But there is a special irony of history involved here. The federal government started its own research on coal synthetics 30 years ago with promising progress—but the coal program was killed by the Eisenhower administration. According to critics, it was the oil industry's political muscle that did in the synthetics program 25 years ago. Now oil has the contract.

One of those critics, FEA's O'Leary, delivered a harsh judgment on that political decision when he testified before Sen. Abourezk:

"My own view is that, if we continued to spend at a critical level (on synthetics) we would not have had any sort of an energy crisis in the late 1960s or early 1970s. We would have had an orderly transit from our dependence upon natural liquid and fuels to synthetic fuels sometime in the 1960s. But the representatives of the oil industry . . . I think that if I had been the executive of an oil industry, I would have taken precisely the same position."

### SUSTAINING ECONOMIC PROSPERITY

Mr. HEINZ. Mr. President, Arthur Burns has been an eloquent, erudite and sometimes controversial spokesman on economic issues during his tenure as Chairman of the Board of Governors at the Federal Reserve System. All of those qualities were fully apparent when Chairman Burns recently spoke at the commencement exercises of Carnegie-Mellon University.

The message of Dr. Burns' remarks is clear: Unemployment and inflation, rather than being opposing and distinct phenomena, are intimately connected with one another. If we take this analysis to heart, it is obvious that attempts to cure one problem at the cost of exacerbating the other would be shortsighted and ultimately self-defeating. Unemployment and inflation must both be the objects of a concerted and vigorous attack.

I am sure that my colleagues will want to consider Dr. Burns' remarks and weigh his arguments. For that reason, I ask unanimous consent that the full text of his commencement address be printed in the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

REMARKS BY ARTHUR F. BURNS AT THE COMMENCEMENT EXERCISES OF CARNEGIE-MELLON UNIVERSITY, PITTSBURGH, PA.

It is a great pleasure for me to be here today to join in paying tribute to this graduating class.

In considering what I might say on this occasion, I found my thoughts going back to a series of lectures on the Management of Prosperity that I gave on this campus in 1965. In these lectures I explored the challenge of sustaining the prosperity our economy was then enjoying.

As events unfolded, that year proved to be a critical point of inflection in this Nation's economic history. And I believe it holds a lesson for us that is worthy of close attention.

What happened in 1965 is that, through a series of policy miscalculations, a balanced and healthy prosperity was transformed into a classic situation of excessive monetary demand. Had it not been for the mistakes of 1965, I believe we would have escaped many of the economic troubles that subsequently came to plague us and with which we continue to grapple today.

The Federal government threw caution to the winds in 1965. Having successfully nurtured a phase of economic expansion over a period of four years, our Nation's policy makers—in their enthusiasm for extending the ongoing improvement—took the risk of applying one stimulus after another to the economy at a time when full employment was already close at hand. In that year a sizeable reduction of excise taxes was legislated, besides putting into effect additional reductions of personal and corporate income taxes that had been voted a year earlier when the economy was less robust. Those things were done at the very time our military involvement in Vietnam was starting to escalate rapidly and when we were also embarking upon the Great Society programs that became such a heavy drain on the Federal budget.

The pressures on available resources generated by that extraordinary series of expansionist measures were for a time reinforced by a liberal monetary policy. As a result of releasing all these stimuli on an economy that had already developed considerable momentum on its own, we started on

a path of inflation from which we have never since been able to disengage ourselves entirely. Events such as major crop failures and the sharp rise in oil prices merely aggravated the underlying inflationary bias that originated in the mid-1960's.

One hard lesson of the past dozen years is that a condition of chronic inflation makes the achievement and maintenance of a low level of unemployment extremely difficult. Today's high unemployment rate is, fundamentally, the legacy of an inflation that surely could have been avoided.

I have chosen to direct your attention to the policy mistakes of the mid-1960's because that episode teaches that prosperity can be as difficult to retain as to achieve. We are again in a phase of economic expansion that could carry us to much fuller utilization of our resources in a year or two. As that condition is approached, the costly consequences of our earlier incaution need to be remembered.

Let me therefore say, in closing, that a durable prosperity in our country must not be taken for granted. Whether or not you graduates can fulfill your personal aspirations will depend heavily on how well you and the entire American people understand the need to prevent new inflationary waves across our land.

### OLSEN SETS ALLMARK TO LONG TERM OF SERVICE TO CONGRESS

Mr. MAGNUSON. Mr. President, recently James B. Olsen, hearing and printing clerk to the Committee and Commerce, Science, and Transportation, took the galley sheets chronicling his service to the Congress from the file and after making the entries for February 28, 1977, set an allmark, and sent them to press for a final edition.

For 43 years, Jim served this Nation and most of his service was directly to the Congress. In 1934, fresh out of high school, Jim was appointed to the U.S. Government Printing Office. In 1939, he became the night congressional information clerk, serving as a liaison between the Congress and GPO. Early in 1942 Jim enlisted in the Navy, where he saw service during the Battle of Normandy and the Allied invasion of southern France as a sonarman aboard the destroyer U.S.S. *Jouett*. When the war was over, Jim returned to GPO and in 1947 he was selected to be a member of the first postwar printer's apprentice class.

Thus Jim began a new path of service to the Congress. He served GPO at various assignments as a printer, and in 1959 he was detailed to the newly formed Select Committee on National Water Resources. When the committee completed its assignment and expired in 1961, Chairman Kerr asked Jim to join the staff of the Senate Space Committee. I served on that committee, too, and I was very pleased when the Senate Commerce Committee was able to obtain Jim on permanent detail from GPO in 1967.

Jim also assisted the Senate Post Office and Civil Service Committee, the Senate Labor and Public Welfare Committee, and the Senate Special Committee on Aging with their printing needs.

At the Commerce Committee, Jim quickly became a vital part of the committee's operations. He not only handled the printing, but served as the hearing clerk. This position requires a rare mix-

ture of good humor and commonsense. Many members of the press have told me how Jim made covering the committee more enjoyable. He welcomed witnesses, assisted new committee members and staff, and in many important ways saw to it that the work of the committee was carried on in an environment of quiet professionalism and good grace. Jim's contributions cannot be easily numbered, and they will not be soon forgotten.

Not only did Jim serve the Congress in many different roles as a printer, he also served his fellow printers by serving as chairman of the Capitol Hill chapel, Columbia Typographical Union, No. 101, of the International Typographical Union from the time that the chapel was formed in the 1960's until his retirement.

Jim and his fine wife, Veronica, have earned this opportunity for relaxation. We hope that they both enjoy the years ahead, and we know that while the chapter in Jim's life history entitled "Service to the Congress" may be completed, much yet remains to be recorded in the chapters on "Service to his fellow men."

### MRS. MARY BELLE CLEMONS GRAHAM: A PERSONIFICATION OF THE MIRACLE OF AMERICA

Mr. HELMS. Mr. President, during this national Small Business Week, it may be well for us to reflect for a moment on the future of this segment of our economy which provides the livelihood for more than one-half of our citizens and 47 percent of all nonfarm and nongovernment jobs.

The future of many small businesses in our country is threatened today by a well-meaning but nevertheless oppressive glut of governmental regulation.

As a practical matter, big business is able to hire employees to interpret and complete Government forms, able to retain lobbyists to participate in the regulatory process, able to draw on adequate capital to comply with OSHA and EPA standards and the like.

The small business man, however, too often has insufficient resources to cope with both his competition and unexpected regulation. The result is all too often backbreaking expense, and eventual closing down.

Thus, in the 1971-74 period 350 foundries in this Nation closed—not because of competition or lack of demand—but because they could not afford to meet new EPA and OSHA requirements. Presumably, the big boys picked up the business.

But, Mr. President, just when we are tempted to despondency, we discover that in spite of obstacles, determined and hardworking people are still showing that the free enterprise system is still alive and kicking.

A particularly inspiring example is Mrs. Mary Belle Clemons Graham, North Carolina's Small Business Person of the Year.

Mrs. Graham had a fifth grade education and was employed as a domestic when her husband died in 1953, leaving her with three children to raise.

She continued as a domestic, and then

later became a housekeeper at the Taylorsville, N.C., hospital. While there she saw the need to provide a home where elderly people who did not require hospitalization could be cared for.

She knew she needed nurse's training but the nearest school for nurses aides was some miles away, in Hickory. And she could not read well enough to pass the driver's test. So Mrs. Graham took a basic education course, got her license, bought a car and drove nightly after work to Hickory for nurse's aide training.

By 1962, she had purchased a small home, and began with five patients. In 1964 she expanded, and in 1968 began plans for a major new 34-room rest home. Nineteen and one-half acres were purchased in 1970, and construction began.

But the idea seemed destined to collapse when her contractor abandoned the project, and declared bankruptcy. The roof of the half-built rest home literally fell in. Her business lost money, her precious savings were drained, the situation seemed hopeless.

But Mrs. Graham was undeterred. Through the help of an SBA loan, the construction was resumed and completed.

Today, Belle's View Rest Home, Inc. has 44 patients, and 12 employees. A minibus takes patients to town, to recreation facilities, and for drives in the magnificent mountains nearby.

A full recreational therapy program is conducted on premises by Catawba Valley Technical Institute. Movies are shown twice weekly. Regular church services are held on two Sundays each month.

And Mary Belle Clemons Graham is a cherished and beloved part of the health care team that serves Taylorsville and Alexander County so well.

Mr. President, Mary Belle Clemons Graham embodies the human scale, a concern for others, and a willingness to give of self, that is so typical of small business as we have always known it, and exemplifies those reasons why small business must be encouraged in this Nation.

#### MORRIS BRYAN: THE FOUNDING FATHER OF GEORGIA OLYMPICS

Mr. TALMADGE. Mr. President, there appeared in the May 20 edition of the Atlanta Journal an excellent article about Morris Bryan of Jefferson, Ga., founder and developer of an outstanding track and field program called Georgia Olympics.

Georgia Olympics, which just completed its sixth annual meet at Jefferson, brings to Jefferson, Ga., the State's best track and field athletes. Nearly 1,000 young athletes took part in this year's meet.

Morris Bryan, president of Jefferson Mills, is one of Georgia's leading citizens and businessmen. He has been active in many pursuits which have enhanced social and economic progress in the State of Georgia, and he is to be commended for conceiving the Georgia Olympic program.

Many Senators know Mr. Bryan and I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### FOUNDING FATHER—MORRIS BRYAN: THE FORCE BEHIND GEORGIA OLYMPICS (By Bill Bryant)

JEFFERSON.—There is a stack of paper on one edge of the old desk labeled "Cotton Report." The sheets of paper are there to tell the president of Jefferson Mills how much he had to pay for cotton fibers in the past months.

That's important to Morris Bryan, who sits behind the desk, because his mill makes corduroy fabric and he needs cotton.

He puts his telephone down after a conversation with a buyer about those prices and frowns. "Going up again," he says.

Then he pushes the stack of reports back to an outer edge of the desk and pulls closer another pile of papers. As he does, his expression changes and the frown leaves.

These sheets do not report the price of cotton or dye or have anything to do with mill operation. They are the names of the athletes who are due in Jefferson for Georgia Olympics VI. And the subject of track always puts Morris Bryan in a better mood.

Georgia Olympics is the state's all-classification track and field meet. It is being held here for the sixth year this weekend, and about the worst thing anyone has ever said about it is that it's the greatest thing ever to happen to track in Georgia.

The meet brings together the best Georgia has to offer in track and field and provides one stage for their performance. Before there was such a thing as Georgia Olympics, state track meets were usually held at four or five sites around the state for the different classifications of Georgia high schools. They rivaled swine flu in popularity.

This meet is run with the precision of a moon shot, adding another degree of uniqueness in the usually helter skelter world of track meets. People marvel at the organization of a meet which starts and finishes within seconds of when it is supposed to.

Georgia Olympics has received glowing tribute in the last five years from everyone from Jesse Owens to U.S. senators to the kids for whom it is run, and nearly 1,000 are taking part this year.

This is Morris Bryan's track meet. Now that's going to make him mad.

He would just as soon the hundreds of events be run off this weekend without his name ever being mentioned. But the story of Georgia Olympics is the story of Morris Bryan.

He would be quick to correct that Georgia Olympics is much more than a one-man operation, that the people of Jefferson make the tremendous undertaking work, not him alone. And he is right, of course. Probably a fifth of Jefferson's 2,500 people will have a hand in the Olympics, whether it's acting as meet officials, judges, timers and statisticians or decorating store windows with Olympic bunting and providing the trophies or planting flowers around the track or baking cookies for the hospitality house or simply putting safety pins into the numbers of the athletes.

But, and he can't argue this, there would be none of those chores to perform if Bryan hadn't brought Georgia Olympics here six years ago.

Morris Bryan is a native of Athens, a graduate of Georgia Tech and Tech grad in 1941 and is now the 57-year-old president of Jefferson Mills Inc. He has distinguished gray hair, as one should in his position, a gravelly, always serious, voice and a deep-seated love of the sport of track and young people.

In 1962 he built the first all-weather track for a high school in the nation here and

surrounded it with Jefferson Memorial Stadium.

But Bryan found himself one of the very few people in town who knew the difference between a stopwatch and a grandfather clock. Football packed 'em into the new stadium, but it stood almost alone in the spring when Bryan would have loved to have seen boys and girls running around it.

So, as a member of the school board, he influenced Jack Keen to move from Atlanta's Dykes High School to the seclusion of Northeast Georgia, helped him into a new house not 100 yards away from the track and told him to do for Jefferson what he had done for Dykes track.

Keen did it and soon Jefferson teams were winning track meets and challenging for state championships just as his Dykes teams had.

The idea of Georgia Olympics was to follow—not like a bolt of lightning as Keen and Bryan sat at a track meet somewhere one day or anything quite that dramatic, they say, but as a simple idea to have one big track meet in one place.

Along with Keen, Bryan drafted a letter to the Georgia High School Association and presented a proposal that would virtually eliminate its personnel from having to trouble themselves with a state track meet.

The idea came at a time when Jefferson needed something to attract attention to itself as something other than a den for car thieves and moonshiners.

The financial gamble, Bryan wrote then GHSA executive secretary Sam Burke back in 1971, would be his and Jefferson's. "We may be wrong, but there is nothing lost by trying it," the letter read. "There is much to gain if successful . . . the only reason we're willing to do this is because it would mean so much to track throughout the state."

They weren't wrong, and Georgia Olympics began the next year with Roman numeral I.

It has continued to prosper under Bryan's behind-the-scenes guidance and tireless effort. Last year a new surface was added to the track. There is a new public address system this year and races are being timed by an electronic device which is the most advanced on the market.

Jeffersonians helped with part of the cost of the PA system, but most of the money has been Bryan's. He's reluctant to say what it's all cost him. Considerable, to be sure.

"We're lucky it falls our lot to be able to do some of these things, just plain lucky," he says and closes the subject.

The dollars and time have certainly not been without their reward to Bryan personally. He acts as the meet announcer and it's obvious he has a lot of fun at Georgia Olympics.

"Look at that competition," he's fond of saying over the PA system as runners match strides coming toward the finish line.

He's asked what are the thrills he gets from it all?

"Primarily in the performance of these youngsters," he says. "Of course it's great to see a state record broken, but some of the best and most thrilling races are the battles for third and fourth where the competition is really at its zenith. There the trophy has already been won, and I'm fighting for my own personal dignity," Bryan says, putting himself in the runners' place.

Bryan's Olympic goal, he says, is that every runner would leave Saturday night able to say: I did my best.

"You hope to provide an environment in which one can really become himself, where they realize and recognize excellence. And excellence might not be a state championship; it might just be doing the best with what they have. What you try to do is give a man opportunity to achieve, not force him to achieve. What you're hoping he'll achieve

is the very best he can do with what he was given to do with. It's the same thing in business."

The analogy between business and Bryan's thoughts on athletic competition are readily seen. He runs Georgia Olympics much as he does Jefferson Mills. Just as every winner has his own moment on the victory stand for personal recognition, individual achievement is recognized at the mill and rewarded with such things as incentive bonuses.

Bryan is dead serious when he asks that you "soft peddle" Morris Bryan in any account of Georgia Olympics. For the sake of honesty, that is not always possible.

More than one coach in the state has looked up at Bryan as he announced another race, as Winder-Barrow's Cook Holiday did recently, and said: "He's the best thing to ever happen to track in this state."

Malcom Morton, president of the Jefferson Track Club, knows better than to praise Bryan publicly, but the other day at a Rotary Club luncheon he was enumerating the important facets in making Georgia Olympics a success. Among them, Morton said, was a "real track enthusiast as a promoter."

Everyone knew who he was talking about.

#### ENCOURAGING THE INSTALLATION OF POLLUTION CONTROL EQUIPMENT

Mr. HEINZ. Mr. President, there exists a continuing debate over the so-called conflict of environmental, energy, and economic priorities. Yet, it seems to me that our national goals of a clean environment, maximization of energy resources, and maintenance of a healthy economy are not necessarily exclusive of one another. In fact, I am convinced that there are ways that each of these goals can be met without compromising the others.

For example, pollution control requirements stimulate the development of new technology which, in turn, demands new processes and productivity from our industries. Today, there are over 600 firms, including environmental divisions of major corporations, engaged in the manufacture of environmental equipment. This figure does not include some 10,000 firms engaged primarily in waste collection, or those firms engaged in environmental design, engineering and consulting activities. In all, it has been estimated that more than 1 million jobs were provided by the environmental industry during 1975, and again in 1976.

In addition to creating jobs, pollution control can result in other savings. The impact of pollution on human health, on vegetation, and on property has been extensively documented. One study estimated the 1975 cost of air and water pollution damage in terms of human health, materials, residential property, and vegetation at \$42.6 billion.

Pollution control equipment can place demands on energy supplies. However, that demand is often minimal when compared with the gains to be derived or when compared to other alternative uses of that energy.

I believe that through the cooperative efforts of those concerned with industry growth and environmental cleanup, we can achieve each of our goals. I am encouraged whenever I learn that these

cooperative efforts are taking place, and think that it would be beneficial to bring them to the attention of my colleagues.

Mr. President, two recent articles document several instances of industry successfully working to devise ways to meet our energy, environmental, and production needs. The examples cited in these articles are persuasive testimony in support of the view that the installation of pollution control equipment can have additional energy and economic benefits. I ask unanimous consent that the texts of both these articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Environmental Science and Technology Magazine]

#### PRIZES FOR CLEANUP ACHIEVEMENTS

Many industrial companies endeavor to be "good citizens" of their respective communities these days. Some do so because of the force of the law, but others do so quite voluntarily, and some have even profited (ES&T, March 1977, p 234). Indeed, certain companies have become outstanding as "good citizens" from the environmental standpoint, and these have been recognized through the presentation of awards by the Environmental Industry Council (EIC) headquartered at Washington, D.C. (ES&T, February 1977, p 132). These awards were given for excellence in air, water/wastewater, and noise pollution control, solid waste management, and land reclamation.

#### EASING BURDENS

The actual presentation of awards was preceded by the environmental industry conference, "Economic Growth With Environmental Quality," held in Washington in late February, and attended by over 200 people. They heard EIC chairman John Autry, of Johns-Manville Corp., keynote the conference by explaining that the Council represents industry as a whole, and tries to help customers of the environmental equipment, consulting, and supply sectors ease the burden of compliance so that these customers may stay profitable. Autry also said that the EIC stands ready to explain the nature of the environmental industry; undertake projects; offer counsel concerning regulations; act as an information clearinghouse; and provide its membership with a voice in Washington.

The conference chairman, Frank Sebastian of Envirotech Corp., noted that it was a sequel to a meeting called in December 1975 by the Council on Environmental Quality (CEQ). At that conference, CEQ had estimated that pollution created 1 million jobs; at the February conference, Sebastian quoted a CEQ estimate that pollution control made 2 million jobs in 1976.

The conference heard from a panoply of speakers that could read like pages from "Who's Who." In addition to Autry and Sebastian, there were Harvard economist Otto Eckstein, Arthur D. Little consultant Craig Lentz, and former EPA administrator William Ruckelshaus. Futurist and Hudson Institute director Herman Kahn, Rep. Paul Rogers (D, Fla.), chairman of the House Health and Environmental Subcommittee, and other very highly distinguished speakers were also heard. Indeed, every speaker or panelist, whether from academia, industry, or federal or state government, was someone most notable in his field. If there was one thing they all agreed upon, it was that environmental compliance costs must henceforth be considered as part of the costs of doing business.

#### AIR AND WATER

For water, the first National Environmental Award went to Great Lakes Paper Co. (Thunder Bay, Ont., Canada). Great Lakes had to treat wastewater from its 250,000-tpy kraft pulp mill without aeration tanks or because of the plant's small area. The answer was to install a Rapson-Reeve closed-cycle mill that discharges virtually clean water, and recycles heat, chemicals, fibers, and organics that are normally lost.

The clean air prize went to Volvo of America Corp., for its "240" series cars that meet Clean Air Act hydrocarbon, CO, and NO<sub>x</sub> standards for 1978. The trick is a catalytic converter and exhaust gas sensor that controls all three pollutants, and helps to keep air/fuel mixtures at optimum levels, thereby enhancing fuel economy. The converter was developed jointly by Volvo and Engelhard Industries; and the sensor by Volvo and Robert Bosch, GmbH of W. Germany. Perhaps this award will inspire other car makers to "try harder."

#### THE PREMIER AWARD

A novel steam power station design providing for special low transmission walls and other features cut noise so much that Long Island Lighting Co. (LILCO, N.Y.) was able to install such stations near residential areas. This type of installation can reduce distances needed to transmit power to consumers, and earned for LILCO an award for noise abatement. And Erie Mining Co. (Hoyt Lakes, Minn.) was honored for its successful program leading to revegetation of infertile taconite mining wastes—a task previously considered impossible.

The Premier Award, however, came straight from the waste can. That top prize went to the Refuse Energy Systems Co. (RESCO, Saugus, Mass., ES&T, August 1974, p 692), owned by Wheelabrator-Frye, Inc., now of Hampton, N.H. In the first year of operation, the RESCO facility disposed of more than 250,000 t of solid waste, and made over 1 billion lbs of steam for the nearby General Electric Lynn River Works. Also, cost of garbage collection is reduced, and resources are recovered. Incidentally, the conference heard an estimate that energy from solid waste, extracted at the RESCO plant, is equivalent to that from 16-18 million gal/y of fuel oil, and when the plant is fully on steam, will ultimately supplant that now derived from about 30 million gal/y of fuel oil.

All of these awards also do something else that is noteworthy. They serve as concrete evidence that environmental protection and economic growth can be quite compatible. This compatibility will be enhanced by the ingenuity, knowhow, and increasing corporate good citizenship of U.S. industry. It will act as a tangible expression of the "can-do" attitude that forms the backbone of the nation's strength, and is being fostered in environmental efforts through the activities of the EIC.

[From Business Week magazine, Nov. 29, 1976]

#### EXTRACTING FUEL FROM SLUDGE

When the supervisor of a recent test of a new sludge-burning system in Concord, Calif., found three of his key people lounging around, he was delighted. "One was reading a newspaper, another was eating a snack, and the third man was out-and-out asleep," recalls Ronald B. Sieger, project manager for Brown & Caldwell, Inc., a California consulting engineering firm that designed the system. "I thought it was just great that things were running that smoothly."

The preliminary test results, in fact, are a major boost for a process known as pyrolysis, a method of burning waste to produce a gas

rich in fuel values. Advocates of pyrolysis like the method because, compared to incineration, it produces less air pollution and it makes possible higher energy recovery. And many think it is a particularly promising solution to a growing problem: what to do with the watery sludge that is left over from the growing number of secondary sewage treatment plants.

#### SUBSTITUTE GAS

There are already more than 300 sludge incinerators operating in the U.S., and not everyone is convinced that pyrolysis will provide results that the incinerators do not. But the Concord system looks like a godsend to California's Central Contra Costa Sanitary District. The district, which cosponsored the \$613,000 project with the state of California and the federal Environmental Protection Agency, has learned that it may not get all of the natural gas it would need to fuel a new plant it is building to treat 30 million gal. of sewage per day. Preliminary test data show that the gas produced by pyrolyzing of a mixture of refuse and sludge may be an acceptable substitute. The evidence "indicates that we can meet 90% to 95% of our gas requirements," says Gerry A. Horstkotte, Jr., the district's general manager and chief engineer.

Other sewage treatment managers who are not under the gun on fuel supplies may find sludge pyrolysis attractive, anyway. The EPA has announced an imminent ban on dumping sludge in waterways, and municipalities are scrambling to find alternatives. Incineration, landfill, and composting are possibilities, but pyrolysis is getting increasingly serious attention.

For example, when the EPA recently banned ocean dumping after 1981 in the New York Bight, disposal site for nearly three-quarters of the sludge generated by the New York metropolitan area's 100 treatment plants, the Interstate Sanitation Commission started looking into incineration. But earlier this month the New York-New Jersey body granted a \$106,000 contract to Nichols Engineering & Research Corp., a Belle Mead (N.J.) subsidiary of Neptune International Corp., to build a pilot pyrolysis plant instead. If the pilot test proves out, the agency plans to spend \$206 million for five plants containing 13 pyrolyzing furnaces. "At one point, we were leaning toward straight incineration," says Alan I. Mytelka, assistant chief engineer of the commission, "but improvements in sludge dewatering methods and other strides associated with pyrolysis have been such that pyrolysis got our recommendation."

#### PRODUCING METHANE

The key to a sludge pyrolysis furnace lies in limiting the oxygen flow to its multiple hearths. Partly dewatered sludge pours onto the first hearth. As it is pushed onto successive hearths, it is joined by a controlled flow of shredded refuse. As more combustible garbage is added, furnace temperatures climb to a sizzling 1,400F to 1,700F. But because the air supply is limited, the furnace produces a stream of combustible gas and an inert carbon-containing ash, instead of the carbon dioxide and water produced by normal combustion.

At the Concord facility, some of this gas will fuel a lime recovery furnace, and the rest will be burned in an afterburner. The hot exhaust gas from the afterburner will be used to generate steam, which in turn will provide energy for aeration blowers and plant heating and cooling. According to Frank P. Sebastian, senior vice-president of Envirotech Corp., which will provide the Contra Costa furnaces, fuel cost savings will hit more than \$2 million annually by 1980 if present plant expansion plans hold. And even if the sludge were burned alone, without the refuse, he claims, the savings could still reach \$1.7

million annually. The savings possible with incineration, he says, would be about 30% smaller because combustion is less complete.

Such optimistic predictions have not convinced all experts that straight incineration is obsolete, however. Pyrolysis is still relatively new, and there is no universal agreement on how well it shapes up compared to conventional burning. For example, both Anton Kalinske, vice-president of the Boston consulting firm of Camp, Dresser & McKee Inc., and Jerry I. Jones, a pyrolysis expert at Stanford Research Institute, argue that a well-designed incinerator will give the same Btu output as a pyrolysis furnace.

The capital costs of incineration and pyrolysis are about the same, but an independent consulting group in the Minneapolis-St. Paul area recently estimated that a pyrolysis system would cost some \$500,000 more each year to maintain. It opted for incineration. Detroit also plans to stick with incineration in an upcoming \$60 million project to increase sludge-burning capacity with the addition of eight new furnaces by December, 1979. "Pyrolysis is a nice concept on paper," says Darrel G. Suhre, director of engineering for the Detroit Water & Sewerage Dept. But he adds, "There have to be more proven results before it can be adopted wholesale."

Such hesitancy on the part of prospective buyers does not faze either Nichols or Envirotech, the two leading suppliers of sludge pyrolysis systems. "We feel we're looking at a very substantial market, one running into the hundreds of millions of dollars over the next two or three years," says Thomas E. Davy, Nichols' vice-president for environmental sales.

Envirotech's Sebastian says that the majority of existing sludge incinerators are "candidates for retrofit" into pyrolysis furnaces. Retrofitting an incinerator involves upgrading of sludge-dewatering equipment and the addition of an afterburner, process controls, and a waste-heat recovery boiler.

Environmental officials echo the suppliers' optimism. "We have a lot of hopes for pyrolysis," says Robert K. Bastian, a technical specialist in the EPA's Office of Water Program Operations. The Concord test is the only full-scale demonstration of sludge pyrolysis on record so far, and Bastian stresses that more proof is needed before pyrolysis can be considered a widespread solution to the sludge dilemma. But he predicts that "within the next few years, we are going to have some answers."

#### S. 275—FOOD AND AGRICULTURE ACT OF 1977

Mr. ZORINSKY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter which I have this day sent to the distinguished chairman of the Senate Committee on Agriculture, Nutrition, and Forestry, Senator TALMADGE.

There being no objection, the letter was ordered to be printed in the RECORD as follows:

U.S. SENATE,

Washington, D.C., May 25, 1977.

HON. HERMAN TALMADGE,  
Chairman, Senate Agriculture, Nutrition, and Forestry Committee, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: As a member of the Senate Agriculture, Nutrition, and Forestry Committee, I want to commend you for your strong and fair leadership during the Committee's consideration of S. 275, the Food and Agriculture Act of 1977.

Countless citizens and organizations came before the Agriculture Committee, each presenting differing and often controversial opinions, and they were always afforded the

utmost courtesy by you, Mr. Chairman. Your continued efforts led the Committee to the necessary bipartisan cooperation among the members which prevented delays and steered us toward our goal of writing effective legislation. You exemplified the highest form of leadership in the United States Senate.

I want to extend my warmest congratulations and sincerest appreciation to you and say that I look forward to our continued work together on the Senate Agriculture, Nutrition, and Forestry Committee during the 95th Congress.

With warmest regards, I am

Sincerely,

EDWARD ZORINSKY,  
U.S. Senator.

#### POSITIVE RESULTS OF MINNESOTA EDUCATION PROGRAMS

Mr. HUMPHREY. Mr. President, recently the Senate overwhelmingly endorsed extension of the discretionary programs of the Education of the Handicapped Act.

We did this because it is so patently right and fair that handicapped children have every opportunity to enjoy the advantages their unimpaired companions take for granted: The joy of learning and discovery—the opportunity to develop to the fullest their personal and social potential.

But there is another reason for the resounding support. These programs are proving their worth. Families and school systems throughout the United States can testify to gratifying achievements in reaching and teaching the handicapped through the aid of federally funded programs.

Only yesterday my office received notice from the U.S. Office of Education concerning successful programs undertaken in Minnesota. UNISTAPS, developed by the University of Minnesota, State Department of Education, and the Minneapolis Public Schools has provided solid evidence that the residual hearing of deaf children, if nurtured and encouraged by parents, can help children to master normal conversational skills and frequently to participate in regular classroom instruction.

A second article describes an experiment in which computer results are used effectively to permit teachers to evaluate pupil progress and tailor their program and emphasis to individual needs.

Mr. President, I ask unanimous consent that both articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

#### COMPREHENSIVE ACHIEVEMENT MONITORING

In Hopkins, Minnesota, youngsters actually cheer when their teachers pass back their test papers. They are anxious to see how well they have done—on past, present, and future materials.

And one little girl in particular, Jennifer Johnson, is eager to see what CAM, the computer, has written in reply to her love letters. Jennifer who is 11 years old—going on 12—has been writing to CAM for several years.

And since Jennifer started getting replies from her computer friend, other students have been writing notes on the bottom of their green test sheets. Lance Peterson told CAM how much he enjoys "doin' CAM tests."

Then added a skeptical note, "I've heard your machine can only read holes." Since he was writing in pencil, Lance wasn't at all sure his message would get through.

Nor did Julie Ruys really expect an answer. But to tilt the odds in her favor, she added a P.S. "I am a good friend of Jenny. She told me how to talk to you."

Many of the youngsters draw pictures for CAM, wish him a happy holiday, and report their latest activities. And CAM, of course, responds. He grades their papers and sends back notes. It's no wonder cheers go up when test paper's are returned.

CAM stands for Comprehensive Achievement Monitoring. The computer is part of a very effective teaching method in which constant testing helps teachers teach and students learn.

CAM students take frequent tests and "mini" final exams every few weeks to find out what they are learning, how well they are remembering, and how much they know about what they are about to be taught. The idea is to find out where to concentrate teaching and learning efforts.

If the child does not remember something taught a few months earlier, he needs to go back and review forgotten material. If he isn't catching on to current lessons, he can immediately get to work on these problem areas. And if he knows a unit about to be taught, why should he have to take it?

Students in the lower grades are introduced to CAM through a gaily colored booklet with a wizard on the cover. "Welcome to the Kingdom of CAM," it reads. "Guess who I am?" It then explains the testing process with lively cartoons of the wizard, named Mr. Objective, performing tricks along the way.

Basically, CAM is management by objectives. Tests are scored and results analyzed by the computer. Printouts then go to the teacher and the student. While the student is striving to improve in areas in which he has done poorly, the teacher is analyzing both the individual tests and summary data so she can make important decisions to improve the course.

The hub of all this activity is the Evaluation Center in Hopkins, directed by Donald B. Sension. Begun initially with funding from the U.S. Office of Education, the center is currently operated with local moneys. It is being used by more than 300 teachers in grades 2 through 12 in all seven Hopkins elementary schools, its three junior highs, and two high schools. Some 16,000 students regularly receive results in one or more subjects.

In addition, eight other local districts in the Twin Cities and surrounding suburban areas are using the CAM system.

#### UNISTAPS

By carrying on normal conversations with their deaf children, Minnesota parents are finding that they can be architects of good language development.

Talk with deaf children? Encourage them to hear? Yes, and laugh and play and, at the same time, teach.

Building on everyday events and the normal course of parent-child chatter, a project known as UNISTAPS works with hearing impaired preschoolers and their parents from the days when sounds are only noise through the preschool years when situations and sentences take on meaning. UNISTAPS is an acronym which recognizes the cooperation of the University of Minnesota, the State Department of Education, and the Minneapolis Public Schools.

The cooperative venture has been so successful that the program has been recognized as exemplary by the U.S. Office of Education. And its family-oriented methods, used with hearing impaired children aged 0 to 5, are

now being used with other types of handicapped children.

The program is structured to the needs of each child and family, and begins as soon as a hearing loss is detected. "There are few totally deaf children," explains Dr. Winifred H. Northcott, project director. "Most have residual hearing and with amplification there is high potential for learning to hear and to talk." All the children are fitted with individual hearing aids, usually one for each ear.

Instruction varies. A teacher may meet with a parent and child initially at one week intervals. Later as the skills of both parent and child are refined, the parent instruction sessions are less frequent. But since some children are as young as 7 months and others may be 4 or 5 years old, each situation dictates its own best program. This ranges from home-based counseling all the way to regular nursery school for most 3-year-olds.

A continuing program of group and individual family guidance and counseling is provided. It is jointly designed by parents and staff.

Some deaf "graduates" enter regular classes in an elementary school. Published research findings indicate their social and academic behavior are within the range of their hearing classmates.

But Dr. Northcott points out, "Not all deaf children are going to be able to go into a regular class. Some may need special class placement and assistance such as lip reading or sign language. But every child and family can benefit from this early intervention," Dr. Northcott says.

"It is important to provide everyday experiences suitable to the child's level, age, and ability," she continues. "The habits of seeing, listening, and thinking in words (all essential to language) are cultivated in a child by his parents during his daily activities—eating, bathing, playing."

So from the very beginning, parents are encouraged to talk naturally to their deaf child—to expand words into sentences. Words by themselves don't have meaning at first—it is the situations that give them meaning. "More," says the child pointing to milk. "All right," says the parent, "I'll give you more milk" and pours at the same time.

Along the same line, parents don't formally teach the same "red" but the concept of "redness" comes out in a situation. "Oh, your tongue is red. You've been eating red candy," or "Your hands are red. It's cold outside."

If a hearing impaired child hears colloquial English, he will eventually speak in kind. If he is not talked to in a natural way as part of his daily life, he could speak in a random way for a time, then become silent because he hears no functional language sounds to imitate.

What better example to imitate than success. And in this program for hearing impaired as well as blind and multihandicapped children, success is spelled U-N-I-S-T-A-P-S.

#### S. 790—WHO ARE THE BENEFICIARIES?

Mr. STAFFORD. Mr. President, the Corps of Engineers calculates that reconstruction of locks and dam 26, as proposed by S. 790, will produce "delay reduction benefits" of \$53,411,000. That is \$53,411,000 per year. That \$53,411,000, which accounts for two-thirds of all the benefits of this nearly half billion dollar taxpayer investment, would go into the pockets of the big barge companies.

I believe that such benefits, created by a taxpayer investment, should be, at least in part, recovered for the benefit of the taxpayers of the United States.

We all favor efficiency. But when efficiencies are financed entirely by taxpayers, they should be shared with the taxpaying public, through the collection of waterway user charges from the barge company beneficiaries.

In this context, I believe it is instructive to examine who owns and operates the inland barges, and thus who will be the direct beneficiaries of this costly taxpayer investment at locks and dam 26. I ask unanimous consent that a list of some of the companies that dominate the waterways—and are the leading opponents of fair-share user charges—be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

#### WHO OWNS THE BARGES

(1) Eastern Gas and Fuel Associates is not a well-known company, but is the largest waterway company. It has annual sales of about \$600,000,000, making it the nation's 296th largest industrial company. That is larger than companies like Hershey Foods, Libby, McNeill & Libby, or Bell & Howell. It owns 70 towboats and over 1,500 barges, which produced revenues of \$120,000,000 in 1976. That accounted for 17.6 billion ton miles, approximately 10 percent of the inland waterway traffic. Coal traffic represents about 60 percent of the company's barge business.

(2) U.S. Steel (the nation's 13th largest industrial corporation with sales of \$8.8 billion) carried 13.1 million tons of commodities in 1976, an increase of 21 percent over 1975 on its captive subsidiaries: Warrior and Gulf Navigation Co. and Ohio Barge Line, Inc. That is more traffic than the combined traffic on the Missouri and Arkansas River systems.

(3) Ashland Oil is the nation's 45th largest corporation, bigger than such well-known companies as Monsanto, Lockheed, Cities Service, and 3M, with 1976 sales of \$4.3 billion. The company's 1976 annual report says the company's "towboats and barges comprise the nation's largest fleet for transporting liquid cargoes on the nation's inland waterways."

(4) Central Soya has an inland marine fleet of over 200 vessels. The company reported in its 1976 annual report that "an aggressive marketing program at our river elevator helped achieve a 30 percent increase in barge shipments this past year." With sales of \$1.8 billion, it is larger than better-known firms such as H. J. Heinz, Allis-Chalmers, Reynolds Metals, and General Tire.

(5) Cook Industries, a half billion dollar a year grain and building products company, operates 212 barges on the Mississippi, each with a capacity of 50,000 bushels.

(6) Texas Gas Transmission Co. (revenues of \$900,000,000) owns American Commercial Barge Line, which in turn owns 52 towboats and 1,258 barges. It received 30 percent of its barge revenues from hauling coal, accounting for an estimated 6 billion ton-miles of traffic. The company has reported: "During the past five years, this division has attained a compound annual growth rate of 18.8 percent in revenues and 23.7 percent in net income."

Texas Gas Transmission Corp.—Inland Waterway Services Division:

1971, 1976, and percent increase, 1971-1976:  
Income, \$13,263,000, \$35,291,000, 165 percent.

Barging Revenues, \$46,224,000, \$91,713,000, 98 percent.

Ton-miles Carried, \$14.4 billion, \$18.2 billion, 26 percent.

(7) Dravo Corp. (revenues of \$750,000,000), owns the Union Mechling Corp., which has a fleet of over 700 barges, plus a Pittsburgh

shipyard building 200-300 towboats and barges yearly. Last year Dravo posted a 15 percent increase in profit from its waterway and equipment division, even though that group was dragged down by poor business among its equipment subsidiaries.

Dravo, in its annual report discussed user charges: "We also consider a waterways user fee to be a regressive tax that must be passed along from carriers to shippers and, ultimately, to the individual consumer . . . through our participation in an industry-wide information campaign, we will attempt to assure full public debate of these critical issues before legislative action is taken."

#### CONFUSION ABOUT AIRCRAFT CARRIERS

Mr. HART. Mr. President, today's Washington Post contains a story entitled "Big Carrier" Advocates Block Shift of Funding," which describes the continued refusal of the House Armed Services Committee to approve the reprogramming of \$6 million in fiscal year 1977 funds for design work on a so-called CVV, a conventionally powered aircraft carrier of about 60,000 tons.

This report by the Washington Post is important in two ways. First, it notes what I believe to be the importance of approving this reprogramming action. As the Secretary of the Navy noted in his statements to the House committee, without this reprogramming action it will not be possible to authorize a CVV in fiscal year 1979, if the Congress should decide to do so. The Senate based its approach to the aircraft carrier program on creating a series of options for fiscal year 1979, including, but not limited to, the CVV. If the House action were to be sustained, the CVV would not be an option in fiscal year 1979, which would be most unfortunate. I sincerely hope that the House committee will reconsider its action and support the Secretary of Defense and the Secretary of the Navy in their request for this reprogramming action.

However, it appears that in the arguments for the reprogramming action some have argued that the CVV will help answer the most serious problem we face in regard to aircraft carriers: The need for more of them. In the last 20 years, the naval environment has changed drastically, and the vulnerability of every surface ship has risen substantially. This means that if a given naval capability, such as the capability to launch aircraft at sea, is to be survivable, it must be based on a larger number of platforms. Yet, over the same period the number of aircraft carriers in the U.S. Navy has declined by more than 50 percent, to only 13 today.

If our carrier capability is to be survivable, our naval aircraft must be disbursed onto a larger number of platforms. However, the CVV program, contrary to what some have apparently suggested, will not do this. The Chief of Naval Operations testified before the Senate Armed Services Committee during this year's hearings that the CVV program will not result in an increase in the number of carriers in the force. Outside witnesses in addition testified that because of the design and lead-ship cost of the CVV, the first CVV could po-

tentially cost as much as a Nimitz-class carrier.

While I believe the CVV should be developed as an option, the only type of aircraft carrier which will answer the need for a greater number of aircraft platforms is the VSTOL support ship, or VSS. This would be a carrier of about 20,000 to 25,000 tons designed exclusively for VSTOL aircraft. According to Navy information dated April 1976, the life cycle cost of a VSS would be about \$1,222 million in fiscal year 1980 dollars, compared to a Nimitz life-cycle cost of \$5,354 million in fiscal year 1978 dollars.

In other words, it would be possible to afford about five VSS for each Nimitz. This supports the statement by the Senate Armed Services Committee in its report on the fiscal year 1978 defense authorization bill that—

It appears that only a program incorporating this type of less costly ship can answer the need to disperse at-sea air assets into a larger number of platforms.

Mr. President, I believe that the reprogramming action for the CVV should be approved, in order that the Congress may have before it a full range of options in fiscal year 1979. There can be no justification for depriving ourselves of any credible option. But at the same time, we should be aware that the proposed CVV will not answer the need for more aircraft platforms; only the VSTOL support ship can do that.

Mr. President, I ask unanimous consent that the article from today's Washington Post, "Big Carrier" Advocates Block Shift of Funding," be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### "BIG CARRIER" ADVOCATES BLOCK SHIFT OF FUNDING

(By George C. Wilson)

"Big carrier" advocates on the House Armed Services Committee yesterday refused to yield to Pentagon pleas to let the Navy shift money to design a smaller and cheaper aircraft carrier.

"It's incredible," said Rep. Les Aspin (D-Wis.) after his committee voted yesterday, "that a bunch of yahoos are blocking" the "overwhelming" desire of the House and Senate to switch to a cheaper carrier.

Aspin was reacting to committee votes yesterday of 12 to 7 and 12 to 9 against reconsidering earlier refusals to allow the Navy to reprogram \$6 million in fiscal year 1977 money to finance medium-size, or "midi," carrier designs.

Defense Secretary Harold Brown, who opened the hearing with a plea not to "tie our hands" by refusing the funding request, stood up from the witness table after the committee voted against him and said: "I'm sorry . . . I don't think this will advance the cause of a new carrier for the nation."

Navy Secretary W. Graham Clayton, Jr. told the committee before the votes that the Navy needed the \$6 million right away. Otherwise, he said, the designs would not be finished in time to include the midi-carrier in the fiscal 1979 budget going to Congress in January.

Asked after the hearing what he would do to keep the midi-carrier from slipping behind schedule, Clayton replied: "I don't know." He said several avenues of redress will be explored.

Aspin, who is allied with the Pentagon on

the carrier issue, said that perhaps the Senate, in its imminent conference with the House on the fiscal 1978 Pentagon procurement bill, could make some kind of trade to free the \$6 million.

The basic argument is whether national defense would be better served by building two midi-carriers costing \$1 billion each instead of continuing with the large Nimitz class which costs \$2 billion a ship. The Navy already has three nuclear powered Nimitz carriers at sea or under construction.

The House approved on March 3 the revisions President Carter made in the fiscal 1977 Defense budget he inherited from former President Ford, including elimination of funds for a fourth Nimitz. The House on the same day rejected, on a 252-to-161 vote, an amendment to restore the Nimitz funds. The Senate on March 15 passed the fiscal 1977 Pentagon budget as revised by Carter.

Building two midi-carriers of 60,000 tons each for the price of one Nimitz of 90,000 tons, Brown said yesterday, would enable Navy carrier planes to patrol two different areas of the world.

Although stating that the midi "is not a budgeteer's ship," he said its lower cost would enable the Navy to afford more ships at a time the numbers of Soviet ships are of price concern.

Brown refused to commit himself to making the midi nuclear powered. He said there is no nuclear power plant in sight that is small enough for the midi.

Rep. Samuel S. Stratton (D-N.Y.), a leading advocate of the Nimitz, said yesterday it would be "idiotic" to switch from the nuclear powered Nimitz to an oil fueled carrier at the time the world is running out of petroleum.

Brown replied that the planes on carriers would have to burn either natural or synthetic petroleum in the future, regardless of what kind of carrier they are based on. The carrier itself, he said, could burn the same fuel as the planes—perhaps a derivative of coal.

#### NURSES SUPPORT ECONOMY IN HEALTH CARE

Mr. HUMPHREY. Mr. President, the problem of rising health costs has reached an acute stage.

I believe we have scarcely tapped the immense opportunity for cost-saving implicit in better management and improved delivery systems.

Several articles in the May 15, 1977 issue of the American Nurse are particularly relevant to this approach. The American Nurses' Association is quoted as supporting in principle the Carter administration effort to contain hospital costs. I believe it is encouraging that members of our health professions recognize the necessity of confronting this problem.

Besides indicating a willingness to cooperate in seeking a solution, ANA President Anne Zimmerman stresses the need to promote health as well as treat sickness; and affirm's the association's support for a comprehensive system of national health insurance.

The same issue focused on a promising experiment in maternal care, a nurse-operated childbearing center launched in late 1975. The New York City center described in this article provides a valuable laboratory for developing less costly and more patient-oriented forms of health care.

In this connection, I would like to draw

attention to a similar project organized even earlier at the University of Minnesota. Funding for the University of Minnesota Childbearing-Childrearing Center will run out in July and, quite frankly, I have been grant-shopping, so far without success, among our many Federal health programs, to find a possible source of aid for this innovative approach to cost-conscious, community-based maternal care with its focus on birth and infancy as a healthy experience.

Mr. President, I ask unanimous consent that the two articles from the *American Nurse*, and the text of a brochure and explanation of the University of Minnesota Childbearing-Childrearing Center be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the *American Nurse*, May 15, 1977]

**ANA SUPPORTS CARTER EFFORT TO CONTAIN COSTS**

The American Nurses' Association has announced its support in principle for the Carter administration effort to contain hospital cost increases as a means of controlling inflation in the health care industry.

"ANA shares the government's concern over rapidly rising costs," Anne Zimmerman, association president, stated.

Hospital cost containment bills were introduced April 25 in Congress at the request of the Carter administration. The legislation would affect about 6,000 general care hospitals.

Speaking for ANA, Ms. Zimmerman said the proposal was worthy of discussion and offered the association's cooperation in solving the hospital cost problem. She warned that in reaching a solution, the quality of care must not be sacrificed.

Quality is affected by the numbers and working conditions of health care professionals employed by hospitals, the ANA president pointed out. Registered nurses represent the largest number of these professionals. Therefore, the increase in salaries of nurses, as well as those for low-paid personnel, should be excluded from computation of hospital cost increases that are subject to regulation under the proposed legislation.

"The wages of hospital employees cannot alone be blamed for rising hospital costs which have increased at a percentage much greater than that of the salaries of hospital workers," Ms. Zimmerman noted.

Discussing the causes of inflation in health care costs, she observed that decisions about the kinds and amount of health services have been vested in the physician and not shared with other health care providers.

Additional factors contributing to spiraling inflation have been retrospective cost reimbursement by third-party payers such as insurance companies; inadequate planning that has resulted in the proliferation of health care institutions and duplication of equipment and services; and inefficient management of existing facilities.

"The American Nurses' Association is especially pleased with the bills' implications in regard to comprehensive health planning and agrees that capital expenditures must be well planned and related to the real needs of the community," Ms. Zimmerman commented.

She expressed hope that representatives of management, health care professionals, consumers and employees could mediate areas of conflict and overlapping interests during discussions of the Carter administration proposal and development of future health care legislation.

Because the present bill deals only with hospital cost containment, Ms. Zimmerman said it would be limited in its impact on the health care delivery system in general. She called for the federal government and health care providers to work together to provide incentives for a health care focus rather than an illness emphasis in the delivery of care.

"Our present reimbursement policies need to be fundamentally altered," Ms. Zimmerman explained. "These policies currently reward the treatment of sickness, but virtually ignore the promotion of health."

"We recognize that the containment of hospital care costs is an essential step toward a system of national health insurance which the American Nurses' Association believes should be comprehensive in nature and should reimburse for the promotion and maintenance of health and the prevention of illness."

[From the *American Nurse*, May 15, 1977]

**CHILDBEARING CENTER—NEW APPROACH TO MATERNAL CARE**

(By Shirley Fondiller)

NEW YORK.—Ever since it was established almost six decades ago, the Maternity Center Association—an organization of professional and civic leaders—has pioneered for the improvement of maternal care.

Always in the forefront of innovation, MCA views its most recent "first" with increasing satisfaction: a nurse-operated center in a home-like setting designed to best serve families in the childbearing experience.

Occupying the two lower floors of an imposing six-story townhouse on Manhattan's upper east side (formerly the home of the late John Sloan), the childbearing center offers prenatal care that is highly educational, and labor and delivery in a personalized, family-type environment. Mother and infant are discharged home within 12 hours of delivery. Through prearrangement with the center, the Visiting Nurse Service of New York provides followup care at home.

The new center is part of a growing trend in the nation to develop less costly and more patient-oriented forms of health care than are traditionally provided by hospitals.

"We do not see our unit as the right arrangement for every woman," says Ruth Watson Lubic, MCA's general director since 1970. "What we're interested in is offering options and alternatives. However," she adds, "we didn't set ourselves up as an alternative to hospitals, but rather to bring back into the system those families who had lost trust and refused to go to the hospital."

More than two years in the planning stage, the childbearing center was officially launched at an impressive ceremony on Oct. 9, 1975. It has been licensed by the New York State Department of Health.

Ms. Lubic reports that as of this past April, 100 births have been accommodated. So far, she notes, new baby girls slightly outrank baby boys in number. Women with multiple pregnancies are referred to hospital services.

The center strives to provide safe, satisfying and economical maternity care to individual families. Initiated as a demonstration project (a small grant was provided by the Commonwealth Fund for the development of criteria and policies), it hoped to determine that risk criteria can predict whether women will have normal pregnancies and deliveries; and to assure that women and infants who receive care in this setting are not a greater risk than those cared for in more conventional facilities. Interim evaluations by MCA's advisory committees and by the State Department of Health have concluded that these objectives are being met.

"We want to test the impact of the child-birth, infant care and parent education programs," states Ms. Lubic. "Also, to find out what it really costs to have a baby."

The center's fee for expectant families is \$750, which includes prenatal care, classes in preparation for childbirth and infant care, labor and delivery, pediatric examination and post-partum checkup. There are no separate physician fees or other hidden costs, according to the general director.

An important aspect of the program's philosophy is the concept of "family," and not the "patient," as the focus of the center's nursing and health care services.

The dictionary definition of patient—"one who is acted upon"—has no applicability to the childbearing center. Rather, families are viewed along with staff as active members of the health care team.

The general consent form, a document shared with applicants prior to the first prenatal examination, explicitly points out that the family participants in all decisions within the limits of safe maternity and infant care.

**TERMS OF ENROLLMENT**

The center accepts families from the five boroughs of New York City—the area covered by the Visiting Nurse Service. Candidates must be less than 22 weeks pregnant.

"We take women expected to have normal, uncomplicated pregnancies and deliveries," says Ms. Lubic. "Expectant mothers who have experienced serious illness or problems during previous pregnancies or births are referred to other services."

Applicants must be no more than 35 years of age for the first child; for succeeding pregnancies, they should be no older than 39 years and should have no more than four children. A history of three or more miscarriages is considered a reason for referral.

"We don't have a minimum age limitation," declares Ms. Lubic. The youngest mother so far has been 16 years old.

"Candidates receive a family handbook—which describes the childbearing center—and the detailed consent form and financial information."

Conditions necessary for admission to the program and the emphasis on family participation are explained in a required orientation conducted by the staff.

Included are personal inspection of the facilities; meetings describing procedures, methods and services as well as mutual expectations; frank discussions on differences between hospital, home and center deliveries; and potential risks of childbearing to the mother and her baby plus the appropriate management.

Also stressed is the fact that the center is not a hospital but that it has the necessary equipment and supplies for normal childbearing. There is no operating room, intensive care unit or highly specialized services and equipment.

For emergencies the center uses a nearby hospital as a back up facility—an 11-minute ride by ambulance.

The major reason for intrapartum transfer has been "failure to progress in labor." Ms. Lubic notes that none of the feared emergencies such as cord prolapse, abruptio and postpartum hemorrhage have occurred.

Under the terms of enrollment, provisions for postpartum care are explained. It is the family's responsibility prior to the birth to arrange for pediatric care after discharge from the center.

The consent form covers several areas in detail: physical examinations; authority to treat; early referral; informed consent, patient history and right to withdraw; use of medical records; and disposition of specimens.

Despite the specificity of the general con-

sent document, it has not deterred anyone from participating in the program.

Enrollment, Ms. Lubic points out, is determined after all records and reports concerning a prospective candidate's health status have been completed.

#### FAMILY INVOLVEMENT

There is family involvement in every step of the mother's care. It is not unusual to see small children accompanying their parents to routine visits and classes. A multipurpose room used for group discussion also serves as a playroom for the youngsters.

During the second and third trimesters, participants are required to attend parent classes that are conducted by nurses and nurse-midwives. (Special classes are also available for couples in the first trimester.) Some of the topics include maternal care during pregnancy, physiology of labor and delivery and care of the newborn. In addition, there are group and individual educational conferences that enable the expectant mother and father (or any support person selected by the mother for labor and delivery) to discuss with other parents various aspects of childbearing.

Prior to labor, most parents will have met and worked with all members of the center staff.

Physical care is provided by certified nurse-midwives, obstetricians, a pediatrician and the visiting nurses. A nurse-midwife is available around the clock (nurse-midwives perform the deliveries although obstetricians are available if necessary).

Currently there are five full-time and four part-time certified nurse-midwives on the staff of the childbearing center. Aiding them are midwife assistants, new health workers whose duties range from housekeeping tasks to a supportive role during labor and delivery.

Childbirth education services at the center are provided by MCA's staff of parent educators. A qualified researcher is responsible for all research and evaluation activities at the association, including data collection for the childbearing demonstration project.

At the center there is a family room and lovely garden area where expectant mothers may freely walk around or relax during the early stages of labor.

When active labor begins, the mother and father (or her support person) retire to one of the two labor/delivery rooms, both furnished with attractive floral draperies and cheerful surroundings. These family-care rooms contain a leatherette reclining chair, bassinette, infant scale, sinks and a hospital bed with a wide mattress.

"Delivery can be experienced in any safe position," asserts Ms. Lubic. "There are no stirrups, enemas or public shaves." Episiotomies are generally not necessary.

The center is not equipped for Caesarian sections. Only analgesics and local anesthesia (pudendal block) are given to women who need them.

The parents are given their baby right after delivery. "The bassinet is the least used equipment," declares Ms. Lubic.

What happens when an expectant mother goes beyond her delivery due date?

"There is a deadline of two weeks of post-mature births," Ms. Lubic replies. This has occurred just four times and in those cases, the mother was referred to her back-up physician or hospital. Often families rely on one of the three staff obstetricians, each of whom also has a private practice.

Several hours after delivery, the mother and infant are ready for discharge. Before they leave, a pediatrician examines the baby. The center provides the mother with normal postpartum care and two visits by the Visiting Nurse Service—one visit within the first day home, the other on the third to fifth day. Visiting nurses involved in this service

participate in a four-hour orientation session at the center.

#### IMAGINATIVE LEADERSHIP

The increasing popularity of the childbearing center is unquestionably due to MCA's imaginative board of directors through whose support the leadership of Ruth Watson Lubic and her staff of nurse experts—committed to improving the quality of maternity care—has found expression.

Ms. Lubic's association with MCA goes back over 15 years when she first enrolled in the joint nurse-midwifery program with Downstate Medical Center, New York.

As a certified nurse midwife, she served as a clinical instructor, parent educator and consultant to the association. At the time of her present appointment, she was president-elect of the American College of Nurse-Midwives (some years earlier she was its first executive secretary).

Ms. Lubic received her basic nursing preparation at the School of Nursing, Hospital of University of Pennsylvania. Later she earned her B.S. and M.A. degrees in nursing education at Teachers College, Columbia. She is currently a certified doctoral candidate in applied anthropology at Columbia.

Widely published and accorded many honors, Ms. Lubic was a member of the first official American medical delegation to the People's Republic of China in the summer of 1973.

Mother of one son, she is married to a New York attorney who holds the unique title of "honorary nurse midwife."

As for the present demonstration project, Ms. Lubic anticipates that the center will be able to handle 500 births annually when functioning at its maximum level. A realistic expectation? Yes, nods the general director with a confident smile.

#### A CLOSER LOOK AT THE CHILDBEARING-CHILDREARING CENTER

(By the University of Minnesota Childbearing-Childrearing Center)

##### FAMILY ORIENTATION

The care-givers of the Center believe that childbearing and childrearing are basically healthy and growth producing experiences that include the mother, baby, and significant family members, which are those defined by the mother. Therefore, this system is committed to enhancing the family's experience by involving its members in the entire spectrum of their care. Included in this are a number of activities planned to encourage positive growth of the participants.

##### CHILDBEARING CARE-NURSE-MIDWIVES

The nurse-midwife provides on-going care that encompasses physical, emotional, and supportive growth of the pregnant woman and her family. This includes complete prenatal care, labor support and delivery of the baby, postpartum follow-up, plus on-going interconceptional care. Except for the delivery, all of the care including lab work and pregnancy testing is provided at the Center. Within the limits of safety the nurse-midwives are committed to facilitating the woman/couple's desires regarding their childbearing experience.

##### CHILDBEARING CARE-PEDIATRIC NURSE PRACTITIONERS

The pediatric nurse practitioners (PNP's) visit new parents in the hospital to discuss child care and feeding and remain "on call" to help with any questions or concerns regarding pediatric care. For parents who elect to continue with the Center for childbearing care, they provide physical and developmental assessment and emotional support during well-child visits. Emphasis is on the family and its integration as a unit.

##### PARENTING SUPPORT

Several activities contribute to the development of skills and a support base for parent-

ing. During and after pregnancy parents may participate in small support groups where they can share feelings and discuss their changing relationships and new responsibilities. A variety of other activities are planned in response to individual and group request. Many women continue their contact with the Center through an active volunteer consumer group.

#### UNIVERSITY OF MINNESOTA AFFILIATION

The Childbearing-Childrearing Center is an outreach program of University Hospitals and as such its consumers receive the benefit of the many supportive services of the University. Medical consultation for the Center is provided by the Departments of Obstetrics and Pediatrics. Costs for both professional care and hospital services are competitive with those in the Metro area.

#### WHAT IS A NURSE-MIDWIFE?

A nurse-midwife is a registered nurse who has successfully completed further comprehensive study and clinical practice in a nurse-midwifery program approved by the American College of Nurse-Midwives, and works in consultation with a board certified obstetrician. She is prepared to manage the care of mothers and babies throughout the maternity cycle, including family planning, as long as no medical problems arise.

#### WHAT IS A PEDIATRIC NURSE PRACTITIONER?

A pediatric nurse practitioner (PNP) is a registered nurse with pediatric and/or public health experience and graduate training through a certified pediatric nurse associate program, who works in close conjunction with a pediatrician. She is prepared to do physical and developmental assessments on children of all ages with emphasis on giving guidance and support to families.

#### EXPLANATION OF THE UNIVERSITY OF MINNESOTA CHILDBEARING CENTER

The first nurse-midwifery care at the university of Minnesota was delivered in the fall of 1972 when one nurse-midwife joined the faculties of nursing and obstetrics and gynecology. That was the start of the Childbearing-Childrearing Center (CCC), which organized in concept in July of 1973. At that time there was one nurse-midwife and a part-time, volunteer nurse research assistant/graduate student who made up the Center.

Another nurse-midwife came in September and together the two nurse-midwives delivered 21 women in 1973. The graduate educational program preparing nurse-midwives also began in the fall of 1973 graduating a total of 15 women who have taken the national certifying examination given by the American College of Nurse-Midwives. Today the Center staff has 4 nurse-midwives, one 1/2 time pediatric nurse practitioner, a maternity nurse practitioner, a secretary, a 70% time receptionist, and 2 part-time physicians, 1 in obstetrics and 1 in pediatrics. There were 118 women who delivered babies with the Center in 1976 and 128 children are receiving their well-child care under the Center's childbearing component.

The basic philosophy of the Center includes the following:

Childbearing and childrearing are essentially healthy, normal events in life.

Health maintenance and prevention of illness are the cornerstone for a healthy society.

Childbearing and childrearing care is most appropriately delivered in a context that affirms the family and includes identified support persons in care.

Responsibility for one's health belongs to the individual; the health care system is present to respond to identified needs and to assure progress meets parameters of normal care is optimally delivered in a system that provides continuity.

Alternatives in health care delivery are es-

sential to meet the various needs and wants of today's consumers

Nursing as a discipline is oriented toward health and growth; nurses working in an expanded role are particularly well suited to deliver personalized health care

The appropriate setting for delivery of health care is community based, not hospital (illness) based

Woman to woman relationship within the childbearing, childrearing periods has the potential for mutual growth and enrichment

Continuity during the critical period between childbearing and childrearing is especially important

Within this philosophy the personnel of the Center have worked continually toward goals that would carry out their underlying philosophy.

Current operational statements of the CCC:

1. To maintain a site, located in the community, for all out-patient care delivery
2. To provide childbearing and childbearing care at the same location
3. To provide care that is focused on and affirms consumer wants and needs
4. To provide opportunity for on-going consumer involvement in the Center
5. To provide a setting for student education
6. To modify the in-hospital setting, as needed
7. To provide as personalized care as possible including continuity, on-going labor support, and home visits
8. To have an on-going system of research and evaluation
9. To provide opportunity for continuing staff education
10. To encourage active participation by staff in community activities and education

To date, all of the funding for the Center has come from University sources. Both the School of Nursing and the Department of Obstetrics and Gynecology have contributed salary monies. A Health Sciences Atkinson Grant made possible the development of the childbearing component. Those crucial monies will run out in July. The Hospital is now providing all of the support for the clinics and the building, as well as covering several salaries.

Acquisition of the separate building for the Center has been a tremendous developmental step. Intake is increasing. More activities are possible. The childbearing component is becoming more integrated. Parking is marvelous. There is a whole atmosphere of excitement present in the Center.

We hope to demonstrate that such a Center is indeed viable. We know it is a service that women and couples are seeking. We also are aware of the difficulties of supporting such a Center financially. It is crucial that additional monies be obtained just to maintain present service; since we have many ideas we would like to see the services expand! We are in the process of hiring, on a trial basis, an editor for our newsletter and a consumer coordinator for all consumer activities. We feel these are essential functions, but they cannot be handled solely by present staff.

Our goal is to proceed as realistically as possible without losing the idealism and vision that has prompted our growth thus far.

#### FUEL SAVINGS, POLLUTION CONTROL, AND PROFIT

Mr. HEINZ. Mr. President, over the past several years, I have taken an increasing interest in the search for ways to cleanup our environment and at the same time encourage the growth and productivity of our industry. The formula for resolving these two concerns has now been made more complex by the need to

conserve our existing energy resources and develop new sources of energy.

The debate over the best way to resolve these problems has been ongoing for some time and, I am sure, will continue. My purpose today is to share with my colleagues two magazine articles which recently were brought to my attention. Both articles support the position that it is possible to develop and install technology which yields fuel savings, pollution abatement, and profits. Mr. President, I ask unanimous consent that these two articles be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Business Week, Apr. 18, 1977]

#### SOLVENT RECOVERY PAYS OFF

Information Terminals Corp. had not planned on immediately installing an expensive vapor recovery system when it started building its own magnetic tape plant in Sunnyvale, Calif., in 1975. But when local air quality officials insisted, ITC executives grudgingly agreed. Today they say that their \$100,000 recovery system has made it economically feasible to use better solvents than in the past and thus produce a new high-quality tape. "They forced us to do it early," conceded ITC President Reid Anderson when he recently announced the company's new Verbatim tape line, "and it's a good thing they did."

Magnetic tapemakers run into a solvent emission problem in applying the resin coating containing the magnetic particles to the tape base, and ITC is just one of several manufacturers to discover the benefits of enforced solvent recovery. "There are technical obstacles [to recovery systems] for some companies and economic ones for others," says Arthur G. Schwartz, a consultant with extensive experience in recovery systems, "but the trend is definitely to put them in."

Environmental pressures aside, the reason solvent recovery is so appealing is that prices of solvents are skyrocketing. Some prices have shot up more than 40% since the Arab oil embargo. "Even so-called low-priced solvents are expensive today," notes Clyde S. Roark, a product manager at the Boulder (Colo.) plant of International Business Machines Corp.'s Office Products Div., which also has installed a recovery system.

Justifying the costs, Magnetic tapemakers, of course, are not the only industry faced with orders to control solvent vapor emissions. Plants with big paint lines, such as those making auto bodies and appliances, are also under the gun. Most such plants are installing systems that burn vapors, recovering the heat for their baking ovens.

But the coatings used in making premium tapes require solvents that are costly and sometimes hard to get. For example, new types of tapes, especially those used in broadcast studios and computers, increasingly require solvents like cyclohexanone, dioxane, and THF in order to apply the tough, hard-to-dissolve resin binder that is crucial for these applications.

"Recovery has allowed us to use solvents that we probably would have had a hard time justifying otherwise," says IBM's Roark. "Our chemists have had a freer rein to go into more exotic formulations." In addition, Roark says his plant has been able to keep running with recovered solvents when solvent shortages shut down some tape manufacturers.

Even manufacturers of commercial-grade tapes, whose solvents generally cost less, are finding solvent recovery to be a boon. Certron Corp., for one, has been recovering vapors for two years, and William A. Smyth, manufacturing vice-president, estimates that his company recaptures 90% to 95%—about

1,000 gal. daily—of the methyl isobutyl ketone solvent it uses to produce audio cassette tapes. That works out to annual savings of at least \$80,000, Smyth says, which is enough to return Certron's \$250,000 investment in the system in about three years. Environmental results are equally encouraging. Expelled airborne solvents dropped from 450 lb. a year to 59 lb.

Certron and ITC both use simple adsorption/desorption systems supplied by Vic Mfg. Co., of Minneapolis. In these installations, solvent-laden vapors are sucked from tape-drying ovens into a large tank filled with activated carbon. The solvent molecules adhere to the carbon, and the cleaned vapors are vented to the atmosphere. Hot steam percolates through the carbon bed, picking up the adsorbed solvent molecules and carrying them to another tank. The reclaimed solvent is then distilled and held for re-use.

A few bugs. Although Vic is currently the undisputed leader in the industry, other companies are also carving out a market. Oxy-Catalyst Inc., a West Chester (Pa.) division of Research-Cottrell Inc., last week delivered the components of what will eventually be an \$800,000 recovery system to Memorex Corp.'s plant in Santa Clara, Calif. The Oxy-Catalyst system substitutes hot-air vacuum stripping for steam with the aim of reducing the cost of energy and of the distillation step. Another supplier, West Germany's Bamag, installed a system for 3M Co.—an installation about which 3M will reveal few details.

Few of the systems have been without problems. At Certron, the original phenolic-lined tanks had to be replaced with stainless steel when they failed to stand up to the company's solvent formulas—a switch that Smyth says cost the company \$50,000. Other companies have complained of collapsing carbon beds, corrosion, and spontaneous burning. Even 3M, which insists that its "multimillion-dollar" system has been running well for the past year, admits to "initial startup problems" that required it to hire at least one outside consultant.

Despite the painful debugging that vapor recovery systems often entail, their advantages have not been lost on other industries. Richard C. Waugh, president of the Chemical Operations Div. of Syntex Corp., a Sunnyvale (Calif.) pharmaceuticals company, says that his division is spending "well into the millions" to recapture solvents, and "we plan to spend more." Food-processing companies often reclaim methylene chloride, a solvent that is widely used for decaffeinating coffee. Vapor recovery is also important in industrial dry-cleaning and in printing—particularly in color lithography, where various types of acetate and hydrocarbon solvents are used.

For these industries, as for the tape makers, cost benefits are just as important as environmental requirements. Certron's Smyth summarizes the tradeoffs in one terse question: "How can you argue with recovery if you are paying 32¢ a gallon for solvents and just blowing it into the air."

[From Business Week, May 17, 1977]

#### A CLEAN BURNER WITH A FUEL-ECONOMY BONUS

When Peabody Holmes Ltd., a London subsidiary of Peabody Gallon Corp., invented a high-efficiency burner some six years ago, it touted the device primarily as a fuel saver. That was also the plan that Peabody Engineering Corp., its Connecticut sister, meant to follow when it took over exclusive U.S. rights to the burner last year. But both companies are finding that one of the burner's bonus attributes—that it slashes visible smokestack emissions—is an even stronger selling point.

Most U.S. customers, of course, have a keen interest in both angles. Last month Peabody Engineering received a \$2 million contract from the Puerto Rico Water Resources Au-

thority, which produces all of Puerto Rico's electricity, to install 26 of the Peabody Air Pressure Recovery (APR) burners on three boilers near San Juan. "This was the best way to meet the Environmental Protection Agency's criteria, and we'll save fuel also," explains Juan Bonnet, assistant executive director. "Otherwise, we would have to install particulate removers, which not only would have cost twice as much but would have left us with a sludge disposal problem."

Florida Power Corp., which has been running 10 APR burners at its Turner Station in Enterprise, Fla., for more than a year, also welcomed the fuel-saving bonus. The burners put the company in full compliance with visible-emissions requirements and saved it 4,000 bbl. of oil last year. "We could never have met state air standards any other way," says James Whitehurst, plant superintendent.

#### TWO SELLING POINTS

The APR burner reduces emissions and conserves fuel because it "intimately mixes" oxygen with fuel with as little as 1 percent of excess air, says Frank Gullo, product manager at Peabody Engineering. That puts Peabody in the enviable position of having two provable claims to use in its marketing push. Peabody Holmes, which has already sold 400 APR burners in its European marketing territory for a total of \$4 million, is also tailoring its approach to each country it sells in. "A customer in the steppes of Russia is not bothered by particulate emissions," explains Ian Murdoch, sales manager of the Burner Div.

Conventional burners consist of a series of "air doors," or vents, through which air flows to an air register. The air then has to make a turn of anywhere from 60 to 90 degrees to reach the fuel. The APR burner replaces the air register with a venturi-type throat that sends a low-turbulence flow of air in a straight line to the fuel. "Since we can control the flow's direction," Gullo explains, "we don't have to flood the fuel with excess air to make up for inefficient mixing."

Energy is conserved at both ends of the process, Gullo claims. Less energy is needed to pump the reduced air flow through the burner. And since excess air—which runs as high as 20% in conventional burners—has a cooling effect in the boiler, less energy is required to maintain boiler temperature. The efficiency of the process makes it nonpolluting, he adds. "Even though we don't inundate the fuel with oxygen," he says, "we find that we complete combustion more thoroughly."

#### RIVAL VERSIONS

Peabody claims its burner is the only one on the market to use the venturi design, but it is not the only high-efficiency process available. Babcock & Wilcox, Combustion Engineering, and other companies have their own versions on the market. "There seems to be a tendency for states to relax their sulfur emissions requirements, and with more companies burning high-sulfur fuel, there is a great need for devices to reduce visible emissions," explains Donald J. Frey, section manager for fuel-firing equipment at Combustion Engineering. He says the company has developed a process to reduce excess air in its tangentially fired boilers—boilers in which air and fuel are normally fed into the furnace in layers and do not mix until they hit the fireball in the center of the furnace. The new process speeds up the initial combustion and makes it more efficient, Frey says.

The potential market is large enough to make competition only a minor worry to the companies involved. Arthur J. Jackson, Peabody Engineering's marketing vice-president, says that retrofits for utilities are his major aim now, but he also looks for sales in the original equipment market and in industrial applications.

Although the APR burner costs 7% to 10% more than conventional burners, Jackson says that the increase, taken over the cost of an entire boiler package, is insignificant. "It's like raising the price of the ashtray in an automobile," he explains.

Peabody is confident enough of the burner's performance to guarantee that it will keep excess air at less than 2% and to guarantee that users will meet EPA standards. So far, Florida Power's experience seems to bolster that confidence. Says plant superintendent Whitehurst: "To be absolutely honest, we haven't been able to find a major problem with the burner yet."

#### GEORGIA: THE CENTER OF THE SUN BELT

Mr. TALMADGE. Mr. President, there appeared in Atlanta magazine an excellent article on the phenomenal growth and economic progress in the State of Georgia, "The Center of the Sun Belt."

Like an idea whose time has come, Georgia is a State and the South is a region whose time is at hand. As this article points out, the Southeast particularly is enjoying significant growth and progress in virtually every social and economic area, and Georgia is squarely in the middle—and in fact is a pacesetter—for this new boom country.

I bring this article to the attention of my colleagues in the Senate, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Atlanta magazine]

#### GEORGIA

(By J. Michael Robertson and Martin Shartar)

The enormously varied state, largest east of the Mississippi, is increasingly appealing to investors and tourists alike. And the center of the Sun Belt also spawns extraordinary people who create and achieve—people from poets to the President.

#### GEORGIA'S PLACE IN THE SUN BELT

The Sun Belt, that stretch of the southern United States once stereotyped as an amalgam of *Death Valley*, *Days*, the Dust Bowl and Tobacco Road, has been discovered by the media. It's gaining on the industrial Northeast and Midwest in population, wealth and influence, as the nation's news-gatherers relentlessly—and accurately—report. The Southeast in particular is on the rise, and Georgia sits at the center of the new boom country.

The proliferation of dateline "Atlanta" in news reports is as much due to the rediscovery of the reality of the South's bright future as to curiosity in the land of the new President. Statistics can lie, but in the case of the New South's new economics, they don't.

Georgia has received its share—perhaps more—of the region's new prosperity.

Between 1960 and 1975 the population of the United States grew 18.4 per cent; Georgia's rose 24.5 per cent.

During that period national nonfarm employment grew 41.9 percent; in Georgia it increased 64.1 per cent.

Manufacturing employment grew 9.2 per cent nationwide; Georgia manufacturing employment rose 27.1 per cent.

National retail sales grew 154.2 per cent; Georgia retail sales jumped 242.9 per cent.

U.S. buying income grew 173.1 per cent, while Georgia buying income rose 226.9 per cent.

Georgia's percentages are strikingly superior partly because the state was far behind the rest of the country when the post-World War II boom began. But many feel Georgia and the Southeast are going to sling-shot: Sometime in the next hundred years the Southeast will surpass all other regions of the country in "real numbers," not just in percentages. Though some dispute that prospect, the view has emphatic champions. Jasper Dorsey, vice president and chief executive for Southern Bell in Georgia: "The rest of the 20th Century belongs to the South, and Georgia is on the leading edge."

Whether the projection of Georgia's economic future is moderate or superlative, the central fact is clear: Along with the rest of the Southeast, Georgia is on the grow relative to the rest of the United States. The promotional rhetoric of the Fifties and early Sixties has become reality.

Vigorous promotion of the state's assets explains part of Georgia's success. Eager to push the comeback from the national recession—which hit Georgia late and hard—early this year the Atlanta Chamber of Commerce opened a New York City office to serve the Northeast. The potency of the South's appeal is reflected in the cries of "raiding party" which greeted the one-man operation. Dave Lawton of the Atlanta Chamber explains that the New York office should be seen in a "sales context." It will serve prospects all over the Northeast who have already contacted the Atlanta Chamber; no "cold calls" are anticipated for six months or more. But the New Yorkers are not misreading Atlanta's aggressive posture. "There's no question we are competing with the other Southern states," says Lawton.

The New York office is only part of the Chamber's new Forward Metro Atlanta campaign, a renewal of past development efforts that helped make Georgia and Atlanta roaring success stories in the Sixties. A three-year, million-dollar program of national and international magazine advertising, possible TV spots, direct mailings, etc. is planned.

William Hunt, president and chief executive officer of Yardley of London Inc., which moved headquarters and manufacturing facility to Metro Atlanta in 1976, gauges the success of past such campaigns: "The publicity over the past 10 years about the city . . . has been like the Chinese water torture: it's been a constant pressure and just made it the first place I wanted to look when we decided to move."

Behind the national magazine ads and attention-getting gambits such as the New York City office lie the nuts-and-bolts of industrial development. These day-by-day, inch-at-a-time efforts are handled by the professional staffs of the Atlanta Chamber, the Georgia Bureau of Industry and Trade and a number of other Georgia businesses and state organizations. (A few of that number: the Georgia Chamber of Commerce, Georgia Power Co., the Southern and Seaboard Railways, Georgia Institute of Technology's Industrial Development Division, Atlanta Gas Light Co., the Georgia Ports Authority, and the state's major banks.)

Industry and Trade provides market, site, tax, freight and construction data to the prospect; its staff may visit the company in question. The Bureau's aim: to get the prospect into the state for a personal tour of prospective communities—which must do the real selling. (A sign of Georgia's statewide receptiveness to new and expanding industry: In 1976, 79 per cent of the new jobs and 65 per cent of new capital investment were in Georgia communities with populations under 50,000. These statistics also show new willingness on the part of industry to locate in small towns, a definite boon to Georgia and her predominantly rural neighbors.)

The Bureau of Industry and Trade is selective. "We'll get calls every month from folks hunting minimum wage opportunities. We tell them, 'If you're only interested in minimum wage, forget it.' The companies that want something for nothing are few and far between. They're not worth spending much time on. . . . Back in the Fifties some apparel people got tax relief money to build plants. When that ran out, they'd pick up their sewing machines and were gone. Of course, as long as it's the free enterprise system, we can't dictate what companies go where. Our overall goal is getting a better mix of high-quality jobs and building the state's tax base."

Contrary to popular belief, says the same Industry and Trade source, Georgia is not in the business of "stealing Yankee industry" by coaxing it to pull stakes and relocate in Dixie.

"Relocation is one in a 1,000. I'd say 99.9 per cent of our projects are expansion projects. It's nearly impossible to pick up an individual plant and move it. A lot of people [mistakenly] think we're stealing plants from up North. To be perfectly truthful, a lot of companies would like to get out of higher cost Northern communities and into the South, but they'll do it very gradually through expansion."

Most of Georgia's industrial growth comes from plants already in the state. Last year capital investment in Georgia fell short of the magic \$1 billion mark, though the \$835.1 million invested was still a record, surpassing the previous high of \$677 million (in 1973).

According to Tom Hanifen, Industry and Trade's director of research, more than 10,000 new jobs were created in 1976 by 278 expansions at a capital investment of \$638.2 million; an additional 11,169 jobs were created by 202 new plants built at a capital investment of \$196.9 million. (Finding statistics that give the layman a real sense of Georgia growth is difficult. Hanifen likes these numbers: Since 1960 Georgia has averaged 34 new industrial projects a month, representing an investment of \$36.2 million and producing 1,476 new jobs every 30 days. "This rate," says Hanifen, "has more than held up during regional national international uncertainty.")

In a recent issue *Industry Week* magazine surveyed a number of companies who had moved all or part of their operations from the North to the South. Only 5 per cent expressed dissatisfaction with their move. The reasons given for initial relocation and subsequent contentment included non-union or lower labor costs, tax advantages, lower land costs, favorable climate, availability of energy supplies, and access to new markets. Each of these reasons has been a factor in Georgia growth.

The relative importance of the presence/absence of strong union tradition in Georgia is difficult to measure because of the state's other compelling attractions. But Roy Cooper, associate director of economic development research for the Atlanta Chamber, believes that the "state of the union" in the South is definitely in the minds of industrial prospects.

"Almost every manufacturer coming this way is concerned with the right-to-work law," says Cooper. "If President Carter signs a bill abolishing right-to-work, it would cost us an edge—but it would not put us at a competitive disadvantage because it would apply to our neighbors as well." (Nineteen states now have right-to-work legislation, including seven Southern states; the recent defeat of the labor-backed common situs picketing bill by the U.S. House of Representatives does not bode well for national repeal of the right-to-work option this session of Congress.)

An official with the Georgia Bureau of Industry and Trade concedes that the state's

low degree of unionization is still a factor in attracting industry. "A lot of Georgia towns say, 'Don't tempt us with a union company.' And lots of union companies would like to come down here and be non-union. Nobody knows how this will come out. If the companies don't make the mistakes they did elsewhere, the South will stay relatively non-union." Between 1964 and 1974 the number of workers in Georgia employed in industrial jobs who joined labor unions increased by only one-half of 1 per cent. During the same decade the number of industrial jobs in Georgia increased by 35 per cent.

Long-term, the productivity of the Georgia worker—in many cases a generation or less removed from dawn-to-dusk farm labor—is more important to the state's growth than non-union tradition and a lower average wage.

Dick Horner, president of E. F. Johnson Electronics, which recently built an assembly plant in Conyers (Rockdale County), says his company must remain unorganized because all its competition is unorganized. "But it is not so much a matter of the per hour cost of labor as its productivity, and we like what we see."

Georgia also presents attractive tax advantages to industrial prospects, though the nature of those advantages needs explaining. State corporate and individual taxes are low; more important, tax rates are stable. And the state government is constitutionally forbidden to operate at a deficit.

Corporate income taxes have not increased since 1967, and there has been no personal income tax hike since 1971. The 3 per cent sales tax rate has not changed since it was adopted in 1951. By constitutional amendment, a 1 per cent sales tax is collected in Fulton and DeKalb Counties to support a rapid transit system.

"We have not tried to outgive everybody," says Roy Cooper. "We have no 10-year moratoriums as are found in some other Southeastern states. We expect companies to come in and pay their fair share, but those taxes won't suddenly go sky high. That kind of extra is not good relations with companies already here. They may say, 'Hell, we'll build elsewhere.' Business knows you can't create something out of nothing. If [government's] got a program, somebody's got to pay for it."

Lower land costs may also be a factor in the decisions of some companies to locate in Georgia, though land costs in Atlanta are about the same as in other U.S. metropolitan areas. An important consideration is construction costs: Georgia's are 26 per cent below those in New York City and 13 per cent below the national average.

Georgia's mild climate is a powerful lure, particularly in the aftermath of the nation's frigid Winter of the Century and the growing realization that energy shortfalls are real and can be permanent. Georgia Summers are warmer than those in New York or Minnesota, but air conditioning requires less energy than heating. And the contribution of climate to quality of life for the Georgia worker can't be denied. The state has rich and varied recreational opportunities, access to which is extended by Georgia's place in the sun. As Jack Talley, vice president for industrial development with Georgia Power, puts it, the "professional factory worker" in many Northern cities has nothing to do after 5 p.m. except "drink beer, bowl and bitch."

Availability of energy is increasingly important to industrial prospects. Georgia, though offshore oil is yet to be developed, has no other significant energy resources. But gas, oil and coal are available in the region. And Georgia Power, the state's electrical energy supplier, produces 80 per cent of its electricity using coal, a fact which promises uninterrupted power to the state's industries. Coal contracts are in hand, and the industry already has pollution abatement equipment

in place. Georgia Power anticipates a 7 per cent annual growth in the demand for electricity over the next 10 years, and has embarked on a building program to insure that the Company has the generating capacity to satisfy that rate.

The South is succeeding in projecting itself as a land of economic growth—for the individual as well as the corporation. A recent study by the Federal Reserve Bank of Atlanta shows that the South enjoyed net in-migration from every section of the country between 1970 and 1975 in spite of the recession—and including the West, which has historically been the nation's fastest growing area.

Though economists are not in total agreement, some feel Georgia is approaching that "critical mass" in population at which point a prospective industry can safely decide to move into the area without concern about the present size of the labor pool. The industry can count on a portion of the nation's surplus labor moving to an area because of a national perception of that area as a place of growth and opportunity.

Georgia State University's Dr. Donald Ratajczak, director of GSU's economic forecasting project, suggests many young people are coming south not because they know jobs are here but because they believe jobs will be here. They see the South, he says, "as a place of new opportunity, a place where they're not frozen into one occupation for the rest of their life. . . . They see a chance to spin off on their own."

Atlanta in particular is seen as a place where the main chance will come available because of its well publicized status as a transportation center. Atlanta's Hartsfield International Airport is the world's largest air cargo facility and handles the world's second largest volume of passenger traffic. Eighty per cent of the United States is within two hours commercial flight time. Seated at the cradle of the Dixie crescent, Atlanta offers truck and rail access to all of the Southeast.

Atlanta's location matters because the Southeast is increasingly a market in its own right. Dr. Ratajczak: "Georgia is increasing its market share. Right now the fastest market growth is in Alabama, the most sustained is in South Carolina, and the fastest population growth is in Florida. Only one state borders on all three. If we keep our site costs down, we can serve all three markets."

Since November one intangible in Georgia's economic future has been Pres. Carter. His election must mean something to the economy of the state, pundits reason—but what? Since Carter shows no penchant for log-rolling, it is apparent that any economic benefit from his election will come from national changes in perception, from the degree to which Georgia's image is enhanced in the eyes of outsiders as a result of birthing a President.

Californian C. P. Samson, vice president of the San Francisco-based American Real Estate Exchange, was here recently in conjunction with the opening of his firm's Atlanta office, and expressed a common opinion: "There are people who say I don't care whether you say something good about me or bad about me, just say something about me. People are talking about Georgia in more conversations every day. There are bound to be favorable effects. People think that Georgia definitely will not be hurt by the new administration."

The Atlanta Chamber and the Georgia Bureau of Industry and Trade see little "Carter fallout" from within the United States—aside from some increase in tourism. But many see Carter's election as having definite and long-term international benefits for the state.

Ronald Morgan, a vice president of Atlanta-based Robinson-Humphrey Company,

an internationally active brokerage firm, reports increasing overseas interest in stock in Georgia companies, and in the state as the site for direct foreign involvement. He sees a number of reasons: the state's transportation systems, labor pool, mild climate—and Jimmy Carter. As James Hall, of Trust Company Bank's division of industrial development, puts it, "Foreigners are more impressed with Carter being from Georgia than we are. We're so used to turnover every four or eight years that we aren't... [Carter's election] has definitely gotten the attention of the foreign market."

David Burke, local manager of the Atlanta office (established last year) of Barclays Bank of London, gives the question an international perspective: "Carter's election will have some international effect. I could not quantify the value of such worldwide publicity... The area was growing anyhow and I think this was just another boost."

International activity in Georgia is indeed "growing anyhow." Total value of Georgia exports for 1975 is estimated at almost \$2 billion. International investment in the state amounts to almost \$1 billion from sources in 22 different foreign countries. Nearly 16,000 jobs have been created for Georgians through foreign investment in Georgia manufacturing.

John D. "Jack" Welsh, head of the Bureau of Industry and Trade's international division, on the recent spurt in foreign involvement: "The difference between today and three or four years ago is like night and day—from 60 companies to 250, the bulk of these in the last two or three years."

According to Jim Wilkerson, the Atlanta Chamber's director of economic development and research, foreign investors—mostly Western European, Canadian and Japanese—are attracted to the United States because of its relative political and economic stability, and to the South and Georgia because of the same qualities that make the region attractive to domestic investors.

Other possible attractions cited by Welsh and Wilkerson:

**Foreign banks.** Because of recent changes in Georgia law, such banks are now allowed to operate and make loans in Georgia. Barclays and Credit Suisse (Switzerland) are already in Atlanta, and Welsh anticipates a total of eight to 10 by the end of the year. Foreign banks tend to bring their clients' money into areas they enter. Because they are truly international banks, operating in scores of countries, they will turn the attention of all these countries to Georgia.

**Georgia's international banks.** Trust Company established the state's first international department in 1952. Since then First National, Citizens & Southern, National Bank of Georgia and Fulton National Bank have done the same. Trust Company and First National have offices in London, and C&S has offices in Jamaica, Costa Rica, Colombia, Rio de Janeiro, Peru, Nassau and Singapore.

**Free trade zones.** For the purposes of customs, such zones are considered outside the United States. Goods can be shipped into a foreign trade zone, warehoused, assembled or modified, then shipped out of the country without paying custom duties. Georgia's first foreign trade zone has been established on 33 acres in the Shenandoah Industrial Park (in Coweta County, 30 miles south of Atlanta). Escaping duties gives manufacturers and handlers a competitive advantage. For the host territory, a foreign trade zone means jobs and service business.

**Freeports.** Last November Georgia voters approved a constitutional amendment which allows cities and counties on a local option basis to declare themselves freeports. That status relieves all or part of the inventory taxes on goods produced in Georgia and destined for shipment outside the state, or warehoused in Georgia for later shipment

outside. Jobs and service business are produced for the freeport locality. Both domestic and international businesses would get competitive advantage.

**The World Congress Center in Atlanta.** Though the "World" in the \$35-million, 600,000-square-foot facility's name was looked upon by some as Atlanta exuberance when the Center opened last year, those involved in promoting Georgia internationally say the WCC will be important in attracting worldwide attention—and visitors. Though booking most international conventions require an eight-year lead time, the WCC is pleased with early overseas response. In March of this year the 13th International Congress of Game Biologists convened at the WCC, its first meeting in the Western hemisphere. (Recent meetings were in Lisbon, Stockholm, Paris, Moscow and Helsinki.) Other international conventions are already booked.

**Atlanta itself.** Talking of the WCC, the splendid new Atlanta hotels, the extensive international press coverage Atlanta received even before the Carter campaign attained credibility, Jack Welsh says, "We talk about Atlanta as the new international city—I really believe it is! In comparison with neighboring Southeastern states, the thing we have that they don't is Atlanta. Now those who might have overlooked us before put us on their list." Whatever the lure, Industry and Trade reports a striking increase in the number of foreign visitors—from ambassadorial rank on down.

**The Atlanta-London air route.** Last year the CAB recommended Atlanta get it, but in December Pres. Ford sent the recommendation back to the CAB for further study. The Atlanta-Europe air route is probably most important as an imagebuilder as far as national business is concerned. But it would definitely boost international business: Francisco A. da Costa Lobo, ex-Portuguese banker who organized and now heads NBB's international department, was recently quoted as saying, "I think after a year of direct flights to London, we will see international business here just boom." (Roy Cooper, who has been tracking the CAB deliberations for years, has "full confidence when the matter is settled, Atlanta will have a route.")

Foreign investment is only half of Georgia's international story. Between 1972 and 1975 Georgia exports doubled, and the prospects for increases are good. Seventy-five percent of those exports were manufactured goods; the remainder consisted of agricultural products.

Southeast Georgia produces half the world's supply of naval stores (resin, turpentine, etc.). Northeast Georgia is a broiler and egg center; the state is among the nation's top producers of both. Georgia leads the country in the production of pulpwood and peanuts, and grows large quantities of corn and grain. Given the inability of much of the world to feed itself, the state has enormous potential for agricultural export.

Though the bulk of the finished products which Georgia exports are made by a relatively small number of companies—Lummas Industries and its fiber-producing machinery is an example—their success encourages others to get their feet wet. Part of the recent interest in foreign commerce was due to the recession, but the long-term benefits of that forced internationalism may be great. Jack Welsh says for years he urged Georgia companies to try foreign markets. "We just don't have time," they'd answer. In the last few years they got time! Once they start doing business overseas, they find it's profitable."

A key to Georgia's international trade is the Georgia Ports Authority which has deepwater facilities at Savannah and Brunswick. Savannah has an ambitious \$52 million expansion 80 percent completed. When a third container berth is completed this year, the Savannah port will have the capability to

load and unload 100,000 containers annually. The GPA is already planning future container berth construction on recently purchased Savannah property. When two general cargo berths are completed, Savannah will have the use of modern paper handling equipment which will mean an increase of 150,000 tons of paper products shipped annually.

In July, 1977, completion of a \$4.5 million expansion of Savannah's dry bulk facility will allow a 50 percent increase in handling such Georgia agricultural commodities as corn, soybeans, soybean meal, peanuts and peanut meal. Georgia Pacific and Forest Commodities Corporation have started construction on woodchip export facilities. And the GPA is investing \$12 million in improvements at Brunswick.

Because of the tremendous upsurge in U.S. trade with the Middle East, the Ports Authority just opened a Mediterranean office in Athens, Greece—the first such effort by a U.S. ports authority. Trade development staff has been increased in GPA offices in Tokyo, Bonn, New York, Chicago and Atlanta. The feasibility of opening an office in Southeast Asia is under study.

A new sense of the term "antebellum" is entering Georgia's economic lexicon.

Let it refer to the pre-World War II era when the state's relation with the rest of the United States was all export: Georgia young people, Georgia farm products and raw materials, and an image of the state as indolent and anti-growth were all "shipped" North, bringing little return.

Now, with Georgia and the Southeast emerging as national and international economic hot spots, it can be said without melancholy that those days are truly gone with the wind.

—J. MICHAEL ROBERTSON

#### THE TOURIST TENSE: PAST IS PRESENT

Fame can be a cumbersome compliment. Consider the plight of Plains, changed in the twinkling of an electorate's eye from side-road settlement to instant tourist attraction. It's exhilarating to move from sidelines to center field, but it can be traumatic.

Some days the permanent population of Plains—about 500, not subtracting those who've moved to Washington or elsewhere—gets lost in the shuffle of 5,000 day-trippers prowling for peanut souvenirs, a glimpse of the Carter clan, even such treasures as a six-pack from Billy's service station.

Don't underestimate peanut power. Jimmy Carter's autobiography fervently claims that boiled goobers, properly prepared, "should be considered one of the great gifts of God to mankind." Less godly gifts in the form of gold pendants fetch as much as \$200 a nut at Atlanta jewelers. In their natural state—boiled but ungilded—they sell for about 50 cents a bag at Atlanta's massive 146-acre State Farmers' Market, at highway vending stands along mountain roads and near Interstate cloverleafs—and they're plentiful in Plains.

But there's more to Plains' magnetism than its heady carnival atmosphere and 30-minute, peanut-wagon tours around town. There's a hard-to-label sense of deep-rooted values that even crowds can't obscure, a rare backward glance not often seen by 20th Century urbanites.

Plains has become the symbol of what Georgians have long called "plain living." It's an attitude that reverences Nature, finding harmony and meaning in family, home, church and the gifts of season. It prevails in hundreds of Georgia towns and hamlets. They stand squarely within this century, looking more to the future than the past, but they're girded by an inviolable awareness of time and place, of being and belonging.

Muscling for industry because jobs for young people are vital to maintain their

stability, Georgia's communities are also aware that travel is a burgeoning industry. Travel-related services account for a hefty 25 per cent of gross revenues produced by all retail and service businesses in Georgia.

But how to promote or even describe a state teeming with attractions and whose sheer geographical vastness sometimes surprises visitors and natives? The largest state east of the Mississippi, Georgia offers variety to challenge Cleopatra's with its mountains, coast, picturesque cities and historical places. Atlanta's metropolitan tempo—and Plains, the most prominent of the state's carefully preserved citadels of star-spangled Americana.

After Carter's nomination a Georgia delegation visited Johnson City, Texas, to see how its residents had coped with tourists tracking LBJ's trail. Their first measures—a traffic light and portable johns—didn't factor the principal difference between the Presidents' native states: You don't have to drive through Texas to get to Florida's playgrounds.

For more years than Georgia likes to reckon, its tourist trade relied on motel/gas-pump change left over from Florida-bound dollars. But by 1976, tourist spending in Georgia reached a record \$1.6 billion—and 5 million visitors are anticipated this year.

Tourists are learning that Georgia offers more than a pass-through glance, and the State's Bureau of Industry and Trade (which embraces tourism) requested more funds to promote Georgia's multiple lures. Further allocations are sought for new welcome centers, including a proposed \$100,000 facility in Plains to guide pilgrims to numerous attractions nearby.

There are countless ways to enjoy Georgia, from the Summer lull of lakes and beaches to the Winter lure of ski slopes, from Atlanta's tempting pace to the solitude of untouched rivers, swamps and kindred wild places.

They are but a sampling of the state's glinting facets, for there are plural Georgias shaped by history, custom and terrain. A 50-mile drive within any section of the state can lead to startling shifts of scenery, dialect, folklore. Even the food changes, kneaded into history's bread: You can almost taste the scorch of Sherman's March to the Sea in the dime-flat biscuits that follow his trail.

Mountain life to the north is more distant than miles from the state's flat, bottoming plains. The ear can hear the contrast between palate-softened "Geechee" along the coast and the inland twang toward the west. Eyes can feast on Georgia's shifting landscape: jagged hills and soft loamy fields, the plunge of gorges, the reach of skyscrapers, the gloss of rivers.

These visual delights can frame a vacation etched to the traveler's appetite and imagination. The sandy stretch of Golden Isles fingering the coast tempts with a full range of resorts, from low-cost to luxurious, intermingled with a nest of carefully protected wilderness preserves.

Inland water spots flourish among vast lakes whose shores are an easy drive from northwest mountain towns rich with Indian and Civil War relics, northeastern highlands made famous by novels and films, and cities mingling old and new.

Two such resorts—Lake Lanier Islands and Callaway Gardens—are within hailing distance of Atlanta, where past and present mix almost imperceptibly on hills where battles were waged, sit-ins staged, and peace finally found and nourished.

There are Revolutionary echoes in Savannah—a heritage of Federal and Victorian architecture—and up-river in the one-time frontier town of Augusta, whose Broad Street facades are an anthology of early-to-late 20th Century small-town styles, and

down the coast among the ghosts of Midway, Darien and Fort Frederica.

The old within the new nurtures Georgia. The state's New South image shines like a buckle on the bright-futured Sun Belt, but ceremony and custom are its links to a proud past. And Georgia's pride runs deep. Some native Atlantans now pushing their own mid-century marks can remember high school teachers who traced every battle of the War Between the States, culminating their lectures with a boast: "Of course Sherman had to destroy Atlanta—he knew how important we were even then!"

Some such boasts were made from hurt pride—a lost war, a ruined economy, a backward-backwoods reputation born out of defeat and poverty. Perhaps the habit of looking forward grew from the pain of looking back, but there was always something to boast about—if only a tenacious will to survive that helped to shape scores of men and women whose contributions to literature, entertainment and governance were merely capped by Jimmy Carter's Presidency. His distinction—the first Deep South president since Andrew Jackson—is but the last of a string of firsts and/or foremost memorized by Georgia youngsters from grade school forward. They usually begin with Lyman Hall, Button Gwinnett and George Walton, attracted by biographies more florid than their signatures pledging the 13th Colony's commitment to the Declaration of Independence.

But Georgia's character is more vivid in its literature than its history, revealing traditions that unify a century of words reading like letters from home, from Joel Chandler Harris' *Uncle Remus* tales to Jimmy Carter's *Why Not the Best?* The Harris texts preserve African myths merging into Biblical parables, mysteries and miracles learned from Christian slave masters; the Carter celebrates a New South measured and ordered with the clarity of Ecclesiastes.

There are universals braiding the works of Georgia authors, says Georgia State University literature professor Dr. Kenneth England: "Erskine Caldwell, Flannery O'Connor, Carson McCullers and others write about human nature as it is. Their locale and frame of reference is one they know—Georgia—but, as in the works of Thomas Hardy, the characteristics of human nature transcend locale."

"The Southern writer is probably the last author in America who has a set tradition, a pattern that has been fitted, and he or she writes from that. The rest of the United States is fluid, but Southerners—and some New Englanders—have a sense of place, of religion and family and the set stations of life. You can recognize it in the significance given to the traditional gathering for meals."

Dr. England remembers his first teaching assignment near Augusta, the setting for Caldwell's *Tobacco Road*, being prayed for by the purported real-life model of the novel's Sister Bessie Rice, and sharing boarding house accommodations with other high school teachers. "We were paid \$90 a month for nine months," he recalls, "and room and board was \$19, but that included a breakfast that would just sink you."

Food leaps out of Georgia books like a hungry motif, the symbol of deliverance from a hard-scrabble past. Savor, for example, Scarlett O'Hara's honeymoon feasts in New Orleans: gumbos, shrimp Creole, doves, oysters, mushrooms, sweetbreads, turkey livers, fish baked in lime-laced jackets. And whetting her appetite are memories of Tara's goobers, dried peas and sweet potatoes.

If in today's Georgia you can gorge yourself on delicacies to widen Scarlett's eyes, you can also read about and witness the methods used to prepare such plain staples as syrups, sausages, fruits, preserves, game and nuts (including the inevitable goober). Read Caroline Miller's 1933 Pulitzer Prize-winning *Lamb in His Bosom* for an account of pre-Civil War Georgia, then trace the

similar habits of plain living preserved in the *Forfire* volumes edited by Eliot Wigginton, then see that lifestyle duplicated at Tifton's Georgia Agrirama. It's an authentic replica of a mid-19th Century Georgia farm, close to Georgia's Agricultural Experiment Station, where modern farming techniques are under constant development.

Tifton, strides I-75, southeast of Plains. West of Plains is Westville, a functioning recreation of an 1850 village near Lumpkin. Working craftsmen demonstrate ancient skills in stores, homes and outbuildings transported from other Georgia towns and carefully rebuilt.

The southwest sector of the state preserves Indian artifacts at Leesburg, in the Columbus Museum of Arts and Crafts, and the Kolomoki Mounds near Blakely. Other Columbus attractions include the restored Victorian Springer Opera Theater, host to such diverse celebrities as Edwin Booth and Franklin D. Roosevelt.

Home-grown celebrities born in this area include achievers in a world which admitted blacks only as athletes or entertainers—Leo "Tiger" Flowers, first black world's middleweight champion; Jackie Robinson, first to break baseball's color barrier and first black member of the National Baseball Hall of Fame; Fletcher Henderson, Twenties jazz great credited with starting the Big Band movement; Gertrude "Ma" Rainey, undisputed Queen of the Blues.

Albany claims Wallingford Riegger, the late 12-tone composer, and Ray Charles, master of contemporary, Grammy-caliber blues. Dramatist Lonnie Elder, author of the powerful *Ceremonies in Dark Old Men*, was born in Americus. Actresses Miriam Hopkins and Joanne Woodward hail from Bainbridge and Thomasville.

Cordele was home to Mac Hyman, whose *No Time For Sergeants* added Will Stockdale to America's funnier folk heroes while dissolving Korean and Cold War tensions in a flood of humor. And the streets of Carson McCullers' native Columbus wind with memory's heartache through her unforgettable fiction.

Those who know the longing to belong recognize themselves in *The Heart Is a Lonely Hunter* and *Member of the Wedding*, having heard the music of *The Ballad of the Sad Café* as a universal instinct to establish contact with all things in the world.

There's a leaner language in the fiction of Southeast Georgia, fixed in the spare prose of Vereen Bell's *Swamp Water*, set in the wilderness of the Okefenokee Swamp. Filmed in the vast place that Creek Indians knew as "trembling" earth or water, the movie version of Bell's novel is still worth watching for on late-show midnights, especially for the characteristic vinegar of Walter Brennan's performance.

Fictional accounts of coastal Georgia include Harry Herve's *The Damned Don't Cry*, made into a classic Joan Crawford weeper, and Hamilton Basso's *The View from Pompey's Head*, its film version made memorable by Marjorie Rambeau's vivid appearance. Basso's novel (he was a New Orleans native), still in print 20 years after its first publication, makes good vacation reading if you head for St. Simons, Jekyll, St. Catherines, Skidaway, or even the wilder of Georgia's Golden Isles.

For preparation, read Atlantan Betsy Fancher's *The Lost Legacy of Georgia's Golden Isles*. And if you work up-coast to Savannah, try her recent *Savannah, A Renaissance of the Heart*. Its chapters are a weave of history, description, sightseeing tips—with recipes added for a delectable lagniappe (cooks who can't find *file* will welcome Mrs. Colquitt's shrimp gumbo).

Savannah's history is visible in the city's restored mansions; many are residences, others are museums, including the home of

Juliette Gordon Low, founder of the Girl Scouts of America.

Travelers who scout the central section of Georgia will find scores of ante-bellum and Victorian structures. They are scattered through such handsome towns as Washington, Madison, Monticello, Milledgeville, Athens—increasingly used as locations for films set in an early- to mid-20th Century time frame.

Crawfordville is the site of "Liberty Hall," Federal Style home of Alexander Stephens. Georgia's most notable 19th Century statesman. His biography is a near-Jeffersonian recitation of political acumen: six terms in the Georgia Legislature; U.S. Congressman, 1843-1859; organizer of the unsuccessful Constitutional Union party, formed to fight secession; Vice President of the Confederacy following the vote to secede; Confederate commissioner who sought peace at the Hampton Roads Conference; refused his Senate seat in 1866, but permitted to serve again in Congress from 1872 to 1882, when he was elected governor of Georgia.

In Macon, almost literally the state's center, you'll find the ceremonial language of Georgia's Indian legacy. The Ocmulgee National Monument is the East's most comprehensive archaeological restoration of Eastern Woodland civilizations, detailing the lifestyles of six different groups who lived here between 8000 B.C. and 1717 A.D. Its ceremonial earth-lodge is considered the oldest public building in the United States.

Athens, a thriving city surrounding the massive University of Georgia campus, boasts notable architecture, a compelling museum, historical sites and scenic sights. The University's faculty includes Dean Rusk, Secretary of State in the Kennedy and Johnson Administrations, now Professor of International Law and director of a newly endowed program of international studies.

Jefferson boasts the Crawford W. Long Museum, on the site of the office where Dr. Long performed the first operation using ether. Bill Arp, Georgia's 19th Century answer to Mark Twain, is permanently remembered in the Douglas County town that bears his name.

Other notable natives of Georgia's Piedmont region are Hall Johnson, whose choir helped popularize Negro spirituals, painter Benny Andrews, actor Melvyn Douglas; author John Oliver Killens, founder of the Harlem Writers' Guild, whose *Odds Against Tomorrow* was a harrowing film forecast of a world leveled by atomic warfare.

Collectors of mid-century, Deep South blues and their white boogie spin-offs will feel at home in Macon, birthplace of Otis Redding and the Allman Brothers. Augusta's history-rich thoroughfares were once the playgrounds of soprano Jessye Norman—and at the other end of the musical scale, future shocker James Brown. It was also home to Erskine Caldwell, the more memorable of whose countless volumes are *God's Little Acre*, *Tobacco Road* and *Collected Short Stories*. Aficionados of dashing romance might prefer to think of it as the birthplace of Frank Yerby, whose *Foxes of Harrow* reached the summit of such fiction.

The most potent of the Piedmont's writers is the late Flannery O'Connor whose God-ridden, Satan-driven characters leap to stunning life from the pages of *A Good Man is Hard to Find*, *Wise Blood*, *The Violent Bear It Away*, *Everything That Rises Must Converge*.

Her *Complete Short Stories*, crafted from a private vision of deliverance, is a literary landmark for a doubting age, her characters finding finally some touch of grace within the white-knuckled grip of religious dogma.

Georgia's northeast mountains cradle the fictional setting for James Dickey's *Deliverance*. Its film version introduced moviegoers to Georgia scenic delights, white-watered with peril. Nature's menace is some-

times real in the Chattooga's rolling rapids—amateurs beware—but Dickey's threatening hill folk are less likely to be found.

You'll have trouble finding Narrows, a Banks County crossroads too small for road maps or gazeteers, but baseball freaks may want to search it out. It's the birthplace of Typos "Ty" Cobb, one of the most brilliant and spectacular players of the game. The "Georgia Peach," first member elected to the National Baseball Hall of Fame, made records still unbroken and had a .367 lifetime batting average, made 4,191 major-league hits, stole 892 bases and won 12 batting championships—stuff to feed the folklore of the Great American Pastime.

The *Foxfire* collections of mountain folklore, gathered by students at Rabun Gap-Nacoochee School, when the imagination as keenly as mountain food tempts the palate. *Foxfire's* anecdotes, home remedies and assorted techniques for mastering the art of plain living introduce Georgia's mountaineers—reserved but welcoming, guarded and gracious.

Terry Kay's *The Year the Lights Came On* measures the impact of technology on rural mountain lifestyles. Set in and near Kay's native Royston, the novel illuminates the quantum impact of modernization in the mountains.

The northwest mountains are a hive of Indian and Civil War remembrances, offering remnants of the Cherokee nation before the early 19th Century push of western settlers. There are battlefields and monuments from the Civil War, quiet pockets among historic but modern mountain towns. Among the state's most tranquil places is the Berry College campus, and the Martha Berry Museum is a gentle memorial to the woman determined that learning's riches be shared with the poor.

This area's past is restored in *Yesterday in the Hills*, reminiscences gathered by Floyd and Charles Hubert Watkins. Its pages are a retro-calendar of past habits, generously laced with humor and larded with down-home detail. Its closing chapter tracks an orbit of change drawing mountaineers downhill to Atlanta, the denominator of Georgia's plurality.

It was called "The Terminus" in the beginning—the first broad plateau below the Appalachian and Smoky foothills where a railroad could be built connecting downstate farms with markets across the mountains. Civil engineer Stephen Long hammered a stake marking that railroad terminus in 1837, commenting that it would "be a good location for one tavern, a blacksmith shop, a grocery store and nothing else." So began Atlanta.

By 1864, it had grown from terminus to nexus—even then you had to pass through Atlanta to get anywhere east, west or south of it. Before and after Sherman burned it, there was a frontier flavor to Atlanta, a bit raw and brawling, brash and boastful. Yet, a Southern softness gentled it with a touch of charm. Fifteen years after Sherman torched the city, Atlanta held the first of a series of Expositions proclaiming its renewal—and invited Sherman to attend. He not only accepted the invitation; he invested in the affair.

Credited locally with inventing urban renewal, Sherman helped set the city's habits: It has been constantly renewing itself ever since.

Atlanta is a new city—with just enough of its past preserved to give it character. There's a choice between megalstructures and mansions, town-bound and suburban lifestyles—both of the tree-shaded and tranquil—set traditions and swining new styles.

If Sherman helped create a new city, however inadvertently, Margaret Mitchell's "Gone With the Wind" indelibly fixed the old in the world's imagination. There's no

Tara, but several reconstructed Plantation Plain homesteads. The author said her family was on the floor with laughter when they saw Hollywood's elaborate sketches for the movie's Tara. Closer to the "real" thing is the Tullie Smith House on the grounds of the Atlanta Historical Society—worth a visit even when closed—to glimpse its Swane House, Atlanta's stately mansion.

Stately mansions of another sort anchor Atlanta's glistening 20th Century skyline—microcities and megastructures and architect John Portman's Peachtree Center, a city-within-a-city of hotels, offices, restaurants, shops and boutiques, a dinner theater. Beyond his trend-setting landmark/trademark atriums and silo-shaped cylinders, Portman's most notable contribution to urban architecture is his melding of spaces and places designed more for people—and their pleasure—than for show.

Atlanta shows, theater-style, range from roadshow to repertory, rock blasts to Rachmaninoff in Symphony Hall. It's a partner to the High Museum, Atlanta Children's Theater and Alliance Theater at the Memorial Arts Center. The structure is a tribute to the more than 100 of Atlanta's cultural leaders killed in a 1962 plane crash after a tour of Europe's artistic treasures.

The Center's funding is a tribute to Atlanta's most generous philanthropist, Robert W. Woodruff, the long-time "anonymous" donor whose largesse has shored a host of cultural, educational and social institutions and gifted downtown with parks greening like oases among the city's towers.

You'll find other Atlanta parks named for such native sports kings as golfer Bobby Jones and tennis great Betsy Grant. Piedmont Park is the place to head in May, time of the annual Atlanta Arts Festival, a people-pleasing week of art, music, theater, jazz, dance and opera. Atlanta-born singers Barbara Cook, Mattawilda Dobbs and Beverly Wolfe aren't known to have performed there, but are likely to have visited the Festival as kids.

Piedmont Park was the 19th Century site for a series of International Cotton Expositions—a few end-of-century structures and bridges survive—the second of which was organized and promoted by Henry W. Grady, the city-boosting journalist who coined the phrase "New South." It stood for an attitude oriented more to the coming century than the past.

The 19th Century past is present in Grant Park's Atlanta Cyclorama, depicting a crucial engagement in the last-ditch Battle of Atlanta, and remembered in Stone Mountain's Memorial carving just east of the city.

Cinemaddicts who've memorized *Gone With the Wind* can now watch hockey games, basketball, musical events and circuses at the Omni, whistling distance from the film's famous wagon-and-flame scene. Visitors to Underground Atlanta enter at the site of the old depot, its harvest of maimed and dying Confederates one of the film's few direct references to war.

Atlanta's moonlight-and-magnolia image is a faint echo behind the hum of its 20th Century energy. It's more like nightlife-and-dogwood now, refreshing a city that matured earlier than most in urging past and present into inseparable harmony.

There's a mood in Atlanta beyond such labels as "New South" or "Sun Belt Capital"—a mood shaped by hundreds of leaders and shared by thousands of residents. You can grasp it in the writing—but more often in the doing—of such Atlantans as Pulitzer Prize-winning journalists Ralph McGill, former Mayors William Hartsfield and Ivan Allen Jr., Nobel Peace Laureate Martin Luther King Jr., U.N. Ambassador Andrew Young.

They articulated a possibility for others to realize, symbolized nationally by the achievement of a Jimmy Carter, practiced in Atlanta and Georgia by citizens aware that today's

"Y'all come" is frequently tomorrow's "Y'all stay." For Georgia's healthiest pluralism is in the diversity of its people—individuals who have crafted from the stuff of plain living the art of mastering it in harmony.

—MARTIN SHARTAR.

#### CLARIFICATION OF SENATOR JOHNSTON'S POSITION ON VOTE ON S. 7

Mr. JOHNSTON. Mr. President, I wish to clarify my position on S. 7, the Surface Mining Control and Reclamation Act of 1977, as adopted by the Senate Friday, May 20, 1977.

In committee, I voted against reporting S. 7 to the floor. My opposition was based on the presence of the surface owner consent provision in section 515 of the reported bill. The issue of surface owner consent has been divisive and controversial each time the surface mining legislation has been considered by the Senate. I have always believed that surface owner consent would give rise to windfall profits and disruptive interruptions in the development of our federally owned coal resources. I introduced an amendment to S. 7 which proposed generous treatment of surface owners, but would not have required their consent as a prerequisite to mining federally owned coal resources. After long debate on Thursday, my amendment, which was cosponsored by Senator BUMPERS, was defeated.

Although consideration of S. 7 continued on Friday, I was not able to be present Friday due to prior commitments in Louisiana. When I left the Senate on Thursday, S. 7 contained a surface owner consent provision and I could not, therefore, vote for the bill. The distinguished majority leader, my good friend Senator BYRD, graciously consented to refrain from voting in favor of the legislation on Friday in order to announce with me a live pair.

Friday, Senators BUMPERS, JACKSON, and NELSON offered an amendment which proposed generous treatment of surface owners in lieu of requiring surface owner consent as a prerequisite to the mining of federally owned coal. Had I been present on Friday, I would have supported that excellent amendment which was adopted by the Senate. The adoption of that amendment improved the bill substantially. While I continue to disagree with certain provisions of the bill, I would have voted for final passage of S. 7 as amended by the Bumpers-Jackson-Nelson amendment.

Mr. President, I thank the distinguished majority leader for allowing me to pair with him on this issue. All of us are keenly aware of and thankful for his efforts to accommodate each of us. However, due to the change in circumstances on Friday, I ask unanimous consent that the Permanent Record of Friday, May 20, 1977, reflect that, had I been present, I would have voted in favor of final passage of S. 7, the Surface Mining Control and Reclamation Act of 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### MILITARY RECORDS PROVE THE WORLD WAR II WOMEN PILOTS ARE ENTITLED TO VETERANS' BENEFITS

Mr. GOLDWATER. Mr. President, it was my pleasure today to appear before the Senate Committee on Veterans' Affairs to testify on the bill I have introduced, together with 16 other Senators, to provide veterans benefits to the women pilots who served with the Air Corps during World War II.

The cosponsors of the bill include Senators RANDOLPH and HANSEN of the committee and Senators HATHAWAY, BENTSEN, WILLIAMS, SCHMITT, DOMENICI, NELSON, BAYH, HATCH, METCALF, BELLMON, MCINTYRE, DOLE, TOWER, and MCCLURE.

Mr. President, the case for these ladies is quite evident. To all intents and purposes, they were in the military. They were trained to be military officers and, after training, their duties were comparable to flight officers.

They were sworn in with the same oath of office as given male officers; they were treated in all illness by Air Corps flight surgeons; and they received disciplinary action for flying violations under the authority of the 104th Article of War of the Manual for Court Martial.

Other civilian organizations contributed to the war effort, but none of them can meet the same criteria as the WASP. In fact, some of the other groups were not even considered U.S. employees. For example, the merchant marine remained the responsibility of private shipping lines. Their members were covered by collective bargaining agreements with the private shipping operators. Congress determined by law in March of 1943 that the merchant marine were not to be considered Federal employees.

So unlike the WASP, the merchant marines were private employees. And, I should add, they were never destined to be militarized, because another fact which separates the WASP from all other civilian groups is that they were from the start of their program planned and scheduled to be militarized.

There was nothing secret about this. The women knew militarization was planned, and their training from the start included no less than 66 hours in military instruction. This military training was extended to 137 hours in March of 1944, and a special course was instituted at the Army Air Forces School of Applied Tactics, at Orlando, Fla., designed to give additional training to the WASP as potential officers. Any one who went through this training had to know they were about to become regular military officers.

Mr. President, the historical record presents documented proof that the WASP were "de facto" military officers. Numerous official memorandum, directives and regulations disclose the true status of the WASP as part of the military organization.

Now, I have summarized the pertinent facts regarding the WASP from these official records and incorporated them in my statement before the Veterans' Affairs Committee this morning. In order that my colleagues may know more about the WASP, and in order to disprove the emotional and totally misinformed criti-

cisms which some persons have raised against these ladies, I ask unanimous consent that the text of my statement be printed in the Record.

There being no objection, the testimony was ordered to be printed in the Record, as follows:

TESTIMONY OF SENATOR BARRY GOLDWATER OF ARIZONA BEFORE THE SENATE COMMITTEE ON VETERANS' AFFAIRS, MAY 25, 1977

Mr. Chairman, I am delighted that you are holding hearings today on the bill I have introduced, together with 14 other Senators, to provide veterans benefits to the women pilots who served with the Air Corps during World War II.

I believe that after you know the proven facts about the role these women played in the war effort, the admission standards they had to meet, and the military regulations they served under, you will agree they were, to all intents and purposes, in the military and are entitled to benefits as veterans.

#### I. ORIGINS OF THE WASP

Serious efforts to establish the World War II women's pilot program began at the direction of President Roosevelt himself. On July 3, 1941, Miss Jacqueline Cochran, winner of several aviation awards, lunched with President and Mrs. Roosevelt and it was then suggested that she "go over to the AAF and determine if women pilots could not be usefully employed" in the United States. The President said he would make the arrangements for such a meeting.

A few days later, "by direction of the President," Miss Cochran met with General "Hap" Arnold, Chief of the Air Corps; Colonel Robert Olds, who was then head of the Ferrying Command; and Mr. Robert Lovett, the Assistant Secretary of War for Air. The purpose of the meeting, as it is recorded, was to consider "the possibilities of utilizing women pilots to ferry primary, basic and advanced trainers from factories to Air Corps stations, thus releasing combat pilots for more important duty."

Mrs. Eleanor Roosevelt openly promoted the use of women pilots by the military in several of her national newspaper columns.

On September 3, 1942, General Arnold issued formal orders directing that the details be worked out for using women pilots "to the maximum" in the ferrying of military aircraft. The plan evolved in two separate steps.

First, recruiting was started almost immediately of experienced women pilots to serve with the Air Transport Command. This was the Women's Auxiliary Ferrying Squadron (WAFS).

Second, a training program was established for women pilots with less flight experience than the women who joined the WAFS. This program was known as the Women's Flying Training Detachment.

These girls entered training at Houston, Texas, on November 16, 1942. Early in 1943, the bulk of the training was shifted to Avenger Field at Sweetwater, Texas.

On August 5, 1943, the two programs were merged into one, and this is when the organization took on the name of WASP—Women Air Forces Service Pilots.

#### II. OBJECTIVES OF THE WASP

General Arnold summed up the objectives of the WASP in a memorandum dated November 3, 1942, informing the Flying Training Command as follows:

"Contemplated expansion of the armed forces will tax the nation's manpower. Women must be used wherever it is practicable to do so. It is desired that you take immediate and positive action to augment to the maximum possible extent the training of women pilots. The Air Forces objective is to provide at the earliest possible date a sufficient number of women pilots to replace men in every non-combatant flying duty in which it is feasible to employ women."

On March 22, 1944, General Arnold testified before the House Committee on Military Affairs in support of legislation providing for the appointment of women pilots as officers in the Air Corps. "Right at this moment," he said, "the Army is short over 200,000 men."

He added: "[W]e must provide fighting men wherever we can, replacing them with women wherever we can; whether that be in the factories, ferrying aircraft across the country, towing targets for ground troops to shoot at, or any place where we can release men and make available the younger men to actually do the fighting."

To illustrate how serious the problem was, General Arnold told the Committee that, on account of the manpower shortage, the Air Forces had returned to the Ground and Service Forces 36,000 highly qualified men who were needed to go into fighting units immediately.

### III. WHAT DID THE WASP DO?

To satisfy the national need, 1,102 WASP were assigned to operational duties. This includes 1,074 WASP, who graduated from training, and an additional 28 WAFS, who entered upon operational duties without taking the training course.

These women performed every kind of flying operation possible within the Continental United States and Canada. They were used in the Air Transport Command where they flew 77 types of airplanes from the factories to the modification centers, to the depots, and to other destinations within the United States. They were used to tow targets for ground troops to shoot at and for airplanes to shoot at. They were used in the weather wing as utility pilots. They did tracking and searchlight missions, simulated strafing smoke-laying, radio control flying, basic and instrument instruction, and engineering test flying.

The WASP flew, subsequent to graduation from training, sixty million miles for the Army Air Forces, or about 2,500 times around the earth at the equator. This service included 30,000 hours in the multi-engine B-26 and B-29 Super Fortress.

### IV. HOW WELL DID THE WASP DO?

The WASP, according to the overwhelming opinion of station commanders where they were on duty, were as efficient and effective as male pilots in most types of duties and were better than men in some instances, such as towing targets for gunnery practice.

According to official Air Corps medical studies, the women pilots had equally as much endurance and stamina as male pilots did. In fact, the cases of flying fatigue were so outstandingly low and so far below the rate among men pilots, that many men refused to believe it. But the truth is many of the WASP flew as much as 70 hours per month, with no complaints except they wanted to fly more.

Official records of the Statistical Control Division of the Air Training Command show that in July of 1943, the average number of ferrying hours for each woman was 52. Male pilots were averaging only 35 hours a month in the same time period.

Of 1,830 women who were accepted for pilot training, two-thirds passed the program. The elimination rate for women was lower than among male cadet pilots.

For the entire WASP program, the all-accident rate was slightly above the male all-accident rate during the same years. But accident rates are always higher in the early stages of any flying program. The development stages for the training of male pilots had already been completed. If we compare the development months of the male program with the comparable period of the WASP program, the all-accident rate for women was lower than the rate for men in domestic flying.

Of all airplane accidents during the life

of the WASP program, 9% of the total were fatal. Among male flyers during the same period, 11% of all domestic accidents were fatal.

### V. WERE THE WASP SUBJECTED TO DISCRIMINATION?

Now, I do not want to overdo this aspect, but it is a fact that these girls did bear extra burdens simply because they were women. The very reason they were not militarized was their sex. The law allowed the Air Corps to commission men as flight officers, but not women.

On January 11, 1944, the Deputy Chief of Air Staff asked the Assistant Chief for Personnel to look into the legality of commissioning women pilots directly into the Army on the basis of their qualifications as service pilots. On January 13, 1944, the official reply was given. It was negative. A decision of the Comptroller General stated that the authority extended only to men and could "not be regarded as authority for commissioning women as officers in the Army of the United States."

Now, if you ask me why these ladies are entitled to veterans benefits, while some other civilian groups are not, there is one reason. Women could not be commissioned as pilots because they were women. It is unfair for their country to continue to punish these women by blocking veterans benefits for them when the only reason they were not taken into the service at the time was their sex.

This is not the only instance of sex discrimination against the WASP. In October of 1943, an investigation was made by the Air Inspector of complaints that discrimination was occurring against the WASP at various ferrying bases in an attempt to discredit the women pilot training program. The Air Inspector's report dated November 22, 1943, concluded that women pilots at the Second and Fifth Ferrying Groups were being discriminated against. His report found that the attitude and method used by male pilots in the conduct of flight checks were "obstructive and unfair." The Inspector determined that some check pilots were resentful of the women's pilot program and tended to favor the elimination of the WASPs.

There are other documented reports that women pilots were frequently confronted by hostility from some male pilots and commanding officers, and it is much to their credit that the women achieved an outstanding record in the face of difficulties which only they, as women, encountered.

### VI. DID THE WASP EXPECT TO BE MILITARIZED?

One of the distinctive features of the WASP which separates them from all other civilian groups who served with, but not in, the Armed Forces during World War II, is the fact that they were scheduled for militarization from the start.

The official Army Air Forces historical study of the WASP, entitled "Women Pilots with the AAF, 1941-1944," states that "the AAF early recognized the advantages of specific legislative authority for the WASP program and sought for many months to obtain Congressional approval of military status for women pilots. . . ."

The same study reports: "From the first stages of the program, [the AAF] had been planning for the day when the WASPs could discard their civilian status and emerge as full-fledged members of the Army of the United States."

Official records show that soon after the women pilot program was activated, the plans for militarization were underway. On December 3, 1942, only three months after recruitment of WASPs began, Major General George Stratmeyer, Chief of Air Staff, held a conference at which he instructed the Director of Individual Training to prepare a plan for Training women pilots under which

they would be brought into the military service. In addition to these parties, the conference was attended by Brigadier General Harold George, Commanding General of the Ferrying Command; Lieutenant General B. K. Yount, Commanding General of the AAF Training Command; and Miss Jacqueline Cochran.

Air Corps files also disclose that in early 1943, General Arnold sent to Brigadier General M. G. White, The Assistant Chief of Staff, G-1, a draft of a memorandum addressed to General Marshall requesting that legislation be initiated to militarize women pilots and to incorporate them into the Army Air Forces.

In fact, an AAF Memo dated June 28, 1943, which refers to the newly created Office of Special Assistant for Women Pilots, specifically identifies one of the duties of the Director as being to "draw up plans for militarization."

There were disagreements over what type of militarization was to be used. Some Air Corps officials wanted inclusion of women pilots in the Women's Army Corps (WAC). Others proposed the direct commissioning of women pilots in the Air Corps. There was general agreement, however, on the need for militarization.

On September 30, 1943, Representative John Costello introduced the first of the WASP militarization bills. On February 16, 1944, Secretary of War Henry Stimson sent a letter to the House Committee on Military Affairs recommending enactment of the bill. The fact that the War Department publicly supported passage of the bill in early 1944, just 17 months after the women pilots program began, is additional evidence that the women expected to be taken into the military. Unfortunately, that bill was defeated because of reasons which have left the impression of sex discrimination.

Another indication that the women expected to become officers is that their training, from the start, included military instruction. This covered courses in military courtesy and customs, Articles of War, the safeguarding of military information, drill and ceremonies, Army organization, military correspondence, and chemical warfare.

As a result of a directive from Army Air Corps Headquarters, dated March 6, 1944, this military training was extended from 66 to 137 hours. In fact, a special course was instituted at the Army Air Forces School of Applied Tactics at Orlando, Florida, in the Spring of 1944, designed to give training to WASPs as prospective officers. During a period of about five and one half months, 460 WASPs were trained at this school so that they could take care of duties as officers.

### VII. WOULD THE WASP BILL SET A PRECEDENT?

With the above background, we now reach the question: Why should the WASP receive veterans benefits and not other civilian groups who served during wartime?

The answer is simple. The WASP were trained and treated as military officers. The other groups were not.

The WASPs were scheduled for militarization from the start. Other civilian groups were not.

Mr. Chairman, WASPs had to meet the physical standards set by Army Regulations (Form 64). In general, WASP trainees received about the same training as did the flying cadets.

All flying cadets, male or female, after graduation went to transition training in the type of aircraft they were flying. The only difference was that the males went to transition training schools while the WASP were expected to make the transition in the airplane when first required to fly it.

Ferrying Division directives issued in April of 1943 specifically provided that women pilots were to be given transition to multi-engine planes and high-powered single-engine craft "under the same standards

of individual experience and ability as apply to any other pilot."

All check rides were given by Army Air Corps officers, using the same service-pilot standards that applied to men. This fact alone distinguishes them from male contract pilots and other civilian groups.

Women pilot trainees received about the same compensation as male flying cadets, except for not receiving insurance benefits.

Trainees were required to live in barracks on the training base. They were required to follow as closely as possible the schedules established for male flying cadets and other Army Air Forces bases. Regular inspections were made by the AAF.

The WASP were treated in all illness by AAF flight surgeons. Dentists from an Army Air Base hospital visited the training base regularly. While they were in the service, the WASP were entitled to the same military medical care as cadets and military pilots were.

After graduation, uniforms were provided the WASP as in the case of all other flying personnel. They were expressly required by AAF regulation 40-9 to wear this uniform.

After assignment to operational duties, women pilots received slightly less than the pay of a second lieutenant on flying status. I say less because they had no quarters and meals allowances. Nor did they enjoy the right to advancement in pay depending upon their length of service.

These pay conditions, scaled to be comparable with a flight officers pay, distinguish the WASP from other civilian groups. They did not receive the higher salaries that civilians usually did.

The WASP were comparable to military officers in many other respects. They were sworn in with the same oath of office as given the male officers. They stood formal inspection. They received officer training. They could not leave their base without a pass. And they were on duty 24 hours a day by written military memorandum.

The WASPs understood that they would be disciplined the same as other officers. They were issued copies of flying safety and court martial sentences for violation of flying regulations. Copies of their receipts are on file.

They received disciplinary action for flying violations under the authority of the 104th Article of War of the Manual for Court Martial. In fact, WASPs served on flight safety boards convened to punish other military pilots.

Also, there are on file numerous official orders requiring WASPs, similar to male Air Force pilots, to proceed to specific places at specific times and to perform specified duties.

#### VII. SUMMARY

Mr. Chairman, each and every one of the facts I have revealed today about the WASPs are documented on the public record and in official materials located in the historical archives of the Air Force.

These facts totally refute the unsupported and emotional criticisms made by opponents of the bill.

The truth is the WASPs were, to nearly all intents and purposes, in the military. They operated hazardous and complicated military equipment and sometimes were used as examples by the Air Corps when headquarters wanted to prove to men that certain new aircraft coming off the production lines could be operated safely. By having women fly the same planes without mishap, the men were shamed into operating aircraft which the rumor mills had falsely maligned.

Piloting military aircraft across the country for thousands of miles entirely on their own was dangerous and grueling work. Thirty-eight WASPs did lose their lives serving their country.

Their government did not even let the families of these dead girls display gold stars. Nor did the government give burial allowances or insurance payments to surviving dependents.

My argument is that the WASPs are entitled to veterans benefits because of the nature of their duties. These benefits should not be given merely to offer recognition to the women. The benefits are due to them because they were a part of the military.

They did expect to be militarized. They knew militarization was planned and that steps were being taken to that end. They were not subject to the draft, yet they volunteered for low pay, long hours and military regimen.

Other civilian organizations contributed to the war effort, but none of them operated under the military pay system and the military disciplinary system. None of the others, who remained civilian, were recommended for militarization by the War Department.

One final note, Mr. Chairman, the bill will not be expensive. The Veterans Administration estimates the cost at about \$87,000 a year.

Mr. Chairman, I urge your Committee's speedy and favorable action on the bill.

#### SCIENCE IN THE WHITE HOUSE: A NEW START

Mr. STEVENSON. Mr. President, Lewis M. Branscomb, formerly head of the National Bureau of Standards and currently vice president and chief scientist for the IBM Corp., has recently made a perceptive and thoughtful contribution to the discussion of how this Nation can better manage its scientific and technological resources. His article, "Science in the White House: A New Start," appeared in the May 20, 1977, issue of Science magazine.

Dr. Branscomb suggests how science and technology can provide for a better future and how the U.S. scientific and technological community can respond more effectively to national needs. Areas he identified as meriting priority include:

First. The necessity to develop a national strategy for insuring the adequacy and proper use of energy and other material and resources;

Second. The need for improved management of the Government's research and development activities, including major responsibility for management placed with the Office of Science and Technology Policy;

Third. The need to understand more fully how technology contributes to the national economic health;

Fourth. The consolidation of technical agencies such as the National Science Foundation, the National Bureau of Standards, and the National Aeronautics and Space Administration; and

Fifth. The need for long-term institutional support focused on technical social and economic research.

Although there are many points of views on these issues, Dr. Branscomb's article is a valuable contribution to the debate.

Mr. President, I ask unanimous consent that Dr. Branscomb's article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD as follows:

#### SCIENCE IN THE WHITE HOUSE: A NEW START (By Lewis M. Branscomb)

Many scientists believe that all society should expect from science is access to the knowledge and understanding that comes from searching for truth. Certainly science has been given too much credit—and too

much blame—for the uses of technology and their effects on the well-being of mankind. To be true to its own principles and promise, the world scientific community must sustain its commitment to the fullest possible understanding of man and nature. But what assurance can we have of the continued commitment of the public and its political leadership to the health of the scientific and technical enterprise?

The commitment of science to the search for truth does not free the scientists from the obligation to participate in the process through which scientific knowledge is applied. Scientists should, of course, be wary of imposing their values on others, of assuming that they know the right path for mankind to follow. But we scientists must realize that hope for a better life for future generations depends on public conviction that this hope is realistic, that there are alternatives to a Malthusian destiny. Thus the values of contemporary society are as much a consequence as a source of the commitment of science to human betterment.

American science continues to have much to contribute to the well-being of humanity. The challenges of energy, raw materials, environment, health, jobs, and improving the quality of life call for imaginative new solutions. Our industrialized trading partners pay us the compliment of emulating our tradition for innovation. The Japanese and West Germans have been particularly successful, and this success is a matter of great national pride. Communist nations place a high value on developing relationships through which they may share in American technological experience. The developing nations are particularly insistent on accelerating their own ability to absorb the science and technology on which their own development so heavily depends.

Yet today the spirit of conviction and commitment that is necessary to mobilize American science and engineering for constructive ends seems to be in a state of suspended animation. The dominant mood of the technical community is one of uncertainty, indeed of confusion. It saps the will and nourishes the doubts about the efficacy of science, doubts that are nurtured by examples of technological mismanagement.

The scientific community looked to the events of 1976 to put the Nixon years of indecision and mistrust behind us and mobilize a national effort to address the future with a new sense of confidence. Many scientists naively wondered why questions of scientific and technological strategy for the nation played virtually no part in the recent political campaign for the presidency. Many expected a President who had been a graduate student in nuclear engineering to move swiftly in filling the positions of Science Adviser, director of the National Science Foundation, and administrators of the National Aeronautics and Space Administration and of the Energy Research and Development Administration. A chance remark to the press by Burt Lance, director of the Office of Management and Budget, that the new budget might be reduced in the R & D area to provide funding for social programs was amplified out of all proportion to its significance by a nervous technical community. The President has been busy with problems of greater political importance. But the scientific community is eager for a clear signal from the new Administration on its attitude toward these three concerns: the efficacy of technology to meet human needs, the strength of the American scientific and technical enterprise, and the willingness of political leaders to mobilize this strength to that end.

No doubt, that signal will be forthcoming. But the process of remobilizing the American scientific and technical enterprise will be more difficult, will take longer, and will call for a more sophisticated under-

standing of political realities than most American scientists are prepared for.

Let me then summarize the four major themes of this discussion. Do science and technology in fact offer a realistic hope for a better future for mankind? Is the American scientific and technical community ready to respond? How should we understand the hesitation of political leadership to mobilize this capability for constructive purposes? How can the creative, pragmatic, and traditionally optimistic energies of the American technical community become fully engaged with the major issues of our times?

#### ARE SCIENCE AND TECHNOLOGY A CONSTRUCTIVE FORCE?

The relation of science and technology to prospects for mankind was assessed last year through a project of the National Academy of Sciences. Organized as part of the academy's activities in celebration of the Bicentennial of the United States of America, 17 scientists, engineers, and scholars from eight nations gathered at Bellagio, Italy, to prepare a prospective look at science, technology, and society. The report of this Bellagio conference<sup>1</sup> was basically optimistic.

The conference reached the conclusion that it is probably within the technical and financial capacity of the world's nations to address the problems of food, population, and health in a timely manner, without the necessity of reducing the quality of life that may be enjoyed within any nation. The limits on total energy and material supply are not inexorable—at least within the foreseeable future. The "pie" is not of fixed size. An increasing share to the poor need not reduce the quality of life available to those who are more comfortably fixed.

Increasing food production in the world by a factor of between 2 and 4 by the end of the century can be accomplished, but it will require vigorous application of agricultural science and technology and associated economic infrastructure development. Similarly, the coupled energy and materials problem will call for a much wider spectrum of technological choice than is now available. While new energy sources will have to be brought into being, and present sources made safer, cheaper, and more environmentally acceptable, a major part of the energy problem must be addressed through conservation. To many, this means demand reduction, doing without something to which we have become accustomed. No doubt there is much wasteful use of energy, and this waste can easily be curtailed. But major opportunities lie in restructuring the uses to which different forms of energy are put, for the purpose both of optimizing energy strategy and raw materials strategy. Science provides an almost endless range of possibilities for reconfiguring or substituting materials, for utilizing different grades of energy, and for trading off energy and materials choices against one another.

All of this will require a vigorous range of technical activities to develop the necessary options. But on top of that requirement, one must recognize that each of these technological options is likely to be, at least when first introduced, more expensive than the traditional technology it replaces. Thus, as one looks at the necessity for new technological alternatives, one finds that there will be a need for an additional increment of technical effort to reduce the cost impact of these more expensive technologies. Thus, every area of economic activity will have to be the target of innovative increases in quality, efficiency, and productivity to avoid inflation and sustain living standards. With such productivity increases, with energy conservation,

and with the use of alternative fuels and materials, we may be able to approach energy self-sufficiency and environmental quality without the kind of economic consequences to living standards that threaten the political will to persevere.

A similar argument can be made about the economic pressures that result from the public's desire to increase worker and consumer health and safety, to protect the environment, and to improve the quality of life generally. These goals, too, can most easily be met if the technological changes that they imply are accompanied by innovations that reduce their incremental costs.

I have given reasons why more, not less, science and engineering activity is needed—to create the alternatives for food, materials, and energy, to protect the environment and quality of life, and, through innovation, to reduce the cost of these alternatives. But there is a further reason, more important than the others—and that is to protect human society from catastrophic failures in the societal arrangements (systems) that will be devised as solutions to the first three problems.

The Bellagio study focused particularly on this issue—the need for protecting the resiliency of the world population. "Resiliency" is a technical term that refers to the ability of a system to find a new and satisfactory equilibrium point after it has suffered a serious perturbation. A resilient society is not immune to radical change. Indeed, it is through a lack of excessive rigidity that such a society demonstrates the capacity to accept change in order to remain viable. Too many of mankind's technological interventions with nature have been in the quest for stability, often achieved at the expense of future resiliency. A systems engineer would say that we must ensure that our social systems are resilient and have "soft failure" modes, that they do not collapse when unexpected events occur, but degrade gradually. Examples can be found in agricultural policy in relation to unanticipated changes in climate, or in relation to dependence on a small number of genetic varieties of food grains. Many examples come from the unanticipated ecological responses to selective uses of pesticides aimed at specific short-term problems. The most fundamental threat to resiliency is the quest for military stability through a policy of mutually assured nuclear destruction.

Coping with uncertainty, illuminating the consequences of technological choice, making public decisions in the absence of definitive scientific information—all place additional emphasis on the need for an aggressive mobilization of scientific and technical strength in America and around the world. Conventionally, science has been thought to be useful in proportion to the technological possibilities it creates. Today, science is more important and more frequently it is used as a means to understand the options and consequences associated with deployment of technology. Indeed, the one price that absolutely must be paid for the wide-scale use of science and technology for human betterment is the vigilance, the restraint, and, above all, the foresight to illuminate the paths ahead.

#### IS THE TECHNICAL COMMUNITY READY TO RESPOND?

What does it take to mobilize U.S. conviction that science and engineering can do more to solve world problems? Must we wait until we are fully persuaded that nations face certain starvation or catastrophe unless new solutions can be found? Whether the requisite positive measures are taken, of course, depends on a matter of national will in many nations and on the climate for international cooperation. But the place for us to start is at home. What of the fitness of the American scientific and technical enterprise to respond to these challenges?

On the positive side, we enjoy the largest civil research and development effort of any

nation on earth. In terms of total effort and in terms of leading contributions, our science is still the envy of the world. In spite of several years of alienation between government and universities, the university research community in America contains many scientists ready and eager to apply their skills to the dominant problems of the world society and to do so in partnership with the government. Others need to be encouraged. Despite the well-publicized conflict between economic and ecological interests, our appreciation for environmental impact and technology assessment is unique in the world. Where else would (i) a \$600-million hydroelectric dam be held up to protect an endangered 3-inch freshwater fish called the snail darter, (ii) a unique butterfly enjoy priority at the end of the main runway of the Los Angeles International Airport, and (iii) the sexual aspirations of a clam threaten the construction of a nuclear power station in New Hampshire? And no longer can anyone fault the current generation of students for their unwillingness to work within the American pragmatic tradition. One worries instead about the subordination of altruism to economic necessity as young people focus their attention on jobs.

On the negative side, while the scientific community is performing brilliantly in many areas, it is enjoying it less. During the recent presidential election campaign I received many letters from scientists. None of them complained about inadequate funding from the public purse. Virtually all of them complained of burgeoning administrative red tape and of an altered relationship with government science agencies that amounted in many cases to mutual suspicion bordering on hostility.

Adding my own interpretation to much that I heard and read, I conclude that the machinery of science and its support continues to turn; but those in control of the knobs have lost confidence in the justification for science programs and, however unintentionally, communicate that loss of confidence right down to the individual investigator. Science is being justified as applied research. Applied research is directed from Washington as though it were product development. Development activities are pursued by national laboratories and agency headquarters with inadequate provision for connecting them to the technology delivery system through which the public ultimately benefits. Industry, concerned that much government-sponsored activities is disconnected from the market mechanism, watches this process with considerable chagrin, for it raises public expectations of benefits that are almost certain to be frustrated. The result can only be a further loss of public confidence in science, industry, and government, a loss that none can afford.

The situation is particularly bad in the area of science for decision-making. Excellent scientific work can illuminate the future consequences of present choices. But we have few institutions within which all the appropriate skills can be directed at major problem areas with continuity of effort over the years. The government has available to it the volunteer efforts of National Research Council committees. But while they prepare excellent reviews of what is known, they do not perform the needed interdisciplinary research.

The most telling evidence of the lack of institutional development for separating scientific fact from fiction in the public policy area is the concern many scientists today hold about their colleagues' professional integrity. Technical expertise is increasingly suspect, as the public participation in technology policy debates increases. But that participation is necessary to create consensus and motivate public action. Lay participants are not a part of the peer group whose approbation is relied on by scientists to assure objectivity. In any case, those scientists who have chosen to look for per-

<sup>1</sup> A limited number of copies of the summary report were prepared and may be available from the National Academy of Sciences, 2101 Constitution Avenue, NW, Washington, D.C. Full publication is in preparation.

sonal satisfaction in social action instead of peer approval frequently provide justification for public skepticism about technical experts, or suffer disapproval of their colleagues simply for being visible. The necessity of debating the technical facts associated with public choice, and carrying on this debate through the media so that the public can participate, is clear. Unfortunately, the traditional mechanisms for preventing the contamination of scientific objectivity by ideology do not work well in the public policy arena. New mechanisms must be evolved to encourage the participation of well-qualified scientists in both professional and public debate, with broadening public participation, and with heightened standards of objectivity and accountability.

#### WHY DOES SCIENCE POLICY NOT RECEIVE HIGHER PRIORITY?

A third area of concern relates to political leadership and the relation of the scientific community to that leadership. Public policy issues cannot be resolved nor institutional problems addressed without leadership as well as public participation. Many, if not most scientists assumed that, in January 1977, the Executive Branch of government would pick up science and technology policy debates at the point that they were abandoned in 1973. There have been encouraging signs. In August 1976, President Ford implemented the statute reestablishing the Office of Science and Technology Policy (OSTP) and appointed H. Guyford Stever as Special Assistant to the President for Science and Technology. President Ford also left his successor with a federal budget in which a significant increase for basic science was a point of personal pride to the budget director, James T. Lynn. President Carter sustained this increase in his budget. Trained in science and engineering, he can bring to the presidency a special personal awareness of science and technology matters. Carter placed great emphasis during the campaign on the importance of competence in the management of the Executive Branch. A \$25-billion R. & D. segment in the 1977 budget will provide considerable scope for the exercise of technical management skills with which the President had been familiar during his naval career.

In late March President Carter nominated a distinguished and vigorous earth scientist, Dr. Frank Press, to serve as director of OSTP and as his Special Assistant of Science and Technology. But in some respects it is unfortunate that the President did not fill this position in December 1976 at the same time that he selected the chairman of the Council of Economic Advisors, the Special Assistant for National Security Affairs, and the director of the Office of Management and Budget. The Special Assistant-designate could then have participated earlier in the staffing of the science and technology policy positions throughout the government departments and specialized agencies.

One reason why science and technology policy matters have not been higher on the agenda for attention lies in the practical consequences of the recent campaign and election. In spite of what scientists want to believe about the importance and permanence of science policy in the White House, there is no well-established institutional tradition for the Special Assistant for Science and Technology to enjoy a significant role in the management of the federal enterprise. A stronger basis for this tradition resides in a few committees of the Congress, where a very substantial sophistication has developed in science and technology policy through the staffs of the House Science and Technology Committee and several of the committees of the Senate. These committees, plus the Technology Assessment Board that oversees the Office of Technology Assessment, not only kept the policy debate alive during the Nixon years, but actively advanced it in the course

of establishing a legislative basis for the OSTP.

However, a rather more fundamental effect is responsible for the reduced visibility of science and technology policy in political debate. This effect has to do with the maturing of technology issues as political matters. As the President gave public issues with which the scientific community is most concerned the priority of prominence in his policy, the technical details have become proportionally less visible, although no less important. For example, in the area of most vital concern to the future of mankind—slowing down the nuclear arms race and proliferation of weapons—the President has in fact given priority to a technical strategy of high promise. Nevertheless, such issues are now discussed in terms more familiar to the public and the political process.

Reading the diary<sup>2</sup> in which George Kistiakowski records the events of his 18 months as Science Adviser to President Eisenhower, one is struck by the fact that the Science Adviser in 1959 was concerned almost exclusively with military, atomic energy, and space matters. The one exception was the contamination of the cranberry crop, just before Thanksgiving, with a pesticide believed to be carcinogenic. In those days the scientific community was just beginning to work with the Science Adviser to attract the government's attention to civil matters such as the world food problem, the future supply of fossil fuel energy, the public health consequences of agricultural and industrial chemicals, and the opportunity for science and technology to improve human life in other spheres. It was not easy at that time to mobilize public attention and action on such matters.

Fifteen years later the situation is totally changed. The public has been convinced, and in every one of these areas there exists not only one or more specialized federal agencies, but also a plethora of special and public interest groups with competent lobbies. Thus, as has been said about wars and generals, the issues of energy, environment, health, defense, and the economy are now considered too important to be left to the scientists and the engineers.

While campaigning for the presidency, Carter organized a large number of task forces on issues. The energy, environment, health, defense, and economy task forces were staffed with many people whose principal interest was essentially political. These people were not simply panels of professional experts such as one might have found in the panels of the President's Science Advisory Committee in the 1960's. In addition, to these "issue-oriented" panels, there was a task force on science and technology policy. Inevitably, this residual topic of science and technology policy was bereft of much political significance. It came to be regarded as the aggregation of those scientific and technical matters that do not lie within the framework of one of the identified significant political issues of today's society rather than as an integral part of all of them. Thus, those concerned with science and technology policy came to be viewed simply as representatives of a scientific constituency, a constituency whose priority for attention lies pretty well down the list.

While scientists and engineers cannot claim all the credit, the fact that energy, environment, and health issues have been elevated from the sphere of specialized professional advice to government and established as mature political concerns of their own represents real progress. But it does not mean that these issues do not have substantial technical content.

<sup>2</sup> G. B. Kistiakowski, *A Scientist at the White House* (Harvard Univ. Press, Cambridge, Mass., 1976).

Instead, science and technology policy must now constitute the underlying technical strategy for finding long-term solutions to all the major issues of the day.

#### HOW CAN U.S. SCIENCE AND TECHNOLOGY BECOME MOBILIZED?

The Office of Science and Technology Policy can best serve the President by compensating for the short-term orientation of the White House and the agencies. Therefore, OSTP must reach beyond the framework of conventional political thinking and reflect a new awareness of how we must prepare for the future.

The new role for OSTP will be difficult. Today the government has less direct control over the technologies that matter to the public than it did over defense technologies in Kistiakowski's day. The private sector finances and conducts approximately 70 percent of the civil research and development in this country. The output of this research and development influences employment, productivity, and inflation, as well as all the problems associated with industrial activity. Because technological activities of public importance increasingly take place in the private sector, the government must look beyond its own research and development to obtain information about future trends and alternative technical directions. The social dimensions of civil technology activity almost always involve trade-offs between cost and benefits in which different groups of the population enjoy the benefits or suffer the costs. This aggravates the difficulty of resolving questions of risk assessment and impedes the process of rational strategy-making for the society as a whole.

Finally, a particularly difficult dimension of public policy-making results from the fact that, increasingly, public decisions will be based on predictions of risk that cannot be verified through empirical data. Impacts on nature of technological activity are initially difficult to detect when masked by the normal and unpredictable natural fluctuations. By the time these consequences have grown to the point that man-made influences exceed natural fluctuations, it may well be too late to mitigate irreversible effects. The injection of carbon dioxide into the atmosphere with a possible effect on climate is an example. In situations like this, it may be necessary to make very important decisions (such as whether to place primary reliance on coal as an energy source for the next 25 years) in the absence of empirical determinations of the consequences (in this case of increased concentration of carbon dioxide). In such circumstances, public decisions must be based on simulations, theoretical predictions, and sophisticated interpretation of statistics. The government is poorly equipped to make decisions on this basis, and the public is ill prepared to accept them. Even if the basis for decision is clear, it is a serious political challenge to persuade the public to forego substantial near-term benefits to reduce the likelihood of a theoretical disaster in the remote future.

If indeed we are convinced that the mobilization of scientific and technological capabilities can substantially ameliorate the threats to America's future and if the technical community stands ready to respond to that challenge, what is needed to make progress? Five areas of public policy need special attention.

(1) The fundamental necessity is a mechanism for generating national strategies for ensuring the adequacy and proper use of energy, of materials, and of the other resources and systems on which our national well-being depends. No single institution can possibly accomplish this task, although many people have proposed a fourth branch of government or other structural devices to address it. I believe we cannot look to one agency, to one congressional committee, or to one private body to generate such strat-

egies. Instead, we need to focus on the importance of strategy-making itself. To that extent a limited set of mixed public and private commissions established by the Congress with the cooperation of the Administration might serve a useful purpose. We must invent new mechanisms, compatible with our democratic political traditions, that permit the generation of a national consensus behind a strategy whose validity extends well beyond the time horizon of elected officials.

(2) The management of the government's research and development activities must be substantially improved. The OSTP has a crucial responsibility in this area. Today a large part of the R & D budget is frittered away on demonstration projects that teach us little about the elements of technical risk and also fail to demonstrate market acceptance or economic viability. Nevertheless, demonstration projects reflect the frustration of the Congress in seeking to broaden the political support for accelerated technology to meet public needs. For working with the private sector the government must develop better patterns that emphasize generating needed technologies within the industries that are expected to deliver their benefits to the public.

(3) High priority must be given to mastering the technological component of economic health. No other major industrial nation manages its economic affairs without a ministry for industrial and technological matters. In this respect functions and capabilities of the Department of Commerce need to be rethought. The department requires extensive upgrading of its capability to evaluate technological strengths and weaknesses in industrial sectors on a microeconomic level. In the absence of this capability, it will be difficult to generate any meaningful strategy for applying our technological skills to the generation of jobs, limiting inflation, and improving international competitiveness.

(4) The government should pull together its efforts to strengthen the national scientific and technological infrastructure, recognizing the crucial importance of basic research and the need to rebalance university research around rising technical opportunities and shrinking numbers of students. Serious consideration should be given to the organization of a national science and technology administration based on elements of the National Science Foundation, National Bureau of Standards, and National Aeronautics and Space Administration and deploying a pool of national laboratories and centers. Such a new agency would invest in science and engineering research and education and in applied research for basic technologies; it would provide a full range of scientific and technical services necessary to support the productive application of science and engineering in the private sector.

(5) Particularly urgent is the provision of long-term funding for research institutions that focus on the technical, social, and economic aspects of major public issues of high technical content. Two examples of such institutions are Resources for the Future and the International Institute for Applied Systems Analysis. Such research institutes should focus not only on the domestic aspects of environment, climate, agriculture, energy, and the like, but should cover the international aspects as well. Most important they should look 10 to 20 years into the future and attempt to provide a rigorous, documented basis for analysis of policy alternatives that will assure a resilient future for mankind.

These few examples suffice to indicate that the structural changes that are needed will not be easy to accomplish. They are unlikely to arise from the traditional governmental focus on short-term objectives. They will require initiative and leadership from the White House, and the informed consent of

the public, neither of which is likely to be effective without the active efforts and support of the technical community.

This effort we owe to future generations, for without it the promise of science may yield only bitter fruit.

#### PRELIMINARY NOTIFICATION— PROPOSED ARMS SALES

Mr. HUMPHREY. Mr. President, section 36(b) of the Arms Export Control Act requires that Congress receive advance notification of proposed arms sales under that act in excess of \$25 million or, in the case of major defense equipment as defined in the act, those in excess of \$7 million. Upon receipt of such notification, the Congress has 30 calendar days during which the sale may be prohibited by means of a concurrent resolution. The provision stipulates that, in the Senate, the notification of proposed sale shall be sent to the chairman of the Foreign Relations Committee.

Pursuant to an informal understanding, the Department of Defense has agreed to provide the committee with a preliminary notification 20 days before transmittal of the official notification. The official notification will be printed in the RECORD in accordance with previous practice.

I wish to inform Members of the Senate that such a notification was received on May 23, 1977.

Interested Senators may inquire as to the details of this preliminary notification at the offices of the Committee on Foreign Relations, room S-116 in the Capitol.

#### THE B-1 BOMBER

Mr. ANDERSON. Mr. President, on May 23 the Washington Star published a column by Robert R. Denny on American defense policy. The column struck a responsive cord in my mind.

In addition to neatly summarizing the case against the B-1 bomber, the column illustrates a point that has struck me several times during recent deliberations of the Armed Services Committee.

Our armed services appear to have an excessive attraction to highly sophisticated and expensive technology that exceeds the mission needs of our defense. Cheaper substitutes which can still accomplish the mission at a lower total cost are often shoved aside for development of the latest, most exotic and usually fantastically expensive new weapons system. Sometimes we find ourselves with prototypes of new weapons whose exotic quality is a marvel to behold while our combat troops on the ground in Europe lack sufficient reserves of basic conventional war material.

I hope the Members of the Senate will read the column, and I ask that it be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

#### DEFENSE NEEDS A PLOWHORSE, NOT B-1

(By Robert R. Denny)

I love the B-1 bomber because it's beautiful. Sitting on the ramp, it is a legitimate, monumental work of art whose design perfectly expresses an exciting function.

As an ex-pilot, I would dearly love to slide the throttles forward, pull the wheel back ever so slightly and let the needle-nosed airplane catapult me into that magic upper world of clouds and stars that grubby groundings never know.

But as a sane and sober citizen, a taxpayer and a former bomber pilot with a little knowledge of the capabilities of airplanes in combat, I have to turn my back on the temptress.

I do not think we should build the B-1 in quantity for four reasons: The cost of such a bomber fleet would be about half the total expense of the Vietnam war. The arguments advanced for the B-1 are flimsy. Its intended function can be performed better by something much cheaper. Finally, we need a totally different kind of aircraft to fill an urgent need.

The fleet of 244 B-1's requested by the Air Force is estimated to cost \$25 billion. But that's only the down payment. By the time training, replacement parts and other costs are added in, the figure will rise to more than \$100 billion. We can't afford it.

The Air Force says it needs the B-1 because it will take longer than a missile to get to its target. This extra time will provide "high visibility of national resolve" and allow "time for negotiation," the generals said recently in a syndicated news feature sent to thousands of editors. The argument sounds pretty silly when you consider that the B-1 has been designed to provide no visibility at all. Its function is to slip under the enemy radar at treetop level and make a sneak attack on Soviet targets.

(Ironically, the B-1's predecessor, the inglorious B-70, was supposed to fly too high and fast for the enemy to reach. That illusion died when a Russian missile shot down Gary Powers in his high-flying U-2 in 1960. The B-70 promptly joined the B-36 and B-58 in the white-elephant graveyard of Air Force Edsels.)

The B-1 function of streaking to the target underneath the radar can be performed by the cruise missile. Salvos of these little nuclear-tipped jet drones can be fired by any wide-bodied airplane that "stands off" well out of firing range. The Russians have nothing to counter them.

But the Russians do have something else that's giving our strategists nightmares. It's an old nightmare that threatens to turn into solid, fearsome flesh some morning just before dawn.

The specter is a sudden tank invasion of Europe. More than 100 divisions are poised on the Soviet border—far more, as President Carter said after his inspection of NATO, than "defense" requires. A less diplomatic statement was made recently by retired Marine Gen. Lewis Walt. While reasonable men may find it easy to disagree with Walt's fulminations on amnesty, Vietnam and the volunteer army, his expertise on military hardware has to be respected.

He believes that Russian tanks could punch across the border in a dozen places and take Western Europe in two weeks. Other military men nod fearfully in agreement.

What would stop such an onslaught? Tactical nuclear weapons? Not when the enemy has penetrated your allies' cities and towns. Our own tanks and artillery? Our tanks are outnumbered three to one; our artillery by six to one. Fast-flying fighter-bombers? They go too fast to lock onto low-silhouette targets. Helicopter gunships? They're useful but they're terribly vulnerable to the mobile missile-launchers and rapid-firing cannon platforms that accompany the Russian tanks.

What remains? The Air Force has found a near-ideal weapon to stop the tank. A throwback to World War II, it's a slow, highly maneuverable single-seat airplane called the A-10. It's so heavily armored that a Russian cannon shell will bounce off its cockpit.

Sliding along the ground behind hills and buildings, it's an almost impossible target for fast, high-flying fighters. And—shades of the old West—the bulky airplane is, quite literally, built around a 20-foot-long, seven-barrel Gatling gun. This monster can fire 70 big rounds of 30mm. cannon shells per second and punch through any tank armor.

We have a handful of these tank-killers now and could usefully spend some of the B-1 money on producing many more.

The B-1 is a racehorse at a time when we need plowhorses. It is time to give up the wild blue yonder for the dim and dubious battle down below.

#### ADDITIONAL FEDERAL JUDGES

Mr. CANNON. Mr. President, I am pleased that the full Senate enacted important legislation dealing with the tremendous workload facing Federal courts. S. 11, the omnibus judgeship bill, creates an additional 146 Federal judgeships for Federal district and appellate courts.

I can tell my colleagues that these additional judges are very much needed in my State and the ninth circuit of which Nevada is a part. S. 11 provides for 1 additional Federal district judge for Nevada and 10 additional judges for the ninth circuit. Those who followed Judiciary Committee hearings and are familiar with the workload of the Federal courts, know that the ninth circuit is one of the busiest courts of appeals in the Nation.

For some time I have felt that Congress needed to act to provide additional Federal judges to keep pace with the growing Federal caseload. It was encouraging to see that the new administration and the Justice Department actively supported this legislation to create these needed positions. In my view the only effective way to go about reducing the tremendous backlog in Federal courts is to provide the necessary manpower to handle the workload. We simply have to recognize the dramatic increase in the number of cases reaching the Federal courts and the fact that Congress has not created any circuit judgeships since 1968. The last increase for district court judges was in June 1970.

In approving this bill the Senate acknowledges the urgent need for these additional judgeships as well as the rights of those who must depend upon Federal courts for a legal remedy. This legislation will aid considerably in reducing the tremendous backlog which often results in the type of frustration which causes many to abandon going into Federal court.

#### THE CLASS OF 1977—A RENEWAL OF CONFIDENCE IN AMERICA

Mr. HUMPHREY. Mr. President, on May 21 I had the honor of participating in commencement exercises at Assumption College in Worcester, Mass. My remarks to the 425 degree recipients, their families and friends focused on the great hope and promise that America is, despite the troubles of the past and the challenges of the future.

I observed that the personal awareness of our national institutions, our social and political process, of most of our graduates is about 8 to 10 years.

During that time our Nation has suffered a series of traumatic experiences—recession, Vietnam, and Watergate, to name a few.

Against this background, the tough and complex problems that confront America sometimes appear overwhelming. It is no wonder that optimism and confidence are scarce in our Nation today.

However, I reminded these young people of some of the problems that have faced other generations of young Americans, including my own. And, I concluded that each generation has faced up to its own crises because the only other option was to give up. Americans are not quitters. They never have been and this generation is no different.

We will continue to "muddle through," to make progress toward our ideals and our goals, toward the promise of America.

I concluded my remarks by noting that we all live by hope. We do not always get all we want when we want it. But we have to believe that someday, somehow, someday it will be better and that we can make it so.

Mr. President, I am convinced that young Americans have not given up the values and ideals that have made this country great. They are not about to throw in the towel. There is nothing in their character that indicates to me that we have educated a generation of quitters. They will work hard, pragmatically, to move our country closer to the achievement of its promise to all of us and to the world. I return to the Senate uplifted and with renewed confidence in our future after being with the class of 1977. I thank them for this opportunity to renew my faith in America. I am grateful to all those at Assumption College for making the 1977 commencement such a great day.

Mr. President, I ask unanimous consent that my commencement address at Assumption College in Worcester, Mass., on May 21 be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR HUBERT H. HUMPHREY, COMMENCEMENT ADDRESS, ASSUMPTION COLLEGE, WORCESTER, MASS., MAY 21, 1977

It is a privilege for me to be here with you today to participate in your Commencement.

Whenever I speak at a Commencement I recall the advice given to the Georgetown University graduates a few years ago by Bob Hope. As he looked out on the bright young people before him, contemplated the great challenges that confronted them, and the great promise the future held, he said:

"My advice to you graduates about ready to go out in the world is this—Don't do it!"

Seriously, I have known of Assumption College and its reputation for quality education for many years. As a former professor at a similar-sized private liberal arts college in Minnesota, I also am aware of the special kind of educational experience you offer to your students and I value it greatly.

Assumption also has an outstanding record of achievement in a field that is very close to my heart and a major element in my efforts throughout my public career—Social Rehabilitation. As a national center of excellence in Social Rehabilitation, you have made an important contribution in making whole and healthy, once again, lives that have been

shattered by the tragedy of crime, delinquency, physical and mental handicaps, and the abuse of drugs and alcohol.

And, your leadership in building a more solid base of mutual respect and understanding among people with differing religious beliefs also deserves public recognition. For as we have seen in Northern Ireland, Nigeria, Lebanon and elsewhere in recent years, tolerance and respect for those with other creeds is essential to liberty and freedom in a democracy.

Finally, I want to thank Assumption and Dr. George Doyle for the outstanding work he has done for me and the Joint Economic Committee of the Congress. His work has helped to open our eyes to the changes occurring in China and their implications for the United States. And, in a more recent study for the JEC, he has drawn our attention to the threat to our competitive free enterprise system that exists because of our neglect of the needs of our smaller businesses.

Commencement is one of those rare occasions when a speaker is expected to focus on the future—your and our nation's. And there is no subject I would rather discuss, particularly with young people. So let us think about the future for a few minutes today and reflect upon our most reliable guide to it—our past and present.

For most of you graduating today, your personal awareness of our national institutions, our social and economic problems, and our political process goes back roughly eight to ten years. And, during that time our nation has suffered a series of traumatic experiences. These include:

The worst recession since the Great Depression,

The constant world-wide assault on democratic institutions and human rights, which has made democracy an endangered species,

A long, divisive, tragic and unpopular war. Corruption in government, industry and finance.

The forced resignation of a Vice-President of the United States and of a President of the United States,

And much more.

Against this background, the difficult and complex problems that confront America and the world sometimes appear overwhelming—like a tidal wave. Is it any wonder why we seem confused, uncertain and bewildered. Here are but a few questions that keep surfacing.

How will we maintain and improve our standard of living in a world ever more limited in energy and material resources?

How will we provide rewarding work at decent wages to all of those who need it?

How will we meet the requirements for food for an ever more heavily populated world?

How will we meet the need for good housing, quality health care, and better educational opportunities without producing a raging inflation that destroys the living standards so many have worked so hard to achieve?

How will America preserve for its children and grandchildren the fragile beauty and priceless value of our environment?

How will we use our strength in the world to prevent nuclear holocaust and to reduce the unjust distribution of the world's abundance between nations?

And, how will we assure that the moral principles and social values that have held our families, our communities and our nation together for so long will provide the sound foundations needed for a stable society in a rapidly changing world?

Confronted with these problems, and mindful of our recent experience, it is not surprising that optimism and confidence are rather scarce in America today.

And, when things go wrong, we always hear from those who call for a totally new

and different way—a quick and sure fix. In fact, what is needed is a restatement and renewal of our basic and time tested values—personal integrity, human compassion, truthfulness, public trust, pioneering, hard work and perseverance.

So before we decide to give up on "government by the consent of the governed" or on "the promise of America," consider Historian D. W. Brogan's citation of the contrast between democratic government and the non-democratic. The latter he observed, "is like a splendid ship, with all its sails set; it moves majestically on, then it hits a rock and sinks for ever. Democracy is like a raft. It never sinks, but damn it, your feet are always in the water."

Let me remind you of a little history. I think there is a convincing case that our experience is on the side of the optimists. It has never been easy and it never will be! And, the "good old days" were never really that good!

Thirty-eight years ago I donned a cap and gown and marched to the podium at the University of Minnesota to receive my bachelor's degree.

The future we faced was filled with foreboding and our nation faced incredible problems. Take a look at these problems just for openers.

Hitler was flexing his inhuman muscles in Europe, and the prospect of world war was real and present.

The nation was bitterly divided between those who said Europe's problems were its own and those who felt our survival as a democracy was at stake.

America remained in the grips of the Great Depression with an unemployment rate of over 17 percent, millions of people out of work, and an uncertain prospect of economic recovery.

At least a third of our nation was "ill-fed, ill-clothed and ill-housed."

Racial injustice was a fact of life for millions of our citizens, and religious bigotry was widespread in our land.

The opportunity to own your home, to send your children to college, to receive the best in health care, and to live a secure old age was limited to the fortunate few.

That's the way it was, and some of my classmates felt overwhelmed by them. They seemed to share the opinion expressed by the British novelist and skeptic Aldous Huxley when he observed:

"I have peered into the future, and it won't work!"

But most of us realized that our problems simply would not go away. And we were unwilling to live with the consequences of ignoring them.

I am sure you would agree that our generation was no more energetic, no more idealistic, no more courageous, and certainly no better prepared to deal with our challenges than you are with yours. We realized that our only option was to confront our challenges and to overcome them.

Every generation of Americans has faced up to its own crisis. We never have been a nation of quitters, and I see nothing in the character of this generation that makes me believe we have changed. Our history is filled with trouble, disasters, violence, corruption, war and struggle.

In the very beginning of our history, many of George Washington's troops at Valley Forge simply packed up and went home. The first Chief of Staff of the U.S. Army was in the pay of the Spanish Emperor. At the same time, there were citizens who refused to pay their taxes. The movement for secession was underway virtually at the same moment that America was born. The negotiators of the treaty to end the war with Britain were stoned when they returned home.

And talk about corruption. Just review the history of the 1870's and 1880's. This was a period of unprecedented plundering of public

purse and public domain. The despoiling of our natural resources, the growth of unrestrained monopoly, and the exploitation of our working people, including child labor, was a national disgrace.

Imagine the life or death problems that faced the first settlers in the Massachusetts Bay Colony.

Imagine the fear and uncertainty of young people who came of age when Civil War threatened to rip us apart.

Imagine the trauma that plagued every new wave of immigrants who came to our shores to seek a better life for themselves and their families.

But, in every instance Americans have persevered, and America has been better for it. We always have managed to cling to our ideals while working pragmatically for progress toward their achievement. We have, as the British say, "muddled through"—by trial and error—to become a better nation. We have always been inspired by dreams and hopes—and blessed with resources and a vital, energetic, restless people.

Every generation of Americans has maintained its commitment to achieving our nation's goals. And each generation has moved us closer to fulfilling the promise of America—a life with dignity in the pursuit of happiness for all our citizens in a free society.

Let me remind you of some of the progress we have made.

In 1939, when I received my degree after being forced by the Depression to leave the University for six years, only eight percent of our 23 year-olds had graduated from college. Today nearly 26 percent of this age group have done so.

In 1939, you could expect a new son or daughter to live for 62 years. Today their life expectancy is over 73 years.

In the 1940's and 1950's we debated the possibility of a strong national Civil Rights policy. Today we have it.

For decades we bemoaned the fate of the hungry child and the shamed parents of such deprived children. Today our Food Stamp and feeding programs for young and old have eliminated any excuse for such suffering and indignity.

For decades the retarded and mentally ill were closed off from society and institutionalized in human warehouses. Today these individuals are being educated, trained and brought back into our communities, and our families where they belong.

For years we struggled to assure that poverty and old age would not prevent our people from receiving needed medical care. Today Medicare and Medicaid have provided a solution.

For many years we worked to devise a system to reduce the chances of nuclear or conventional war. Today we have made progress by negotiating a Strategic Arms Limitation Agreement, a Limited Nuclear Test Ban Treaty and a Nuclear Non-Proliferation Treaty.

These are just a handful of indicators of the distance we have come. Certainly, many of these initiatives require improvement. But we have made progress and our nation is better.

There is good reason to be positive, even optimistic, about your future and that of our nation. True, America is not perfect, we have our problems, but as long as we have the courage to recognize them, we can correct them.

The true test of the strength of our democracy is our willingness to look at ourselves in the mirror, acknowledge that the dirty face we see is our own, and then clean it up. Remember, the only people who cannot be self-analytical or self-critical are the weak.

Adlai Stevenson put it very well when he said, "Democracy is not self-executing. We have to make it work, and to make it work we have to understand it. Democracy's need for wisdom will remain as perennial as its

need for liberty. Not only external vigilance but unending self-examination must be the perennial price of liberty; the work of self-government never ceases."

America has not failed, we have not lost our way. We are just continuing to try our best to find a better way.

The story of America is not one of establishing an instant utopia. The story of America is not immediate and complete success. The story of America, to put it simply, is the struggle to do better—Progress, not Perfection.

When our Founding Fathers met in Philadelphia two hundred years ago, they gave us and the world a set of promises—promises and hopes that would be sacred to us always as we moved toward a more perfect, not the perfect union. America is a promise and a hope in the minds and hearts of all those who cherish liberty, justice and opportunity.

We live by hope. We do not always get all we want when we want it. But we have to believe that someday, somehow, someday it will be better and that we can make it so.

You cannot tell a poor boy from a small country town on the plains of South Dakota who has had the opportunity to be a teacher, a mayor, a Senator and Vice President, that America is not a nation of promise.

You cannot tell a people whose ancestors were a handful of pioneers settling in a wild land, and descendants who have forged the most prosperous and successful democracy in history, that America is not a land of hopes, promises and opportunity.

So, as you look to your individual futures and our collective future, keep in mind the wise advice of Victor Hugo.

"The future has many names," he said. "For the weak, it is the impossible. For the faint-hearted, it is the unknown. For the thoughtful and the valiant, it is ideal. The challenge is urgent, the task is large, the time is now."

There you have it. Now go to it!

#### STUDENT FINANCIAL AID

Mr. PELL. Mr. President, on May 23, the Secretary of Health, Education, and Welfare, Joseph A. Califano, announced a new and simplified application procedure for the basic educational opportunity grant program, effective for the academic year 1978-79. As the principal sponsor of that legislation in 1972, I applaud his action. A simplified application process will make it easier for students to establish their eligibility for basic grants. Hopefully, it will lead to an increase in the number of students participating in the program.

In the past, a student seeking to establish basic grant eligibility has had to file a separate application with the Federal Government. This application was necessary even though he or she might also have to file an application for a needs analysis through one of the private services providing for such analysis, in order to participate in institutional aid programs. This meant an individual student would have to fill out two—or possibly even more—forms with approximately the same information.

Under the new procedure initiated by the Office of Education, a student would only have to fill out one form, that of the needs analysis service. Data necessary to determine basic grant eligibility would be forwarded to the Federal Government by the service. Only in the case where a student's institution participated in no additional needs analysis service

would a student fill out the separate basic grant application form.

It is estimated that this change will reduce the number of forms filled out by 2.5 million per year. As a long-time foe of unnecessary paperwork, I am delighted that the Office of Education was able to initiate this change. It can only serve to provide a closer link between the basic grant program and other student aid programs, thereby increasing the opportunity for all qualified students to pursue postsecondary education.

I ask unanimous consent that the text of the press release of the Department of Health, Education, and Welfare concerning this change be printed in the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF HEALTH,  
EDUCATION, AND WELFARE,  
May 23, 1977.

Secretary of Health, Education, and Welfare Joseph A. Califano, Jr. announced today a simplified student financial aid procedure which will eliminate the need for over 2.5 million families to file Federal forms.

"This action, which will eliminate duplicate paperwork for millions of students and their parents, is a start toward fulfilling President Carter's commitment to simplify Government procedures and to ease the paperwork burden on the American people," Secretary Califano said. "Equally important, the new system is a first step toward consolidation of all student-aid forms into one single form and toward improving financial-aid procedures that have become very complicated and confusing."

"Dr. Ernest L. Boyer, Commissioner of Education, has moved swiftly with this first step in the wake of the reorganization of the Student Financial Assistance Bureau in the Office of Education," the Secretary continued. "The new program will be in effect in time for the applications that are filed this coming year for the academic year 1978-79."

The new system involves the U.S. Office of Education's Basic Educational Opportunity Grants (BEOG) program, which currently provides approximately \$1.5 billion annually in grants to nearly two million needy students.

At present, most students applying for either campus-based Federal aid or direct Federal financial help, or both, must fill out two separate forms: one for the college and another for the Office of Education. Under the new plan, the second form, a separate Basic Grant application, will be eliminated. The Office of Education will use the information secured by the college—using either a College Scholarship Service (CSS), American College Testing (ACT) or a state scholarship form—to determine the student's financial need and to establish his or her eligibility to receive a Basic Grant.

A common date for starting the processing of all student-aid applications also will be introduced. Students and parents will be given the forms after December 1, with instructions that they are to be filled out and filed after January 1. This distribution date—which is currently used by BEOG—is later than the one now used by ACT and CSS. The new schedule is designed to make it possible for families to report actual annual income to establish need, rather than estimated annual income. Use of more precise income figures should help assure that grant money goes only to those students and families who actually need it, and in the proper amounts.

For those colleges and universities still

wishing to make early decisions on admission and financial aid, an early application procedure is being developed by CSS and ACT. "We intend to accommodate those universities and colleges that need more flexibility," Califano said.

For the coming 1977-78 school year, the Basic Grant program has a budget of \$1.7 billion. Grants will average \$850 per student. Currently the average Basic Grant is \$750.

The program announced today has been developed jointly by the Department of Health, Education, and Welfare and the Coalition for the Coordination of Student Financial Assistance, a non-profit private organization representing the Nation's colleges and universities and student assistance organizations. The Coalition is an outgrowth of the 1974 National Task Force on Student Aid problems, which was chaired by former Commissioner of Education Francis Keppel.

Mr. HASKELL. Mr. President, yesterday, the Senate passed the Food and Agriculture Act of 1977, S. 275, after defeating two attempts to reduce the farm income guarantees and price support levels provided for wheat and grains in the committee's bill. I am most gratified that my colleagues resisted these attacks on the farm price supports because in my view, the target prices and loan levels recommended for wheat and feed grains were the very minimum needed to protect producers in my State and other western States in the coming years. However, from the standpoint of offering fully adequate protection, I must admit that the provisions we passed fall short, especially if current weather and market conditions prevail.

For that reason, I introduced an amendment to S. 275 to raise the 1977 wheat target price to \$3 and the 1978 wheat target price to \$3.25, making \$3.25 the floor for the wheat target price in every succeeding year. I did not call up my amendment only because it became very apparent that there was considerable sentiment in this body to actually reduce the committee's recommended levels, in keeping with the administration's position that the prices recommended by the committee were too costly and would work against the President's efforts to balance the budget in the next 4 years. The strong emphasis on budgetary considerations and the intense pressure on the part of the Secretary of Agriculture and administration officials to reduce the commodity price support levels, made it obvious that the higher levels needed by our producers would not be enacted, and in fact made it absolutely necessary that the Senators from the wheat and grain producing States concentrate their efforts on defending the Agriculture Committee's recommendations.

Nevertheless, I still believe that our producers deserve and require better target price and loan level support if they are to survive the present price collapse and continue to provide this Nation and the wheat importing nations of the world with adequate food supplies in the years ahead.

In Colorado, our wheat farmers are presently being offered prices as low as \$1.71 per bushel for their wheat. Considering that the national average price of wheat in April last year was \$3.50, this is nothing short of disastrous. The

1976 cost of producing a bushel of dry-land wheat in Colorado was \$3.82 according to figures from the Department of Economics at Colorado State University. I realize that cost of production figures are, it would seem, infinitely flexible and disputable, and differ widely from farm to farm to say nothing of region to region. Nevertheless, using the Department of Agriculture's own estimates for projected costs of producing a bushel of wheat in 1977, the minimum cost per bushel, including the lowest land allocation cost, is \$3—costs of producing selected crops in the United States—1975, 1976, and projections for 1977, page 35.

A \$3 target price is not going to offer any wheat farmer a windfall profit or even a break-even price in most cases. With production costs climbing steadily, and a record wheat carryover expected this year together with another bumper crop of perhaps as much as 2.1 billion bushels, wheatgrowers in this country face another disastrous year in terms of price and financial stress in 1978.

The target price concept was enacted by Congress in 1973 in order to assist agricultural producers, especially the independent family farmer, during just such periods of surplus and price collapse. The theory was that direct Government payments would help replace income lost because of low prices, and allow farm families to weather temporary price depressions until the market recovered. It was a fine idea, but very few farmers have benefitted from the program to date because target prices have been well below market prices for most commodities. To date, it has cost the Government almost nothing. To my knowledge, no Federal target price or deficiency payment has ever been made for wheat or feed grains.

Now we are entering a period when farmers are going to need the protection offered by this program—wheat farmers at least—in order to stay in business in the short run until prices recover and the farm economy stabilizes. The entire program becomes a complete fraud if the Government sets the target price levels so low that farmers cannot really benefit even when the need is greatest. This is just what the administration is trying to do, and in my view, this is nothing short of a betrayal of the American farmer.

I think we must remember that farmers did not get into this surplus situation entirely on their own. For years, the Government had a very outspoken policy of all-out production, urging farmers to plow up every acre and plant fence-row to fence-row. Perhaps successive years of favorable weather and record crops worldwide could not have been predicted—even by expert Government meteorologists—but I think we must now share some of the responsibility and the costs of this miscalculation with our farmers. It is completely unfair to abandon them now.

The family farmer is always the first to feel the impact of a price collapse or cost-price crunch such as the present situation. It is during these severe price slumps that the independent family

farmer and the young farmer who is the future of agriculture, are driven off the farm, and corporate entities gain an ever-stronger foothold in agricultural production and in land ownership and control in rural America. If we really want to curb this disturbing and, in my view, economically dangerous trend, and if we really want to protect the family farming system, we must offer our farm families the income protection they need during these difficult periods of financial stress.

I hope, now that the Senate is on record in favor of the target prices and loan levels recommended by the Senate Committee on Agriculture, Nutrition and Forestry, that the Senate conferees on the Food and Agriculture Act of 1977 will staunchly and vigorously defend and support these levels and not acquiesce in the figures being proposed and aggressively sought by the administration.

#### CLARENCE MITCHELL OF MARYLAND

Mr. MATHIAS. Mr. President, we elect Presidents, we appoint judges, we hire corporate executives, but we can only pray that there will be prophets among us.

Prophets cannot be conjured upon demand. They cannot be appointed by political leaders or propped up by municipal corporations. Like poets, they are born and not made. And like poets they sing songs and have visions that strike a deep responsive chord in the people.

Only the people can confer the title "prophet." Sometimes it happens almost imperceptibly for a prophet is created when the people, by their actions and in the fullness of time, confirm his prophecies.

The people have done this with Clarence Mitchell, Jr., of Baltimore.

All over America today people look to Clarence Mitchell for guidance, for advice, for counseling, for example, and for predictions of what the future holds for us. He has become a prophet simply by being himself and by acting out of a wisdom and experience that found a response in the people.

For years as director of the Washington Bureau of the National Association for the Advancement of Colored People, Clarence Mitchell, and the advice he gives, have been weighed in the balance. They have not been found wanting.

During the last decade there have been serious problems in race relations. Throughout this difficult period Clarence Mitchell urged the positive course. He spoke out eloquently against the negative responses that led to violence, bitterness, and hatred.

Clarence Mitchell might have snatched instant popularity in the excitement of the moment by joining those who advocated violent remedies, but he rejected that path. I doubt he ever even considered it. Instead, he trod the difficult, tiring, sometimes lonely, route of non-violence and conciliation.

Time has proved that the path Clarence Mitchell chose was the way to prog-

ress. Although the going was often slow, there have been many victories. Today Clarence Mitchell's wisdom is confirmed by the people. He is perceived as the unusual man he is—as a man with a persistent vision of the truth and with the courage to pursue that vision.

A very fitting tribute to Clarence Mitchell written by Ernest Furgurson, chief of the Washington Bureau of the Baltimore Sun, was published in that paper on May 22, 1977. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

#### A MAN WHO GOT THINGS DONE (By Ernest B. Furgurson)

WASHINGTON.—Who put the phrase "Burn it down" into the modern American idiom? Who gets credit for popularizing the concept of "black power" that scared so many whites half to death in the middle 1960's? Where is H. Rap Brown now? Whatever happened to Stokely Carmichael?

What difference does it make?

Very little, it turns out when we look back over the history of the civil rights movement in the generation since World War II. There have been four classes of civil rights leaders in those years. One is politicians, many white, who stepped out front against segregation before it was stylish to do so—but who even then risked nothing more precious than the next election. Another was the crusaders who lit the conscience of the country, pressing on in daily danger of violence, in and out of jails, preaching brotherhood.

Then there were the demagogues who inflamed not the conscience but the anger of their countrymen, who drove the races further apart. Here is where Brown, Carmichael and their colleagues who spread fear fit in, along with others whose distant aim may have been laudable but who taught hate instead of love.

The fourth category were the men and women who were seldom spread across the papers, almost never made a speech in front of a television camera.

They seldom had to summon up physical courage, to defy police dogs or bullets. They had instead to exercise brains and tact with their stubbornness, and thus to convert into lasting law the flames of indignation lit by their brothers on the streets and in the jails.

Here I think of Clarence Mitchell, Jr., of Baltimore, who has spent most of his life as chief lobbyist for the National Association for the Advancement of Colored People. Most newspaper readers would not recognize his photograph. Yet he has dealt effectively with eight presidents, beginning with Franklin Roosevelt, and left a large imprint on America in his time.

While King was marching in the 1960's—and while Watts and Detroit were burning, and Brown and Carmichael were making things worse instead of better—Mitchell was speaking the language of political tactics and legislative finesse. The media in those days—especially television—promoted the idea among the young that the cursers and the burners were the wave of the future. They were younger, they were more telegenic. Quietly insisting that a president move on an executive order, persistently using one senator to persuade another senator to pass an amendment out of committee did not make good pictures.

The freedom marches of the early 1960's led to the Civil Rights Act of 1964. The Selma March led directly to the Voting Rights Act of 1965. Few realize that the death of King led to the Fair Housing Act of 1968—and

that Mitchell was the only one of Lyndon Johnson's advisers, black or white, who urged him on in making it a congressional act rather than an executive order.

As Johnson wrote, Mitchell "knew how difficult it would be, even with legislation, to induce the people in the heartlands and the suburbs, the cities and the countryside, to change their deep-seated sense of individualism in buying and selling their homes. . . . He believed, as I did, that without the moral force of congressional approval behind us, the struggle for open housing would be lost before it had even begun."

For such beliefs, which were instrumental in passage of every civil rights law and executive order of the past three decades, Mitchell and the NAACP were chastised and declared a relic of times past. But he persisted, as he has before. And while the Carmichaels and Browns have disappeared from view, he is still in and out of the White House, recently to urge Jimmy Carter to push for a decent increase in the minimum wage.

Next year Mitchell intends to retire from his lobbying job, though remaining as chairman of the Leadership Conference on Civil Rights. The other day, looking back over his time here, he had the perspective to say that among the greatest rewards has been the change in attitude among young blacks—who include some of the same young militants who criticized him.

"They don't act like anybody is doing them a favor. They act like this is what they ought to have. And this is the way we want it," he said. The good grace of that statement was characteristic of the man.

#### HAWAII'S FIRST HIGH SCHOOL JUDO CHAMP IS YOUNGEST IN A FAMILY OF CHAMPIONS

Mr. MATSUNAGA. Mr. President, for the first time in the 13-year history of the National High School Judo Championships, held this year in New Haven, Conn., a youngster from Hawaii won first place in the 1977 competitions. He is Derek Ishikawa, a sophomore from Pearl City High School.

Because they have had to fight jet lag, as well as a more rugged style of judo practiced by their mainland opponents, Hawaii youngsters have always found the national competition very tough. Derek's achievement is even more amazing in view of the fact that he began taking judo lessons for fun only 4½ years ago.

Perhaps his secret is that he comes from a family of champions.

Derek's grandfather, the late Masaru Ishikawa, is still well remembered as the judo champ of the islands in the 1920's. His father, Harold Ishikawa, holds the coveted black belt.

It was Derek's grandmother who helped him become Hawaii's first high school champion. Showing him the trophies and medals won by his grandfather, she encouraged him to believe that he could win.

Knowing that my colleagues will find Derek's story as heartening as I do, and by way of congratulating him, I ask unanimous consent that the text of an article about Derek's win, taken from the Honolulu Star-Bulletin, be printed in the RECORD. I am confident that Derek has established a trend, and that next year's championships, to be held in Hawaii, will prove to be even more successful for the Island State team.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATIONAL JUDO CHAMP IN STEP WITH GRANDPA

(By Paul Carvalho)

"His grandmother will be very happy," Harold Ishikawa said. "You know, her husband, Masaru Ishikawa, was the judo champ in the Islands during the 1920s."

Grandma Ishikawa wasn't on hand to greet her grandson, Derek, last night at Honolulu International Airport but she had every reason to be happy . . . and proud.

A sophomore at Pearl City High School, Derek was coming home after a weekend of competition on the Yale University campus in New Haven, Conn., where he won the 1977 National High School Judo Championship in the 125-pound weight division.

It was the first time in the 13-year history of the high school nationals that a participant from Hawaii came away with the first-place prize.

But for Derek, it was the Tradition, rather than the Precedent, which mattered.

Judo was something he took up on a whim 4½ years ago. "A friend of mine was going to start taking it and I went along, just to watch," he said.

"After I had taken a few lessons, I was visiting my grandmother one day and she started talking to me about my grandfather. She showed me some medals and pure silver plates he had won when he was competing," Ishikawa said.

"At that time I was just going to judo for the fun of it but after seeing what my grandfather had done, I began to take it more seriously. I wanted to see if I could reach the level of my father (Harold, a black belt) and maybe even my grandfather. That became my goal and pretty soon I started winning."

Winning, at least on the national level, has not come easy for judo practitioners from Hawaii. The State's last national champion was George Hatae, who won his title in 1952.

The problem stems from the contrasting styles between local and Mainland competitors. On the Mainland, practitioners of the ancient Japanese martial art are, for the most part, not as technically refined as local judoists. They rely on strength, rather than skill.

"They are fierce, and extremely strong. When they grab you, forget it. You feel so weak," said Jeffrey Tamaoka, a teammate and friend of Ishikawa's who participated in last year's national competition. "In Hawaii, technique means a lot, but over there (on the Mainland), brute strength is everything."

Mike Matsumoto, whose son, David, an Iolani senior, finished second in the heavy-weight division this year, concurred.

"On the last night of the tournament a coach from California approached me and said that our boys are much more purists. They put up a good, clean fight."

Ishikawa, who won five matches in the double-elimination format to take the title, noticed the difference in styles from the outset.

"In Hawaii, you usually attack or are attacked on the upper body, but on the Mainland, they go low and try to take you to the ground. They actually try to wrestle with you."

His toughest match was the title bout, a five-minute, no overtime battle. But he also had a rough time in his first match of the tournament, when he fell behind in points early on.

"I was lucky, though. My opponent kept rushing me. He didn't have very much patience and wasn't thinking about defending himself, so I was able to turn it around."

Ishikawa's victory came as a surprise to his coach, Lee Nakamoto, since he had been nursing a bad leg throughout the OIA season.

Though he finished first in last November's qualification matches, Ishikawa did not compete for the individual OIA title last month, instead, saving himself for the nationals.

"I didn't think he, in particular, could do it, because his division (the 125-pound category) is especially rough, and he had been re-injuring his leg all season," Nakamoto said.

What Ishikawa, an Ikkyu (No. 1-ranked brown belt) did have in his favor was an unorthodox, aggressive lefthander's style.

"Coming from the left side gives Derek a natural defense against most of his opponents, who are righthanded. It also gives him a natural offense. For his weight, he is very tall and has long, strong legs, which he uses in the Uchimata style (driving the front leg between the opponent's legs and then flipping him)," Nakamoto said.

Ishikawa's success, along with that of Matsumoto's, who is planning to attend the University of Michigan this fall, could be a harbinger of good times for local high school competitors.

In all, there were 240 entrants in this year's tournament, with 14 from Hawaii—12 boys and two girls, representing nine different schools. Though only two placed, the experience should be valuable for the local participants in the 1978 nationals, scheduled to be held in Honolulu (McKinley gym is the tentative site).

And yes, there should be a decided home-mat advantage.

"In the past we have always had to contend with jet-lag, climate changes and expenses. We had several top-flight competitors who could not attend the nationals this year because they simply could not afford it," Nakamoto said. "I think next year will be the finest showing ever for Hawaii."

COMMENCEMENT ADDRESS DELIVERED BY SECRETARY CALIFANO

Mr. PELL. Mr. President, on Sunday of this week, HEW Secretary Joseph A. Califano gave the commencement address for the graduating class at the College of New Rochelle in New Rochelle, N.Y. The address was important—first because it was the Secretary of the Department of Health, Education, and Welfare who gave it, and second, because of what he had to say.

Secretary Califano spoke of his personal commitment and the commitment of the Federal Government to diversity in education, including the support—within the bounds of the Constitution—of private colleges and universities such as the College of New Rochelle.

Mr. President, Secretary Califano's thoughtful address deserves the attention of our colleagues and others who read the RECORD. I ask unanimous consent to print it as part of my remarks in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMENCEMENT ADDRESS OF JOSEPH A. CALIFANO, JR.

Here and across our nation, this is the season in which we celebrate the ancient ritual of commencement.

For each of you, that ritual has enormous personal meaning. But it has a larger meaning too: What you have achieved in your

years here is important, not only to you as individuals, but also to your nation.

Why? For two significant reasons:

First, because the College of New Rochelle has given you that sense of moral discipline essential to the enjoyment of true freedom. In an increasingly libertine society, where individual goals are often so self-centered that they border on total self-indulgence, you have been educated in a tradition of social justice and moral duty. That education will strengthen and support you throughout your life; and your nation will be stronger for it.

Second, and equally important, this college has etched in you the intellectual discipline that distinguishes the truly educated person. If we are to meet and master the perverse problems that baffle us today—problems of energy supply, of social welfare, of maldistribution of national and world resources—if we are ever to master those problems, we must do it with trained intelligence.

These two qualities—moral and intellectual discipline—distinguish the educated citizen. Their presence in our society is essential if we are to have the collective trust on which a democratic nation thrives. That is why, a decade ago, President Lyndon Johnson called education "the first work of the Nation."

And that is why President Carter is so deeply committed to the enterprise of education.

Constitutional democracy cannot survive without an educated citizenry. In a world that moves at jet speed, a world of ever more complex problems, an ignorant populace is likely to be a bewildered and impatient populace. And such a populace, confused and anxious, would be easy prey to the sirens of demagogues who tempt us with cheap and facile solutions; or those who put the virtues of efficiency above the values of liberty.

In the face of bewildering problems, the lure of the quick fix can be irresistible. In the face of a growing reluctance to commit adequate resources to public needs, uniformity and cold-blooded efficiency could become as tempting to our society as making trains run on time was to Mussolini's Italy. With techniques of persuasion as pervasive, sophisticated and subtle as today's, a widely and diversely educated citizenry is essential to the health of democratic government.

So, first of all today, I bring you firm assurance of your government's strong commitment to education at every level—and to higher education in all its rich diversity: a diversity which includes private institutions like the College of New Rochelle.

All across America, colleges like this one—small, independent liberal arts colleges—have played a role far out of proportion to their size or numbers. They have been a powerful force in the intellectual life of the nation. They have educated distinguished men and women.

These colleges were founded to train ministers, lawyers and statesmen—and for many years they also educated most of our greatest teachers, scholars, scientists and writers.

While training so much talent for the development of our democratic tradition, independent institutions like this one have given us more—much more:

They have been seedbeds not only of intellectual endeavor, but of deep religious and cultural values;

They have been guardians of independent thinking and academic freedom, enjoying a bit more insulation from the whims and pressures of politics than their tax-supported sisters.

Perhaps the greatest contribution of these private institutions beyond training talent for the nation, has been diversity: the rich variety that colleges like this lend to the American educational landscape. What

an incredibly rich resource. Hundreds of institutions, each independent, each solving its problems in its own way, each a vital center of innovation and experiment, each with its own special commitment to cultural and moral values.

It is this diversity that gives American higher education and American life so much of their vitality. It is this diversity that your national government is pledged to nourish and safeguard.

We are committed to the continued health and stability of private colleges and universities in America. And we intend, within the limits of constitutional law, to help these institutions as much as we can.

That commitment is something rather new in the history of American education. For most of our nation's history, institutions like this one worked their educational miracles with scant support from their government beyond their tax exempt status. Only in the last few years has the Federal government come to play a more significant role in support of private higher education.

I think it is fair to say that this recent national commitment expressed in programs of help to institutions and to individual students, has been crucial to private higher education in America. For this support has guaranteed financial survival and stability to many institutions, at a moment when economic pressures threatened their future.

Sister Dorothy Ann tells me that many of you who will receive degrees today are here in part because of one or more programs of Federal assistance: basic grants, student loans, or work-study programs.

That is a measure of our national commitment to higher education. Our goal is to expand opportunity for higher education to the point where any student can rise to an educational level that matches and fulfills his talent, regardless of income, regardless of race, regardless of age, regardless of sex.

Achieving that goal will not be quick or easy. But I look out today at these 450 faces of men and women who are graduating from the College of New Rochelle, and I can see that we are making progress, as a nation, toward that goal.

For here I see men and women, an impressive percentage of minority citizens, working people, mothers of small children, people whose income might once have barred them from college. And here I see older graduates, too, some in their sixties, some in their seventies, and Mrs. May Dobson, 81 years old.

This, my fellow citizens, is the evidence you are the evidence that this nation we love is on the right course.

I have underscored your government's pledge to safeguard the precious diversity of American higher education, our commitment also to safeguard the health of private colleges to the fullest extent of our limited economic and Constitutional power.

Let me add one more commitment today.

We intend to demonstrate our trust in the educational community of this nation by working to free it from the snarl of government red tape. Our colleges complain of too many regulations; too many forms that are complicated and repetitive, too much bureaucracy; too much government involvement; a failure by government to understand the difference between prudent monitoring of our financial support and unwarranted intrusion into academic institutions. We agree. We intend to demonstrate that we trust higher education to do its work effectively and use federal resources wisely, without undue interference from Washington.

We will, of course, be vigilant about how the taxpayers' money is spent. We care deeply about excellence and equal opportunity. But we must be wise enough as a nation

and trusting enough as public servants to recognize that over-regulation squanders the taxpayers' money and that red tape can strangle excellence.

In the end, of course, dollars alone cannot guarantee the vigor of institutions like this one. Dollars can pay bills, and that is important, but they cannot produce ideas. Dollars may guarantee the survival of a college or university, but they can never guarantee its success.

What counts, in the end, is the institution itself: the leaders and talent it attracts and produces, their energy, their zest and determination, their appetite for innovation, their conscience and their willingness to engage their institution in the world, with people and problems beyond the campus. It is these qualities, not budgets or endowments that measure the true strength of any institution.

And these qualities I'm happy to say are in rich abundance at the College of New Rochelle.

Virtually every graduate program offered here is one that engages the College and its graduates in the quest for social justice, community, school psychology, remedial reading, special education. That one fact speaks volumes.

And consider the recent history of this college.

Faced with the necessity to change simply to survive, you chose to renew this institution. This small and quiet woman's college transformed itself by founding a new institution called the School of New Resources. And in so doing, you engaged yourselves in the world, with rich and enduring rewards for the hundreds of new students you found.

Without forsaking your central mission of educating young women, you reached out to educate others, people who once stood outside the gates of higher education.

In this act of self-renewal, this college became an instrument of personal renewal for thousands of people. And by extension, you are helping to intensify our national effort to renew ourselves, to solve our myriad problems and to recover our national self-confidence.

That is a prodigious accomplishment. It reflects great credit and should inspire great pride in every one of you who has played a part in the drama. Particularly you who graduate today.

To you, I would say simply this: The qualities that mark this college—its passion for excellence, its courage to engage the world, its capacity for self-renewal—these are qualities that distinguish individuals as well as institutions. Nourish these qualities, live by them, and you will enrich your world.

Permit me now one parochial comment. Christian charity, God's love incarnate, the force that created this college, is not the stuff of flower girls. It finds enduring strength only in intellectual and moral discipline, discipline that has made possible the kind of self-confident social engagement that characterizes this college. Let that same sense of energized charity mark your lives.

For as Teilhard de Chardin wrote: "Some day after mastering the winds, the waves, the tides and gravity, we shall harness for God the energies of love."

"And then, for the second time in the history of the world, man will have discovered fire."

This concludes additional statements submitted today.

SENATE LEGISLATIVE ACHIEVEMENTS JANUARY 4, 1977-MAY 25, 1977

Mr. ROBERT C. BYRD, Mr. President, at this point, I would like to look at the

legislative record of the Senate to date. In the past 5 months, the Senate has addressed a variety of problems. Of prime importance have been programs instrumental to improving the Nation's economy. The 95th Congress has enacted the major portions of the President's economic stimulus proposals.

We have authorized an additional \$4 billion for local public works projects which provide jobs through construction in places with the most distressing levels of unemployment.

We have enacted \$20.1 billion in a special economic stimulus appropriation to implement programs for public service employment, public works projects, countercyclical revenue sharing, and training of unemployed youths, veterans, unskilled workers, and older Americans.

We have authorized \$3.25 billion to extend the countercyclical revenue sharing program which helps State and local governments maintain basic services until national unemployment drops below 6 percent.

We have enacted a 3-year \$34 billion tax cut for individuals and businesses. Forty-six million Americans—90 percent with income under \$20,000—will pay less taxes. Corporations will be allowed a tax credit on hiring new employees in an effort to encourage business expansion and reduce unemployment. In addition, 96 percent of all taxpayers will benefit from having a simpler method of computing their taxes.

The other major issue of national concern of the 95th Congress is energy. We have already made progress in this area.

In January, we sent the President a measure granting him special emergency pricing and allocation authority to deal with the natural gas shortage during the record-cold winter months.

On Friday last, the Senate passed a measure establishing a program for the regulation of coal strip mining and reclamation so as to minimize the degradation of the environment while allowing increased production of this essential domestic supply of energy. Although the Congress has sent the President a strip mining program in the last two Congresses, both bills were vetoed. President Carter, however, supports congressional initiatives to enact uniform minimum Federal mining and reclamation standards.

A week ago today, the Senate passed the cornerstone of the President's energy program—the creation of a Department of Energy which will administer a national energy policy. As passed by the Senate, the energy-related functions of some 50 agencies—including the Federal Energy Administration, the Energy Research and Development Administration, and the Federal Power Commission—will be incorporated into a single cabinet-level Department which will have pricing, allocation, pipeline and other authorities previously splintered among numerous entities.

The President's comprehensive energy bill, which was received 3 weeks ago by the Congress, has already been the subject of numerous hearings. Testimony

has been heard from the administration and the following provisions have been the subject of committee hearings: home insulation by utility companies; appliance and automobile efficiency standards; energy conservation in schools and hospitals; natural gas regulation; public utilities rate changes; and tax incentives for energy conservation. Further hearings and mark-up sessions have been scheduled for the next several weeks on these and other sections of the proposal.

With regard to other Senate achievements, we passed last night an omnibus farm bill which extends for 5 years the basic price support program for major commodities and the food-for-peace—Public Law 480—program. The Senate bill makes needed revisions in these programs as well as needed reform to the Food Stamp program which is extended for 2 years.

The Senate also passed on yesterday a measure to allow the appointment of 145 additional Federal judges to enable the courts to efficiently and expeditiously handle the business brought before them.

Additional legislation of national significance which the Senate has passed this year includes: a bill improving export administration and attacking the most repugnant aspects of the Arab boycott; a measure to halt the importation of chrome from Rhodesia in violation of U.S. sanctions; authority for the President to submit plans for reorganization of Federal agencies; an extension of the unemployment compensation program to aid those temporarily unemployed; a \$35.9 billion authorization for procurement of aircraft, missiles, naval vessels, and weapons and \$3.7 billion for military construction; an extension of important public health programs; and tomorrow, action is expected to occur on a bill seeking to eliminate the problem of oil pollution from tankers, and improve vessel safety.

With regard to internal Senate reforms, the Senate early in the session agreed to an extensive realignment of committee jurisdictions and other changes which have expedited the flow of business and resulted in the significant number of important bills already reported from committees this year. The Senate also adopted a tough code of conduct for members and staff which requires extensive financial disclosure.

The record of the Senate of the 95th Congress has, of course, only begun. I am, however, satisfied that we have made a good beginning. I am confident that our labors have laid the groundwork for continued productivity.

For a more detailed account of Senate legislative achievements, I refer all Senators to a report prepared by the Democratic policy committee staff. I ask unanimous consent that this report, and data concerning the President's legislative proposals and comparative legislative activity, be inserted in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

## LEGISLATIVE DIGEST—JANUARY 4–MAY 25, 1977

## ECONOMY—UNEMPLOYMENT

**Tax cut.**—Congress has cleared for the President a 3-year \$34 billion tax cut. Forty-six million Americans—90% with income less than \$20,000—will pay less taxes. Corporations will be allowed a tax credit on hiring new employees. Ninety-six percent of all taxpayers will have a simpler method of computing their taxes.

**Economic Stimulus Appropriations.**—Congress has enacted a measure providing \$20.1 billion to implement the President's economic stimulus proposals including funds for public works projects, public service employment and countercyclical revenue-sharing to help State and local governments continue their basic services and to target employment and training programs to youth, veterans and unskilled workers.

**Public Works Employment.**—Congress has enacted a measure authorizing \$6 billion for local public works projects which provide jobs through construction in places with the most distressing levels of unemployment.

**Unemployment Compensation.**—Congress has extended the unemployment compensation program until October 31 to aid those temporarily unemployed with an income to meet their day-to-day living expenses.

## ENERGY

**Emergency Natural Gas.**—Congress enacted early this year a measure giving the President special emergency authority to deal with the natural gas shortage during the winter months.

**Department of Energy.**—The Senate passed last Wednesday a bill to create a cabinet level Department of Energy incorporating some 50 energy-related agencies including FEA, ERDA and the FPC.

**Strip Mining.**—The Senate and the House have both passed a measure to minimize the degradation of the environment by requiring minimum uniform standards for mining and reclamation.

**Comprehensive Energy Policy.**—Senate and House committee hearings will continue throughout this month and next on energy supply, conservation, natural gas, and public utilities regulation as part of a broad program for cutting energy consumption, conserving energy supplies and increasing domestic sources of energy.

## SENATE REFORM

**Committee Reorganization.**—At the beginning of the session, the Senate reduced the number of Senate committees and realigned jurisdictions into a more rational order. It agreed to numerous other changes to spread legislative responsibilities more equally among all Senators.

**Ethics Code.**—The Senate adopted an official code of conduct for Senators and staff which requires extensive financial disclosure.

## OTHER MEASURES

**Arab Boycott.**—Under consideration by House-Senate conferees is a bill attacking the most repugnant aspects of the Arab boycott against Israel and generally improving export administration.

**Rhodesian Chrome.**—Congress acted early this year to halt the importation of chrome from Rhodesia which was in violation of U.N. sanctions against trade with that country.

**Presidential Reorganization Authority.**—Congress extended the authority of the President to submit plans for reorganization of Federal agencies which shall take effect within 60 days if Congress does not disapprove by resolution.

**Omnibus Farm Bill.**—The Senate has agreed to extend the basic price support programs for major commodities and the

Food for Peace (PL 480) program. This bill also makes important revisions in these programs as well as needed reform to the Food Stamp program which is extended for two years.

[95th Congress, 1st Session]

## SENATE LEGISLATIVE ACHIEVEMENTS

(Prepared by Senate Democratic Policy Committee, Robert C. Byrd, Chairman)

## SENATE ACTIVITY

|                       |        |
|-----------------------|--------|
| Days in Session       | 79     |
| Hours in Session      | 406:49 |
| Total Measures Passed | 232    |
| Private Laws          | 0      |
| Public Laws           | 31     |
| Treaties              | 0      |
| Confirmations         | 26,074 |
| Record Votes          | 169    |

Symbols: (VV)—Passed by Voice Vote; numbers in parentheses indicate number of record vote on passage, conference report, or reconsideration.

## AGRICULTURE

**Federal Crop Insurance Corporation Capital.**—Amends the Federal Crop Insurance Act to increase the authorized capital stock of the Federal Crop Insurance Corporation from \$100 million to \$150 million in order to replenish its operating capital which was nearly exhausted as a result of indemnity payments to insured farmers for crop losses during the 1976 drought and harsh winter of 1977. S. 955—Passed Senate April 25, 1977. (VV)

**Grain Inspection.**—Amends the United States Grain Standards Act to facilitate and improve the implementation of the amendments made in 1976 (Public Law 94-582); establishes a temporary 12-member committee (representing farmers, consumers and all segments of the grain industry) to advise the Administrator of the Federal Grain Inspection Service (FGIS) on the implementation of the 1976 act, and provides for its termination 18 months after the date of enactment; eliminates the requirement that grain merchandisers and elevator operators using grain inspection or weighing services maintain certain itemized types of records of their operations for a five-year period and requires them instead to keep only such records as the Administrator may prescribe for administration and enforcement; repeals, effective October 1, 1977, the authority for the charging of fees for Federal supervision of grain inspection and weighing and provides instead for funding of these activities through the regular appropriations process; makes several technical amendments; and prohibits effective May 1, 1977, subclassing of the hard red winter wheat on the basis of color, kernel content, or percentage of dark, hard and vitreous kernels. S. 1051—Passed Senate March 30, 1977. (88)

**Land and water resources conservation.**—Establishes a mechanism for making long-range policy to encourage the wise and orderly development of the Nation's soil and water resources; requires the Secretary of Agriculture to (1) prepare an appraisal of the Nation's land, water and related resources and (2) develop a national land and water conservation program setting forth the direction for future soil and water conservation efforts on the Nation's private and non-Federal lands by December 31, 1979, and to update them each fifth year thereafter; requires that the appraisal and the program together with a detailed statement of policy intended to be used in framing budget requests for Soil Conservation Service activities to be transmitted to Congress on the first day it convenes in 1980 and at each 5-year

interval thereafter; requires that programs established by law be carried out in accordance with the statement of policy unless either House adopts a disapproval resolution within 90 days of receipt; provides that Congress may revise or modify the statement of policy, and that the revised or modified statement of policy shall be used in framing budget requests; requires, beginning with the fiscal 1982 budget, that requests sent by the President to Congress governing Soil Conservation Service activities express the extent to which the projected programs and policies meet the statement of policy approved by Congress; requires the President to set forth reasons for requesting Congress to approve a lesser program or policy where budget recommendations fail to meet the established policy; and requires the Secretary to submit to Congress beginning with fiscal 1982, an annual report evaluating the program's effectiveness. S. 106—Passed Senate March 23, 1977. (VV)

**Omnibus farm bill.**—Extends for 5 years through 1982 the basic price support programs for wheat, feed grains, cotton, rice, and wool; extends, with major changes, the food stamp program into 1979; extends into 1982 the Food for Peace Program (P.L. 480) with some changes; and establishes a new charter and clearer direction for the Federal role in agricultural research;

**Payments limitation.**—Places a limitation of \$50,000 on the total payments which a person may receive annually under one or more of the programs for wheat, feed grains, upland cotton, extra long staple cotton, and rice instead of the present \$20,000 limitation and the separate \$55,000 limitation on rice;

**Commodity programs.**—Milk—sets the price support at 80% of parity adjusted semi-annually but reviewed quarterly; extends for 5 years the Class I base plans, seasonal base excess plans, and seasonal takeout-payback plans for 5 years; Wool—updates the support levels to 90% of the formula; Wheat—sets the target price for wheat at 1977 at \$2.90 per bushel; and the target price for 1978 at \$3.10 per bushel and an increase thereafter if the cost of production exceeds that level; Feedgrains—sets target price levels for corn at \$2.28 per bushel in 1978 and increases thereafter based on cost of production, and ties the support level for other feedgrains to corn; Cotton—establishes a target price of 51.1 cents per pound for 1978 to increase in subsequent years in relation to cost of production increases; Peanuts—establishes a national acreage allotment and a minimum national poundage quota; sets up a price support program for producers through loans, purchases or other operations; Soybeans—requires price support loans for producers on the 1978 through 1982 crops at not less than \$4 per bushel;

**Grain Reserves.**—Requires the Secretary to formulate a producer storage program on original or extended price support loans for wheat and feedgrains at the same support level as provided by the 1949 Act, as amended; authorizes the President to negotiate a system of food reserves for humanitarian food relief and to maintain such a reserve of food commodities as a contribution of the United States to the system; expands the authority of the Secretary to acquire commodities for disposition in the event of national disasters; makes the following changes in the farm storage facility loan program: authorizes the Secretary of Agriculture to use guarantees on secured loans as well as direct loans as a means of assisting farmers to construct or purchase on-farm facilities; permits the making or guaranteeing of loans for the construction of facilities to store high moisture grain and

forage crops, as well as dry grain; and requires, with respect to direct loans, that the borrower put up security for the loan and base the interest rate charged to farmers on the rate charged the Commodity Credit Corporation;

**Food for Peace Program (P.L. 480) Reforms.**—Extends into 1982 the program and increases the annual authorization to \$750 million;

**Food Stamp Reforms.**—Extends the current food stamp program for 2 years; eliminates the purchase requirement and establishes a single benefit reduction rate at 30% of net income; limits participation to households at or below official Federal poverty levels; replaces current itemized deductions with standardized deductions; requires unemployed participants to seek employment; requires a 60-day period of ineligibility for a household whose head voluntarily terminates employment; eliminates automatic, categorical eligibility of welfare recipients; gives Indian tribal organizations greater authority over food distribution programs on reservations; increases incentives for States to root out program abuse and improve administration; authorizes pilot projects to improve administration; and extends authority to purchase commodities and establishes the Federal share of administrative costs for the Commodity Supplemental Food Program;

**Food and Agricultural Research.**—Expands support for research programs, improved dissemination of research findings, increased efficiency and coordination of Federally-funded food and agricultural research including nutrition research and animal health research; creates three interrelated advisory panels to improve coordination; provides for a program of competitive grants within the Department to initiative high priority research activities; authorizes the Secretary to make grants to agriculture experiment stations and land-grant universities to support the Federal-State cooperative research program; authorizes research on solar energy as applied to agriculture; directs the Secretary to develop and implement a national nutrition research and extension program;

**Grain Inspection.**—Added the language of S. 1051, the Federal Grain Inspection and Weighing Program Improvements bill as earlier passed by the Senate which amends the United States Grain Standards Act with respect to recordkeeping requirements and supervision fees, and establishes an advisory committee to provide advice to the Administrator of the Federal Grain Inspection Service;

**Other Provisions.**—Amends the authorizations for several existing rural development and conservation programs and contains other provisions including those relating to the inclusion of aquaculture and human nutrition as functions of the Department of Agriculture, beekeepers indemnity, and the importation of filberts. S. 275—Passed Senate May 24, 1977. (169)

**Wheat producers assistance.**—Provides temporary emergency assistance to wheat producers who planted prior to January 1, 1977, in order to prevent further increases in carryover stocks resulting from record U.S. wheat production and decreasing U.S. exports; requires the Secretary of Agriculture to carry out, through the Commodity Credit Corporation, a special wheat acreage grazing and hay program for the 1977 crop whereby a wheat producer who elects to participate may designate an acreage of cropland on his farm, of not to exceed 40 percent of the wheat acreage allotment, for grazing purposes or hay production only; requires that the producer designate the specific acreage on the farm to be so used; directs the Secretary to pay any participating pro-

ducer an amount determined by multiplying the number of acres placed in the program times the projected yield established for the farm times \$1; makes the producer ineligible for any other payments or price supports, including deficiency payments and disaster payments under section 107 of the Agricultural Act of 1949, on that portion of the wheat allotment placed in the program; provides that such acreage shall be deemed to have been planted for harvest for the purposes of wheat acreage history; and authorizes the Secretary to issue the necessary regulations to carry out this act. S. 650—Passed Senate March 16, 1977. (60)

**Wheat referendum.**—Defers the wheat marketing quota referendum for the 1978 crop, which by law must be held no later than August 1, until 30 days after the adjournment of Congress or October 15, whichever is earlier, in order to provide additional time for enactment of legislation, presently being considered by Congress, for the 1978 and subsequent wheat crops which would eliminate the need for a referendum. S. 1240—Passed Senate April 25, 1977. (VV)

#### APPROPRIATIONS

##### Fiscal 1977:

**Continuing.**—Extends the continuing resolution (Public Law 94-473) which expires on March 31, 1977, until April 30, 1977, to provide financing authority for the following programs traditionally funded under the Departments of Labor, and Health, Education and Welfare Appropriations Acts: higher education; National Health Service Corps; home health services; emergency medical services; library resources; teacher corps; alcohol abuse and alcoholism prevention, treatment and rehabilitation; health professions educational assistance; D.C. medical and dental manpower; activities under title VI of the Comprehensive Employment and Training Act; vocational education; and National Institute of Education; and amends the resolution to provide such amounts as necessary for the calendar quarter ending March 31, 1977, for general revenue sharing payments to State and local governments. H.J. Res. 351—Public Law 95-16, approved April 1, 1977. (VV)

**Economic stimulus.**—Makes economic stimulus appropriations in the total amount of \$20,101,484,000 in new budget obligation authority for fiscal year 1977 which is \$3,692,365,000 under the budget estimate; includes the following to implement the economic stimulus proposals recommended by the President in his message of January 31, 1977:

**Public Works Projects.**—\$4 billion for acceleration of local public works projects;

**Revenue Sharing Program.**—\$4,991,085,000 for revenue sharing payments for the last three quarters of fiscal 1977;

**Antirecession Financing.**—\$632.5 million for increased antirecession payments under Public Law 94-363 to States and local governments in areas of high unemployment to assist them in maintaining basic services;

**Public Service Employment.**—\$7,987 billion for public services jobs which will expand the present Comprehensive Employment and Training Act (CETA) public service programs from the current 310,000 jobs to 600,000 jobs by September 30, 1977, and 725,000 jobs by December 31, 1977;

**Targeted Employment and Training Programs.**—\$1,438 billion for programs targeted to youth, veterans and those in need of new skills; and

**Older Americans.**—\$59,400,000 for an additional 14,800 jobs for community service employment for older Americans;

In addition, includes the following appropriations: \$95 million for production of NASA's third shuttle orbiter; \$300 million for the construction grants reimbursement

program for sewage treatment plants; \$175 million for a drought assistance program contingent upon enactment of authorizing legislation; \$35 million increase in the obligation limitation on airport development grants; \$366 million for various programs authorized under the Federal-Aid Highway Act; \$50 million for the Northeast Corridor improvement programs to speed up construction currently underway; and \$2 million for IRS accounts collection and taxpayer service. H.R. 4876—Public Law 95-29, approved May 13, 1977. (130)

Supplemental.—Makes supplemental appropriations in the total amount of \$28,923,859,260 for fiscal year 1977 for almost every department and agency of the Federal Government including appropriations to cover costs associated with the October 1, 1976, general government pay raise. H.R. 4877—Public Law 95-26, approved May 4, 1977. (98)

Urgent disaster supplemental.—Makes urgent supplemental appropriations of \$200 million for fiscal year 1977 for disaster relief activities resulting from the severe weather conditions prevalent throughout the nation. H.J. Res. 269—Public Law 95-13, approved March 21, 1977. (VV)

Urgent power supplemental.—Makes urgent power supplemental appropriations of \$6.4 million for fiscal year 1977 for the Department of the Interior, Southwestern Power Administration, for power purchases caused by critically low stream flow conditions in the area served by the Administration; and removes the restrictions in Public Laws 94-355 and 94-373 which limit the use of funds appropriated to ERDA subject to enactment of authorizing legislation to assure the continued funding of essential energy research, development and demonstration programs. H.J. Res. 227—Public Law 95-3, approved February 16, 1977. (VV)

#### ATOMIC ENERGY

Nuclear Regulatory Commission authorization.—Authorizes \$299,640,000 for fiscal year 1978 for the Nuclear Regulatory Commission; includes \$41,480,000 for nuclear reactor regulation, \$12,130,000 for standards development, \$36,050,000 for inspection and enforcement, \$22,090,000 for nuclear materials safety and safeguards, \$148,400,000 for regulatory research, \$10,180,000 for program technical support, and \$29,310,000 for program direction and administration; provides for a reduction in appropriations if (1) the Clinch River Breeder Reactor Project is cancelled or indefinitely deferred, (2) the license application is withdrawn or further construction is cancelled for the fuel reprocessing plant at Barnwell, S.C., and (3) plans for commercial fuel reprocessing and plutonium recycling are cancelled; and directs the Administrator of the General Services Administration to study and report to the Environment Committee by June 15, 1977, on the feasibility of consolidating the NRC which is presently housed in nine buildings throughout the Washington metropolitan area. H.R. 3733—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

#### BUDGET

##### Rescissions:

Helium purchases.—Rescinds \$47.5 million in contract authority for helium purchases under Public Law 87-122 as recommended by the President in his message of September 22, 1976, for which purchase contracts were terminated by the Interior Department in 1973 and the contract authority therefore is no longer needed. H.R. 3347—Public Law 95-10, approved March 10, 1977. (VV)

Second budget rescission.—Rescinds \$644,050,000 of the \$941,278,000 in budget authority recommended by the President in his message of January 17, 1977, as follows: De-

partment of Defense—Military—\$143.6 million in retired pay, \$452.6 million in Naval shipbuilding and conversion because of the decision not to procure the fourth nuclear powered aircraft carrier (CVN-71) or convert the nuclear powered cruiser USS Long Beach to the Aegis air defense weapons system, and \$145.35 million for Air Force procurement because of termination of the Advanced Logistics System (ALS); \$41.5 million in funds appropriated to the President for foreign military credit sales; and \$12 million for the Department of State contributions for international peacekeeping activities because of the lower budget levels established by the U.N. General Assembly; and disapproves \$277,228,000 as follows: Department of Commerce—\$525,000 for salaries and expenses of the U.S. Travel Service and \$1.5 million for operations, research and facilities of the National Oceanic and Atmospheric Administration to continue surveys, mission and cost analysis and initiation of design and engineering studies for Oceanlab; and \$6,803,000 for the Department of Transportation for retired pay for the Coast Guard. H.R. 3839—Public Law 95-15, approved March 25, 1977. (VV)

##### Resolutions:

Third Budget Resolution, 1977.—Revises the Second Budget Resolution (S. Con. Res. 139) for fiscal year 1977 setting the level of revenues at \$347.7 billion, outlays at \$417.45 billion, deficit at \$69.75 billion, budget authority at \$472.9 billion and public debt at \$718.4 billion; contains an adequate funding level to permit enactment of up to \$13.8 billion in tax legislation stimulus as proposed by the administration and \$3.7 billion in increased outlays to produce jobs in areas of high unemployment; sets a level of budget authority at \$1.1 billion and outlays at \$760 million for EPA construction grants, railroad and highway construction and improvement in recreational facilities; sets the following levels of funding for the relief of individuals and families hard hit by the recession and the harsh winter: (1) \$1.8 billion in budget authority and outlays for direct payments to recipients of social security, SSI, and railroad retirement, or any similar stimulus proposals, (2) \$508 million in budget authority and \$508 million in outlays to extend the Federal supplemental benefits program for the unemployed, and (3) \$200 million in budget authority and \$200 million in outlays for Federal assistance to low- and moderate-income families to help them meet fuel costs during the winter emergency; includes adequate levels of budget authority for housing to support increased reservations for a total of 360,000 dwelling units for low- and moderate-income families; and makes the following revisions to the totals for budget authority and outlays contained in the Second Budget Resolution to reflect savings which have been achieved and additional costs which have arisen under existing programs (in billions of dollars):

National Defense—BA: \$108.8 instead of \$112.1, 0: \$100.1 instead of \$100.65;

International Affairs—BA: \$7.9 instead of \$8.9, 0: \$6.8 instead of \$6.9;

General science, space, and technology—BA: \$4.5 instead of \$4.6, 0: \$4.4 instead of \$4.5;

Natural resources, environment, and energy—BA: \$18.7 instead of \$18.2, 0: \$17.2 instead of \$16.2;

Agriculture—BA: \$2.3 instead of \$2.1, 0: \$3.0 instead of \$2.2;

Commerce and transportation—BA: \$17.3 instead of \$17.2, 0: \$16.0 instead of \$17.4;

Community and regional development—BA: \$14.8 instead of \$9.55, 0: \$10.55 instead of \$9.05;

Education, training, employment and so-

cial services—BA: \$30.4 instead of \$24.0, 0: \$22.7 instead of \$22.2;

Health—BA: \$40.6 instead of \$40.5, 0: \$39.3 instead of \$38.9;

Income Security—BA: \$170.9 instead of \$155.9, 0: \$141.3 instead of \$137.2;

Veterans benefits and services—BA: \$18.9 instead of \$20.3, 0: \$18.1 instead of \$19.5;

Law enforcement and justice—BA: \$3.5, 0: \$3.6;

General Government—BA: \$3.5 instead of \$3.6, 0: \$3.5;

Revenue sharing and general purpose fiscal assistance—BA: \$7.6, 0: \$7.7;

Interest—BA: \$38 instead of \$39.6, 0: \$38 instead of \$39.6;

Allowances—BA: \$0.8 instead of \$0.7, 0: \$0.8;

Undistributed offsetting receipts—BA: —\$15.6 instead of —\$16.8, 0: —\$15.6 instead of —\$16.8. S. Con. Res. 10—Action complete March 3, 1977. (38)

First Budget Resolution, 1978.—Sets the level for total budget outlays for fiscal year 1978 at \$460.95 billion, estimated revenues at \$396.3 billion, new budget authority at \$503.45 billion, and the estimated deficit at \$64.65 billion as compared to the President's estimates of \$462.6 billion in budget outlays, \$404.7 billion in revenues, \$506.2 billion in new budget authority, and a proposed deficit of \$57.9 billion; sets the appropriate level of the public debt at \$784.9 billion and the amount by which the statutory amount may be increased to \$83.6 billion; for estimated revenues (1) assumes the level of fiscal stimulus in fiscal 1978 provided in the Tax Reduction and Simplification Act as agreed to by House and Senate conferees; (2) accepts a \$65 million allowance for miscellaneous tax and tariff legislation; (3) considers the entire cost of the earned income credit as a reduction of revenue; and (4) postpones the treatment of tax credits in excess of recipients tax liabilities until development of the second budget resolution; recommends outlays for budget programs by function for fiscal year 1978 as compared with the President's proposed budget outlays as follows:

National Defense: \$110.0 billion as compared to \$112.8 billion;

International Affairs (conduct of foreign affairs, foreign information and exchange activities, the Peace Corps, Food for Peace, Corps, Food for Peace, and non-military foreign assistance): \$7.3 billion as compared to \$7.2 billion;

General Science, Space and Technology: \$1.7 billion, which is the same estimate submitted by the President;

Natural Resources, Environment, and Energy: \$20.0 billion as compared to \$20.9 billion;

Agriculture: \$4.35 billion as compared to \$4.4 billion;

Commerce and Transportation: \$19.4 billion as compared to \$19.9 billion;

Community and Regional Development: \$10.8 billion as compared to \$9.9 billion;

Education, Manpower, and Social Services: \$27.2 billion as compared to \$27.0 billion;

Health: \$44.3 billion as compared to \$44.6 billion;

Income Security (social security and unemployment insurance, retirement systems for Federal and railroad employees and assistance programs for the needy): \$146.7 billion as compared to \$148.7 billion;

Veterans Benefits and Services: \$20.2 billion as compared to \$18.8 billion;

Law Enforcement and Justice: \$3.85 billion as compared to \$3.8 billion;

General Government: \$3.85 billion as compared to \$4.0 billion;

Revenue Sharing and General Purpose Fiscal Assistance: \$9.7 billion, which is the same estimate submitted by the President;

Interest: \$43.0 billion as compared to \$40.9 billion;

Allowances (includes Federal pay increases for civilian agencies and other expenditures which cannot be reasonably assigned to other functions); \$1.9 billion as compared to \$1.2 billion; and

Undistributed Offsetting Receipts (includes receipts from rents and royalties on leases on the Outer Continental Shelf and other deductions from outlays which cannot be reasonably assigned to other functions): \$16.3 billion in undistributed offsetting receipts in the Congressional budget as compared to \$16.0 billion in the President's budget. S. Con. Res. 19—Action completed by both Houses May 17, 1977. (137, 142)

#### CONGRESS

Congressional Campaign Committee Employees Retirement Credit.—Amends title V, U.S.C., to provide that a congressional employee may credit not to exceed 10 years of service as an employee of the Democratic Senatorial Campaign Committee, the Republican Senatorial Campaign Committee, the Democratic National Congressional Committee or the Republican National Congressional Campaign Committee for Civil Service Retirement purposes provided the required deposits for such service are made to the fund; and makes the provisions of this act applicable to an employee who retires on or after the date of enactment. S. 992—Passed Senate March 5, 1977. (VV)

Joint Committee on Atomic Energy Abolishment.—Abolishes the Joint Committee on Atomic Energy and provides for the disposition of its staff and the transfer of its statutory functions and authority to other congressional committees having jurisdiction over the development, utilization or application of atomic energy; establishes, until March 31, 1979, an Office of Classified National Security Information under the policy direction of the Majority and Minority Leaders and the administrative direction of the Secretary of the Senate which shall be responsible for safeguarding national security information and other restricted data; authorizes the office to classify and declassify information within the guidelines developed for restricted data by the responsible executive agencies and to establish a central repository in the Capitol for safeguarding such data; directs the Office, within 30 days of enactment, to furnish the Senate Armed Services, Energy, Environment and Foreign Relations Committees with a listing of all records, data, charts, and files to be transferred and to indicate which committee may have jurisdiction; directs the chairmen of the committees involved to resolve any jurisdictional problems which may arise; makes necessary conforming amendments to certain laws which pertain to the Joint Committee on Atomic Energy; and provides that this act shall become effective on the tenth day after the date of enactment. S. 1153—Passed Senate March 31, 1977. (VV)

#### CRIME—JUDICIARY

Daughters of the Confederacy Patent Renewal.—Extends for 14 years design patent number 29,611 which is the insignia of the United Daughters of the Confederacy. S. 810—Passed Senate May 13, 1977. (VV)

Jefferson F. Davis.—Restores posthumously full rights of citizenship to Jefferson F. Davis effective December 5, 1968. S.J. Res. 16—Passed Senate April 27, 1977. (vv) U.S. District Court Terms: Amends section 104(a) (1), title 28, U.S.C., to provide for holding terms of the U.S. District Court for the Eastern Division of the Northern District of Mississippi at Aberdeen, Ackerman, and Corinth. S. 662—Passed Senate April 7, 1977. (vv)

North Dakota Judicial District.—Amends title 28, U.S.C., to realign the judicial dis-

tricts of North Dakota by transferring Bottineau, McHenry, and Pierce Counties from the Northeastern Division to the Northwestern Division and transferring Sheridan and Wells Counties from the Southeastern Division to the Northwestern Division in order to reduce the average distance which litigants, attorneys, and jurors in these counties must travel to the nearest place of holding court by approximately 100 miles. S. 195—Passed Senate May 24, 1977. (vv)

Omnibus Judgeship.—Provides for the appointment of 110 additional permanent district court judges in 65 specified judicial districts; creates three temporary district court judgeships, for a minimum of 5 years, in the Eastern District of Kentucky, Southern District of West Virginia, and Southern District of Florida; divides the fifth circuit into a new fifth circuit consisting of Alabama, Florida, Georgia, and Mississippi which would have 14 judges, and a new eleventh circuit consisting of Louisiana and Texas which would have a total bench of 12 judges; creates a total of 35 new circuit court judgeships distributed as follows: one new judgeship in the first circuit; two in the second circuit; one in the third circuit; three in the fourth circuit; five for the revised fifth circuit; two for the sixth district; one for the seventh circuit; one for the eighth circuit; ten for the ninth circuit; one for the tenth circuit; and six for the new eleventh circuit; contains a "report back" provision which requires the Judicial Council of the Ninth Circuit Court to make recommendations for a solution to the unique problems of that circuit within one year of the date on which the tenth new judge is appointed; authorizes the Administrative Office of the United States Courts to upgrade and reclassify eight employee positions; and amends existing law to require that actions brought against rail or motor carriers on claims for damage or delay to shipments be subject to a minimum jurisdictional amount of \$10,000 for each bill in lading, in order to prevent abuse of the Federal judicial process by persons bringing such actions simply as a means of tolling the statute of limitations while settlement negotiations are undertaken. S. 11—Passed Senate May 24, 1977. (16)

Coast Guard authorization.—Authorizes \$1,252,321,000 for fiscal year 1978 for the Coast Guard for the procurement of vessels and aircraft, construction and improvement of shore and offshore facilities, alteration and removal of obstructive bridges, aids to navigation, pollution abatement, administrative expenses, and operating expenses; authorizes a year-end strength for active duty personnel of 39,129; contains authorization and personnel to supplement the recent Presidential program of boarding and inspecting oil tankers; funds for the reactivation of Coast Guard cutters to be used as back-up vessels in the enforcement of the 200-mile Fishery Conservation Zone; funds and personnel to supplement the present enforcement of the Fishery Conservation and Management Act of 1976; funds and personnel to create a search and rescue mission capability at the Portage, Mich., Coast Guard station; restoration of funds expended by the Coast Guard as a result of the unanticipated winter storm damages; funds for two additional ice-breaking tugs and one large ice-breaker; funds for the procurement of radar and other equipment for a continuation of various vessel traffic systems; and funds for the study of oil spill containment in high seas or fast rivers. H.R. 6823—Passed House May 16, 1977; Passed Senate amended May 25, 1977. (VV)

#### DEFENSE

Defense production extension.—Extends for two years, through fiscal 1979, the titles

of the Defense Production Act of 1950, as amended, which contain the sole authority for a number of programs designed to maintain the national defense production base in peacetime, prepare for mobilization, provide a pool of trained manpower for war production management, provide uniform cost accounting standards for negotiated defense contracts, provide for the examination of national policy with regard to material supplies and shortages, and continue the Joint Committee on Defense Production. S. 853—Public Law 95—, approved, 1977. (VV)

Military construction authorization.—Authorizes \$3,726,633,000 for construction and other related authority for the military departments, and the Office of the Secretary of Defense within and outside the United States; contains authority for the construction of new projects which will create an estimated 50,000 jobs in the construction industry and to operate and maintain the current inventory of military family housing; directs DOD to give the chemical weapons storage site program top priority; contains \$100 million for energy conservation programs; directs DOD to examine long-term goals which would eliminate reliance on oil and natural gas and utilize coal as a fuel source and to report to Congress before submitting the 1979 authorization; directs DOD to report on the construction backlog for the U.S. Forces in Europe including efforts to increase NATO and/or host nation participation; includes \$7.3 million for construction of support facilities for personnel stationed at Diego Garcia; increases from \$400,000 to \$1 million DOD authority for emergency minor construction projects without specific authorization; makes clear congressional intent that commissary surcharge funds may be used to provide new commissaries and renovate existing commissaries anywhere in the world; permits the Secretary to acquire by exchange certain lands contiguous to Fort Bliss Military Reservation, El Paso, Texas; increases from \$2 million to \$3.3 million the authorization for the construction of shore-side facilities for the U.S.S. Arizona memorial in Hawaii; and permits the use of certain former military land conveyed to San Francisco for public purposes other than park and recreational uses thus permitting the city to construct a sewage treatment facility on the site. S. 1474—Passed Senate May 13, 1977. (VV)

Military enlistment and reenlistment bonuses.—Amends chapter 5, title 37, U.S.C. to extend for 15 months, from June 30, 1977, to September 30, 1978, present law authorizing the armed services to pay enlistment and reenlistment bonuses to selected enlisted personnel who possess a critical skill or to those who enlist for service in a critical skill including the combat arms; and adds a provision whereby a member would forfeit his bonus if he becomes technically unqualified in the skill for which the bonus was paid unless it is the result of an injury, illness, or other impairment which is not a result of his own misconduct. H.R. 583—Passed House February 8, 1977; Passed Senate amended May 2, 1977. (VV)

Military procurement authorization.—Authorizes \$35.955 billion for fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development, test, and evaluation for the Armed Forces; prescribes the authorized personnel strength for each active duty component and of the Selected Reserve of each Reserve component of the Armed Forces and of civilian personnel of the Department of Defense; and authorizes the military training student loads. H.R. 5970—Passed House April

25, 1977; Passed Senate amended May 17, 1977; In conference. (144)

#### ECONOMY—FINANCE

**Export Administration—Arab boycott.**—In title I, amends and extends the Export Administration Act of 1969 to September 30, 1979; requires reviews of export control lists and rules and regulations issued under the act within 1 year of enactment; provides for a continuing analysis of national security export controls so that a country's Communist or non-Communist status is no longer the sole determinant of U.S. policy; provides for a review of national security export controls to determine whether modifications are necessary in light of evolving technology, the availability of restricted items from sources outside the United States, and other relevant matters; improves the role of industry representatives in formulating and implementing national security export controls; improves the process of export licensing review and decision; increases the penalties applicable to violations of the Export Administration Act; and otherwise improves the administration of U.S. export controls;

Exempts agricultural commodities purchased for export and stored in the United States from subsequent export restrictions; requires that when export controls are imposed on farm commodities for foreign policy reasons or domestic shortages, the President must submit a detailed report of his reasons to Congress which has 30 days to veto the action; requires a study of the national security impact of the export of technical information to restricted countries within 6 months of enactment; and adds reporting and notification requirements to the act;

In title II, seeks to prevent most forms of compliance with foreign boycotts; prohibits refusal to do business with blacklisted firms and boycotted friendly countries pursuant to foreign boycott demands; prohibits discrimination against other U.S. persons on the grounds of race, religion, sex, or national origin in order to comply with a foreign boycott; prohibits U.S. persons from furnishing information about another person's race, religion, sex or national origin for foreign boycott enforcement purposes; provides for public disclosure of requests to comply with foreign boycotts; requires domestic U.S. persons who receive such requests to disclose publicly whether they are complying with such requests; provides that these provisions apply to all domestic concerns and persons, including intermediaries in the export process;

Exempts the following from the antiboycott provisions: (1) transactions in which a unilateral and specific selection is made by a boycotting country, or national or resident thereof; (2) to allow United States persons residing in a foreign country to comply with the laws of that country with respect to his activities exclusively therein; (3) to permit a negative certification with respect to carriers or route of shipment in order to comply with requirements protecting against war risks and confiscation; and (4) to allow compliance with immigration or visa requirements with respect to the individual and members of his family; preempts all State foreign boycott laws; provides a 2-year grace period for agreements in effect on or before March 1, 1977, with three additional 1-year extensions available in cases where good faith efforts are being made; and generally strengthens U.S. law against foreign boycotts to reduce their domestic impact. H.R. 5840—Passed House April 20, 1977; Passed Senate amended May 5, 1977; Conference report filed. (140)

**Foreign corporate bribes and domestic disclosure.**—Amends the Securities Exchange Act of 1934 to require companies subject to the jurisdiction of the Securities and Ex-

change Commission to maintain accurate records, prohibit certain bribes, and expand and improve disclosure of ownership of the securities of U.S. companies;

In title I, requires companies subject to SEC jurisdiction to maintain strict accounting standards and management control over their assets; prohibits the falsification of accounting records and the deceit of accountants auditing the books and records of such companies; makes it a crime for U.S. companies to bribe a foreign government official for the specified corrupt purposes; imposes a maximum fine \$500,000 on companies and \$10,000 and 5 years imprisonment on individuals for violation of the criminal prohibitions;

In title II, requires those persons who already file reports with the SEC when they own more than 5 percent of the shares in a U.S. company to identify their residence, citizenship, and the nature of their beneficial ownership; provides for the development of a comprehensive system in publicly held companies; requires the Commission to consolidate the various beneficial ownership reporting requirements of the Securities Exchange Act into a centralized nonduplicative system for the collection of such information, and to tabulate and make it available to regulators and the public; requires the Commission, within 30 months of enactment, to report to Congress with respect to the effectiveness of the ownership reporting requirements and the desirability and feasibility of reducing or otherwise modifying the 5-percent disclosure threshold giving appropriate consideration to specified regulatory and public policy; and provides the Commission with authority to assure that the jurisdictional effectiveness of section 15(d) of the Securities Exchange Act is not inappropriately limited because of the use of nominee and street name registration of securities. S. 305—Passed Senate May 5, 1977. (VV)

**Interest rates (Regulation Q).**—Federal Credit Unions.—Extends from March 1, 1977, until December 15, 1977, existing authority (commonly known as Regulation Q) under the Interest Rate Control Act by which Federal financial regulatory agencies set interest rate ceilings on deposits in financial institutions under their respective jurisdictions; extends until August 31, 1977, the Treasury Department's authority to borrow funds from the Federal Reserve System;

Modernizes the powers of Federal credit unions under the Federal Credit Union Act in order that they may provide more contemporary financial services to their members; considers demand deposit accounts of state chartered credit unions as member accounts, if they qualify pursuant to state law, thus making them eligible for Federal share insurance; establishes varying self-replenishing lines of credit to member borrowers; removes the distinction between secured and unsecured loans and raises the maximum loan to 12 years (currently 5 years on unsecured loans and 10 years on secured loans); empowers the board of directors to establish their own loan maturity and collateral requirements; removes the \$2,500 maximum amount for unsecured loans; provides the necessary flexibility to meet members' needs in accordance with the applicant's creditworthiness and the credit union's soundness rather than arbitrary loan ceilings; permits real estate loans with maturities up to 30 years; and includes the following restrictions on such lending authority: (1) loans must be secured by a first lien, (2) loans must be for a one-to-four family dwelling, (3) the dwelling must be the principal residence of the borrower, and (4) the sales price must not exceed 150 percent of the median sales price of residential real property to be determined on a market area basis; al-

lows loans with maturities of up to 15 years for the purchase of mobile homes used as the member's residence, or for the repair, alteration or improvement of a member's residence; permits Federally guaranteed or insured loans, such as the VA guaranteed mobile home loans, with maturities as specified in those statutes; increases the officials' borrowing limit on unsecured loans from \$2,500 plus pledged shares to \$5,000 plus pledged shares and permits them to guarantee or endorse up to the same amounts without board approval; clarifies the existing provisions regarding the penalty for excess interest and the provision regarding loan amortization; ensures that a member may repay his or her loan prior to maturity with no penalty; authorizes loans to other credit unions and credit union organizations; and contains other provisions. H.R. 3385—Public Law 95—, approved , 1977. (VV)

**Securities and Exchange Commission Authorizations.**—Amends the Securities Exchange Act of 1934 to increase the authorization for fiscal year 1977 from \$55 million to \$56.5 million. S. 1025—Public Law 95—, approved , 1977. (VV)

Authorizes \$58,290,000 for fiscal year 1978 for the operation of Securities and Exchange Commission. S. 1311—Passed Senate May 25, 1977. (VV)

**Small business amendments—Disaster relief loans.**—Amends the Small Business Act to authorize \$954.7 million for the Small Business Administration for fiscal year 1978 of which \$47.1 million is for the surety bond guarantee program, \$4 million for the lease guarantee program, and \$171 million for salaries and expenses; places ceilings for the first time on SBA lending programs except for the physical and economic injury disaster loans which are open ended authorizations; places greater emphasis on the non-lending programs by (1) directing SBA to develop a small business procurement source data bank, (2) authorizing additional procurement officers to increase the total value of small business set asides awarded by the Federal Government, and (3) increasing the authorization for development of various business management training program; gives SBA the discretionary authority to suspend interest and principal payments on both direct and guaranteed loans made by private lenders; authorize SBA to certify a small business company's ability to perform a specific Government contract; makes handicapped sheltered workshops eligible for small business set-aside procurement contracts; directs that priority be given to labor surplus areas when awarding small business set-aside contracts; enables homebuilders to obtain SBA financial assistance by permitting financial for residential or commercial construction or rehabilitation for sale or rental; provides that nonprofit groups of 75 members or less who have organized for purposes of rehabilitating blighted urban or rural areas may also obtain loans; allows SBA to make compliance loans to small firms who must meet Federal regulatory standards adopted prior to 1974;

Authorizes the Administrator, upon certification by a State Governor, to make loans to small business concerns that have suffered economic injuries as a result of a disaster occurring after July 1, 1975, and are in need of financial assistance not available on reasonable terms in the disaster area; places a \$100,000 limitation on the amount of a loan and permits the Administrator to defer payment of principal and interest for 1 year; lowers the interest rate on physical disaster loans for the uninsured damaged portion of a principal residence and property from the present rate of 6% percent to the following: 1 percent on the first \$5,000 worth of damage, 2 percent on the second \$5,000,

and 3 percent on all damage above \$10,000; limits to 3 percent the interest rate on all other loans and permits the forgiveness of principal amounts over \$500 as follows: up to \$1,000 when the uninsured damage is equal to between 10 and 20 percent of the market value, up to \$2,000 when the uninsured damage is equal to between 20 and 30 percent of the market value, and up to \$3,000 when the uninsured damage is equal to 30 percent or more of the market value; gives qualifying applicants the option of receiving a one-third payment equal to the amount that would be forgiven in place of a loan; makes the loan rate of the Farmers Home Administration compatible with that of SBA by reducing from 5 to 3 percent the interest rate on loans to finance the repair or replacement of property, including crops and livestock, which was lost, damaged or injured because of a disaster occurring on or after July 1, 1976; authorizes SBA to increase the principal of a loan by not to exceed \$2,000 in order to insulate property which was damaged or destroyed during the period April 1, 1977, to October 1, 1977, whether or not the property was insured at the time of the damage; and requires the Administrator to submit a report to Congress evaluating the program and making recommendations as to its continuation, modification or termination. H.R. 692—Passed House February 9, 1977; Passed Senate amended May 19, 1977; Senate requested conference May 19, 1977. (VV)

Small business loan ceilings.—Amends the Small Business Act to increase the fiscal year 1977 authorization ceilings for the following SBA financial assistance programs: Business Loan and Investment Fund from \$6 billion to \$7.4 billion, Economic Opportunity Loans from \$450 million to \$525 million, and Small Business Investment Company Program from \$725 million to \$887.5 million; and amends the Small Business Investment Act of 1958 to increase the fiscal year 1977 ceiling on the Surety Bond Guarantee Program from \$56.5 million to \$110 million. H.R. 2647—Public Law 95-14, approved March 24, 1977. (VV)

U.S. International Trade Commission.—Authorizes \$12,187,000 to the U.S. International Trade Commission for fiscal year 1978; makes the Chairman, rather than the full Commission, responsible for administrative matters; and authorizes the Commission to continue publication of its reports on synthetic organic chemicals until 1981. H.R. 6370—Passed House April 25, 1977; Passed Senate amended May 17, 1977. (VV)

White House Conference on Small Business.—States as the sense of the Senate that the President should convene a White House Conference on Small Business to develop recommendations that will increase public awareness of the importance of small business; identify the problems of new, small, and independent business enterprise; and suggest appropriate governmental actions to encourage and maintain the economic interests and potentials of the small business community in order to strengthen the overall economy of the Nation. S. Res. 105—Senate agreed to March 28, 1977. (VV)

#### EDUCATION

Education of the Handicapped.—Extends certain programs under the Education of the Handicapped Act for 5 years, through fiscal year 1982, with authorizations for each of fiscal years 1978 through 1982, respectively, as follows: (1) Part C, Centers and Services to Meet Special Needs of the Handicapped—\$76 million, \$80 million, \$86 million, \$89 million, and \$93 million; Part D, Training Personnel for the Education of the Handicapped—\$77 million, \$82 million, \$87.5 million, \$92.5 million, and \$97.5 million; Part E,

Research in the Education of the Handicapped—\$20 million, \$22 million, \$24 million, \$26 million, and \$28 million; Part F, Instructional Media for the Handicapped—\$24 million, \$25 million, \$27 million, \$29 million, and \$29 million; and provides the authority for the Bureau of Education to support model education projects for all handicapped children under section 641 of the act. H.R. 6692—Passed House May 9, 1977; Passed Senate May 23, 1977. (VV)

Higher education technical amendments.—Makes technical and miscellaneous changes to higher education provisions contained in the Education Amendments of 1976 (Public Law 94-482). H.R. 6774. Public Law 95—, approved—1977. (VV)

Vocational education amendments.—Makes a number of technical amendments to title II of the Education Amendments of 1976, Public Law 94-482, dealing with printing and clerical errors and changing certain reporting dates; removes the \$25 million a year limit for State administrative expenses and authorizes funds under the basic State grant for this purpose with the requirement that States match Federal funds used; requires States to set forth in their State plan the amount of Federal funds it plans to retain at the State level for administration; and gives each local recipient the option of using a percentage of Federal funds which is equal to the percentage of Federal funds in their vocational education program or to use any amount of Federal funds as long as they are matched by State appropriated funds for administrative expenses. H.R. 3437—Public Law 95—, approved—1977. (VV)

#### ELECTIONS

Federal Election Commission Authorization.—Authorizes \$7.5 million for activities of the Federal Election Commission for fiscal year 1978. S. 1435—Passed Senate May 5, 1977. (VV)

Overseas citizens voting rights.—Amends the Overseas Citizens Voting Rights Act of 1975 and the Federal Voting Assistance Act of 1955 to improve the administration and operation of these laws; vests the authority and responsibility for collecting and disseminating absentee voting information to citizens overseas in the President's designee (currently the Secretary of Defense) under the Federal Voting Rights Assistance Act; authorizes utilization of the same ballot application and free airmail postage provisions presently contained in the Federal Voting Assistance Act for all citizens residing overseas; provides the designee with the authority to revise the absentee registration and ballot application forms currently recommended for use by military personnel and civilians temporarily residing abroad and to develop a single form which could also be used by citizens covered by the Overseas Voting Act; provides that any balloting material sent from the United States to persons covered by either act or returned by them to this country shall be sent by priority airmail or by the most expeditious postal service available; directs the designee to publicize and notify appropriate citizens and State election officials of the availability of free postage and the expedited mail delivery of balloting material; and provides that the exercise of the right to register or vote in Federal elections by citizens residing overseas shall not affect the determination of his place of residence or domicile for the purpose of any tax imposed under Federal, State, or local law. S. 703—Passed Senate May 9, 1977. (VV)

#### EMPLOYMENT

CETA.—Extends the authorization of sums as may be necessary for all titles of the Comprehensive Employment and Training Act (CETA) through fiscal year 1978; extends

the amendments to title VI made by the Emergency Jobs Programs Extension Act of 1976 which provides that each prime sponsor of a public service employment program may use its allocation, first, to sustain its existing number of public service job holders under the Act, and shall thereafter fill any additional public service jobs with low-income persons unemployed for at least 15 weeks who have been receiving or are eligible for unemployment compensation, and also provide that 50 percent of title VI job vacancies due to attrition must meet those eligibility requirements, but the remaining 50 percent may be filled under the original title VI requirements (15 days unemployment in areas having 7 percent or higher unemployment rates, and 30 days unemployment in other areas). H.R. 2992—Passed House March 29, 1977; Passed Senate amended May 25, 1977. (VV)

Emergency unemployment compensation.—Extends the Emergency Unemployment Compensation Act to October 31, 1977, to provide a maximum of 13 weeks of emergency benefits (which combine with the 26 weeks of regular and 13 weeks of extended benefits for a total of 52 weeks of unemployment benefits) in States where the insured unemployment rate is 5 percent or more, with a phase-out under which individuals eligible before October 31, 1977, may continue to receive benefits until January 31, 1978; extends until April 30, 1977, the maximum 26 week program now in effect (which combine with 26 weeks of regular and 13 weeks of extended benefits for a total of 65 weeks of unemployment benefits) in order to avoid terminating benefits for certain participants in that program; provides that the cost of emergency unemployment compensation paid after March 31, 1977, be met from nonrepayable general revenues without the present law requirements that the costs ultimately be met from Federal Unemployment Tax;

Provides that, in addition to any eligibility requirements of State law, an individual would be disqualified from receiving emergency benefits for failing to (1) actively seek work, (2) apply for any suitable work which was referred by the State agency, or (3) accept any offer of suitable work; defines suitable work as that which (1) is within the capabilities of the claimant, (2) meets conditions of present Federal law, (3) meets the conditions of State law and practices pertaining to suitable or specific disqualifying work such as unreasonable travel distance or threat to morals, health, or safety, (4) pays wages equal to Federal or State minimum wage, (5) pays gross average weekly remuneration equal to the individual's weekly unemployment benefits plus any Supplemental Unemployment benefits he might be entitled to, and (6) was listed with the State employment service or offered in writing; allows a State to waive these requirements if an individual furnishes satisfactory evidence that prospects for obtaining work within a reasonable period of time in his or her occupation are good;

Establishes new statutory authority and procedures for the treatment of fraud and erroneous payments; disqualifies applicants submitting false or erroneous information; requires States with certain exceptions, to recover any overpayments made to individuals; makes fraud in connection with the program a Federal crime and imposes a fine of up to \$10,000 and imprisonment for up to 5 years;

Provides for State implementation of changes made by this act; requires each State to enter into a modification if its present agreement within 3 weeks after the Secretary of Labor proposes the modification to the State; provides that if modification is not entered into, the Unemployment Compensation Program in that State would expire within the last week which ends on

or before March 31, 1977; permits Kentucky, which does not have a scheduled meeting of its legislature during 1977, to defer until 1979 compliance with certain requirements of the act;

Simplifies administration by terminating an individual's entitlement to emergency benefits two years after the end of the benefit year for which regular benefits were payable; extends for two years, through 1979, the moratorium under which the Federal unemployment tax is automatically increased to recapture any loan to a State which is unpaid after 2 years; prohibits benefits to an individual who was illegally working at the time he earned his eligibility; allows States to deny unemployment compensation to teachers during brief mid-year vacation periods if the teacher was employed by the school system immediately before the start of the vacation and has reasonable assurance of the employment continuing at the conclusion of the vacation; makes clear that groups of local governments are to be provided the same options for financing unemployment compensation as those provided to single government units; extends from September 30, 1979, to March 31, 1980, the provision contained in Public Law 94-566 which requires States to reduce the unemployment benefits of an individual by the amount of any public or private pension including social security and railroad retirement annuities in order to conform this enactment date with the final reporting extension granted the National Commission of Unemployment Compensation; extends the time by which the National Commission on Unemployment Compensation must submit its interim report from March 31, 1978, to September 30, 1978, and the time by which it must submit its final report from January 1, 1979, to July 1, 1979; and amends present law to require an affirmative vote of the Senate and the House to make effective the President's quadrennial recommendations regarding the salary increases of Members of Congress, the Federal judiciary, Cabinet officials and other top Federal personnel. H.R. 4800—Public Law 95-19, approved April 12, 1977. (82)

Public works employment.—Authorizes an additional \$4 billion to extend the program of grants to State and local governments to provide jobs through construction in places with the most distressing levels of unemployment as originally authorized under Title I of the Public Works Employment Act of 1976; provides that 65 percent of the funds be allotted on total numbers of unemployed and 35 percent on the basis of the relative severity of unemployment, with States participation in the 35 percent allocation only if their unemployment rates exceed 6.5 percent for the most recent 12-month period; provides that no State shall receive less than three-fourths of 1 percent nor more than 12.5 percent; requires that within a State 70 percent or more of the funds be spent in areas with rates of unemployment above the national average and 30 percent for areas with rates below the national average but above 6.5 percent; provides a \$70 million set aside for grants that were not received, considered or rejected solely because of an error by a U.S. employee or officer; contains a 2½ percent set-aside for Indian and Alaskan Natives projects to insure a substantial fund for such projects while permitting high-unemployment non-Indian communities a competitive chance to be awarded projects in States with Indian communities; includes the transportation of water to drought-stricken areas within the term "public works project" and permits an applicant who received a grant to substitute one or more projects for the project for which the grant was made under certain conditions approved by the Administrator; requires that all articles, materials and supplies used in a project be produced

and made from substances mined or produced in the U.S. except in certain cases; requires a grant applicant to expend 10 percent of the funds for minority business enterprises if available within project areas; requires that priority and preference be given to pending applications resulting in energy conservation; repeals the provision permitting the Secretary to consider the unemployment rate in adjoining areas from which the labor force for a project may be drawn; ensures that all laborers and mechanics employed on projects are paid the prevailing wage rate under the Davis-Bacon Act; requires the Secretary to consider only those applications for grants submitted on or after December 23, 1976, and before the date of enactment except for applications from the Trust Territory of the Pacific, Indian tribes and Alaska Native Villages or any applicant if a sufficient number of applications were not received; requires the Secretary of Commerce to study public works investment in the U.S. and report his findings to Congress within 18 months of enactment; requires the promulgation of regulations assuring special consideration to the employment of qualified disabled and Vietnam-era veterans;

Mandates, in Title II, the obligation of funds for water resource projects for fiscal 1977 (with the exception of the Meramec Dam in Missouri) and states congressional intent not to uphold any prospective budget rescissions or deferrals regarding these projects; provides that the rates of interest or discount used to access the return on Federal investment in projects carried out by the U.S. Army Corps of Engineers or the Department of Interior Bureau of Reclamation be those established by the Water Resources Development Act of 1974 or by prior law authorizing such projects. H.R. 11—Public Law 95-28, approved May 13, 1977. (48,123)

#### ENERGY

Coal Conversion Authority.—Extends for 6 months, from June 30, 1977, until December 31, 1977, the authority for the Federal Energy Administration to issue coal conversion orders pursuant to section 2 of the Energy Supply and Environmental Coordination Act of 1974 in order that Congress has sufficient time to study pending coal legislation without disrupting the present conversion program. S. 1468—Passed Senate May 11, 1977. (VV)

Deepwater ports.—Extends through fiscal year 1980 the annual \$2.5 million authorization under the Deepwater Port Act of 1974 which established a licensing and regulatory program governing offshore deepwater port development beyond the territorial limits of the United States. S. 891 (Identical to H.R. 6401)—Passed Senate May 17, 1977. H.R. 6401—Public Law 95—, approved 1977. (VV)

Department of Energy.—Creates a cabinet-level Department of Energy (DOE) to permit coherent administration of the national energy policy by merging the following components: all functions of the Federal Energy Administration, the Energy Research and Development Administration, and the Federal Power Commission; four Regional Power Marketing administrations and the power-marketing functions of the Bureau of Reclamation currently under the Department of Interior; functions relating to fuel supply and demand analysis currently under the Bureau of Mines; authority for development and promulgation of new building conservation standards now vested in the Secretary of HUD; Commerce Department programs to promote voluntary industrial energy conservation; jurisdiction over three naval oil reserves and three naval oil shale reserves currently administered by the Department of Defense; authority currently vested in the Interstate Commerce Commission to regulate oil pipelines; and authority

to publish guidelines for the Rural Electrification Administration on the issuance of loans or loan guarantees for generation and transmission facilities;

Provides that responsibility for promulgation of automobile efficiency standards will remain with the Department of Transportation but gives the Energy Secretary the right to appeal to the President if he is dissatisfied with the DOT's regulations; leaves responsibility for policing clean air standards with the Environmental Protection agency; continues responsibility for actual leasing of resources for the extraction of energy sources from public land in Interior, but places control over economic terms and conditions of such leases in DOE; requires cabinet-level departments and agencies with conservation responsibilities to designate a principal conservation officer within their Department;

Creates a three-member Energy Regulatory Board, whose members shall be appointed by the President, subject to Senate confirmation, with responsibility for all major direct pricing actions and certification of pipeline routes; gives the Board primary responsibility for actions which directly establish rate and charges under the Natural Gas Act and the Federal Power Act, including the well-head pricing for natural gas, wholesale electric rates, pipeline transmission charges; gives the board primary responsibility for actions under the Emergency Petroleum Allocation Act which affect the price and allocation of crude oil or oil products; creates an Energy Information Administration and an Economic Regulatory Administration; strengthens energy-related data-gathering authority; provides for Congressional review of transfer authority relating to oil transportation and remedial orders by the Energy Regulatory Board; requires an annual financial profile of the energy industry which includes an accounting of foreign ownership of domestic energy sources; contains measures to ensure public accountability; requires the preparation and submission of a national energy policy plan. S. 826—Passed Senate May 18, 1977. (148)

ERDA authorization.—Authorizes a total of \$4,946,261,000 for the Energy Research and Development Administration for fiscal year 1977, of which \$1,175,671,000 is designated for non-nuclear scientific research and programs, and \$3,770,590,000 is designated for non-weapon nuclear scientific research programs; includes: \$461,801,000 for fossil energy; \$286.2 million for solar energy; \$65.7 million for geothermal energy; \$221 million for conservation research and development; \$10 million for a high Btu pipeline gas demonstration plant; \$5 million for a fuel gas low Btu demonstration plant; and \$10 million for solar energy projects; authorizes funds for numerous plans to make improvements to comply with safety regulations; contains authorizations for capital equipment not related to construction to replace obsolete or worn-out equipment and to purchase certain new equipment to meet the needs of expanding progress and new technology at ERDA installations; provides an additional \$50 million for the clean boiler fuel demonstration plant authorized by Public Law 94-187 and \$15 million for the 5 megawatt solar thermal test facility authorized by Public Law 94-187; provides guidelines under which funds for fossil energy programs may be utilized; de-authorizes authorized fossil energy projects which were not appropriated within 3 full fiscal years; allows the Administrator to assist in the demonstration of the production of synthesis gas, methane, methanol, anhydrous ammonia, and similar energy intensive products from municipal waste by entering into agreements with units of local government or persons proposing to construct facilities for the manufacture of such

products; provides authority by which ERDA may reprogram funds between major program areas; directs ERDA to relate the funds authorized and appropriated in annual authorization and appropriation measures to the objectives and goals of the various enabling legislation under which the Agency operates; amends the Federal Nonnuclear Energy Research and Development Act of 1974 to transfer responsibility for preparation of demonstration project water assessments from ERDA to the Water Resources Council; requires the Administration to classify the recipients of ERDA contracts into various categories including: Federal agency, non-Federal governmental entity, profitmaking enterprise, non-profit enterprise, and nonprofit education institution; authorizes the establishment of a small grants program to promote the research, development, and demonstration of energy related systems and technologies appropriate to the needs of local communities; requires the Administrator, in consultation with EPA, to report to the Congress on the environmental monitoring, assessment and control efforts related to its various energy demonstration projects;

Authorizes \$464,302,000 for work in biomedical and environmental research, operational safety, environmental control technology, the materials sciences, and molecular and geosciences portion of the basic energy sciences program and program support; provides \$26.7 million for plant and capital equipment obligations including construction, acquisition, or modification of facilities, land acquisition, and acquisition and fabrication of capital equipment not related to construction; prohibits ERDA from starting projects if the current estimated cost exceeds the original estimated cost by more than 25 percent;

Authorizes ERDA to transfer sums from its "Operating Expenses" to other agencies for work which the moneys were appropriated; authorizes "Operating Expenses" and "Plant and Capital Equipment" as no year funds; authorizes any Government-owned contractor operated laboratory, energy research center or other laboratory performing functions under contract to ERDA to use a reasonable portion of its operating budget for funding employee suggested research projects up to the pilot plant state of development; permits ERDA to contract for advanced architect/Administrator services for construction projects essential to meet the needs of national defense or the protection of life, property, health or safety prior to congressional authorization; requires any officer or employee of ERDA in a policy making position to report certain known financial interests in various energy technologies and related resources; directs the Administrator to develop regulations that would avoid conflicts of interest in ERDA contracts with private persons or organizations involved in energy research and development; and authorizes the establishment of a National Energy Extension Service. S. 36—Public Law 95—, approved 1977. (VV)

ERDA defense program.—Authorizes a total of \$1,780,436,000 for fiscal year 1977 and \$2,030,144,000 for fiscal year 1978 for certain Energy Research and Development Administration (ERDA) programs which have military applications; includes funding of the three national defense programs: (1) weapons activities—supporting the operation of the three weapons laboratories; research on advanced weapons and the full scale development of the following 7 weapons: B-61 and B-61-4 tactical bombs, Trident I missile warhead, full fuzing option strategic bomb, Mark 12-A warhead, 8-inch artillery projectile, and common warhead for land attack cruise missiles and short range attack missile; continued development of improved nuclear test detection methods necessary to

monitor compliance with the limited Test Ban Treaty, Threshold Test Ban Treaty and Peaceful Nuclear Explosives Treaty; operation of the Nevada Test Site and the related costs of tests of advanced weapons concepts; maintenance and reliability assessment of the current weapons stockpile, production engineering for new weapons, nuclear materials recycle and recovery and security measures to protect nuclear shipments; and production of the following 9 new weapons for the war reserve: B-61-3, B-61-4, and B-61-5 tactical bombs, Lance enhanced radiation warhead, Trident I missile warhead, full fuzing option strategic bomb, Mark 12-A warhead, 8-inch artillery projectile, and common warhead for the land attack cruise missiles and the short range attack missile; (2) special materials production—supporting 3 reactors which produce enriched weapons grade uranium, plutonium and tritium; R & D associated with special materials production and management of radioactive wastes; and surveillance, maintenance and management of production reactor waste; and (3) nuclear explosives applications—supporting development of understanding of applications of nuclear explosives for peaceful purposes; includes \$411,344,000 for plant and capital equipment; provides for cost variations in the authorized amounts for projects; provides authority to merge funds appropriated in different years for the same requirement category; directs that funds appropriated pursuant to this act remain available until expended; authorizes ERDA to proceed to design any project subject to the total amount authorized for the activity; authorizes ERDA to retain monies received from outside sources and use them for operating funds; and authorizes ERDA to transfer funds to other agencies supporting its programs. S. 1339—Passed Senate May 22, 1977. (VV)

ERDA synthetic fuel loan guarantee program.—Amends the Federal Nonnuclear Energy Research and Development Act of 1974 to establish a loan guarantee program to be administered by the Energy Research and Development Administration (ERDA) whereby the Administrator may guarantee the payment of interest and principal of bonds, debentures, notes, and other obligations issued for the purpose of financing the construction and initial operation of commercial-sized demonstration facilities for the conversion of biomass into synthetic fuel or other useable forms of energy; authorizes guarantees of up to 75 percent of the total project cost and, during the construction and start up period, up to 90 percent; limits the total outstanding indebtedness that may be guaranteed at any one time to \$300 million; requires ERDA, before approving an application, to notify the appropriate State and local governmental officials and to give the Governor of the State an opportunity to make his recommendation respecting the facility; prohibits ERDA from guaranteeing a project if the Governor recommends against it; authorizes the Administrator, in the event of default, to complete the project and assure management of the facility including the authority to sell the products or energy produced; provides that any patents and technology resulting from the facility will be treated as assets in cases of default and requires that the guarantee agreement contain a provision assuring their availability to the Government if needed to complete the facility; and requires ERDA to submit a report of the proposed guarantee and facility to the appropriate committees of Congress which shall have 90 days to disapprove by passage of a disapproval resolution. S. 37—Passed Senate March 31, 1977. (VV)

Natural gas emergency.—Authorizes the President to declare a natural gas emergency if he finds that a severe shortage exists or is

imminent in the United States which would endanger the supply of natural gas for high-priority uses and the exercise of his authorities is reasonably necessary to assist in meeting requirements for such uses; provides that these authorities shall terminate when the President finds that shortages no longer exist and are no longer imminent;

Emergency allocation.—Authorizes the President, during a declared natural gas emergency, to require (1) any interstate pipeline to make emergency deliveries or transport interstate natural gas to any other interstate pipeline or a local distribution company served by an interstate pipeline; (2) any intrastate pipeline to transport interstate natural gas from one interstate pipeline to another or to any local distribution company served by an interstate pipeline; or (3) the construction and operation by any pipeline of necessary facilities to effect deliveries or transportation; directs the President, in issuing such orders, to consider the availability of alternative fuel to users of the interstate pipeline ordered to make deliveries and to determine that they would not have an adverse effect on the natural gas supply or exceed the transportation capacity of the pipeline; provides that these authorities shall terminate by April 30, 1977, or after the President terminates the emergency, whichever is earlier;

Emergency Sales at Deregulated Prices.—Authorizes interstate pipelines or local distribution companies to purchase supplies of natural gas for delivery before August 1, 1977, from intrastate pipelines at unregulated prices as reviewed by the President for fairness and equity; provides that these purchases could be delivered from intrastate pipelines and any producer of natural gas not affiliated with an interstate pipeline unless such natural gas was produced from the Outer Continental Shelf, and the sale or transportation of the gas was not, immediately prior to the date of the contract for purchase of the gas, certificated under the Natural Gas Act; authorizes the President to require, by order, any interstate or intrastate pipeline to transport gas and operate facilities necessary to carry out emergency purchase contracts;

Miscellaneous.—Authorizes the President to subpoena information to carry out his authority under the Act; contains antitrust protection provisions available as a defense against civil or criminal action brought against any person for violation of the antitrust laws with respect to actions taken pursuant to a Presidential order; gives the Temporary Emergency Court of Appeals exclusive jurisdiction to review all cases including any order issued or other action taken under this act; imposes civil penalties of up to \$25,000 a day for violations of orders and \$50,000 a day for willful violations; directs the President to require weekly reports which shall be made available to the Congress on prices and volume of natural gas delivered, transported or contracted for, and to report to Congress by October 1, 1977, on all actions taken under this act; and authorizes the President to delegate all or any portion of the authority granted to him to such executive agencies or officers he deems appropriate. S. 474—Public Law 95-2, approved February 2, 1977. (21)

Radiation exposure.—Extends the program of the Energy Research and Development Administration (ERDA) to provide financial assistance to limit radiation exposure resulting from the widespread use of sand containing mill tailings in the construction of approximately 500 public and private buildings in the Grand Junction, Colorado area; calls for a cooperative arrangement with the State of Colorado whereby ERDA is authorized to provide 75 percent of the costs of the program; extends the deadline for applying for remedial work under the program from 4 to 7 years; provides that property owners

who removed mill tailings at their own expense prior to the date of enactment and without the administrative determination required may apply for such reimbursement within the first year of enactment; permits the State of Colorado to waive the requirement that it perform the remedial work; and increases the authorization therefor from \$5 million to \$8 million. S. 266—Passed Senate April 4, 1977. (VV)

**Stripmining control and reclamation.**—Establishes a program for the regulation of coal surface mining activities and the reclamation of coal mined lands to assure that surface coal mining operations—including exploration activities and the surface effects of underground mining—are conducted so as to prevent or minimize degradation to the environment and that such surface coal mining is not conducted where reclamation is not feasible; sets forth a series of minimum uniform requirements for all coal surface mining on both Federal and State lands which deal with (1) preplanning (requires that an operator applying for a permit do certain research regarding adjacent land uses, the characteristics of the coal and the overburden, and hydrologic conditions and requiring inclusion in his application of the planned methodology and timetable for the operation in a reclamation plan); (2) mining practices (requires that mining methods be used which will minimize or obviate environmental damage or injuries to public health and safety including restrictions on the placement of overburden, blasting regulations, water pollution control requirements, and waste disposal standards); and (3) post-mining reclamation (requires reclamation and restoration of the mined land to its pre-mined condition including backfilling and regrading to approximate original contour, restoration of water quality and quantity, revegetation to pre-mining conditions and elimination of erosion and sedimentation); provides that these minimum Federal standards be administered and enforced by the States and by the Secretary of the Interior on public lands; authorizes funds to assist States in improving their regulatory and enforcement programs; provides for Federal enforcement of a State program if a State fails to comply with the Act;

Provides for the protection of scarce and vital water resources in the permit application requirements, reclamation standards and provisions for designation of areas unsuitable for mining; provides for a mechanism on both State and Federal lands for citizens to petition that certain areas be designated as unsuitable for surface coal mining; prohibits stripmining of lands which cannot be reclaimed under the standards of the Act, national park areas (except for such lands which do not have significant forest cover within those national forests west of the 100th meridian); and areas which would adversely affect such parks; prohibits stripmining 300 feet from an occupied building, 100 feet from a public road or 500 feet from an underground mine;

Permits certain variances to the mining-reclamation standards of the bill by allowing (1) a surface mine operator to postpone reclamation of limited segments of his mined area where he can prove to the regulatory authority that such segments are necessary to the operation of a planned underground coal mine; and (2) the Secretary of the Interior at his discretion to permit variances for experimental practices that show potential for improved environmental protection over prescribed or currently accepted practices; requires with regard to lands where the Federal government owns the coal but not the surface estate that if the surface owner does not consent, he shall be compensated at twice the difference between the fair market value, without reference to the coal, before and after mining plus relocation costs, 2 years loss of income, and other damages;

exempts mining operators with under 100,000 tons annual production from compliance with provisions of the Act for 24 months;

Bans strip mining in alluvial valleys only if it interrupts or prevents farming but exempts strippers who were already mining in 1976 or had received a State permit to do so by January 4, 1977;

Requires that applicants seeking to strip-mine on prime farmland demonstrate to the State regulatory authority that they can restore the land to its full premining agricultural potential;

Establishes a fund to be used to reclaim abandoned mined lands to be derived from a reclamation fee to be levied on every ton of coal mined at 35 cents per ton for surface mined coal and 15 cents per ton for all coal mined by underground methods or 10 percent of the value of the coal at the mine, whichever is less; requires that 50 percent of all fees collected in any one State be returned to that State; provides that the fee does not apply to lignite coal;

Provides that, beginning no later than 6 months from the date of enactment continuing until a State program has been approved or a Federal program has been implemented, the Secretary is required to carry out a Federal enforcement program which includes inspection and enforcement actions in accordance with the act; and contains comprehensive provisions for inspections, enforcement notices and orders, administrative and judicial review, penalties, and citizen participation. H.R. 2—Passed House April 29, 1977; Passed Senate amended May 20, 1977. (159)

#### ENVIRONMENT

**Disaster relief programs.**—Amends the Disaster Relief Act Amendments of 1974 to extend the authorizations for the Federal disaster assistance programs of the Federal Disaster Assistance Administration, which expire on June 30, 1977, through fiscal year 1980. H.R. 6197—Passed House May 17, 1977; Passed Senate amended May 24, 1977. (VV)

**Drought Emergency Authority.**—Provides temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976-77 drought conditions affecting irrigated lands in the western States; authorizes the Secretary, acting through the Bureau of Reclamation and the Bureau of Indian Affairs, to: (1) study available means to augment, utilize, or conserve Federal reclamation and Indian irrigation projects water supplies and to undertake construction (which must be completed by November 30, 1977), management, and conservation activities to mitigate drought damage, (2) acquire water supplies by purchase from willing sellers and redistribute the water to users based upon priorities he determine, and (3) undertake evaluations and reconnaissance studies of potential facilities to mitigate the effects of a recurrence of a drought emergency and make recommendations to the President and Congress; provides that payment for water acquired from willing sellers be at negotiated prices; directs the Secretary to determine the priority of need in allocating the acquired or developed water; authorizes the Secretary to defer without penalty, the 1977 installment charge payments, including operation and maintenance costs, owed to the U.S. on Federal reclamation projects, with the costs to be added to the end of the repayment period which may be extended if necessary; requires that this program be coordinated, to the extent practicable, with emergency and disaster relief operations conducted by other Federal agencies under existing provisions of law; requires the Secretary to report to Congress by March 1, 1978, on all expenditures made under this act; authorizes the Secretary to make interest-free five year loans to individual irrigators for construction, management and conservation activities or acquisi-

tion of water; authorizes \$100 million to carry out the water purchase and reallocation (water bank) program of which 15 percent shall be available to carry out other programs authorized by this act; and provides that up to 15 percent of fiscal 1977 funds available to the Secretary for the Emergency Fund Act may be used for non-Federally financed irrigation projects, 5 percent for State Government drought emergency programs, and \$10 million for the purchase of water. S. 925—Public Law 95-18, approved April 7, 1977. (54)

**Drought emergency relief.**—Authorizes \$225 million in grant and loan authority to the Economic Development Administration for assistance to States, Indian tribes or units of local government with a population of 10,000 or more for drought-related projects; includes among the permissible activities for which grants may be made the improvement or expansion of existing water supply facilities, construction of new facilities, well drilling or impoundment where appropriate, transportation of water by pipeline, and purchase of water if it is the most economic method of providing the needed supply; gives the Secretary of Commerce authority to designate areas eligible for assistance; limits grants to 50 percent of the cost of any project and provides that loans shall be at 5 percent interest for not to exceed 40 years and at terms determined by the Secretary; directs the Secretary to consider the relative needs of the applicants giving priority to communities facing the most severe problems; permits obligation of funds for drought impacted projects conducted by eligible applicants during fiscal year 1977 if they are compatible with the purposes of the act; permits funds to be obligated to December 31, 1977, and requires that projects be completed by April 30, 1978; and extends the time allowed for convening the White House Conference on Balanced Growth and Economic Development from 12 to 18 months after the date of enactment of Public Law 94-487. S. 1279—Public Law 95-31, approved May 23, 1977. (VV)

**Earthquake hazards reduction.**—Establishes a national earthquake hazards reduction program under the direction of the President to minimize the loss and disruption resulting from future earthquakes; specifies the objectives of the program which includes the following four elements: (1) a research element dealing with fundamental earthquake risk analysis for land-use consideration, hazards assessment, and engineering and research to reduce earthquake vulnerability; (2) an implementation plan to be prepared within 6 months setting year-by-year targets through at least 1985, specifying roles for Federal agencies, and recommending appropriate roles for State and local units of government, individuals, and private organizations; (3) a State assistance program allowing assistance to the States under the Disaster Relief Act of 1974; and (4) the opportunity for wide sectors of the population to participate in the formulation and implementation of the program; calls for cooperation among a number of Federal agencies including the U.S. Geological Survey and the National Science Foundation; requires the President to report annually to the Congress on progress achieved in the program; and authorizes therefor \$55 million, \$70 million and \$80 million over a 3-year period for the U.S. Geological Survey and National Science Foundation to undertake specific activities and such sums as necessary for other agencies involved in the program. S. 126—Passed Senate May 13, 1977. (VV)

**Endangered species.**—Extends through fiscal year 1980 the authorization for section 6(1) programs under the Endangered Species Act of 1973 at a rate of \$9 million for the

Department of the Interior and \$3 million for the Department of Commerce to assist States in developing programs for the protection of threatened and endangered species of fish, wildlife, and plants. S. 1316—Passed Senate May 25, 1977. (VV)

National Advisory Committee on Oceans and Atmosphere.—Repeals the Act of August 16, 1971, which established a National Advisory Committee on Oceans and Atmosphere and establishes a new and smaller National Advisory Committee on Oceans and Atmosphere (NACOA) to replace it, consisting of 15 members (which is reduced from 25 in the original act) appointed by the President for staggered 3-year terms; sets more stringent qualifications for membership; provides for the transfer of the personnel, positions, records, and unexpended funds to the new Committee; directs the Committee to undertake a continuing review of national ocean policy (on a selective basis), coastal zone management, and the status of U.S. marine and atmospheric science and service programs and advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration; requires the Committee to submit a report by June 30 of each year to the President and Congress and such other reports as may from time to time be requested; gives the Secretary of Commerce 60 days (instead of 90 days) to review and comment on the annual report; directs the Secretary to provide administrative support and services to the Committee; and authorizes \$480,000 for fiscal year 1978. H.R. 3849—Passed House May 16, 1977; Passed Senate amended May 23, 1977. (VV)

Noise control.—Authorizes \$10.9 million for general technical assistance, regulatory and administrative responsibilities under section 19 of the Noise Control Act of 1972 and \$2.1 million for research and development for fiscal year 1978. S. 1511—Passed Senate May 18, 1977. (VV)

Safe drinking water.—Amends the Safe Drinking Water Act of 1974 to extend through fiscal year 1978 the following authorizations which expire on September 30, 1977: \$17 million for technical information and training, \$20.5 million for State water supply supervision programs, \$6 million for State underground injection control program, \$25 million for technology demonstration grants, and \$16 million for research and development activities; and requires the Administrator of the Environmental Protection Agency to make grants under section 144(c) of the Act which authorizes funding of projects demonstrating technology for recycling waste waters for drinking purposes. S. 1528—Passed Senate May 24, 1977. (VV)

Sea grant program.—Extends for 2 years, through fiscal 1979, the authorization for the national sea grant program as follows: \$50 million annually for the basic sea grant program; \$5 million annually for national projects, and \$3 million annually for international cooperation assistance. H.R. 4301—Passed House May 16, 1977; Passed Senate amended May 24, 1977. (VV)

#### FISHERIES

Atlantic tunas.—Extends for an additional 3 years, until 1980, the Atlantic Tunas Convention Act of 1975 which implemented an international convention governing fishing for tuna and tuna-like fishes in the Atlantic Ocean and authorizes therefor such sums as necessary; and redefines the term "fishery zone" to mean the 200-mile fishery zone described in Public Law 94-265. H.R. 6205—Public Law 95—, approved 1977. (VV)

Commercial fisheries.—Extends the Commercial Fisheries Research and Development Act for 2 years, through fiscal 1980, and increases the annual authorization for fiscal year 1978 and the two subsequent years as follows: \$10 million for section 4(a) general programs (increased from \$5 million); \$3 million for section 4(b) which provides funds

on an emergency basis if there is a commercial fishery disaster or serious disruption affecting future production due to a resource disaster arising from natural or undetermined causes (increased from \$1.5 million); and \$500,000 for the section 4(c) program of grants to develop new commercial fisheries (increased from \$100,000). H.R. 6206—Passed House May 10, 1977; Passed Senate amended May 17, 1977. (VV)

Fishery conservation zone transition.—Gives Congressional approval of the fishery agreements between the United States and the People's Republic of Bulgaria, the Socialist Republic of Romania, the Republic of China, the German Democratic Republic, the Union of Soviet Socialist Republics, and the Polish People's Republic; provides that these agreements will enter into force on the date of enactment of this joint resolution; waives the 60-day Congressional review period; limits to 7 days the 45 day period for review and comment on application permits required of the Regional Fishery Management Councils created under the Fishery Conservation Zone Act during 1977 for those applications received by the Council on or before the date of enactment and those received by the Council from the Secretary of State after the date of enactment to provide for an orderly transition from the 12 mile to 200 mile fishing limit; waives, until May 1, 1977, the requirement that foreign fishing vessels have a valid permit on board and permits the Secretary to waive the fee required before fishing permits may be issued if he is satisfied that the foreign nation will pay the fee before May 1, 1977; and repeals, effective March 1, 1977, the Northwest Atlantic Fisheries Act of 1950. H.J. Res. 240—Public Law 95-8, approved February 21, 1977. (VV)

Gives Congressional approval of the fishery agreements between the United States and Spain, Japan, South Korea, and the countries of the European Economic Community (Iceland, France, Italy, Luxembourg, the United Kingdom, Denmark, Belgium, West Germany, and the Netherlands); contains essentially the same provisions as H.J. Res. 240 (Public Law 95-240) to provide for an orderly implementation of foreign fishing within the 200-mile fishery zone of the United States after March 1, 1977, including the 7-day period of comment by the Fishery Management Councils and the public with respect to applications for permits, the May 1 extension of time for the payment of fees and permit requirements, and waives the 60-day Congressional review period. H.R. 3753—Public Law, 95-8, approved March 3, 1977. (VV)

Fishermen's protection reimbursement program.—Extends the provisions of the Fishermen's Protective Act of 1967 which expires October 1, 1977, to October 1, 1979; establishes a Federal Government loan program whereby the Secretary of Commerce may make a loan after October 1, 1977, to the owner or operator of any U.S. vessel to replace or repair vessels or gear lost, damaged, or destroyed by any foreign vessel; conditions loans upon assignment to the Secretary of all rights of recovery and directs the Secretary, with the assistance of the Attorney General, to take appropriate actions to collect on any right assigned to him; cancels repayment of a loan if it is determined that the owner or operator was not at fault; and provides that loans may be granted for any damage which occurred after October 1, 1976. S. 1184—Passed Senate May 24, 1977. (VV)

#### GENERAL GOVERNMENT

Age discrimination report.—Nutrition programs for elderly.—Amends the Age Discrimination Act of 1975 to extend for 6 months, until November 1977, the time in which the U.S. Commission on Civil Rights must submit its report on unreasonable discrimination based on age in programs and activities receiving Federal financial assistance; and

Amends the Older Americans Act to ex-

tend the surplus commodities provision of the title VIII nutrition program for the elderly through fiscal year 1978 in order that it will coincide with the authorization period of the other programs of the act; and gives States the option to receive cash in lieu of such commodities. H.R. 6668—Passed House May 9, 1977; Passed Senate amended May 18, 1977. (VV)

Federal assistance program information.—Increases the availability of information about Federal domestic assistance programs by requiring the Director of the Office of Management and Budget (OMB) to: (1) establish and maintain a data base containing specified information on all Federal domestic assistance programs; (2) develop and maintain a computerized information system to provide for the widespread availability of information contained in the data base by computer terminal facilities; and (3) publish annually a catalog of Federal domestic assistance programs containing information from the data base, a detailed index and any other information deemed appropriate; authorizes therefor \$1.2 million for the first year; \$1.7 million the second year and \$2.2 million the third year;

Amends section 201 of the Intergovernmental Cooperation Act of 1968 to give OMB the responsibility to insure that information is provided to the States through their Governors or designated information centers on Federal financial assistance; requires the Director to report his recommendations to Congress for improving, consolidating and further developing Federal financial information systems; and requires the General Accounting Office to submit a report to Congress 1 year after enactment on actions taken by OMB to implement this act and, within 2 years of enactment, a progress report including an evaluation of its effectiveness and any legislative recommendations. S. 904—Passed Senate May 17, 1977. (VV)

GAO audits of IRS and ATF.—Amends the General Accounting and Auditing Act of 1950 to provide that the General Accounting Office may conduct management and financial audits of the Internal Revenue Service and the Bureau of Alcohol, Tobacco, and Firearms; contains provisions to insure the confidentiality of information including Congressional oversight and penalties for unauthorized disclosure; and requires the Comptroller General to submit to the Senate Finance and Governmental Affairs Committees, the House Ways and Means and Government Operations Committees, and the Joint Committee on Taxation, every six months, the names and titles of GAO employees having access to tax returns and information; to submit as frequently as possible results of the audit; and to submit annually a report of his findings and recommendations which must also include the procedures established for protecting the confidentiality of tax return information and the scope and subject matter of the audit. S. 213—Passed Senate March 11, 1977. (VV)

Kennedy Center authorization.—Increases from \$3.1 million to \$7.6 million the fiscal year 1977 authorization for the John F. Kennedy Center for the Performing Arts with the additional \$4.5 million to remain available until expended for the Secretary of the Interior, acting through the National Park Service, to correct leaks in the roof, terraces, kitchen, and East Plaza Drive and the damage which has resulted from these leaks; and authorizes \$3.7 million for fiscal year 1978. S. 521—Passed Senate February 24, 1977; Passed House amended March 4, 1977; In conference. (VV)

Kennedy Presidential Library.—Authorizes the Administrator of General Services to accept land, buildings, and equipment that have been or may be offered to the United States without reimbursement, for the pur-

pose of maintaining, operating and protecting as part of the National Archives system a Presidential archival depository located next to the University of Massachusetts campus on Columbia Point in Boston in memory of John Fitzgerald Kennedy. H.J. Res. 424—Public Law 95—, approved 1977. (VV)

Library services and construction.—Extends through October 1, 1982, and revises the Library Services and Construction Act; retains current use and allocation of funds but adds a provision to direct one-half of the funds after the appropriation level of \$60 million is reached (current funding level is \$56.9 million) to urban resource libraries, which are defined as public libraries in incorporated areas with populations exceeding 100,000; provides that any State that does not have an incorporated area with at least 100,000 persons will nevertheless be considered to have at least one urban resource library; adds a new title to the Act which provides special aid to and study of urban libraries; authorizes funds for projects to make libraries more energy efficient; and contains other provisions. S. 602—Passed Senate May 20, 1977. (VV)

NASA authorization.—Authorizes \$4,038,789,000 for the National Aeronautics and Space Administration for fiscal year 1978 of which \$4.04 billion is for research and development, \$161.8 million is for the construction of facilities, and \$846.989 million is for research program and management; includes funds to support the following new programs: (1) 5 space shuttle orbiters, (2) development of the shuttle-launched space telescope for research in astronomy, (3) a third generation earth resources survey spacecraft, Landsat-D, to carry an advanced scanning instrument, (4) initiation of a search and rescue satellite system in cooperation with Canada, and (5) initiation of a Jupiter orbiter probe mission; provides continued funding of the Space Shuttle; and includes the second funding increment for a fuel efficient aircraft technology development program designed to decrease fuel consumption of commercial jet transports by 50 percent. H.R. 4088—Passed House March 17, 1977; Passed Senate amended May 13, 1977. (VV)

National Science Foundation authorization.—Authorizes \$894.0 million for fiscal year 1978 and \$1,051.4 million for fiscal year 1979 to the National Science Foundation and an additional \$6 million for fiscal 1978 and \$8 million for fiscal 1979 in foreign currencies which the Treasury Department determines to be in excess to the normal requirements of the U.S.; specifies amounts to be spent for programs to support minorities, women and handicapped persons in scientific fields, graduate fellowships, continuing education for scientists and engineers, "Science for Citizens" and "Public Understanding of Science" programs which are designed to improve public understanding of public policy issues involving science and technology, and a study to assess the science education in two-year colleges; and contains other provisions. H.R. 4991—Passed House March 24, 1977; Passed Senate amended May 5, 1977; in conference. (VV)

Presidential reorganization authority.—Extends for three years from the date of enactment, the authority of the President under chapter 9, title 5, U.S.C., to submit reorganization plans to Congress proposing the reorganization of agencies in the executive branch; expresses Congressional intent that the President provide appropriate means for public involvement in reorganization; requires that the President, on a continuing basis, examine the organization of all agencies of the executive branch and determine what changes are necessary to accomplish the purpose of the statute;

Provides that reorganization plans may: create new agencies, transfer or consolidate

the whole or part of agencies or their functions to other agencies, abolish all or part of the functions of an agency except any enforcement function or statutory program, change the name of an agency, authorize an agency official to delegate any of his functions, and provide that the head of an agency be an individual, commission or board with a fixed term not to exceed 4 years;

Requires that each plan be based upon a Presidential finding stated in a message to Congress that the proposed action is necessary to accomplish one or more of the purposes of the statute; requires that the message specify, with respect to each plan, the reduction of or increase in expenditures likely to result from the plan, as well as any improvements in the effectiveness or efficiency of the government anticipated as a result of the plan;

Prohibits the use of reorganization authority to: create a new executive department, abolish an executive department or an independent regulatory agency, abolish any function mandated by Congress through statutes, increase the term of an office beyond that provided by law, create new functions not authorized by pre-existing statutes, or continue a function beyond the period authorized by law;

Requires the President to submit each plan, which must deal with only one logically consistent subject matter, to both Houses of Congress simultaneously for referral to the Senate Governmental Affairs Committee and the House Government Operations Committee; requires the Chairman of the respective committee to introduce a disapproval resolution whenever a reorganization plan is submitted to assure that there will be a resolution for the Committee to act on and to report either favorably or unfavorably a disapproval resolution for each proposed plan; provides that plans shall become law at the end of 60 calendar days of continuous session of the Congress or if specified, at a later date, unless either House passes a resolution of disapproval or prior to that time if both Houses defeat a disapproval resolution; requires the committees in both Houses to file recommendations on each plan with the full House within 45 days and provides, if the committee has not done so, the resolution will automatically be discharged from further consideration and placed on the calendar; specifies that no more than three reorganization plans may be pending in the Congress at any one time;

Allows the President to (1) amend a plan within the first 30 days after submission if neither committee has ordered reported a disapproval resolution or made any other recommendations on the plan, or (2) withdraw a plan at any time prior to the conclusion of the 60 day period;

Provides that any member may move to proceed to consider a disapproval resolution once it has been reported or discharged; limits to 10 hours floor debate on a disapproval resolution and on appeals and motions made in connection therewith, and makes motions to postpone consideration or amend the resolution out of order;

Provides that suits brought against an agency affected by a reorganization plan, or regulations or other actions taken by an agency under a function affected by the plan shall not abate as a result of the plan, except in the case where the function is abolished; specifies that plans may provide for the transfer or other disposition of affected records, property, and personnel, and for the transfer of unexpended appropriations if the funds will be used for their original purpose; and requires that unexpended funds revert to the U.S. Treasury. S. 626—Public Law 95-17, approved April 6, 1977. (40)

Privacy Protection Study Commission extension.—Extends the life of the Privacy Pro-

tection Study Commission from July 10, 1977, to September 30, 1977, to provide additional time for the printing of a set of appendix volumes for its final report. S. 1443—Public Law 95—, approved 1977. (VV)

Smithsonian Institution—Canal Zone biological area.—Increases from \$350,000 to \$750,000 the annual authorization for the Canal Zone Biological Area (the Barro Colorado Island Facility of the Tropical Research Institute of the Smithsonian Institution). S. 1031—Passed Senate May 2, 1977. (VV)

#### GOVERNMENT EMPLOYEES—FEDERAL OFFICIALS

Federal salary increases.—Denies the October 1 cost-of-living increase to Members of Congress, the Supreme Court Justices and other members of the Judiciary, Cabinet officials, and top Executive personnel who received the March 1 quadrennial pay increase under which salaries were increased as follows: Members of Congress from \$44,600 to \$57,500; Cabinet officers from \$63,000 to \$66,000; the Vice President, Speaker, and Chief Justice from \$65,000 to \$75,000; the President Pro Tempore and Majority and Minority Leaders from \$52,000 to \$65,000; circuit court judges from \$44,800 to \$57,500; district judges from \$42,000 to \$54,500; sub-cabinet assistants from \$44,600 to \$57,500; and other top Federal personnel from \$42,000 to \$52,000. S. 964—Passed Senate March 10, 1977. (44)

Secret Service protection of former Federal officials.—Authorizes the Secret Service to continue to furnish protection to certain former Federal officials (Secretaries Kissinger and Simon and Vice President Rockefeller) or members of their immediate families who received such protection immediately preceding January 20, 1977, if the President determines that they may be in significant danger, and provides that such protection shall continue for a period determined by the President but not beyond July 20, 1977, unless otherwise permitted by law. S.J. Res. 12—Public Law 95-1, approved January 19, 1977. (VV)

#### HEALTH

Public health programs—biomedical research.—Extends through fiscal year 1978, without major substantive modifications, the assistance programs under the Community Mental Retardation and Community Mental Health Centers Act and the programs under the Public Health Service Act, including biomedical research; computes the authorizations for these programs generally on a formula of the higher of the fiscal 1977 authorization or the fiscal 1977 appropriation plus 20 percent;

Establishes five supergrade positions for the National Institute of Alcohol Abuse and Alcoholism in order to attract highly qualified senior level scientific personnel; increases the number of National Cancer Institute consultants from 100 to 200; authorizes the Secretary of Health, Education and Welfare to develop minimum public health standards to maintain preventive health care programs; directs the Secretary to arrange for studies of international health issues and opportunities and to submit a final report by January 1, 1978; authorizes an additional \$135 million to enable the Secretary to make grants for construction and modernization projects to assist public hospitals to meet life and safety codes and avoid loss of accreditation;

Amends the Health Professions Educational Assistance Act to provide for equity in student loan programs, scholarship programs, and payback provisions for medical students within the National Health Service Corps (NHSC) who had made commitments under previous legislation; assures that all physicians graduating from medical schools accredited by the Liaison Committee on Medical Education are treated equally; provides that individuals with obligated serv-

ice to the NHSC may participate in residency training programs as officers in the regular or reserve corps of the Public Health Service prior to fulfilling the obligated service in an underserved area; permits an area Health Education Center to conduct training in general pediatrics as well as in family medicine and general internal medicine; allows the Secretary to repay, in return for service in a health manpower shortage area, educational loans obtained by health professions students before October 12, 1976; guarantees that students who graduated from two year U.S. medical schools will be treated the same as U.S. students who completed 2 years at a foreign medical school when transferring to degree-granting institutions; authorizes construction assistance for the establishment or expansion of regional health professions programs; and amends the Public Health Service Act to conform certain provisions of the student loan program with those in the NHSC;

Increases to \$399,864,200 the authorization for the maternal and child health grant programs under the Social Security Act and extends through fiscal 1980 the authority for 100 percent Federal financing of medicare skilled nursing and intermediate care facility inspection and enforcement costs; extends the Committee on Mental Health and Illness of the Elderly for 1 month, until August 30, 1977, to coordinate its actions and recommendations with the Presidential Commission on Mental Health; provides that States shall not receive less than their 1976 formula grant allotments under the Comprehensive Alcohol Abuse and Alcoholism Prevention, Treatment and Rehabilitation Act; and authorizes \$140 million for preventive family planning project grants and \$5 million for the Sudden Infant Death Syndrome Counseling and Information Services. H.R. 4975—Passed House March 31, 1977; Passed Senate amended May 4, 1977; Senate requested conference May 4, 1977. (131)

#### HOUSING

Supplemental housing authorizations.—Authorizes additional funds for housing assistance for lower income Americans in fiscal year 1977; extends the riot insurance and crime insurance programs; and establishes a National Commission on Neighborhoods;

Increases, in title I, the authorization for section 8 rental assistance, the major housing program for lower income Americans, by \$378 million for a total of \$1,228,050,000; increases operating subsidy funds for public housing projects by \$19.6 million to pay for this winter's unexpectedly high heating costs; extends the contract period for new, privately developed section 8 housing from 20 to 30 years in order to attract more private financing; authorizes such appropriations as may be necessary for reimbursement of the FHA general insurance fund for losses on the sale of foreclosed properties from the FHA inventory; contains a \$10 million increase for a total of \$15 million for the HUD urban homesteading program as a means of attracting additional rehabilitation funds into neighborhoods and disposing of the HUD inventory of foreclosed properties; increases from \$500 million to \$1.341 billion the ceiling for losses incurred by the Federal Housing Administration General Insurance Fund; extends HUD's authority to write crime insurance and riot reinsurance policies through September 30, 1978, and authorizes continuation of policies in force before April 30, 1978, through September 30, 1981; extends from April 30, 1978, to September 30, 1978, the date that the Secretary must submit a plan for the liquidation and termination of these programs; deletes the requirement whereby mortgages may be insured under section 220 of the National Housing Act only if the property is located in an area which has a workable program for com-

munity development; makes clear that mortgages insured under section 221(d)(4) of the Act may be executed by a mortgagor which is a public body or agency, or a cooperative, limited dividend corporation or other entity, private nonprofit corporation or association, as well as a profit motivated entity, as defined by the Secretary; and

Authorizes, in title II, \$1 million for the establishment of a National Commission on Neighborhoods to assess existing policies, laws and programs having an impact on neighborhoods and make recommendations regarding investment in city neighborhoods, community government participation, economically and socially diverse neighborhoods, rental housing, and rehabilitation of existing structures, among other issues. H.R. 3843—Public Law 95-24, approved April 30, 1977. (VV)

#### INDIANS

American Indian Policy Review Commission.—Extends from February 18, 1977, to May 18, 1977, the period of time in which the American Indian Policy Review Commission must submit its final report to the Congress and increases the authorization therefor from \$2.5 million to \$2.6 million. S.J. Res. 10—Public Law 95-5, approved February 17, 1977. (VV)

Sioux Black Hills claim.—Authorizes the U.S. court of Claims to review, without regard to the technical of res judicata or collateral estoppel the determination of the Indian Claims Commission entered February 14, 1974, that the act of February 28, 1877, effected a taking of the Black Hills portion of the Great Sioux Reservation in violation of the fifth amendment. S. 838—Passed Senate May 3, 1977. (VV)

Wichita tribal land claim.—Authorizes the Indian Claims Commission to consider claims by the Wichita Indian Tribe and affiliated bands with respect to aboriginal title to lands which were acquired by the United States without payment of adequate compensation. S. 773—Passed Senate May 5, 1977. (VV)

Zuni lands.—Directs the Secretary of the Interior to acquire through purchase, trade or otherwise the 618.41 acres in the State of New Mexico upon which the Zuni Salt Lake is located and hold such land in trust for the Zuni Indian Tribe; confers jurisdiction upon the Court of Claims to hear and determine an aboriginal land claim that the Tribe failed to file with the Indian Claims Commission under the Act of August 13, 1946, which established that forum; and authorizes the Tribe to purchase and exchange lands in the States of New Mexico and Arizona notwithstanding the restrictions in the act of May 25, 1918, expressly prohibiting further expansion of Indian reservations in these States. S. 482—Passed Senate May 3, 1977. (VV)

#### INTERNATIONAL

Abu Daoud.—States as a sense of the Senate that the release by France of Abu Daoud, a known terrorist who is accused of having planned the murder of Olympic athletes in Munich in 1972, is harmful to the effort of the community of nations to stamp out international terrorism; further states that the United States should consult promptly with France and other friendly nations to seek ways to prevent a recurrence of a situation in which a terrorist leader is released from detention without facing criminal charges in a court of law; and directs the Secretary of the Senate to provide a copy of this resolution to the Secretary of State for transmission to the Government of France. S. Res. 48—Senate agreed to January 26, 1977. (13)

Harp seal killings.—Urges the Canadian Government to reassess its present policy of permitting the killing of newborn harp seals in Canadian waters which is considered by many citizens of the U.S. to be cruel and, if continued at the current high level, may

cause the extinction of that species of seal. H. Con. Res. 142—Action complete April 6, 1977. (VV) to amended March 31, 1977. (VV)

International cooperation on nuclear proliferation.—Commends the President for his stated intentions to give diplomatic priority to the pursuit of nonproliferation measures; endorses and strongly supports active consultations with world leaders on the highest level to: (1) curb the spread of nuclear enrichment and reprocessing facilities and otherwise discourage the diversion of nuclear energy from peaceful uses to nuclear weapons or other nuclear explosive devices, (2) achieve universal acceptance of international safeguards on all peaceful nuclear activities, as well as to seek international cooperation to improve the packaging and handling of high-level wastes and to provide for international storage of plutonium, spent reactor fuel, and other sensitive nuclear materials, (3) explore possible international arrangements for the provision of nuclear fuel services to help meet the legitimate energy needs of cooperating states, (4) reach agreement on sanctions to be applied against any nation which seeks to acquire a nuclear explosives option, and (5) strengthen the safeguards of the International Atomic Energy Agency; and pledges prompt Senate action on legislation to enact a clear statement of goals for U.S. nonproliferation policy providing guidance and support to these Presidential diplomatic initiatives, and to establish a clear statutory framework for the development and implementation of U.S. nuclear export policy. S. Res. 94—Senate agreed to April 28, 1977. (VV)

Portugal military assistance.—Modifies the existing statutory limitations on the allocation of military assistance funds for fiscal year 1977 contained in section 504(a) (1) of the Foreign Assistance Act of 1961, as amended, to add Portugal to the list of eligible countries and specify that \$32.25 million be allocated to that country to upgrade its armed forces which were debilitated as a result of prolonged colonial wars in Africa. S. 489—Public Law 95-23, approved April 30, 1977. (VV)

Rhodesian chrome.—Amends the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome by nullifying the effect of Section 203 (the so-called Byrd amendment) of the Armed Forces Appropriations Act of 1972, Public Law 92-156, which permitted the importation into the United States of chromium and other strategic minerals from Rhodesia, despite mandatory U.N. sanctions against trade with that country which the United States supported by its vote in the United Nations Security Council and by Executive Order 11419; prohibits the importation into the United States of Rhodesian commodities and products as specified in that Executive Order, of July 29, 1968, as well as steel mill products containing Rhodesian chromium in any form; establishes an enforcement mechanism which requires a certificate of origin for these products confirming that they do not contain chromium from Rhodesia; and authorizes the President to suspend the act if he determines that it would encourage meaningful negotiations and further the peaceful transfer of government from minority to majority rule in Rhodesia. H.R. 1746—Public Law 95-12, approved March 18, 1977. (59)

Romanian earthquake.—States as a sense of the Senate that the United States should join with other nations and international, public, and private organizations to assist the people of Romania following the 1977 earthquake; and expresses deepest sympathy to the victims and their families on behalf of the people of the United States. S. Con. Res. 12—Action complete March 17, 1977. (VV)

Romanian earthquake authorization.—

Authorizes \$20 million to the President for fiscal year 1977, to remain available until expended, for the relief and rehabilitation of refugees and other earthquake victims in Romania; requires the President to transmit a report to the Foreign Relations Committees of the Senate and House 60 days after enactment and quarterly thereafter on the obligation of authorized funds; and states that nothing in this act shall be interpreted as endorsing any measure undertaken by the Government of Romania which would suppress human rights as defined in the Conference on Security and Co-operation in Europe (Helsinki Declaration) Final Act and the United Nations Declaration on Human Rights or as constituting a precedent for or commitment to provide development assistance to Romania and requires that the Romanian Government be so notified. H.R. 5717—Public Law 95-21, approved April 18, 1977. (VV)

Soviet expulsion of George A. Krinsky.—States as the sense of the Senate that: (1) the Soviet expulsion of Associated Press reporter George A. Krinsky is contrary to the spirit of the Helsinki Declaration respecting the rights of journalists; (2) the decision serves only to obstruct the implementation of the free flow of information provisions contained in the Declaration; (3) the action only invites and justifies steps of a reciprocal nature by the U.S. Government; and (4) the U.S. and Soviet Governments should seek greater communication in this area to prevent similar events of a counterproductive nature from occurring in the future; and directs the Secretary of the Senate to transmit a copy of this resolution to the President for the Department of State to convey directly to General Secretary Leonid Brezhnev of the Central Committee of the Soviet Communist Party. S. Res. 81—Senate agreed to March 4, 1977. (VV)

Soviet freedom of emigration.—Conveys to the Soviet Government the sustained interest of the American people regarding Soviet adherence to the Helsinki Declaration, including their pledge to facilitate freer movement of people, expedite the reunification of families, and uphold the general freedom to leave one's country. S. Con. Res. 7—Action complete March 22, 1977. (39)

State Department supplemental authorization.—Provides a supplemental authorization of \$89.5 million for the Department of State for fiscal year 1977 as follows: (1) \$60 million to pay U.S. dues and assessments to UNESCO for 1975 and 1976, in arrears because of Congressional action suspending further payments until the President certified that UNESCO's policies were in line with its objectives and less political, and part of the 1977 assessment, (2) \$11,325,000 for aid to Soviet and East European refugees not settling in Israel and \$7.4 million for the Indochinese Refugee Program administered by the United Nations High Commissioner for Refugees to continue U.S. support of 80,000 refugees in Thailand who arrived from Vietnam, Cambodia and Laos in 1975, and (3) \$10,775,000 to provide for the construction of 108 apartment units for the U.S. mission in Cairo—36 for the State Department and 72 for AID; authorizes the Secretary to use appropriated funds to provide emergency medical attention, dietary supplements, and other assistance to U.S. citizens incarcerated abroad; requires that the Chairman or Vice-Chairman of the Senate and House delegations to the four interparliamentary union groups (Canada-U.S., Mexico-U.S., North Atlantic Assembly, and Interparliamentary Union) be a member of their respective foreign affairs committee; increases from 18 to 24 the size of the delegation to the North Atlantic Assembly and specifies that at least 4 of the 12-member delegation from each body be from its foreign affairs committee; and amends Public Law 94-203 (known as the

Case Act which requires the Secretary of State to transmit the text of any international agreement entered into force with respect to the United States) to require any department or agency entering into an international agreement on behalf of the United States to transmit the text of the agreement to the Department of State within 20 days following the date on which the agreement was signed. H.R. 5040—Passed House March 24, 1977; Passed Senate amended May 11, 1977. (VV)

Uganda human rights.—Expresses the sense of the Senate that the actions of the current regime in Uganda violating the human rights of its citizens and residents deserve condemnation by the world community and by the Organization of African Unity; urges all nations supplying lethal arms to Uganda to halt all deliveries of weapons; and urges the U.S. Ambassador to the United Nations to request that the situation in Uganda be investigated by an appropriate agency in the United Nations. S. Res. 175—Senate agreed to May 25, 1977. (VV)

Vietnam POW's and MIA's.—Directs the President, as Commander in Chief of the Armed Forces, to require an accounting of all military personnel presently categorized on personnel rosters of the various branches of the U.S. Armed Forces as prisoner of war, missing in action, or killed in action in Southeast Asia; directs the President, by executive order, to require the Secretary of State to pursue enforcement of the Paris agreement of January 27, 1973; states that the Congress, having passed Public Law 88-408 authorizing the deployment of U.S. Armed Forces for the maintenance of international peace and security in Southeast Asia, recognize a corresponding duty and obligation to determine the fate of missing or unaccounted for Americans; requires that the President, through the Secretary of State, hold the Democratic Republic of Vietnam and the Provisional Revolutionary Government of the Republic of South Vietnam responsible to account for and provide information not otherwise available to satisfactorily dispose of the POW/MIA problem in accordance with the Paris agreement or seek alternatives that might resolve the question; and requires responsible officeholders in the executive and legislative branches to address the authority of their office toward a satisfactory resolution of the problem, make a public accounting, and remove any question as to the integrity of their function. S. Con. Res. 2—Senate agreed to February 21, 1977. (VV)

States as a sense of the Congress that the honor of those Americans who upheld the dignity of the law and served in the U.S. Armed Forces should be reaffirmed and that the Government should do everything possible to address the problems of those who served during the Vietnam war; and urges that there be established, in view of the recent issuance of a general pardon for U.S. draft evaders of the Vietnam war era, a Presidential Task Force on Missing in Action and Prisoners of War to propose courses of action to achieve the fullest possible account for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning Federal policies relating to POW's and MIA's. S. Con. Res. 3—Senate agreed to February 21, 1977. (VV)

#### MEMORIALS, TRIBUTES AND MEDALS

Alex Haley.—Honors and pays tribute to Alex Haley for his exceptional achievement in writing *Roots* and extends to him the highest praise of the Senate. S. Res. 112—Senate agreed to March 14, 1977. (VV)

Charles A. Lindbergh.—Honors Charles A. Lindbergh for his service to our country in peace and war, and expresses appreciation for his leadership and advocacy in the conserva-

tion of natural resources and for his daring and courageous contributions to the field of aviation and aeronautical science. S. Res. 177—Senate agreed to May 19, 1977. (VV)

Cora Rubin Lane 100th birthday.—Expresses the gratitude and appreciation of the Senate to Cora Rubin Lane for her long and outstanding service as an assistant to Senator William E. Borah and expresses best wishes to her on the occasion of her 100th birthday. S. Res. 162—Senate agreed to May 3, 1977. (VV)

Francis R. Valeo.—Commends Francis R. Valeo for his long, faithful and exemplary service as an employee of the Senate and his ten years of service as Secretary of the Senate. S. Res. 133—Senate agreed to April 1, 1977. (VV)

Gerald R. Ford Building.—Names the Federal building located at 110 Michigan Avenue, N.W., in Grand Rapids, Mich., the "Gerald R. Ford Building". S. 385—Public Law 95-25, approved May 4, 1977. (VV)

Jaycees International Conference.—Commends the "Old Sourdough Jaycees" of Anchorage, Alaska, the U.S. Jaycees, and the Jaycee International for bringing together Jaycee leaders around the world who have contributed to the betterment of mankind. S. Res. 137—Senate agreed to April 6, 1977. (VV)

Lt. Gen. Ira C. Eaker Medal.—Authorizes the President to present, on behalf of the Congress, to Lieutenant General Ira C. Eaker, U.S.A.F. (retired), a gold medal of appropriate design in recognition of his distinguished career as an aviation pioneer and Air Force leader; provides a \$5,000 authorization therefor; and authorizes the Secretary of the Treasury to have duplicate medals struck in bronze and sold at cost. S. 425—Passed Senate May 13, 1977. (VV)

Marian Anderson Medal.—Authorizes the President to award to Marian Anderson, in the name of the Congress, a gold medal with suitable emblems and inscriptions in recognition of her highly distinguished and impressive career; provides that bronze duplicates of the medal shall be coined and sold under regulations prescribed by the Secretary of the Treasury; and authorizes therefor \$2,500. H.J. Res. 132—Public Law 95-9, approved March 9, 1977. (VV)

Motion Picture Academy 50th anniversary.—Congratulates the Academy of Motion Picture Arts and Sciences for its past achievements on the occasion of its 50th anniversary on May 11 and extends best wishes for the future. S. Res. 168—Senate agreed to May 11, 1977. (VV)

Philip A. Hart, death of.—Expresses the sorrow of the Senate over the death of Senator Philip A. Hart, of Michigan. S. Res. 15—Senate agreed to January 4, 1977. (VV)

President and Mrs. Ford.—Congratulates and commends President and Mrs. Ford on their exemplary conduct as President and first lady and for their dedicated public service to the Nation during their entire career of public service. S. Res. 22—Senate agreed to January 10, 1977. (VV)

President Ford.—Commends President Ford for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 38—Senate agreed to January 18, 1977. (VV)

President-elect Carter.—Extends best wishes to President-elect Jimmy Carter and to all those who will serve in his administration. S. Res. 23—Senate agreed to January 10, 1977. (VV)

St. Patrick's parish anniversary.—Commemorates the people of St. Patrick's Parish, in Pottsville, Pennsylvania, who this year are celebrating the 150th anniversary of the founding of the parish. S. Res. 116—Senate agreed to March 17, 1977. (VV)

Vice President Rockefeller.—Commends Vice President Rockefeller for the manner

and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 37—Senate agreed to January 18, 1977. (VV)

William O. Douglas.—Dedicates the canal and towpath of the Chesapeake and Ohio Canal National Historical Park to Justice William O. Douglas; directs the Secretary of the Interior to provide the necessary identification to inform the public of the contributions of Justice Douglas and to erect and maintain within the exterior boundaries of the Park an appropriate memorial; and authorizes such sums as necessary to carry out the act. S. 776—Public Law 95-11, approved March 15, 1977. (VV)

#### NATURAL RESOURCES—NATIONAL HISTORIC SITES

Eleanor Roosevelt national historic site.—Authorizes the Secretary of the Interior to establish 175 acres, including the Val-Kill estate in Hyde Park, New York, as the Eleanor Roosevelt National Historic Site to commemorate the life of Eleanor Roosevelt as well as provide a location for the conduct of studies and seminars relating to the issues with which she was concerned. H.R. 5562—Public Law 95-11, approved March 15, 1977. (VV)

Land and Water Conservation Fund.—Amends the Land and Water Conservation Fund Act of 1965 to establish a special account for use in acquiring the backlog of lands previously authorized for inclusion in the national park system and certain similar Federal areas; increases the authorized level of the fund from \$600 million to \$900 million in fiscal year 1978 and from \$750 million to \$900 million in fiscal 1979 with the additional \$450 million to be credited to the special account and to remain available until appropriated; provides that prior acquisition ceiling limitations on authorized areas may be exceeded in any one fiscal year by up to \$1 million or 10 percent of the statutory limitation, whichever is greater; and permits preacquisition work such as title searches, mapping, and other preliminary work which does not interfere with the rights of private landowners if Congressional authorization appears to be imminent. H.R. 5306—Passed House April 4, 1977; Passed Senate amended May 18, 1977. (VV)

Reclamation projects.—Authorizes \$31,050,000 for fiscal year 1978 for continuing construction of the distribution system and drains of the San Luis Unit, Central Valley project, California; and provides for the establishment of a task force to review the management, organization and operation of the Unit and to report to Congress by January 1, 1978, the results of an examination of certain specified issues. H.R. 4390—Passed House May 2, 1977; Passed Senate amended May 24, 1977. (VV)

Water resources development.—Authorizes appropriations for rivers and harbors works of the Corps of Engineers for flood control, navigation, water supply, and other purposes for fiscal year 1978. H.R. 6752—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

Authorizes general water resources research; repeals the Water Resources Act of 1964 and replaces it with similar, but stronger and more comprehensive language; authorizes maintenance of State water institutions, which were established under the old Act; continues support of nonacademic water resource research centers; expands the saline water program and reestablishes many of the provisions of the expired Saline Water Conservation Act of 1971; redirects and strengthens saline water conversion programs which are developing technology to help states expand available water supplies. H.R. 4746—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

#### WILDERNESS AREAS STUDIES

Montana wilderness.—Directs the Secretary of Agriculture to study 9 areas of land totaling approximately 973,000 acres located within the following National Forests in Montana to determine their suitability for designation as wilderness under the provisions of the Wilderness Act of 1964: Beaverbrook National Forest—West Pioneer Wilderness and Taylor-Hilgard Wilderness; Bitterroot National Forest—Bluejoint Wilderness and Sapphire Wilderness; Kootenai National Forest—Ten Lakes Wilderness and Mt. Henry Wilderness; Lewis and Clark National Forest—Middle Ford Judith Wilderness and Big Snowies Wilderness; and Gallatin National Forest—Hyalite-Porcupine-Buffalo Horn Wilderness; requires the Secretary to complete the studies and report his findings to the President within 5 years of enactment who is to submit his recommendations with respect thereto to the Congress within 7 years of enactment; and directs the Secretary to administer the areas so as not to diminish their presently existing wilderness character and potential until Congress determines otherwise. S. 393—Passed Senate May 18, 1977.

Wildlife refuges.—Extends through fiscal year 1980 the authorization for the acquisition and development of the San Francisco Bay National Wildlife Refuge in California (consisting of approximately 21,000 acres), the Tincum National Environmental Center in Pennsylvania (consisting of approximately 1,200 acres), and the Great Dismal Swamp National Wildlife Refuge in Virginia (consisting of approximately 107,360 acres). H.R. 5493—Passed House May 16, 1977; Passed Senate amended May 24, 1977. (VV)

#### NOMINATIONS

(Action by Rollcall vote)

Griffin B. Bell, of Georgia, to be Attorney General.—Nomination confirmed January 25, 1977. (10)

Joseph A. Califano, Jr., of the District of Columbia, to be Secretary of Health, Education, and Welfare.—Nomination confirmed January 24, 1977. (7)

Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General.—Nomination confirmed April 5, 1977. (99)

Roy Marshall, of Texas, to be Secretary of Labor.—Nomination confirmed January 26, 1977. (12)

Andrew J. Young, of Georgia, to be U.S. Representative to the United Nations.—Nomination confirmed January 26, 1977. (14)

Paul C. Warnke, of the District of Columbia, for rank of Ambassador for SALT negotiations and to be Director of the Arms Control and Disarmament Agency.—Nominations confirmed March 9, 1977. (41 and 42)

#### PROCLAMATIONS

American Business Day.—Designates May 13 of each year as "American Business Day." S.J. Res. 40—Passed Senate April 27, 1977. (VV)

Grandparents Day.—Designate the first Sunday of September of each year as "Grandparents Day." S.J. Res. 24—Passed Senate May 16, 1977. (VV)

#### SENATE

Commission on the Operation of the Senate.—Extends for an additional 30 days, until April 1, 1977, the Commission on the Operation of the Senate. S. Res. 93—Senate agreed to February 24, 1977. (VV)

Committee reorganization.—Amends the Standing Rules of the Senate to reorder and rationalize the jurisdictions of Senate committees, effective February 11, 1977, among 15 standing committees and 6 other special, select or joint committees; abolishes the Aeronautical and Space Sciences Committee and transfers its jurisdiction to a newly

created Committee on Commerce, Science, and Transportation; abolishes the District of Columbia Committee and the Committee on Post Office and Civil Service and transfers their jurisdictions to a newly created Committee on Governmental Affairs; transfers the jurisdiction of the former Interior Committee to an Energy and Natural Resources Committee; transfers the jurisdiction of the former Public Works Committee into a new Environment and Public Works Committee; transfers the jurisdiction of the former Labor and Public Welfare Committee to a new Human Resources Committee; continues the existence of the Special Committee on Aging with membership reduced to 9 in the next Congress; continues the existence of the Select Committee on Nutrition and Human Needs until December 31, 1977, after which its jurisdiction will be transferred to the Committee on Agriculture, Nutrition and Forestry; establishes a temporary Select Committee on Indian Affairs to consider all legislation relating to Indians for the duration of the 95th Congress after which its jurisdiction will be transferred to the Human Resources Committee;

Limits the number of committee and subcommittee memberships a Senator can hold generally to two major or class "A" committees and one class "B" committee and eight subcommittees thereof; prohibits committees and eight subcommittees thereof; prohibits committees from establishing subunits other than subcommittees; permits the Majority and Minority Leaders to temporarily increase the sizes of committees to ensure majority party control; allows Senators to serve on joint committees where such service is required to be from members of a committee on which such Senator serves; prohibits Rules Committee members from serving on any joint committee unless the Senate members of such committees are required by law to be from the Rules Committee; exempts members of the Budget Committee during the 94th Congress from certain assignment limitations during the 95th Congress; continues grandfather rights for Senators who are serving on three standing committees as a result of an exemption in the Legislative Reorganization Act of 1970 to continue to do so during the 95th Congress; allows the chairmen and ranking minority members of the Post Office and Civil Service Committee and the District of Columbia Committee to serve on the Governmental Affairs Committee and two other committees of the same class, as long as their service on Governmental Affairs remains continuous; prohibits a Senator from serving as Chairman of more than one standing, select, special, or joint committee unless the jurisdiction is directly related to that of the standing committee he chairs; prohibits Senators from serving as chairman of more than one subcommittee of each standing, select, special or joint committee; limits members to two class A committee or subcommittee chairmanships and one class B committee or subcommittee chairmanship, effective at the beginning of the 96th Congress; requires that not later than July 1, 1977, the appropriate standing committees shall report legislation terminating the statutory authority of the Joint Committee on Atomic Energy, on Congressional Operations and on Defense Production; requires that the appropriate standing committees report recommendations not later than July 1, 1977, with respect to the Joint Committees on the Library and on Printing; allows Senators to serve on joint committees considered for termination pending final disposition of the issue;

Provides for sequential and joint referral of bills that cross jurisdictional lines based on motions by the Majority and Minority Leaders, instead of by unanimous consent; pro-

vides for a computerized schedule of committee meetings by the Rules Committee; permits committees to meet without special leave until the conclusion of the first 2 hours of a meeting of the Senate or 2:00 p.m., except for the Appropriations and Budget Committees which may meet at any time without special consent; requires that morning meetings of committees and subcommittees be scheduled for one or both of two periods, one ending at 11:00 a.m. and a second beginning at 11:00 a.m. and ending at 2:00 p.m.; provides for continuous review of the committee system by the Rules Committee in consultation with the Majority and Minority Leaders; prohibits consideration of committee amendments to bills when the amendments are not in the jurisdiction of the committee proposing them; requires committee reports to contain an evaluation of the regulatory impact which would be incurred by individuals and businesses in carrying out the provisions of the bill; provides for the transition of staff from abolished or realigned committees to the new committees and provides for salary and tenure of committee staff during a transition period; provides that committee staff reflect the relative numbers of majority and minority members and that one-third of the committee staffing funds be allocated to the minority members for compensation of minority staff; provides that such adjustment be made over a four-year period beginning July 1, 1977, with not less than one-half being made in 2 years; provides for funding of increases in the expenditures of new committees resulting from this resolution; incorporates provisions of S. Res. 60 of the 94th Congress relating to individuals appointed by Senators to assist them with committee work; provides for the referral of measures according to the realigned jurisdictions; and provides that legal references to old committees are to be construed as referring to their successors. S. Res. 4—Senate agreed to February 4, 1977. (36)

Deputy President pro tempore.—Establishes, effective January 5, 1977, the Office of Deputy President Pro Tempore which shall be held by any Senator who is a former President or Vice President of the United States; authorizes the President Pro Tempore and the Deputy President Pro Tempore each to appoint an administrative assistant, a legislative assistant and an executive secretary; authorizes the Sergeant at Arms to provide and maintain an automobile for use by the Deputy President Pro Tempore and to employ a driver-messenger; and authorizes the Secretaries of the Conferences of the Majority and Minority each to appoint two staff assistants in each office. S. Res. 17—Senate agreed to January 10, 1977. (VV)

Names Hubert H. Humphrey of Minnesota Deputy President Pro Tempore of the Senate, effective January 5, 1977. S. Res. 27—Senate agreed to January 11, 1977. (VV)

Senate Ethics Code.—Amends the Standing Rules of the Senate to create a Code of Official Conduct; amends Senate Resolution 338 the original resolution establishing the Select Committee on Ethics, to provide for additional procedures for enforcing the new Code as well as other laws and rules of the Senate; and directs other Senate committees to study certain matters related to this resolution;

Public Financial Disclosure.—Requires Senators, candidates for the Senate, officers and employees of the Senate earning in excess of \$25,000 per year to file a report listing their earned income and the sources and categories of value of their income, other than earned income, and all other interests, assets, and holdings held for the purposes of investment or income production;

Gifts.—Prohibits knowingly accepting a gift or gifts having an aggregate value of over \$100 during a year from any individual or organization defined as having a "direct interest in legislation;"

Outside Earned Income.—Limits outside earned income of a Senator, officer or employee earning over \$35,000 to 15 percent of the person's salary; limits each honorarium to \$1,000 for Senators and to \$300 for officers and employees; allows Senators or staff to accept honoraria up to \$25,000 if immediately donated to a tax-exempt charity;

Conflict of Interest.—Bars the use of one's official position to introduce or aid the progress of legislation the principal purpose of which furthers one's own financial interest; allows Members or staff who earn over \$25,000 to provide professional services for compensation if not affiliated with a firm or association and if their work is not carried out during regular Senate office hours; directs committee employees earning over \$25,000 to divest themselves of any holdings which may be directly affected by the actions of the Committee for which they work unless permitted by their supervisor and the Ethics Committee; prohibits Senators from lobbying the Senate for one year after leaving the Senate; applies a similar prohibition to employees lobbying the Committee or office for which they worked;

Unofficial Office Accounts.—Abolishes unofficial office accounts, those accounts defined as not including personal funds of a member, official funds, political funds and reimbursements;

Foreign Travel.—Prohibits "lame duck" travel by a defeated or retiring member; prohibits receipt of counterpart funds where there has been reimbursement from another source; restricts per diem allowance to food, lodging and related expenses and places the responsibility on the person receiving the per diem to return any unused funds;

Franking Privilege—Radio-TV Studio—Senate Computer.—Prohibits mass mailings and the use of the radio-TV studios within 60 days of an election; requires the use of official funds to purchase paper, to print, and prepare mass mailings under the frank; requires a Senator to register mass mailings annually for public inspection; prohibits the use of the Senate computer to store names identified as campaign workers;

Political Activity by Officers and Employees.—Restates the present ban on staff soliciting or receiving campaign contributions; allows a Senator to name one assistant each in his Washington and State office to receive and handle campaign funds;

Discriminatory Employment Practices.—Prohibits discrimination on the basis of race, color, religion, sex, national origin, or state of physical handicap in employment practices in the Senate;

Enforcement.—Sets forth procedures for the Select Committee on Ethics in investigating complaints of violation of the Code and enforcing its provisions;

Further Studies.—Requires the Appropriations Committee to report within 120 days regarding an adjustment of official allowances; requires the Finance Committee to report within 120 days on the tax status of funds raised and expended to defray ordinary and necessary expenses of Members; directs the Rules Committee (1) to report within 120 days on the desirability of promulgating rules providing for: (a) periodic audits by GAO of all committee and office accounts; (b) a centralized recordkeeping system of accounts, allowances, expenditures and travel expenses of all committees and offices; (c) suggested accounting procedures for committee and office accounts; and (d) public disclosure and availability of information on the accounts of all committees and offices in a form which segregates the allowances and expenses of each committee and office; (2) to report within 120 days on the desirability of requiring that only official Senate funds may be used to pay for any expenses incurred by a Senator in the use of the radio-TV studios; and (3) to study laws

relating to contributions made by officers or employees as well as on proposals to prohibit the misuse of official staff in election campaigns and report thereon within 180 days; requires the Governmental Affairs Committee to report (1) within 180 days regarding employee discrimination complaints and the desirability of establishing rules requiring "blind trusts" by members, officers and employees of Senate and (2) within 120 days regarding the use of simplified form of address for franked mail; and directs the Foreign Relations Committee to report in 90 days on the problem of travel, lodging and other related expenses provided members and staff paid for by foreign governments where it is not possible to procure transportation, lodging or other related services or to reimburse the foreign government for those purposes. S. Res. 110—Senate agreed to April 1, 1977. (94)

Special Committee on Official Conduct.—Establishes a temporary Special Committee on Official Conduct composed of fifteen members appointed by the President pro tempore of the Senate (eight appointed upon the recommendation of the majority leader and seven upon the recommendation of the minority leader, with the chairman designated by the majority leader and the vice chairman by the minority members) to conduct a complete study of all matters relating to standards of conduct of Members, officers and employees of the Senate in the performance of their official duties including standards for: (1) annual public disclosure of income, assets, debts, gifts, and other financial items; (2) restrictions on, or the elimination of, outside income from honoraria, legal fees, gifts and other sources of financial or in-kind remuneration; (3) conflicts of interest arising out of investments in securities, commodities, real estate, or other sources; (4) office accounts, and excess campaign contributions; (5) Senate travel; and (6) engaging in business, professional activities, employment, or other remunerative activities, so as to avoid any conflict with the conscientious performance of official duties; requires the Committee to submit a report of its findings by March 1, 1977, together with a resolution setting forth, by way of proposed amendments to the Standing Rules of the Senate, a Code of Official Conduct for Members, officers, and employees of the Senate;

Provides that on March 1, 1977, after the conclusion of routine morning business, the resolution shall become the pending business of the Senate under a 50 hour time limitation with a 2 hour time limitation on amendments thereto and 1 hour on amendments in the second degree, debatable motions or appeals; provides that amendments not germane to the bill will not be received; states that motions to limit debate are not debatable and that motions to table or commit are out of order;

Authorizes the Committee to utilize the facilities and services of the staff of any other committee and provides that expenses of the Committee shall be paid from the contingent fund of the Senate. S. Res. 36—Senate agreed to January 18, 1977. Note: (On March 3, 1977, the Senate, by unanimous consent, extended until midnight, March 7, 1977, the time for the Committee to file its report and provided that the leadership may call the resolution up on March 8, 1977, or any time thereafter.) (VV)

Teamsters pension fund.—Authorizes the Committee on Human Resources to inspect and receive any tax return, return information, or other tax related matter held by the Secretary of Treasury with respect to the Teamsters' Central States Southeast and Southwest Area Pension Fund, and any related matter which the committee demonstrates, to the satisfaction of the Secretary, contains or may contain information di-

rectly relating to its study and oversight proceedings. S. Res. 139—Senate agreed to April 22, 1977. (VV)

## TAXATION

**Sick pay exclusion.**—Delays for one year, to taxable years beginning after December 31, 1976, the changes made by the Tax Reform Act of 1976 with regard to the exclusion of "sick pay" from income; makes a similar delay of the effective date of the provisions regarding the tax treatment of income earned abroad by U.S. citizens; modifies the withholding requirement enacted in the 1976 Tax Reform Act on proceeds of wagers placed in parimutuel pools with respect to horse races, dog races, and Jai Alai requiring a 20 percent withholding tax on winnings of \$1000 or more only if the odds are 300 to one or more; extends for one year the provisions of the Internal Revenue Code to allow State legislators to treat their place of residence within their legislative district as their tax home for purposes of computing the deduction for living expenses; and waives the interest and penalties with regard to certain errors regarding underpayments of estimated tax and withholding that might be made in the tax returns for 1976. H.R. 1828—Passed House April 4, 1977; Passed Senate amended April 6, 1977; House agreed to Senate amendments with amendment which omitted the provisions regarding the treatment of income earned abroad by U.S. citizens April 6, 1977; Senate requested conference April 19, 1977; (100) (Note: Provisions included Tax Reduction and Simplification which became Public Law 95- ).

**Tax reduction and simplification.**—Amends the Internal Revenue Code of 1954 to extend the individual and business income tax reductions enacted in 1975 and to provide tax simplification as follows:

**Standard Deduction and Tax Simplification.**—Permanently changes the standard deduction to \$2,200 for single returns and heads of households and \$3,200 for joint returns; revises the tax tables to simplify tax computation for 96 percent of all taxpayers by building into the tax tables the personal exemption, the general tax credit, and the standard deduction;

**Individual and Corporate Tax Reductions.**—Extends through 1978 the general tax credit of 35 percent per person or 2 percent of the first \$9,000 of taxable income, whichever is larger; extends the earned income credit equal to 10 percent of the first \$4,000 of earned income which is phased out as income rises from \$4,000 to \$8,000;

**Extends through 1978 the corporate tax cuts, enacted in 1975 and subsequently extended, which reduced the tax rate on the initial \$25,000 of corporate taxable income from 22 percent to 20 percent and reduced the rate on the next \$25,000 from 48 to 22 percent;**

**Filing Requirements and Withholding Changes.**—Increases the income level at which a tax return must be filed from \$2,450 to \$2,950 for a single person and a head of household and from \$3,600 to \$4,700 for a joint return; requires modification of the withholding rates to reflect the changed standard deduction;

**New Jobs Credit.**—Provides a new jobs tax credit for 1977 and 1978 equal to 50 percent of the increase in each employer's wage base under the Federal Unemployment Tax Act (FUTA) above 102 percent of that wage base in the previous year; reduces the employer's deduction for wages by the amount of the credit, thereby reducing the maximum gross credit for each new employee from \$2,100 to \$1,806; limits the credit to no more than: (1) 50 percent of the increase in total wages paid by the employer for the year above 105 percent of total wages in the previous year; (2) 25 percent of the current year's FUTA wages; (3) \$100,000 per employer; and (4) the

taxpayer's tax liability with provision of carrying back credit for 3 years and carrying forward credit for 7 years; provides an additional 10 percent nonincremental credit for hiring the handicapped, including handicapped veterans, who have received vocational training;

**Postponement of Changes in 1976 Act.**—Postpones for one year the effective date of revisions made by the Tax Reform Act of 1976 in the tax treatment of sick pay and income earned abroad; relieves individual taxpayers for periods prior to April 16, 1977, and corporations for period prior to March 16, 1977, from additions to tax and interest arising from changes in the tax law made applicable to 1976 by the 1976 Act; relieves employers from penalties for under withholding in 1976 on remuneration which became taxable prior to January 1, 1976, as a result of the 1976 Act; lifts the exclusive use of the test in the 1976 Act for business deductions for the use of the home for day care services for children, handicapped individuals and the elderly and limits such deductible expense; extends for 1976 the election to treat a State legislator's place of residence within the legislative district he represents as his tax home for purposes of determining deductions for travel and expenses;

**Minimum Tax on Intangible Drilling Costs.**—Provides for taxable years beginning in 1977 that intangible drilling costs incurred in oil and gas production operations are to be subject to the minimum tax to the extent that these expenses exceed oil and gas production income;

**Charitable Contributions of Conservation Easements.**—Extends through June 13, 1981 the period during which deductions are allowable for charitable contributions of remainder interests in real property exclusively for conservation purposes as well as the period during which deductions are allowable for charitable contributions exclusively for conservation purposes of easements with respect to real property, if the easement is perpetual;

**Work Incentive (WIN) Program.**—Authorizes an additional \$435 million in each of fiscal years 1978 and 1979 for employment and supportive services for welfare recipients with no requirement for State matching funds;

**Child Care Facilities Amortization.**—Extends through 1981 the 5-year amortization provision for expenditures relating to child care facilities for children of the taxpayer's employees;

**Retirement Income Credit Election.**—Allows taxpayers over age 65 to choose between the retirement income credit as it existed before the 1976 Act and as revised by it for 1976 taxes only;

**Accrual Accounting for Farm Operations.**—Postpones until 1978 the effective date for requiring accrual accounting by any farm corporation if either (a) two families own at least 65 percent of the stock, or (b) three families own at least 50 percent of the stock and substantially all of the remaining stock is owned by employees or their families;

**Gambling Withholding.**—Modifies the 1976 requirement for withholding on gambling winnings to provide that withholding is required on proceeds of more than \$1,000 from bets placed in parimutuel pools involving horses, dogs or Jai Alai but only if the amount of the proceeds is at least 300 times as large as the amount wagered;

**Extension of Countercyclical Revenue Sharing.**—Extends for 6 quarters, or until national unemployment drops below 6 percent, the current countercyclical revenue sharing legislation which expires September 30, 1977 to help State and local governments maintain services; authorizes up to \$1 billion in additional funding for fiscal year 1977 for a total of \$2.25 billion; authorizes up to \$2.25 bil-

lion for FY 1978; requires that the most recent data be used in the allocation formula and that the national amount be determined on the basis of tenths of the unemployment percentage in excess of 6 percent rather than on half percentage points; provides that each tenth of a percentage point will generate \$30 million for allocation in addition to the basic \$125 million; extends the program to Guam, American Samoa, Puerto Rico and the Virgin Islands;

**Other Provisions.**—Amends the Social Security Act to clarify the law which provides for the garnishment of Federal payment for purposes of child support and alimony; and contains other provisions. H.R. 3477—Public Law 95-30, approved May 23, 1977. (128)

## TRANSPORTATION

**Aircraft Registration.**—Amends the Federal Aviation Act of 1958 to permit citizens of foreign countries lawfully admitted for permanent residence in the U.S. and corporations lawfully organized and doing business under U.S. or State laws to register aircraft in the United States provided that (1) the aircraft is based or primarily used in the U.S. thus enabling the Secretary of Transportation to condition registration on reasonable inspection by FAA personnel and (2) as at present, the aircraft is not registered under the laws of any foreign country. H.R. 735—Passed House February 2, 1977; Passed Senate amended May 11, 1977. (VV)

**Interstate Commerce Commission Interim Regulatory Reform.**—Amends the Interstate Commerce Act to authorize \$71,216,000 for fiscal year 1978, \$80,474,000 for fiscal 1979, \$90,935,000 for fiscal year 1980 and \$102,755,000 for fiscal 1980; provides for regulatory reform of the ICC by requiring the agency to review and recodify systematically all of the rules and regulations which it has promulgated and which are still in effect and applying certain provisions with respect to one or more of the independent regulatory agencies and found to be both useful and practicable such as (1) timely consideration of petitions, (2) Congressional access to information, (3) avoidance of conflict of interest, (4) appointment of the chairman by the Presidency by and with the advice and consent of the Senate, and (5) Congressional oversight through the process of an authorization of appropriations not to exceed 4 years. S. 1534—Passed Senate May 20, 1977 (VV)

**Maritime Authorization.**—Authorizes \$552,974,000 for programs of the Maritime Administration for fiscal year 1978 as follows: \$135,000,000 for acquisition, construction, or reconstruction of vessels and construction-differential subsidies, \$372,109,000 for payment of ship operating differential subsidies, \$20,725,000 for research and development, \$5,137,000 for the reserve fleet, \$14,633,000 for maritime training at the Merchant Marine Academy at Kings Point, N.Y., and \$5,370,000 for financial assistance to the State marine schools which includes an increased annual student subsidy from \$600 to \$1200; authorizes additional supplemental amounts to cover increases in salary, pay, retirement, or other employee benefits authorized by law and for certain expenses of the Merchant Marine Academy at Kings Point; and authorizes an additional Assistant Secretary of Commerce to be the principle advisor to the Secretary for Congressional relations. S. 1019—Passed Senate May 24, 1977. (VV)

**Rail Reorganization.**—Office of Rail Public Counsel.—Amends the Regional Rail Reorganization Act of 1973 to authorize an additional \$15 million for fiscal year 1978 to the United States Railway Association to cover litigation and other anticipated expenses involving the reorganization of the Northeast railroads, and amends the Interstate Commerce Act to authorize an additional \$2 million for the Office of Rail Public Counsel which is the statutory successor to the Office

of Public Counsel of the Interstate Commerce Commission. H.R. 4049—Passed House May 3, 1977; Passed Senate amended May 23, 1977. (VV)

#### VETERANS

**Veterans' Care in State Homes.**—Amends title 38, U.S.C., to consolidate the construction grant-assistance programs under section 644 (for State home domiciliary and hospital facilities) and under subchapter III of chapter 81 (for State home nursing care facilities) and create new statutory authority for grants for the construction of new domiciliary facilities and the expansion of domiciliary and hospital facilities, and for initial equipment in both categories; increases to \$15 million the annual authorization for fiscal years 1978 and 1979; removes the 3-fiscal-year limitation on the availability of sums appropriated for the consolidated programs, making the funds available until expended; makes the allowable nonveteran population of a grant-assisted State nursing home domiciliary, or hospital facility 25 percent in order to make allowance for veterans' spouses, surviving spouses, and Gold Star mothers; sets at 33½ percent the limit which any one State may receive in any year of the total amount appropriated for the program; includes domiciliary and hospital projects under the statutory nursing home program recapture provision; allows the Administrator to reduce the recapture period to less than 7 years in cases of expansion, remodeling, and alteration; limits recapture to not more than the amount of grant assistance provided for the project; repeals existing statutory authority for making grants for the remodeling of State home domiciliary and hospital facilities and governing the operation of this program; provides for an October 1, 1977, effective date with a savings provision for hospital and domiciliary grants made under the section to be repealed; and gives existing nursing home program grantees the right to obtain grant modifications consistent with the new act. H.R. 3695—Passed House April 4, 1977; Passed Senate amended May 24, 1977. (VV)

#### INDEX FOR SENATE LEGISLATIVE ACHIEVEMENTS (Prepared by Senate Democratic Policy Committee, Robert C. Byrd, Chairman)

##### AGRICULTURE

Federal Crop Insurance Capital (S. 955).  
Grain Inspection (S. 1051).  
Land and Water Resource Conservation (S. 106).  
Omnibus Farm Bill (S. 275).  
Wheat Producers Assistance (S. 650).  
Wheat Referendum (S. 1240).

##### APPROPRIATIONS

###### Fiscal 1977

Continuing (H.J. Res. 51, P.L. 95-16).  
Economic Stimulus (H.R. 4876, P.L. 95-29).  
Supplemental (H.R. 4877, P.L. 95-26).  
Urgent Disaster Supplemental (H.J. Res. 269, P.L. 95-13).  
Urgent Power Supplemental (H.J. Res. 227, P.L. 95-3).

##### ATOMIC ENERGY

Nuclear Regulatory Commission Authorization (H.R. 3733).

##### BUDGET

###### Rescissions

Helium Purchases (H.R. 3347, P.L. 95-10).  
Second Budget Rescission (H.R. 3839, P.L. 95-15).

###### Resolutions

Third Budget Resolution, 1977 (S. Con. Res. 10).  
First Budget Resolution, 1978 (S. Con. Res. 19).

##### CONGRESS

Congressional Campaign Committees Employees Retirement (S. 992).

Joint Committee on Atomic Energy Abolishment (S. 1153).

##### CRIME-JUDICIARY

Daughters of the Confederacy Patent Renewal (S. 810).  
Jefferson F. Davis Citizenship (S.J. Res. 16).  
Mississippi Court Terms (S. 662).  
North Dakota Judicial District (S. 195).  
Omnibus judgeships (S. 11).

##### DEFENSE

Coast Guard Authorization (H.R. 6823).  
Defense Production Extension (S. 853, P.L. 95- ).  
Military Construction Authorization (S. 1474).  
Military Enlistment and Reenlistment Bonuses (H.R. 583).  
Military Procurement Authorization (H.R. 5970).

##### ECONOMY-FINANCE

Export Administration—Arab Boycott (H.R. 5840).  
Foreign Corporate Bribes and Domestic Disclosure (S. 305).  
Interest Rates (Regulation Q)—Federal Credit Unions (H.R. 3365, P.L. 95-22).  
Securities and Exchange Commission Authorizations (S. 1311) (S. 1025, P.L. 95-20).  
Small Business Authorization—Disaster Relief (H.R. 692).  
Small Business Loan Ceilings (H.R. 2647, P.L. 95-14).  
U.S. International Trade Commission (H.R. 6370).  
White House Conference on Small Business (S. Res. 105).

##### EDUCATION

Education of the Handicapped (H.R. 6992).  
Higher Education Technical Amendments (H.R. 6774).  
Vocational Education Amendments (H.R. 3437, P.L. 95- ).

##### ELECTIONS

Federal Election Commission Authorization (S. 1435).  
Overseas Citizens Voting Rights (S. 703).

##### EMPLOYMENT

CETA (H.R. 2992).  
Emergency Unemployment Compensation (H.R. 4800, P.L. 95-19).  
Public Works Employment (H.R. 11, P.L. 95-28).

##### ENERGY

Coal Conversion Authority (S. 1468).  
Deepwater Ports (S. 891). (H.R. 6401, P.L. 95- ).  
Department of Energy (S. 826).  
ERDA Authorization (S. 36, P.L. 95- ).  
ERDA Defense Program (S. 1339).  
ERDA Synthetic Fuel Loan Guarantee Program (S. 37).  
Natural Gas Emergency (S. 474, P.L. 95-2).  
Radiation Exposure (S. 266).  
Stripmining Control and Reclamation (H.R. 2).

##### ENVIRONMENT

Disaster Relief Programs (H.R. 6197).  
Drought Emergency Authority (S. 925, P.L. 95-18).  
Drought Emergency Relief (S. 1279, P.L. 95-31).  
Earthquake Hazards Reduction (S. 126).  
Endangered Species (S. 1316).  
National Advisory Committee on Oceans and Atmosphere (H.R. 3849).  
Noise Control (S. 1511).  
Safe Drinking Water (S. 1528).  
Sea Grant Program (H.R. 4301).

##### FISHERIES

Fishermen's Protection Reimbursement Program (S. 1184).  
Atlantic Times (H.R. 6205, P.L. 95- ).  
Commercial Fisheries (H.R. 6206).  
Fishery Conservation Zone Transition (H.J. Res. 240, P.L. 95-6), (H.R. 3753, P.L. 95-8).

##### GENERAL GOVERNMENT

Age Discrimination Report—Nutrition Program for Elderly (H.R. 6668).  
Federal Assistance Program Information (S. 904).  
GAO Audit of IRS and ATF (S. 213).  
Kennedy Center Authorization (S. 521).  
Kennedy Presidential Library (H.J. Res. 424, P.L. 95- ).  
Library Services and Construction (S. 602).  
NASA Authorization (H.R. 4088).  
National Science Foundation Authorization (H.R. 4991).  
Presidential Reorganization Authority (S. 626, P.L. 95-17).  
Privacy Protection Study Commission Extension (S. 1443, P.L. 95- ).  
Smithsonian Institution—Canal Zone Biological Area (S. 1031).

##### GOVERNMENT EMPLOYEES

Federal Salary Increases (S. 964).  
Secret Service Protection of Former Federal Officials (S.J. Res. 12, P.L. 95-1).

##### HEALTH

Public Health Programs—Biomedical Research (H.R. 4975).

##### HOUSING

Supplemental Housing Authorizations (H.R. 3843, P.L. 95- ).

##### INDIANS

American Indian Policy Review Commission (S.J. Res. 10, P.L. 95-5).  
Sioux Black Hills Claim (S. 838).  
Wichita Tribal Land Claim (S. 773).  
Zuni Lands (S. 482).

##### INTERNATIONAL

Abu Daoud (S. Res. 48).  
Harp Seal Killings (H. Con. Res. 142).  
International Cooperation on Nuclear Proliferation (S. Res. 94).  
Portugal Military Assistance (S. 489, P.L. 95-23).  
Rhodesian Chrome (H.R. 1746, P.L. 95-12).  
Romanian Earthquake (S. Con. Res. 12).  
Romanian Earthquake Authorization (H.R. 5717, P.L. 95-21).  
Soviet Expulsion of George A. Krinsky (S. Res. 81).  
Soviet Freedom of Emigration (S. Con. Res. 7).  
State Department Supplemental Authorization (H.R. 5040).  
Uganda Human Rights (S. Res. 175).  
Vietnam POW's and MIA's (S. Con. Res. 2), (S. Con. Res. 3).

##### MEMORIALS, TRIBUTES AND MEDALS

Alex Haley (S. Res. 112).  
Charles A. Lindbergh (S. Res. 117).  
Cora Rubin Lane 100th Birthday (S. Res. 162).  
Francis R. Valeo (S. Res. 133).  
Gerald R. Ford Building (S. 385, P.L. 95-25).  
Jaycees International Conference (S. Res. 137).  
Lieutenant General Ira C. Eaker Medal (S. 425).  
Marian Anderson Medal (H.J. Res. 132, P.L. 95-9).  
Motion Picture Academy 50th Anniversary (S. Res. 168).  
Philip A. Haart, Death of (S. Res. 15).  
President and Mrs. Ford (S. Res. 22).  
President Ford (R. Res. 38).  
President-Elect Carter (S. Res. 23).  
St. Patrick's Parish Anniversary (S. Res. 116).  
Vice President Rockefeller (S. Res. 37).  
William O. Douglas (S. 776, P.L. 95-11).

##### NATURAL RESOURCES—NATIONAL HISTORIC SITES

Eleanor Roosevelt National Historic Site (H.R. 5562, P.L. 95- ).  
Land and Water Conservation Fund (H.R. 5306).  
Reclamation Projects (H.R. 4390).  
Water Resources (H.R. 6752) (H.R. 4746).  
Wilderness Areas Studies: Montana Wil-

derness (S. 393), Wildlife Refuges (H.R. 5493).

#### NOMINATIONS (ACTION BY ROLL CALL VOTE)

Griffin B. Bell to be Attorney General.  
Joseph A. Califano, Jr., to be Secretary of HEW.

Peter F. Flaherty to be Deputy Attorney General.

Ray Marshall to be Secretary of Labor.  
Paul C. Warnke for Rank of Ambassador

for SALT Negotiations and to be Director of the Arms Control and Disarmament Agency.

Andrew J. Young to be U.S. Representative to U.N.

#### PROCLAMATIONS

American Business Day (S.J. Res. 40).  
Grandparents Day (S.J. Res. 24).

#### SENATE

Commission on the Operation of the Senate (S. Res. 93).

Committee Reorganization (S. Res. 4).  
Deputy President Pro Tempore (S. Res. 17), (S. Res. 27).

Senate Ethics Code (S. Res. 110).

Special Committee on Official Conduct (S. Res. 38).

Teamsters' Pension Fund (S. Res. 139).

#### TAXATION

Sick Pay Exclusion (H.R. 1828).  
Tax Reduction and Simplification (H.R. 3477, P.L. 95-30).

#### TRANSPORTATION

Aircraft Registration (H.R. 735).  
Interstate Commerce Commission Authorization—Regulatory Reform (S. 1534).  
Maritime Authorization (S. 1019).  
Rail Reorganization—Office of Rail Public Counsel (H.R. 4049).

#### VETERANS

Veterans' Care in State Homes (H.R. 3695).

#### INDEX BY BILL NUMBER FOR SENATE LEGISLATION ACHIEVEMENTS

(Prepared by Senate Democratic Policy Committee, ROBERT C. BYRD, Chairman)

Code to hold hearings June 6 and June 27 on the Administrative difficulties of anticipated energy tax revenues. | Ways and Means Cte. hearings from Adm. May 16-17; from general public May 18-June 1.  |

#### TIME LIMITATION AGREEMENT— S. 252

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such time as S. 252, the Clean Air Act, is called up and made the pending business before the Senate, there be a time limitation on the bill of 8 hours to be equally divided between Mr. MUSKIE and Mr. STAFFORD; that there be a time limitation on any amendment thereto of 2 hours, with the exception of an amendment by Mr. RIEGLE and Mr. GRIFFIN on which there be a time limitation of 6 hours, and with the further exception of an amendment by Mr. CANNON on which there be a time limitation of 4 hours; provided further, that there be a time limitation on any amendment to an amendment of 30 minutes, on any debatable motion or appeal or point of order, if such is submitted to the Senate, of 30 minutes, with the exception of a motion to recommit with instructions by Mr. ALLEN on which there be a time limitation of 1½ hours, and that the agreement be in the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the unanimous-consent agreement is as follows:

Ordered, That when the Senate proceeds to the consideration of S. 252 (Order No. 106), a bill to amend the Clean Air Act, as amended, debate on any amendment in the first degree (except an amendment to be offered by the Senators from Michigan (Messrs. RIEGLE and GRIFFIN), on which there shall

be 6 hours debate, and an amendment to be offered by the Senator from Nevada (Mr. CANNON), on which there shall be 4 hours debate) shall be limited to 2 hours, to be equally divided and controlled by the mover of such and the manager of the bill, and that debate on any amendment in the second degree, debatable motion (except a motion to recommit with instructions to be offered by the Senator from Alabama (Mr. ALLEN), on which there shall be 90 minutes debate), appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: Provided, That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the Minority Leader or his designee: Provided further, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of final passage of the said bill, debate shall be limited to 8 hours, to be equally divided and controlled, respectively, by the Senator from Maine (Mr. MUSKIE) and the Senator from Vermont (Mr. STAFFORD): Provided, That the said Senators, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal or point of order.

#### TIME LIMITATION AGREEMENT— S. 1523

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such

time as the housing bill, S. 1523, is called up and made the business before the Senate, there be a time limitation thereon of 4 hours for debate, to be equally divided between Mr. PROXMIER and Mr. BROOKE; that there be a time limitation on any amendment thereto of 1 hour; that there be a time limitation on an amendment by Mr. MORGAN of 4 hours; that there be a time limitation on any amendment in the second degree, debatable motion or appeal or point of order, if such is submitted to the Senate, of 30 minutes, and that the agreement be in the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that, with respect to the agreement on the housing bill, there be a time limitation of 4 hours on a Budget Committee amendment or amendments to be equally divided in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the unanimous-consent agreement is as follows:

Ordered, That on Monday, June 6, 1977, at the conclusion of the Morning Business, the Senate proceed to the consideration of S. 1523 (Order No. 148), a bill to amend the Housing and Community Development Act of 1974; to extend housing assistance and mortgage insurance programs; and for other purposes, and that debate on any amendment in the first degree (except an amendment to be offered by the Senator from North

Carolina (Mr. Morgan), on which there shall be 4 hours debate, and an amendment or a series of amendments to be offered on behalf of the Budget Committee, on which there shall be a total of 4 hours debate) shall be limited to 1 hour, to be equally divided and controlled by the mover of such and the manager of the bill, and that debate on any amendment in the second degree, debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the bill: Provided, That in the event the manager of the bill is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the Minority Leader or his designee; Provided further, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of final passage of the said bill, debate shall be limited to 4 hours, to be equally divided and controlled, respectively, by the Senator from Wisconsin (Mr. Proxmire) and the Senator from Massachusetts (Mr. Brooke): Provided, That the said Senators, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

#### ORDER FOR ROUTINE MORNING BUSINESS AND CONSIDERATION OF S. 1523 AND S. 252 ON MONDAY, JUNE 6, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Monday, June 6, following the recognition of the two leaders or their designees, there be a brief period for the transaction of routine morning business, with no resolutions coming over under the rule, to be limited to not to exceed 30 minutes, with statements limited therein to 5 minutes each, at the conclusion of which the Senate will proceed to the consideration of the housing bill, S. 1523, and that upon the disposition of that bill the Senate proceed to the consideration of the Clean Air Act, S. 252.

Mr. BAKER. Mr. President, reserving the right to object, as I understand the unanimous-consent request propounded by the majority leader, it is possible that the housing bill might be finished on Monday, or, more likely, Tuesday.

Mr. ROBERT C. BYRD. Right.

Mr. BAKER. I have a problem on this side about commencing the Clean Air Act before Wednesday.

Mr. ROBERT C. BYRD. I appreciate the situation in which the distinguished minority leader finds himself.

I ask unanimous consent that the Clean Air Act follow the disposition of the housing bill, but that, in no case, shall the Clean Air Act come up before Wednesday.

Mr. BAKER. Mr. President, will the distinguished majority leader yield?

Mr. ROBERT C. BYRD. I yield.

Mr. BAKER. I think that will be just fine.

I might say to the majority leader that if we do finish the housing bill before Wednesday, I personally would have no objection to turning to something else. Maybe we can do that by unanimous consent at that time.

Mr. ROBERT C. BYRD. Yes. The REC-

ORD will so state that understanding between the two leaders.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I thank the distinguished minority leader and all Senators who have had a part in the two agreements that have been entered into.

#### COMMITTEE MEETINGS DURING SENATE SESSION TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

#### PROGRAM

Mr. ROBERT C. BYRD. Mr. President, there are no special orders for tomorrow morning. The Senate, when it convenes at 10 a.m., and the two leaders have been recognized under the standing order, will resume consideration of Calendar Order No. 146, a bill to provide employment and training opportunities for youth.

At no later than 1:30 p.m., the Senate will resume consideration of Calendar Order No. 149. Hopefully, the youth employment bill will have been completed by that time. But, in any event, at 1:30 p.m., if the youth employment bill has not been completed, the Senate will resume consideration of the tanker legislation.

There will undoubtedly be a rollcall vote or so in connection with that legislation, and there may be a rollcall vote in connection with the youth employment bill which will be taken up the first thing tomorrow morning. I cannot be sure. That is about all I can say with respect to the program for tomorrow at this time.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MATSUNAGA). Without objection, it is so ordered.

#### RECESS UNTIL 10 A.M. TOMORROW

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 10 o'clock tomorrow morning.

The motion was agreed to; and at 5:35 p.m., the Senate recessed until tomorrow, Thursday, May 26, 1977, at 10 a.m.

#### NOMINATIONS

Executive nominations received by the Senate May 25, 1977:

##### DEPARTMENT OF STATE

The following-named person for appointment as a Foreign Service officer of class 3,

a consular officer, and a secretary in the diplomatic service of the United States of America:

Donald Fraser Ramage, of California.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

## HOUSE OF REPRESENTATIVES—Wednesday, May 25, 1977

The House met at 10 o'clock a.m.

Rev. Lucretia Hurley Davis, Aldersgate United Methodist Church, Alexandria, Va., offered the following prayer:

Almighty God, Creator of all life, we praise You. We worship You. We love You. We pause at the beginning of this new day to open our lives to Your direction. We are Your children, and You know us. You know those areas in which we have sinned, those persons we have hurt. Forgive us. We confess past inequities as individuals and as a nation. Forgive us. Direct us in the paths of justice and equality. Direct our search for peace and righteousness among the peoples. Direct us this day as we make decisions

which affect the lives of men and women across this land. Help us, O Lord, who are entrusted with the ministries of human welfare, of reconciliation, of law and justice, to fulfill our responsibilities in your name with wisdom, mercy, and humility. Amen.

### THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

### MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed with amendments in which the concurrence of the House is requested, bills of the House of the following titles:

H.R. 3695. An act to amend title 38 of the United States Code in order to revise and improve the program of making grants to the States for the construction, remodeling, or renovation of State home facilities for furnishing hospital, domiciliary, and nursing home care for eligible veterans, and for other purposes.

H.R. 3849. An act to establish qualifications for individuals appointed to the National Advisory Committee on Oceans and Atmo-

sphere and to authorize appropriations for the Committee for fiscal year 1978;

H.R. 4390. An act to authorize appropriations for continuation of construction of distribution systems and drains on the San Luis Unit, Central Valley project, California, to mandate the extension and review of the project by the Secretary, and for other purposes;

H.R. 5493. An act to extend until October 1, 1980, the appropriation authorizations for the Seal Beach, Dismal Swamp, and San Francisco Bay National Wildlife Refuges; and

H.R. 6197. An act to amend the Disaster Relief Act of 1974 to provide for authorization of appropriations thereunder through fiscal year 1978.

The message also announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 195. An act to amend title 28, United States Code, to provide that Bottineau, McHenry, Pierce, Sheridan, and Wells Counties, N. Dak., shall be included in the Northwestern Division of the Judicial District of North Dakota;

S. 1019. An act to authorize appropriations for the fiscal year 1978 for certain maritime programs of the Department of Commerce, and for other purposes; and

S. 1528. An act to amend section 2 of the Safe Drinking Water Act (Public Law 93-523) to extend and increase authorizations provided for public water systems.

#### ADJOURNMENT OF HOUSE AND SENATE

(Mr. WRIGHT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. WRIGHT. Mr. Speaker, I am about to send to the desk a privileged resolution. I take this minute to explain to the Membership that it is the standard resolution calling for our reconvening after our adjournment tomorrow to Wednesday next.

#### PROVIDING FOR ADJOURNMENT OF HOUSE FROM THURSDAY, MAY 26, 1977, TO WEDNESDAY, JUNE 1, 1977, AND FOR ADJOURNMENT OF SENATE FROM FRIDAY, MAY 27, 1977, TO MONDAY, JUNE 6, 1977

Mr. WRIGHT. Mr. Speaker, I offer a privileged concurrent resolution (H. Con. Res. 229) and ask for its immediate consideration.

The Clerk read the concurrent resolution, as follows:

#### H. CON. RES. 229

*Resolved by the House of Representatives (the Senate concurring), That when the House adjourns on Thursday, May 26, 1977, it stand adjourned until 12 o'clock meridian on Wednesday, June 1, 1977, and that when the Senate recesses on Friday, May 27, 1977, it stand in recess until 12:30 o'clock post-meridian on Monday, June 6, 1977.*

The concurrent resolution was agreed to.

A motion to reconsider was laid on the table.

#### SCHEDULE FOR TASK FORCE ON WORK MANAGEMENT OF COMMISSION ON ADMINISTRATIVE REVIEW

(Mr. D'AMOURS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. D'AMOURS. Mr. Speaker, on May 17 I circulated a "dear colleague" letter which announced the schedule for the Task Force on Work Management of the Commission on Administrative Review for the near future.

Our job will be to suggest changes in procedures and current practices in the House in order to make Members and staff more effective in doing their jobs. We will be looking at four broad areas in which Members and staff seem to have problems which we can be helpful in solving—information availability and flow, office workload management, personnel procedures, and time use and scheduling.

We are most anxious to have insights from all Members of the House as we examine these areas. In the "dear colleague" letter which I circulated, we asked for either written comments or, if Members desired, for participation in our coming hearings.

I would like to take this opportunity to remind the Members that those hearings for Members will be held on June 2 at 9:30 a.m. We hope you will take this opportunity to give the Commission your views.

#### CLEAN AIR ACT AMENDMENTS OF 1977

Mr. ROGERS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes.

The SPEAKER. The question is on the motion offered by the gentleman from Florida (Mr. ROGERS).

The question was taken; and the Speaker announced that the ayes appeared to have it.

Mr. BAUMAN. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Sergeant at Arms will notify absent Members.

The vote was taken by electronic device, and there were—yeas 369, nays 1, not voting 63, as follows:

[Roll No. 284]

So the motion was agreed to.

The result of the vote was announced as above recorded.

## IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 6161, with Mr. DANIELSON in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on Tuesday, May 24, 1977, all time for general debate on the bill had expired, and the Clerk was about to read section 1 of the bill.

The Clerk will read.

The Clerk read as follows:

*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,*

## SHORT TITLE AND TABLE OF CONTENTS

SECTION 1. This Act, together with the following table of contents, may be cited as the "Clean Air Act Amendments of 1977".

## TABLE OF CONTENTS

Sec. 1. Short title and table of contents.  
Sec. 2. Authorizations; sunshine in Government.  
TITLE I—AMENDMENTS RELATING PRIMARILY TO STATIONARY SOURCES  
Sec. 101. Unregulated pollutants.  
Sec. 102. Basis of administrative standards.  
Sec. 102A. Economic impact statement.  
Sec. 103. Delayed compliance orders under State plan.  
Sec. 104. Assessment of civil penalties.  
Sec. 105. Noncompliance penalty.  
Sec. 106. Compliance date extensions for coal conversion.  
Sec. 107. Stratosphere and ozone protection.  
Sec. 108. Prevention of significant deterioration.  
Sec. 109. Training.  
Sec. 110. Review of standards.  
Sec. 111. New source standards of performance.  
Sec. 112. Variances for technology innovations.  
Sec. 113. Control of pollution from Federal facilities.  
Sec. 114. Waiver of maintenance of effort requirement.

Sec. 115. Energy or economic emergency authority.  
Sec. 116. Visibility protection.  
Sec. 117. Nonattainment areas.  
Sec. 118. Internalization of cost.  
Sec. 119. Codification and publication of applicable implementation plans.

## TITLE II—AMENDMENTS RELATING PRIMARILY TO MOBILE SOURCES

Sec. 201. Limitation on indirect source review authority.  
Sec. 202. Extension of transportation control compliance dates.  
Sec. 203. Light-duty motor vehicle emissions.  
Sec. 204. Emission standards for heavy-duty vehicles or engines and certain other vehicles or engines.  
Sec. 205. Aircraft emission standards.  
Sec. 206. Assurance of protection of public health and safety.  
Sec. 207. Test procedures for measuring evaporation emissions.  
Sec. 208. Vehicle inspection and maintenance.  
Sec. 209. Warranties and motor vehicle parts certification.  
Sec. 210. Parts standards; preemption of State law.  
Sec. 211. Protection of competition; assurance of consumer freedom of choice.  
Sec. 212. Anti-tampering prohibition.  
Sec. 213. Cost of vapor recovery systems to be borne by owner of retail outlet.  
Sec. 214. California waiver.  
Sec. 215. High altitude performance adjustments.  
Sec. 216. Fill pipe standards.  
Sec. 217. Onboard hydrocarbon technology.  
Sec. 218. Carbon monoxide intrusion into sustained use vehicles.  
Sec. 219. Implementation of motor vehicle emission standards and warranties.  
Sec. 220. Testing of fuels and fuel additives.  
Sec. 221. Preemption of State law.  
Sec. 222. Testing by small manufacturers.

## TITLE III—MISCELLANEOUS AMENDMENTS

Sec. 301. Redesignation of air quality control regions.  
Sec. 302. Consultation.  
Sec. 303. Delegation to local government under Federal plan.  
Sec. 304. Employment effects.  
Sec. 305. Administrative procedures and judicial review.  
Sec. 306. Employee protection.  
Sec. 307. Notice to State in case of certain inspections, etc.  
Sec. 308. Emergency powers.  
Sec. 309. Interstate pollution abatement.  
Sec. 310. Interagency cooperation on prevention of environmental cancer and heart and lung diseases.  
Sec. 311. Civil litigation.  
Sec. 312. Fine particulate study.  
Sec. 313. Air quality monitoring by Environmental Protection Agency.  
Sec. 314. Certain minor and technical and conforming amendments.  
Sec. 315. Study and report concerning economic approaches to controlling air pollution.  
Sec. 315A. Environmental adjustments assistance study.  
Sec. 316. Loss of pay prohibited.  
Sec. 317. Rule review.  
Sec. 318. Reduction of paperwork; simplification of administration.  
Sec. 319. Conflicts of interest prohibited.  
Sec. 320. Savings provision; effective dates.

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 1 of title I be considered as

read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. The Clerk will read. The Clerk read as follows:

## AUTHORIZATIONS; SUNSHINE IN GOVERNMENT

SEC. 2. (a) Section 316 of the Clean Air Act is amended to read as follows:

## "APPROPRIATIONS

"SEC. 316. (a) There are authorized to be appropriated to carry out this Act (other than section 327, section 103(b)(5), and authorities providing for research, development, and demonstration under this Act) \$200,000,000 for each of the three fiscal years beginning after the date of enactment of the Clean Air Act Amendments of 1977."

(b) The Clean Air Act is amended by adding the following new section at the end thereof:

## "SUNSHINE IN GOVERNMENT; CONFLICTS OF INTEREST

"SEC. 325. (a) Each person who—

"(1) has any known financial interest (A) in any person subject to such Act, or (B) in any person who applies for or receives any grant, contract, or other form of financial assistance pursuant to this Act, and

"(2) is (A) an officer or employee of the Environmental Protection Agency who performs any function of duty under this Act or (B) a member of the National Commission on Air Quality appointed as a member of the public

shall, beginning six months after the date of enactment of this section, annually file with the Administrator a written statement concerning all such interests held by such officer, employee, or member during the preceding calendar year. Such statement shall be available to the public.

"(b) The Administrator shall—

"(1) act within ninety days after the date of enactment of the Clean Air Act Amendments of 1977—

"(A) to define the term 'known financial interest' for purposes of subsection (a) of this section;

"(B) to establish the methods by which the requirement to file written statements specified in subsection (a) of this section will be monitored and enforced, including appropriate provisions for the filing by such officers, employees and members of such statements and the review by the Administrator (or the Commission in the case of members of the Commission) of such statements; and

"(2) report to the Congress on June 1 of each calendar year with respect to such statements to the Administrator and the actions taken in regard thereto during the preceding calendar year.

"(c) No person who—

"(1) is employed by, serves as attorney for, acts as a consultant for, or holds any other official or contractual relationship to—

"(A) the owner or operator of any major stationary source or any stationary source which is subject to a standard of performance or emission standard under section 111 or 112,

"(B) any manufacturer of any class or category of mobile sources if such mobile sources are subject to regulation under this Act, or

"(C) any trade or business association of which such owner or operator referred to in subparagraph (A) or such manufacturer referred to in subparagraph (B) is a member.

"(2) owns any stock, bonds, or other financial interest in any such owner or operator, manufacturer, or trade or business association, or

"(3) is an officer or employee of any organization (whether or not nonprofit) engaged in litigation or political, educational, or information activities, relating to air quality.

may serve as an officer or employee of the Environmental Protection Agency or as a member, appointed from the public, of the National Commission on Air Quality.

"(d) The Administrator shall promulgate rules for purposes of subsections (b) and (c) which identify specific positions within such agency which are of a nonregulatory or nonpolicy-making nature and provide that officers or employees occupying such positions shall be exempt from the requirements of this section.

"(e) Any officer or employee of the Environmental Protection Agency or member of the National Commission on Air Quality who is subject to, and knowingly violates, this section or any regulation issued thereunder, shall be fined not more than \$2,500 or imprisoned not more than one year, or both.

"(f) Nothing in this section shall be construed to affect or impair any other requirement respecting disclosure or conflict of interest applicable to the Environmental Protection Agency or the Nations Commission on Air Quality."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 2 of title I be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

Mr. DINGELL. Mr. Chairman, reserving the right to object, and I will not object, I do so only for the purpose of inquiring of the gentleman from Florida who has just made the unanimous consent request as to what his intent is, if I can have the gentleman's attention, and I hope I can, with regard to the unanimous consent requests which the gentleman is making; is it his intention that each title be open to amendment at any point and printed in the Record, or is it that each section shall be read or considered as read?

Mr. ROGERS. Mr. Chairman, if the gentleman will yield, I think it would be easier for the Members of the House to follow if we go section by section instead of by title because this will allow us to explain each section, if necessary, and then have it open to amendment at any point, if the gentleman from Michigan would agree to that.

Mr. DINGELL. Mr. Chairman, I would assume the gentleman is then going to request that each section be considered as read, printed in the Record, and open to amendment at any point, and to that I have no objection.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I certainly agree that this is the proper way to go about the disposition of this legislation.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, I rise today in opposition to H.R. 6161,

the Clean Air Act Amendments of 1977, as reported by the Interstate and Foreign Commerce Committee. This legislation may be one of the most seriously defective and misguided measures to come before this Congress. Many of the provisions of the bill have been crafted with little thought to the impacts they will have on our Nation's economy, the individual consumer and our energy programs.

Just 1 month ago, the nation listened to President Carter's "the sky is falling" speech with respect to the energy crisis facing the United States. The Nation was told by the President that a CIA study predicted that our oil and gas supplies were rapidly being depleted, that nuclear power was too dangerous and its expansion would be curtailed and that by increasing our coal production by two-thirds, and conserving, we would be able to meet our energy needs. Well, my friends, should we enact this legislation, the sky really will fall because coal simply will not be able to be burned in any increased amounts. Let me describe for you some of the more onerous provisions and their relationship to the economy, the individual consumer and our energy policy.

The nondeterioration provisions of section 108, and the new source standards of performance provisions of section 111, if enacted, will result in significantly greater expenditures by industry in order to comply with the provisions, and these expenditures will, of course, be passed on to the consumers. One industry that would be affected by this is the electric utility industry. Now I am sure that all of you have received many letters from constituents about increasing utility bills. Well, if you want those bills to further increase, vote for the nondeterioration and new source standards provisions as they are.

The cost of installation of the scrubber equipment to comply with this bill for the Cincinnati Gas & Electric Co. will result in additional company operating costs of \$115 million per year. That money represents capital investment that could be made in additional plant and job expansion to meet the expanding demand for electricity. It was brought out time and again in hearings before the Energy and Power Subcommittee that the utility industry is one of the most capital-intensive and capital-strapped industries in the country. In 1973-74, plant expansion expenditures trimmed solely for financial reasons totaled \$21 billion. There is a real danger of undercapacity, and yet here we are trying to increase operating expenditures. A February 1976 study by EPA estimates that these two provisions would result in \$28 billion in additional costs to the electric utility industry between now and 1990, and, if a high growth rate is assumed for that period, the National Economic Research Associates conclude that additional costs may exceed \$50 billion.

But are we cleaning up the environment with these provisions? No, I think not. An EPA study concludes that the implementation of these policies will result in the generation of substantial amounts of new waste, and that by the

year 1990, we will be producing 50 million tons of additional sludge per year. Just to dispose of this sludge, it will take 2,000 acres of land per year at a depth of 20 feet.

Now let us look at the consumer cost impact of another provision of H.R. 6161—the auto emissions standards provisions. The FEA estimates that, if the provisions currently in the bill are enacted, the fuel penalty by 1981 would be as much as 140,000 barrels of oil per day. That would mean an additional \$0.7 billion per year in payments to the OPEC cartel by U.S. consumers—assuming that we can get the oil. Furthermore, the consumer cost of the new equipment necessary to meet statutory standards is estimated to be \$350 per vehicle by Mr. Costle of EPA. It should also be noted that no one, as yet, knows how to meet these statutory standards on most vehicles and that is why we are postponing again. California, which has higher standards than the rest of the country, provides a good example of what will happen if these standards are not further relaxed. General Motors estimates that approximately 40 of its models for 1978 cannot be sold in California in 1978.

Beyond 1979, as the domestic and foreign manufacturers have recently testified at congressional hearings, the disadvantages in meeting excessively stringent standards include fuel economy penalties, higher costs to the consumer—increased equipment and maintenance costs—and at least initially, poorer driveability and performance and reduced model availability. The impact of these disadvantages, which would result if auto emission standards were tighter than the Dingell-Broyhill standards, must be weighted against the fact that analytical data available shows there also would be statistically insignificant improvements in the Nation's ambient air quality.

#### H.R. 6161 AND THE OIL SHORTAGE

I would like to remind my colleagues of an unpleasant truth: Three and a half years after the Arab oil embargo, we are steadily growing more—not less—dependent on foreign oil. The nondeterioration provisions of H.R. 6161 would make us even more dependent upon foreign oil by requiring many decisions regarding the development of such alternate domestic energy sources as coal, oil shale, and uranium to be based on only one criterion; namely, the quality of air.

The people of this country need and want the cleanest air they can get, and they are willing to pay for it. But certainly they need and want other things as well. And the economic consequences of such growing dependence on foreign sources of oil appear to be so potentially disastrous for this Nation that I feel compelled to present them to you. I do so in order that you may seriously consider whether it would not be prudent to have the nondeterioration provisions and their ramifications studied before voting them into law.

To enact these provisions hastily into law now might very well cause catastrophic and even irrevocable damage to

our country's energy independence and economic well-being. Back in 1970, domestic crude oil production peaked at an average of 9.6 million barrels per day, and crude oil imports were a mere 9 percent of our total domestic supply. In each succeeding year, however, domestic production either declined or stagnated—as the natural consequence of oil field depletion and price control policy—until by this year daily output averaged 17 percent less than in 1972. At the same time, demand kept increasing inexorably. The difference between supply and demand was made up by increasing imports of foreign oil—imports which have soared some 240 percent from 1972 through 1976.

Our balance-of-payments outflow is another crucial factor that must be reckoned with. In 1972 payments for oil imports were \$3.0 billion. Because of soaring demand and the fivefold rise in oil prices by OPEC since then, however, payments outflow in 1976 was over \$35 billion, 10 times as much. Here is an enormous sum sent abroad which could otherwise have been invested in new plants and equipment at home to spur lagging economic growth and make American industry more competitive.

The solution of the problem of growing dependence on foreign oil has been obvious all along, and that is to develop domestic oil and natural gas as well as alternate sources of domestic energy, such as coal, oil shale and uranium. By developing such sources, not only will this country protect itself from the potentially disastrous effects of another Arab oil boycott, but also it will be able to keep tens of billions of dollars at home, where they can be put to work creating hundreds of thousands of new jobs for the unemployed and for young people coming into the job market.

However, the nondeterioration provisions, as presently written, appear to place insuperable obstacles in the path of energy development. They would, for example, severely inhibit the mining of coal in West Virginia and Kentucky. The energy resources of Wyoming, Montana, Colorado, and Utah, which comprise coal, oil shale, and uranium, would be largely unavailable for mining, since all too often the required facilities to mine and process these resources, no matter how well controlled, could not be built where needed.

We must ask ourselves what would be the true energy and economic costs of enforcing the nondeterioration provisions. From the evidence to date, these potential costs appear to be staggering. Two 1976 independent FEA studies show that these provisions would force the electric utilities to increase their oil consumption by 1 million barrels a day by 1990. This amount equals all of the crude oil produced in the Gulf of Mexico last year; that is, almost 12 percent of the Nation's output. FEA consultants also calculated that because of the nondeterioration provisions, coal production could be as much as 150 million tons lower than otherwise projected for 1990, an amount equal to almost one-quarter of all coal being mined at present. Then,

too, the FEA estimates that electric utilities would have to pay an extra \$6 to \$16 billion during the same period.

These crippling restrictions which the nondeterioration provisions would place on coal production and use would drastically affect the President's announced energy policy because coal constitutes over 80 percent of our economically recoverable energy resources. However, to date no one from the administration has been able to explain the inherent inconsistencies and clash of the administration's energy and clean air positions. Starting today, the Energy and Power Subcommittee will hold 3 days of hearings on the coal conversion part of President Carter's energy bill and I can assure you that I intend to find out how the two policies can be justified together—and not just by rhetoric either. But unfortunately, we must act on H.R. 6161 before we consider the energy policy.

The question before us is whether cleaning up the air is so urgent a matter as to take precedence over all other pressing concerns. Employment, economic growth and protection against future oil embargoes—with such momentous issues at stake, it would seem wise to refer the nondeterioration provisions to a commission for 2 years of study. In this way, the potential social, economic, and energy consequences that would flow from such provisions could be studied and their true costs calculated.

Once armed with such knowledge, this body would be in a position to weigh possible tradeoffs between the nondeterioration of air quality and the other needs of this country. Without such knowledge, we would move ahead only at considerable peril, for from much of the evidence to date, the impact of the nondeterioration provisions upon the Nation's economy and energy policy appears to be massive.

Mr. DINGELL. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. PANETTA. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from California.

Mr. PANETTA. Mr. Chairman, I rise in strong support for the Clean Air Act, H.R. 6161, as reported by the Commerce Committee.

As we are all aware, the central controversy in this bill concerns deadlines for meeting auto emissions standards. The plan for extending the deadlines as set forth by the Committee represents the fourth time the Congress has bent the 1970 Clean Air Act to meet the convenience of the auto industry. While I believe the committee compromise is reasonable, I can see no merit in going farther, as some Members suggest, and weakening the Clean Air Act beyond recognition.

We have seen the auto industry meet California's clean air standards with ease, standards that are applicable to as many as 10 percent of the cars sold in

this country. Certainly, there is no question that these standards can be extended, on the timetable the committee proposes, to all American cars.

There is another, particularly difficult problem that could be created if we delay auto emissions standards further. As the chairman of the California Air Resources Board noted:

A slowdown in the auto program, as is being proposed by the industry, will put increasing pressure on stationary pollution sources and most certainly force local air quality officials to halt construction of new facilities which are needed to boost employment and provide products.

Mr. Chairman, I share this view and I find it shortsighted to say that we must protect the auto industry at all costs, while forcing other producers and manufacturers to suffer, just to satisfy Detroit.

There has been an effort by supporters of further delays in air quality controls to portray this issue as a confrontation between radical environmentalists and the auto industry. Mr. Chairman, that is not the case at all. The Committee bill is supported by groups as diverse as the American Medical Association, the Automotive Parts and Accessories Association, the National Governors' Conference, the National Association of Industrial Parks, and many senior citizens' groups.

The broad spectrum of supporters raises an important question in my mind. The Clean Air Act of 1970 passed this body by an overwhelming margin. Poll after poll shows that a huge majority of Americans support stiff clean air standards. Groups such as the Sierra Club and the National Realty Committee which are often at odds on other issues are in agreement on clean air. Mr. Chairman, my question is this—are we or are we not going to enforce and maintain the laws we pass, even if they are opposed by one powerful special interest, when the American people want them enforced? Are we going to allow the often weak voices of individual citizens to be drowned out by the chorus of well-paid Washington lobbyists?

All the excellent ethics measures this House has adopted will do little to restore the confidence of the people in Congress, if we continually ignore their interests and support the special interests. Good representation does not simply mean not taking money from lobbyists and setting up slush funds, although of course that is part of it. It also means listening carefully and being able to take some controversial stands, when that is what the people want. I believe that is what is called for in this case.

We have heard the auto industry's position over and over again, it has received more than its share of coverage by the media. The voices of doctors who see diseases and deaths from respiratory illnesses brought on by air pollution have not been heard enough. The voices of senior citizens whose right to breathe the cleanest possible air is being threatened right now have not been heard enough. The voices of other manufacturers who have been meeting tough air pollution standards on their factories and who will now be asked to meet still stronger

standards just to make up for increased delays in auto pollution compliance have not been heard enough.

Mr. Chairman, I urge my colleagues to listen to those voices and to support H.R. 6161, as reported by the committee.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

**TITLE I—AMENDMENTS RELATING PRIMARILY TO STATIONARY SOURCES**

**UNREGULATED POLLUTANTS**

Sec. 101. (a) Title I of the Clean Air Act is amended by adding at the end thereof the following new section:

**"LISTING OF CERTAIN UNREGULATED POLLUTANTS**

"Sec. 120. (a) (1) In the case of radioactive pollutants (including source material, special nuclear material, and byproduct material), cadmium, arsenic, and polycyclic organic matter, the Administrator shall (not later than one year after the date of the enactment of the Clean Air Act Amendments of 1977) include such substance in the list published under section 108(a) (1) or 112(b) (1) (A) (in the case of a substance which, in the judgment of the Administrator, causes, or contributes to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious, irreversible, or incapacitating reversible illness), or shall include each category of stationary sources emitting such substance in significant amounts in the list published under section 111(b) (1) (A), or take any combination of such actions.

"(2) Paragraph (1) shall not apply if the Administrator finds, after notice and opportunity for public hearing, that the air pollution caused, or contributed to, by a substance referred to in such paragraph (1) may not reasonably be anticipated to endanger public health.

"(b) Nothing in subsection (a) shall be construed to affect the authority or duty of the Administrator to revise any list referred to in subsection (a) with respect to any substance (whether or not enumerated in subsection (a)).

"(c) (1) Before listing any source material, special nuclear, or byproduct material (or component or derivative thereof) as provided in subsection (a), the Administrator shall consult with the Nuclear Regulatory Commission.

"(2) Not later than six months after listing any such material (or component or derivative thereof) the Administrator and the Nuclear Regulatory Commission shall enter into an interagency agreement with respect to those sources or facilities which are under the jurisdiction of the Commission. This agreement shall, to the maximum extent practicable consistent with this Act, minimize duplication of effort and conserve administrative resources in the establishment, implementation, and enforcement of emission limitations, standards of performance, and other requirements and authorities (substantive and procedural) under this Act respecting the emission of such material (or component or derivative thereof) from such sources or facilities."

(b) Section 109 of such Act is amended by adding the following new subsection at the end thereof:

"(c) The Administrator shall, not later than one year after the date of the enactment of the Clean Air Act Amendments of 1977, promulgate a national primary ambient air quality standard for NO<sub>x</sub> concentrations over a period of not more than one hour unless, based on the criteria issued under section 108(c), he finds that there is no significant evidence that such a standard for such period is requisite to protect public health."

(c) Section 108(c) of such Act is amended by adding the following at the end thereof:

"Not later than six months after the date of the enactment of the Clean Air Act Amendments of 1977, the Administrator shall revise and reissue criteria relating to concentrations of NO<sub>x</sub> over a period of not more than one hour. Such criteria shall include a discussion of nitric and nitrous acids, nitrites, nitrates, nitrosamines, and other carcinogenic and potentially carcinogenic derivatives of oxides of nitrogen."

(d) The Administrator of the Environmental Protection Agency shall conduct a study, in conjunction with other appropriate agencies, concerning the effect on the public health and welfare of sulfates, radioactive pollutants, cadmium, arsenic, and polycyclic organic matter which are present or may reasonably be anticipated to occur in the ambient air. Such study shall include a thorough investigation of how sulfates are formed and how to protect public health and welfare from the injurious effects, if any, of sulfates, cadmium, arsenic, and polycyclic organic matter.

(e) Section 302(g) of such Act is amended to read as follows:

"(g) The term 'air pollutant' means any air pollution agent or combination of such agents, including any physical, chemical, biological, radiological (including source material, special nuclear material, and byproduct material) substance or matter which is emitted into or otherwise enters the ambient air."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 101 be considered as read, printed in the Record and open to amendment at any point. This section has to do with unregulated pollutants. The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

**BASIS OF ADMINISTRATIVE STANDARDS**

Sec. 102. (a) (1) Section 108(a) (1) (A) of the Clean Air Act is amended to read as follows:

"(A) emissions of which, in his judgment, cause or contribute to air pollution which may reasonably be anticipated to endanger public health and welfare;"

(2) Section 108(a) (1) of such Act is amended by adding the following at the end thereof: "Such list shall also include air pollutants required to be listed as provided in section 120."

(b) The second sentence of section 111(b) (1) (A) of such Act is amended to read as follows: "He shall include a category of sources in such list if in his judgment it causes, or contributes significantly to, air pollution which may reasonably be anticipated to endanger public health or welfare or if it is required to be listed as provided in section 120."

(c) Paragraph (1) of section 112(a) of such Act is amended to read as follows:

"(1) The term 'hazardous air pollutant' means an air pollutant to which no ambient air quality standard is applicable and which in the judgment of the Administrator causes, or contributes to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness."

(d) (1) Section 202(a) of such Act is amended to read as follows:

"(a) (1) Except as otherwise provided in subsection (b), the Administrator shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class

or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare. Such standards shall be applicable to such vehicles and engines for their useful life (as determined under subsection (d)), whether such vehicles and engines are designed as complete systems or incorporate devices to prevent or control such pollution.

"(2) Any regulation prescribed under paragraph (1) of this subsection (and any revision thereof) shall take effect after such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period."

(2) Section 202(e) of such Act is amended by striking out "which cause or contribute to, or are likely to cause or contribute to, air pollution which endangers" and substituting "which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger"

(e) Section 211(c) (1) (A) of such Act is amended to read as follows: "(A) if in the judgment of the Administrator any emission product of such fuel or fuel additive causes, or contributes, to air pollution which may reasonably be anticipated to endanger the public health or welfare, or"

(f) Section 231(a) (2) of such Act is amended to read as follows:

"(2) The Administrator shall, from time to time, issue proposed emission standards applicable to the emission of any air pollutant from any class or classes of aircraft engines which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that this section be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

**ECONOMIC IMPACT STATEMENT**

Sec. 102A. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

**"ECONOMIC IMPACT STATEMENT**

"Sec. 326. (a) This section applies to action of the Administrator in promulgating or revising—

"(1) any new source standard of performance under section 111(b),

"(2) any regulation under section 111(d),

"(3) any regulation under section 122,

"(4) any regulation under subtitle B of title I (relating to stratosphere protection),

"(5) any regulation under subtitle C of title I,

"(6) any regulation establishing emission standards under section 202 and any other regulation promulgated under that section.

"(7) any regulation controlling or prohibiting any fuel or fuel additive under section 211(c), and

"(8) any aircraft emission standard under section 231.

Nothing in this section shall apply to any standard or regulation described in paragraphs (1) through (8) of this subsection unless the notice of proposed rulemaking in connection with such standard or regulation is published in the Federal Register after the date 90 days after the date of enactment of this section. In the case of revisions of

such standards or regulations, this section shall apply only to revisions which the Administrator determines to be substantial revisions.

"(b) Before publication of notice of proposed rulemaking with respect to any standard or regulation to which this section applies, the Administrator shall prepare an economic impact statement respecting such standard or regulation. Such statement shall be included in the docket required under section 307(d)(2) and shall be available to the public as provided in section 307(d)(4). Notice of proposed rulemaking shall include notice of such availability together with an explanation of the extent and manner in which the Administrator has considered the analysis contained in such economic impact statement in proposing the action. The Administrator shall also provide such an explanation in his notice of promulgation of any regulation or standard referred to in subsection (a). Each such explanation shall be part of the statements of basis and purpose required under sections 307(d)(3) and 307(d)(6).

"(c) Subject to subsection (d), the statement required under this section with respect to any standard or regulation shall contain an analysis of:

"(1) the costs of compliance with any such standard or regulation, including extent to which the costs of compliance will vary depending on (A) the effective date of the standard or regulation, and (B) the development of less expensive, more efficient means or methods of compliance with the standard or regulation;

"(2) the potential inflationary or recessionary effects of the standard or regulation;

"(3) the availability of capital to procure the necessary means of compliance with the standard or regulation;

"(4) the direct and indirect effects on employment of the standard or regulation;

"(5) the effects on competition of the standard or regulation, particularly the effects on small business;

"(6) the effects of the standard or regulation on consumer costs, including costs especially affecting economically vulnerable segments of the population;

"(7) the effects of the standard or regulation on energy use or availability;

"(8) the impact of the standard or regulation on the potential for long-term economic growth;

"(9) the impact of the standard or regulation on productivity;

"(10) the impact of the standard or regulation on the Nation's balance of payments;

"(11) the economic impact of postponing the standard or regulation or of not promulgating such standard or regulation;

"(12) alternative methods to such standard or regulation for achieving equal or greater degree of emission reduction (or health or environmental protection) at lesser economic costs;

"(13) comparative expenditures required to achieve incremental levels of reduction of emissions (or enhancement of health or environmental protection); and

"(14) any possible alternatives for minimizing or eliminating part or all of any adverse economic impacts of such standard or regulation.

"(d) The statement required under this section shall be as extensive as practicable, in the judgment of the Administrator taking into account the time and resources available to the Environmental Protection Agency and other duties and authorities which the Administrator is required to carry out under this Act.

"(e) Nothing in this section shall be construed:

"(1) to alter the basis on which a standard or regulation is promulgated under this Act; or

"(2) to preclude the Administrator from

carrying out his responsibility under this Act to protect public health and the environment.

A standard or regulation subject to this section shall be invalid on the basis of a failure to comply with this section only if the Administrator acted arbitrarily and capriciously—

"(A) in failing to prepare and publish an adequate economic impact statement as required by this section, or

"(B) in failing to comply with the procedural requirements of subsection (b)."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 102-A be considered as read, printed in the Record, and open to amendment at any point. This section has to do with the economic impact statement.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

#### DELAYED COMPLIANCE ORDERS

SEC. 103. (a) Title I of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "DELAYED COMPLIANCE ORDERS

"SEC. 121. (a) (1) After notice and public hearing, upon application by the owner or operator of a stationary source or upon the initiative of the State or the Administrator, a delayed compliance order under subsection (b)(1) or (2) or a primary nonferrous smelter order under subsection (b)(3) may be issued—

"(A) by the Administrator, after thirty days' notice to the State, or

"(B) by the State in which such source is located, but—

"(1) in the case of any major stationary source, no such order issued by the State shall take effect until the Administrator determines that such order has been issued in accordance with the requirements of this Act, and

"(2) in the case of any source other than a major stationary source, such order issued by the State shall cease to be effective upon a determination by the Administrator that it was not issued in accordance with the requirements of this Act.

The notice required to be issued under this section shall include the content of the proposed order and proposed specific findings of the reason or reasons for the issuance of the order. Any order issued under this section shall include final specific findings of such reasons. Not later than ninety days after submission by the State to the Administrator of notice of the issuance of an order under this section, the Administrator shall determine whether or not such order has been issued by the State in accordance with the requirements of this Act.

"(2) (A) An order issued under subsection (b)(3) to a primary nonferrous smelter shall be referred to as a 'primary nonferrous smelter order'. No primary nonferrous smelter may receive both a delayed compliance order under subsection (b)(1) and a primary nonferrous smelter order under subsection (b)(3).

"(B) No primary nonferrous smelter order may be issued by the Administrator without the written consent of the State in which such smelter is located.

"(C) Before any hearing conducted under this section, in the case of an application made by the owner or operator of a primary nonferrous smelter, the applicant shall furnish the Administrator (or the State as the case may be) with a statement of the grounds on which such application is based

(including all supporting documents and information). The statement of the grounds for the proposed order shall be provided by the Administrator or the State in any case in which such State or Administrator is acting on its own initiative. Such statement (including such documents and information) shall be made available to the public for a thirty-day period before such hearing and shall be considered as part of such hearing. No primary nonferrous smelter order may be granted unless the applicant establishes that he meets the conditions required for the issuance of such order (or the Administrator or State establishes the meeting of such conditions when acting on their own initiative).

"(D) Any decision with respect to the issuance of a primary nonferrous smelter order shall be accompanied by a concise statement of the findings and of the basis of such findings.

"(E) Not later than ninety days after submission by any State to the Administrator of notice of its issuance of a primary nonferrous smelter order under subsection (b)(3) of this section to a primary nonferrous smelter within such State, the Administrator shall determine whether or not such order has been issued by the State in accordance with the requirements of this section.

"(b) A delayed compliance order under paragraph (1) or (2) or a primary nonferrous smelter order under paragraph (3) may be issued to an existing stationary source if—

"(1) such source is unable to comply with such requirement by the time required in the applicable implementation plan; or

"(2) (A) the source will expeditiously use new means of emission limitation determined by the Administrator to be adequately demonstrated (within the meaning of section 111(a)(1)),

"(B) such new means of emission limitation is not likely to be used by such source unless an order is granted under this section,

"(C) such new means of emission limitation is determined by the Administrator to have a substantial likelihood of—

"(i) achieving greater continuous emission reduction than the means of emission limitation which, but for such order, would be required; or

"(ii) achieving an equivalent continuous reduction at lower cost in terms of energy, economic, or non-air quality environmental impact; and

"(D) compliance by the source with the requirement of the applicable implementation plan would be impracticable prior to, or during, the installation of such new means because—

"(1) it would require excessive capital expenditures,

"(2) operating costs would be excessive, or

"(3) scarce energy resources would be unnecessarily wasted; or

"(3) (A) such source is a primary nonferrous smelter in existence on the date of the enactment of this section;

"(B) the requirement of the applicable implementation plan with respect to which the order is issued is an emission limitation or standard for sulfur oxides which is necessary and intended to be itself sufficient to enable attainment and maintenance of national primary and secondary ambient air quality standards for sulfur oxides; and

"(C) such smelter is unable to comply with such requirement by the applicable date for compliance because no means of emission limitation applicable to such smelter which will enable it to achieve compliance with such requirement has been adequately demonstrated to be reasonably available (as determined by the Administrator, taking into account the cost of compliance, nonair quality health and environmental impact, and energy consideration).

"(c) (1) An order issued to a source under this section shall set forth compliance sched-

ules containing increments of progress which require compliance with the requirement postponed as expeditiously as practicable. In any case where the Administrator has determined that no means of emission limitation has been adequately demonstrated for a class of sources to permit compliance with such requirement and in the case of a primary nonferrous smelter order, the increments of progress shall be limited to requiring compliance with subsection (d) and to procuring, installing, and operating the necessary means of emission limitation as expeditiously as practicable after the Administrator determines such means have been adequately demonstrated (or adequately demonstrated to be reasonably available within the meaning of subsection (b) (3) (C) in the case of a primary nonferrous smelter order).

"(2) (A) Except in the case of a primary nonferrous smelter order, the aggregate of all orders issued to a source under this section shall not result in the postponement of such requirement beyond the date five years from the date on which, but for this section and but for any order issued under section 113 before enactment of this section compliance would have been required.

"(B) Not in excess of two primary nonferrous smelter orders may be issued under this subsection (b) (3) of this section to any primary nonferrous smelter. The first order issued to a smelter under subsection (b) (3) shall not result in the postponement of the requirement with respect to which such order is issued beyond January 1, 1983. The second such order shall not result in the postponement of such requirement beyond January 1, 1988.

"(d) (1) (A) A source to which a delayed compliance order is issued under subsection (b) (1) or (2) of this section shall use the best practicable system or systems of emission reduction (as determined by the Administrator taking into account the requirement with which the source must ultimately comply) for the period during which such extension is in effect.

"(B) Each primary nonferrous smelter to which an order is issued under subsection (b) (3) shall be required to use such interim measures for the period during which such order is in effect as may be necessary in the judgment of the Administrator to assure attainment and maintenance of the national primary and secondary ambient air quality standards during such period, taking into account the aggregate effect on air quality of such order together with all variances, extensions, waivers, enforcement orders, delayed compliance orders and primary nonferrous smelter orders previously issued under this Act. Such interim measures shall except as provided in subparagraph (C), include continuous emission reduction technology. The Administrator shall condition the use of any such interim measures upon the agreement of the owner or operator of the smelter—

"(1) to comply with such conditions as the Administrator determines are necessary to maximize the reliability and enforceability of such interim measures, as applied to the smelter, in attaining and maintaining the national ambient air quality standards to which the order relates, and

"(2) that any air pollution levels exceeding any national ambient air quality standard to which the order relates occurring within a liability area designated by the Administrator or any violation of a condition under clause (1), shall be treated as a violation of a requirement of the applicable implementation plan by the owner or operator of the smelter.

In issuing a primary nonferrous smelter order under subsection (b) (3), the Administrator shall designate as the smelter's liability area, for the purpose of clause (2), that area within which emissions from the smelter

may, in his judgment, be anticipated to cause, or contribute to, air pollution exceeding any national ambient air quality standard to which the enforcement order relates.

"(C) The requirement of subparagraph (B) for the use of continuous emission reduction technology may be waived with respect to a particular smelter by the State or the Administrator, after notice and a hearing on the record, and upon a showing by the owner or operator of the smelter that such requirement would be so costly as to necessitate permanent or prolonged temporary cessation of operations of the smelter. Upon application for such waiver, the Administrator shall be notified and shall, within ninety days, hold a hearing on the record in accordance with section 554 of title 5 of the United States Code. At such hearings the Administrator shall require the smelter involved to present information relating to any alleged cessation of operations and the detailed reasons or justifications therefor. On the basis of such hearing the Administrator shall make findings of fact as to the effect of such requirement and on the alleged cessation of operations and shall make such recommendations as he deems appropriate. Such report, findings, and recommendations shall be available to the public, and shall be taken into account by the State or the Administrator in making the decision whether or not to grant such waiver.

"(D) In order to obtain information for purposes of a waiver under subparagraph (C), the Administrator may, on his own motion, conduct an investigation and use the authority under section 319.

"(E) In the case of any smelter which on the date of enactment of this section uses continuous emission reduction technology and supplemental controls and which receives a primary nonferrous smelter order under this section, no additional continuous emission reduction technology shall be required as a condition of such order unless the Administrator determines that such additional continuous emission reduction technology is adequately demonstrated to be reasonably available.

"(2) The owner or operator of—

"(A) a primary nonferrous smelter to which a primary nonferrous smelter order is issued under this section, shall, and

"(B) a major stationary source to which an order is issued under subsection (b) (1) on a finding that no means of emission limitation has been adequately demonstrated shall, as a condition of an exemption under section 122(a) (2) (B) (ii),

commit such resources as the Administrator determines to be reasonable for the owner or operator of that source to undertake, or assist in the conduct of research, development, demonstration, and implementation of the necessary means of emission limitation unless the Administrator determines that such commitment will not expedite or improve such research and development.

"(3) A major stationary source to which an order is issued under subsection (b) (1) on a finding of inability to comply due to shortages of clean fuels or continuous emission reduction technology shall, as a condition of an exemption under section 122(a) (2) (B) (ii), make such advance financial commitments as the Administrator determines to be reasonable for the owner or operator of that source to assure timely availability to that source of the necessary means of emission limitation.

"(4) A source to which an order is issued under this section shall comply with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include—

"(A) a requirement that the source to which the order applies comply with such re-

porting requirements and conduct such monitoring as the Administrator determines may be necessary,

"(B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and

"(C) a requirement applicable to any source to which an order is issued under subsection (b) (1) that the source comply with the requirements of the applicable implementation plan during any such period insofar as such source is able to do so (as determined by the Administrator).

"(5) A source to which an order is issued under subsection (b) (2) (relating to new means of emission limitation) shall comply with the requirement of subparagraph (A) of such subsection (b) (2) (relating to the expeditious use of new means of emission limitation).

"(6) Any order under paragraph (1) or (3) of subsection (b) shall be terminated if the Administrator determines on the record, after notice and hearing, that the conditions upon which the order was based no longer exist. If the owner or operator of the source to which the order is issued demonstrates that prompt termination of such order would result in undue hardship, the termination shall become effective at the earliest practicable date on which such undue hardship would not result, but in no event later than the date required under subsection (c).

"(e) If the Administrator determines that a source to which an order is issued under this section is in violation of any requirement of subsection (c) or (d), he shall—

"(1) enforce such requirement under section 113,

"(2) (after notice and opportunity for public hearing) revoke such order and enforce compliance with the requirement with respect to which such order was granted,

"(3) give notice of noncompliance and commence action under section 122, or

"(4) take any appropriate combination of such actions.

"(f) Except for an order issued under this section, a suspension under section 110(f), an exemption under section 118 (relating to Federal facilities), a compliance date extension under section 119, a plan promulgation under section 110(c), or a plan revision under section 110(a) (3) or section 127(c), no order, suspension, plan revision, or other action modifying any requirement of an applicable implementation plan may be taken with respect to any stationary source by the State or by the Administrator."

(b) Section 113(b) (4) of such Act is amended by inserting "or 121 (c) or (d)" after "114".

(c) (1) Section 110(a) (3) of such Act is amended by adding the following new subparagraph at the end thereof:

"(C) Neither the State, in the case of a plan (or portion thereof) approved under this subsection, nor the Administrator, in the case of a plan (or portion thereof) promulgated under subsection (c), shall be required to revise an applicable implementation plan because one or more exemptions under section 118 (relating to Federal facilities), orders under section 121 (relating to stationary source requirements of applicable implementation plans), suspensions under section 110(f) (relating to temporary energy or economic authority), extensions under section 123 (relating to transportation control measures), or variances under section 124 (relating to indirect sources) have been granted, if such plan would have met the requirements of this section if no such exemptions, orders, extensions, or variances had been granted."

(2) Section 110(a) (2) (H) (ii) of such Act is amended by inserting "except as provided in paragraph (3) (C)," before "whenever".

(3) Section 110(d) of such Act is amended by striking out "implements" and all that follows down through the period at the end thereof and inserting in lieu thereof "implements the requirements of this section."

(4) Section 110(c)(1)(A) of such Act is amended to read as follows:

"(A) the State fails to submit an implementation plan which meets the requirements of this section."

(d) Section 307(a)(1) of such Act is amended by striking out "110(f)" and inserting in lieu thereof "121".

(5) (A) Section 110(a)(2) of such Act is amended by adding the following new subparagraph at the end thereof:

"(L) it contains emission limitations applicable to any primary nonferrous smelters in such State."

(B) Each applicable implementation plan (within the meaning of section 110(d) of the Clean Air Act) shall comply with the amendment made by this paragraph by not later than one year after the date of the enactment of this Act.

(e) (1) (A) Section 113(a)(3) of such Act is amended by adding the following at the end thereof: "No order issued under this subsection shall have the effect of permitting any delay or violation of any requirement of this Act (including any requirement of an applicable implementation plan)."

(B) The third sentence of section 113(a)(4) of such Act is amended by striking out the first comma and all that follows down to the period at the end thereof.

(2) The amendments made by paragraph (1) shall not apply to any order issued prior to the date of enactment of this Act and shall take effect on the date of enactment of this Act with respect to orders issued on or after such date of enactment.

(f) Section 302 of such Act is amended by inserting the following new subsections at the end thereof:

"(1) The term 'primary standard attainment date' means the date specified in the applicable implementation plan for the attainment of a national primary ambient air quality standard for any air pollutant.

"(m) The term 'delayed compliance order' means an order issued by the State or by the Administrator to an existing stationary source postponing the date required under an applicable implementation plan for compliance by such source with any requirements of such plan.

"(n) The term 'means of emission limitation' means a system of continuous emission reduction (including the use of specific technology or fuels with specified pollution characteristics).

"(o) (1) Except as provided in paragraph (2), the term 'major stationary source' means any stationary facility or source of air pollutants which directly emits, or has the design capacity to emit, one hundred tons per year or more of any air pollutant for which a national ambient air quality standard is promulgated under this Act (including any major emitting facility or source of fugitive emissions of any such pollutant, as determined by rule by the Administrator).

"(2) For the purposes of subtitle C and section 111, the term 'major stationary source' shall not include new or modified source or facility which is a nonprofit health or educational institution which has been exempted from treatment as a major stationary source for such purposes by the State in which it is located."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 103 be considered as read, printed in the RECORD, and open to amendment at any point. This section has to do with delayed compliance orders.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENT OFFERED BY MR. MADIGAN

Mr. MADIGAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MADIGAN: Page 254, line 14, strike out "determined" and all that follows down through line 16 and insert in lieu thereof the following: "which the Administrator determines is likely to be adequately demonstrated (within the meaning of section 111(a)(1)) upon expiration of the order."

Mr. MADIGAN. Mr. Chairman, it does not make sense that sources which are willing to test new innovative technology should only be able to utilize technology which is adequately demonstrated. Indeed, the summary of this section which was prepared by the committee staff on page 2 says,

This section also includes the authority for States and the Administrator to extend deadlines for sources which are willing to test new innovative technology which has not yet been adequately demonstrated.

But the language of this bill, perhaps erroneously, does not carry out this intent.

Therefore, I propose to allow this delayed compliance order to be granted if the innovative technology is likely to be adequately demonstrated upon expiration of the order.

As you can see on pages 254 and 255 whether or not such new means has been adequately demonstrated would still be discretionary and would be conditioned on the following:

First, the source will expeditiously use such new means;

Second, that such new means of emission limitation is not likely to be used by such source unless an order is granted;

Third, that such new means is determined by the EPA to have a substantial likelihood of either greater continuous emission reduction or equivalent reduction at lower societal cost; and

Fourth, that compliance with the applicable plans would be impractical due to excessive capital, operating and energy costs.

Therefore, this amendment would allow greater variety of promising new means of emission limitations to be utilized by sources.

Incidentally, the report language respecting innovative technology is incorrect. The word "significantly" is used in the 1976 bill but not in the 1977 bill we are now considering. Yet the report language at page 43 of the 1976 report and at page 61 of the 1977 report are identical. In other words, although the bills are completely different the report language paragraph has been copied verbatim without reflecting the change in the language of the bill.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Florida.

Mr. ROGERS. I thank the gentleman for yielding.

I might say we have looked at the gentleman's amendment. We think it is reasonable, and we have no objection on this side.

Mr. MADIGAN. I thank the gentleman for his support.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. MADIGAN).

The amendment was agreed to.

The CHAIRMAN. Are there any further amendments to section 103?

AMENDMENT OFFERED BY MR. MILLER OF OHIO

Mr. MILLER of Ohio. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER of Ohio: Page 267, after line 8, insert the following:

#### POWERPLANT VARIANCES

SEC. 1103A. (a) Title I of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "POWERPLANT VARIANCES UNDER STATE PLAN

"SEC. 129. (a) For purposes of this section, the term—

"(1) 'variance' means an order issued by the State or by the Administrator to a powerplant which emits sulfur dioxide postponing the date required under an applicable implementation plan for compliance by such plant with any requirement of such plan respecting the emission of such pollutant; and

"(2) 'powerplant' means a facility used, as determined by the Administrator, primarily for the production of electric power.

"(b) Upon application by the owner or operator of a powerplant which emits sulfur dioxide into the ambient air, and after notice and public hearing on the record, a variance shall be issued to the plant under subsection (c)—

"(1) by the Administrator with the written consent of the Governor of the State in which such plant is located, or

"(2) by the Governor of the State in which such plant is located.

Before any hearing conducted under this section, the applicant shall furnish the Administrator or Governor of the State (as the case may be) with a statement of the grounds on which such application is based (including all supporting documents and information). No such variance may be granted unless the applicant establishes that he meets the conditions required for the issuance of such variance. Any decision with respect to the issuance of such a variance shall be accompanied by a concise statement of the findings based on the hearing conducted under this section.

"(c) A variance with respect to any requirement of an applicable implementation plan respecting the emission of sulfur dioxide shall be issued to a powerplant under this subsection if the unemployment rate in such State, as determined by the Secretary of Labor, is 6.5 per centum or more of the labor force of such State at the time such variance is issued. No variance may be issued under this subsection unless, taking into account the aggregate effect on air quality of such variance together with all extensions, variances, exemptions, and compliance orders previously issued under this Act, the variance shall not permit continued emissions of sulfur dioxide from such plant which may cause, or materially contribute to, an imminent and substantial endangerment to the health of persons.

"(d) A variance issued to a source under this section shall set forth compliance schedules containing increments of progress which require compliance with the requirement postponed as expeditiously as econom-

ically and technologically practicable. No variance issued to a plant under this section shall result in the postponement of such requirement beyond the date five years from the date on which, but for this section and but for any order issued under section 113 before enactment of this section, compliance would have been required. Additional variances for periods of not more than five years may be issued to any such powerplant emitting sulfur dioxide located in a State in which the unemployment rate, at the conclusion of the period of the initial variance, exceeds 4 per centum of the labor force of such State.

"(e) A plant to which a variance is issued under subsections (c) and (d) shall comply with such interim requirements as the Administrator determines to be economically and technologically reasonable and practicable beyond a reasonable doubt. Such interim requirements shall include, but need not be limited to—

"(1) a requirement that the persons receiving the extension comply with such reporting requirements as the Administrator determines may be necessary, and

"(2) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons.

"(f) If the Administrator determines that a plant to which a compliance date extension is issued under this section is in violation of any requirement of subsection (d) or (e) he shall either—

"(1) enforce such requirement under section 113, or

"(2) (after notice and opportunity for public hearing) revoke such variance and enforce compliance with the requirement with respect to which such variance was granted."

(b) Section 113(b)(4) of such Act is amended by inserting "129(d) or (e)," before "114".

(c) Section 307(a)(1) of such Act is amended by inserting "120" after "121".

Page 263, line 12, after "section" insert ", a variance under section 129".

Page 264, line 10, after "section" insert "under section 129 (relating to powerplants) or".

Mr. MILLER of Ohio. Mr. Chairman, I offer what could be properly viewed as a "jobs protection" amendment. It seeks to minimize the potential unemployment dislocations resulting from environmental standards in States with already unacceptably high jobless rates.

Very simply, my amendment provides that when a State's unemployment rate is 6.5 percent or more a 5-year variance may be granted to a powerplant emitting sulfur dioxide.

The amendment applies only to sulfur dioxide standards for electrical power producing facilities. Upon application of a powerplant operator and after a public hearing on the grounds for the application, a variance to a State implementation plan could be granted by the Governor or EPA Administrator for a period of 5 years if the unemployment rate in the State in which the facility is located is 6.5 percent or more.

Granting such a variance could not endanger public health and would require incremental progress at the applicant powerplant toward compliance with the State plan. If at the end of the initial 5-year period, unemployment in the State remains at 6.5 percent or more,

additional variances of not more than 5 years could be granted.

This amendment seeks to broaden the scope of the bill by recognizing that there are other competing national objectives such as employment and energy production which must be balanced against environmental goals.

As sure as I am standing here today, the Appalachian coal basin production, particularly that in the Ohio Valley, will decline dramatically and unemployment will rise unless some flexibility is created in the imposition of sulfur dioxide standards. Last year 200 million tons of the 665 million tons of coal produced in this country did not meet air quality requirements. Most of that production was in northern Appalachia where coal use is now being banned because of its sulfur content.

If this high sulfur coal cannot be burned, it will not be mined. That will cause two things to happen. First, massive unemployment will occur in the eastern coalfields and second, the energy that the Nation so desperately needs will not be produced.

In my home State of Ohio, a new SIP for sulfur dioxide promulgated by the EPA and presently stayed by court order could result in the direct loss of some 15,000 coal mining related jobs and reduce the State's coal production by 75 percent. Ohio is one of the Nation's leading coal producers and has vast reserves that can serve the Nation's energy requirements yet EPA says Ohio must either import low sulfur western coal or install flue gas scrubbers—both unreliable and costly alternatives.

The Ohio experience has serious national implications. Today America must ask itself how much environmental protection is affordable in terms of jobs that are lost, utility rates that climb higher and higher, and energy resources that are left in the ground. Where do we draw the line among all these and other competing and conflicting national interests?

The amendment I offer is an attempt at such a delineation. There is no way we can have our cake and eat it too. The choices are difficult but because they are difficult we should not turn away from our responsibility in making them. To have a growing, productive economy, these tradeoff choices have to be made now.

What my amendment says then is that when unemployment stands at 6.5 percent or more in a State, at least sulfur dioxide standards should not be a contributory cause for more joblessness.

Mr. ROGERS. Mr. Chairman, I rise in strong opposition to this amendment.

Mr. Chairman, I understand the thinking of the gentleman. We have just seen the amendment, but a reading of it causes great concern for a number of reasons. First of all, there is no showing required to be made that any industry that asks to have the SO<sub>2</sub> air pollution standards waived has anything to do with unemployment. There is absolutely no required showing that the variance will aid in alleviating unemployment.

As a matter of fact, in the bill in section 115, in order to help Ohio we put in a waiver that the Governor can institute in an unemployment or energy emergency for 4 months, so that the Ohio situation which occurred during the natural gas shortage last winter could be handled during those difficult days. We thought that should be recognized, but certainly this amendment is not the way to go to do that.

Furthermore, under the Miller amendment, a powerplant could get 5 years continually and another 5 years and never comply. There are many places with 6.5 percent unemployment in this Nation today. We might as well wipe out the Clean Air Act, with no showing that the variance is necessary to solve unemployment. It does not make any logical connection between air pollution, the variance, and unemployment.

Mr. Chairman, I would urge that the amendment be defeated.

Mr. CARTER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise reluctantly in opposition to the amendment proposed by my friend, the gentleman from Ohio.

Mr. Chairman, this amendment would permit the primary and secondary standards which protect the public health and welfare of our country to be exceeded. That has been the basis of my reasoning all through this legislation, that these standards should not be exceeded.

Mr. ROUSSELOT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, as I understand this amendment, it does nothing more than try to accommodate President Carter's general suggestion to the Congress that we make better use of coal, especially with stationary sources producing electricity. So, I wonder if my colleague from Ohio could respond to the charges that have been made by my colleague from Florida?

Mr. MILLER of Ohio. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I yield.

Mr. MILLER of Ohio. I thank the gentleman for yielding. Section 115, as I understand, would allow a 4-month variance. The Governor could give that variance in case of an economic or energy emergency within his State. But 4 months is not the length of time that would be needed. The reason for 5 years in my amendment is this:

A piece of equipment that is used to produce coal, even a small piece of equipment, will cost a couple hundred thousand dollars. The producer would need a long-term contract to finance this equipment and stay in business. That is one purpose of 5 years. I would prefer having it at some shorter time, but that is practically impossible.

The whole thing boils down to the trade-off that we must make. In Ohio we will have around 15,000 miners who will not be working if we must import low sulfur western coal to operate our elec-

trical generating plants. We have one new electrical generating plant in my district, which consumes 35,000 tons of coal a day. We have many other electrical generating plants. It is vitally important that we continue to produce coal in Ohio in order to fuel the electrical generating plants and keep people working.

There are definite health hazards in unemployment. When a person does not have a job, he may not be able to afford proper medical care or he may have to postpone that care. So, there are health hazards in unemployment, and we have to look at that also.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. ROUSSELOT. I will be glad to yield.

Mr. ROGERS. I thank the gentleman for yielding to me. I think, if one does not look at the other provisions of the bill, one might share the concern expressed by the gentleman from Ohio. When we look at the bill, we find that sources are eligible for variances. Also, if there is a conversion to coal, the bill will permit sources up to 9 years to meet emission limits. The bill permits an extension of 10 years for sources to attain the standards in nonattainment areas. These provisions are new.

We have taken into consideration that we know we have got to move to coal. This is what this bill is designed to do, to help us live with the requirements of energy. We realize that must be done. We must try to obtain more coal and provide some flexibility in meeting emission limits.

So these concerns of the gentleman really have been answered in the overall bill. Additionally, the bill grants the Governor the authority to grant a temporary emergency suspension. I think we have taken care of all of the gentleman's concerns. His amendment is so broad and sweeping that it would simply do away with the Clean Air Act.

Mr. Chairman, I would urge the rejection of the amendment.

Mr. ROUSSELOT. Mr. Chairman, would the gentleman from Ohio care to respond?

Mr. MILLER of Ohio. If the gentleman will yield, I would be glad to respond.

The intent is not to do away with the Clean Air Act. The intent is to keep people working. A trade-off is very necessary. I would hope by the end of the first 5 years of a variance we would have the technology to effectively and efficiently remove sulfur from coal so that we could continue to use coal without the sulfur dioxide problem.

Mr. ROUSSELOT. It is my understanding that in the gentleman's amendment he says: "No such variance may be granted unless the applicant"—which in this case may be in the gentleman's State—"establishes that he meets the conditions required for the issuance of such variance."

So the Governor would be required to make a judgment on the issue of whether this does great damage to the environment, would he not?

Mr. MILLER of Ohio. After a hearing is held, yes.

Mr. ROUSSELOT. So I think the environment is adequately protected.

Mr. WAXMAN. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman and members of the committee, this amendment has a laudable purpose, one would think, of trying to handle the problem of unemployment. But there is no showing at all required, by the terms of that amendment, that there be any increase in employment if this special variance is granted. There is no showing that there will be an increase in employment. There is no showing that it is going to have a better effect on public health. As a matter of fact, there is no correlation at all between this new variance that is going to be created and the purposes of the Act, which is to protect the public health.

The gentleman from Ohio talked about the fact that people need money so that they can pay doctor bills and other expenses. That is an incredible kind of argument to make. We are going to allow the pollutants to continue to be spewed forth into the air, so that people are going to be sick and, therefore, we are going to argue that they are going to be employed so that they can pay the doctor bills. I think we have to look at the artificial choice that this amendment would have us think is before us. It would have us choose between jobs on the one hand and protecting the environment and public health on the other. I do not think that this is the choice. This amendment does not even make it clear that we are making a choice. It only says if there is a factor of unemployment, therefore then we are going to allow the public health to be endangered. It does not even provide that there would be an increase of employment in exchange for health impairment.

Mr. Chairman, I would be pleased to yield to the gentleman if he can answer the criticism which I have of his amendment, which I think is a very important criticism.

Mr. MILLER of Ohio. Mr. Chairman, we are not talking about people being ill from the sulfur emissions of coal. If people are unemployed, their children may be sick yet they cannot go to the doctor because they cannot afford the treatment. There are health benefits in the bill, as well as health benefits in the amendment. It means that if people are working, they will be able to go to the doctor and to pay the doctor bill. If they are unemployed, they also will have psychological problems.

Mr. WAXMAN. Mr. Chairman, if I may reclaim my time, there is no showing, aside from the fact that there is unemployment, there is no showing, as I understand the amendment, that there will be an increase in employment. And when we talk about sulfur dioxide we are talking about a very serious public health danger being emitted into the air which our people, employed and unemployed, are going to suffer from.

Mr. MILLER of Ohio. If the gentleman will yield further, there very definitely is a problem. EPA has issued regulations for the State of Ohio. And if they do go into effect, if they stay in effect, there will be about 15,000 miners who will be out of work.

Right away this is a fact. So we do know that the amendment will alleviate the unemployment problem.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I just want to say that the committee does have an amendment that goes to this question of unemployment as a whole, and that the amendment has the support of the United Mine Workers. So I think we can address that problem later.

There is no reason for adopting something that would just wipe out the Clean Air Act. So I hope that the gentleman from Ohio (Mr. MILLER) will withdraw his amendment, and if he does not, it should be voted down.

Mr. WAXMAN. Mr. Chairman, I appreciate the comments of the gentleman from Florida (Mr. ROGERS).

I think, as the chairman of the subcommittee has said, the provisions of this amendment are far too sweeping and far too broad, and it attempts to equate apples and oranges without a clear showing that there is any relationship between the two.

I believe we ought to keep the protections for public health in the bill by making these stationary-source polluters do something, that is, use the technology now available to them so they can start eliminating the dangers of pollutants to the people in these areas. They will do that if they are required to do it, and we ought to require them to do it. If we have an unemployment problem, we have other ways of dealing with it without jeopardizing the health of the American people.

The CHAIRMAN. The time of the gentleman from California (Mr. WAXMAN) has expired.

(On request of Mr. ROUSSELOT and by unanimous consent, Mr. WAXMAN was allowed to proceed for 2 additional minutes.)

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, let me read from page 3 of the amendment offered by the gentleman from Ohio (Mr. MILLER). It says as follows:

... No variance may be issued under this subsection unless, taken into account the aggregate effect on air quality of such variance together with all extensions, variances, exemptions, and compliance orders previously issued under this Act, the variance shall not permit continued emissions of sulfur dioxide from such plant which may cause, or materially contribute to, an imminent and substantial endangerment to the health of persons.

So, Mr. Chairman, I think that that language does respond to the issue that

the gentleman from California has brought to the attention of the Members.

Mr. WAXMAN. Mr. Chairman, if I may reclaim my time, I think the gentleman from California (Mr. ROUSSELOT) is mistaken, and I want to point out how he is mistaken in reading that language.

It still allows them, under that amendment, to exceed the primary standards, which are the standards set up to protect the public health. To find an imminent hazard we would have to have people dropping dead on the streets.

Mr. ROUSSELOT. Or becoming substantially sick.

Mr. WAXMAN. Mr. Chairman, what we are concerned about with a lot of pollutants is this: There is not an imminent causal relationship, so we are not going to find actual dead bodies resulting from ill health; rather, because of this, there is going to be a period of time during which we find there are detrimental effects. We have primary health standards established to protect the public health. There is an imminent and substantial requirement that immediate action be taken. But, this is different from the primary standard to protect the public health. I want the primary health standard left in the law to protect the people in these areas.

Mr. ROUSSELOT. How is that made different by the language of Mr. MILLER?

Mr. WAXMAN. That language provides only for imminent and substantial circumstances.

Mr. ROUSSELOT. Does that not answer the gentleman's concern? If there is a plant that is needed for the production of electricity, it is utilizing coal, and the Governor of that State decides that the public health needs to be protected, there is provision there that will allow the public health to be protected and yet the energy facility can be users.

Mr. WAXMAN. Mr. Chairman, if I may reclaim my time, there is no showing that anything is going to result in that regard, but there may be a clear situation where they are going to violate the standard that is considered safe for the public health. If we are going to allow them to violate that standard for the protection of the public health for 5 years, then that might be extended for another 5 years, and we would do away with the protections that are afforded by this section.

Mr. MADIGAN. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, in the State of Kentucky we have both low- and high-sulfur coal, and we do not fear that this legislation will cause unemployment. Actually the best available technology must be used on low-sulfur coal as well as on high-sulfur coal, and it will be used according to this legislation.

So I think actually the good gentleman from Ohio (Mr. MILLER) should not

let his heart be troubled, because we need that coal from Ohio and it is going to be mined, and those miners are not going to be put out of work.

We need all the coal that we can get, and importation of western coal into that area would not help one whit because scrubbers would be required for it, according to this present legislation. As I see it, there would be no unemployment as a result of this legislation in the western part of my State, where they mine high-sulfur coal, or in the part of the State of Ohio which the gentleman represents.

Therefore, as I said—and I admire the distinguished gentleman from Ohio (Mr. MILLER) greatly; he is a tremendous man—I think that he is incorrect in his assessment of this situation. I do not believe unemployment will occur.

Therefore, Mr. Chairman, I oppose the amendment of the gentleman from Ohio (Mr. MILLER).

I thank the distinguished gentleman for yielding.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. MILLER).

The question was taken; and the Chairman announced that the yeas appeared to have it.

Mr. MILLER of Ohio. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

So the amendment was rejected.

The CHAIRMAN. Are there further amendments to section 103?

There being none, the Clerk will read section 104.

The Clerk read as follows:

#### ASSESSMENT OF CIVIL PENALTIES

SEC. 104. (a) So much of section 113(b) of the Clean Air Act as precedes paragraph (1) thereof is amended to read as follows: "(b) The Administrator may commence a civil action for a permanent or temporary injunction, to assess and recover a civil penalty of not more than \$25,000 per day of violation, or both, whenever any person—"

(b) Section 113(b) of such Act is amended by striking out the penultimate sentence thereof and substituting: "Any action under this subsection may be brought in the district court of the United States for the district in which the violation occurred or in which the defendant has his principal place of business, and such court shall have jurisdiction to restrain such violation, to require compliance, to assess such civil penalty and to collect any noncompliance penalty (and nonpayment penalty) owed under section 122. In determining the amount of any civil penalty to be assessed under this subsection, the court shall take into consideration (in addition to other factors) the size of the business, the economic impact of the penalty on the business, and the seriousness of the violation."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 104 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 104?

There being none, the Clerk will read section 105.

The Clerk read as follows:

#### NONCOMPLIANCE PENALTY

SEC. 105. (a) Title I of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "NONCOMPLIANCE PENALTY"

"Sec. 122. (a) (1) (A) Not later than one year after the date of enactment of this section, and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations requiring the assessment and collection of a noncompliance penalty against persons referred to in paragraph (2) (A).

"(B) (1) Each State may develop and submit to the Administrator a plan for carrying out this section in such State. If the Administrator finds that the State plan meets the requirements of this section, he may delegate to such State any authority he has to carry out this section.

"(2) (i) Notwithstanding a delegation to a State under clause (1), the Administrator may carry out this section in such State under the circumstances described in subsection (b) (2) (B).

"(2) (A) Except as provided in subparagraphs (B) or (C) of this paragraph, the State or the Administrator shall assess and collect a noncompliance penalty against every person who owns or operates—

"(1) a major stationary source (other than a primary nonferrous smelter which has received a primary nonferrous smelter order under section 121(b)(3)) which is not in compliance with any emission limitation, emission standard or compliance schedule under any applicable implementation plan, or

"(2) a stationary source which is not in compliance with an emission limitation, emission standard, or standard of performance established under sections 111 or 112 of this Act, or

"(3) any source referred to in clause (1) or (2) (for which an extension, order, or suspension referred to in subparagraph (B) is in effect), or a primary nonferrous smelter which has received a primary nonferrous smelter order under section 121(b)(3), which is not in compliance with any interim emission control requirement or schedule of compliance under such extension, order, or suspension.

For purposes of subsection (d)(2)(A), in the case of a penalty assessed with respect to a source referred to in clause (3) of this subparagraph, the costs referred to in such subsection (d)(2)(A) shall be the costs of compliance with the interim emission control requirement or schedule of compliance referred to in such clause.

"(B) Notwithstanding the requirements of subparagraph (A) (1) and (2), the owner or operator of any source shall be exempted from the duty to pay a noncompliance penalty under such requirements with respect to that source if, in accordance with the procedures in subsection (b)(5), the owner or operator demonstrates that the failure of such source to comply with any such requirement is due solely to—

"(1) a conversion by such source from the burning of petroleum products or natural gas, or both, as the permanent primary energy source to the burning of coal pursuant to a compliance date extension under section 119;

"(2) in the case of a coal-burning source granted an extension under the second sentence of section 119(c)(1), a prohibition from using petroleum products or natural gas or both, by reason of an order under section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974;

"(iii) the use of innovative technology sanctioned by a delayed compliance order under section 121;

"(iv) an inability to comply with any such requirement, for which inability the source has received a delayed compliance order under section 121(b)(1) and which results from reasons entirely beyond the control of the owner or operator of such source or of any entity controlling, controlled by, or under common control with the owner or operator of such source; or

"(v) the conditions by reason of which a temporary emergency suspension is authorized under section 110(f).

An exemption under this subparagraph shall cease to be effective if the source fails to comply with the interim emission control requirements or schedules of compliance (including increments of progress) under any such extension, order, or suspension.

"(C) The Administrator may, after notice and opportunity for public hearing, exempt any source from the requirements of this section with respect to a particular instance of noncompliance if he finds that such instance of noncompliance is de minimis in nature and in duration.

"(b) Regulations under subsection (a) shall—

"(1) permit the assessment and collection of such penalty by the State if the State has a delegation of authority in effect under subsection (a)(1)(B)(i);

"(2) provide for the assessment and collection of such penalty by the Administrator, if—

"(A) the State does not have a delegation of authority in effect under subsection (e), or

"(B) the State has such a delegation in effect but fails with respect to any particular person or source to assess or collect the penalty in accordance with the requirements of this section;

"(3) require the States, or in the event the States fail to do so, the Administrator, to give a brief but reasonably specific notice of noncompliance under this section to each person referred to in subsection (a)(2)(A) with respect to each source owned or operated by such person which is not in compliance as provided in such subsection, not later than two years after the date of enactment of this section or thirty days after the discovery of such noncompliance, whichever is later;

"(4) require each person to whom notice is given under paragraph (3) to—

"(A) calculate the amount of the penalty owed (determined in accordance with subsection (d)(2) in the schedule of payments (determined in accordance with subsection (d)(3) for each such source and, within forty-five days after the issuance of such notice or after the denial of a petition under subparagraph (B), to submit that calculation and proposed schedule, together with the information necessary for an independent verification thereof, to the State and to the Administrator, or

"(B) submit a petition, within forty-five days after the issuance of such notice, challenging such notice of noncompliance or alleging entitlement to an exemption under subsection (a)(2)(B) with respect to a particular source;

"(5) require the Administrator to provide a hearing on the record (within the meaning of subchapter II of chapter 5 of title 5, United States Code) and to make a decision on such petition (including findings of fact and conclusions of law) not later than ninety days after the receipt of any petition under paragraph (4)(B), unless the State agrees to provide a hearing which is substantially similar to such a hearing on the record and to make a decision on such petition (including such findings and conclusions) within such ninety-day period;

"(6)(A) authorize the Administrator on his own initiative to review the decision of the State under paragraph (5) and disprove it if it is not in accordance with the requirements of this section, and (B) require the Administrator to do so not later than sixty days after receipt of a petition under this subparagraph, notice, and public hearing and a showing by such petitioner that the State decision under paragraph (5) is not in accordance with the requirements of this section;

"(7) require payment, in accordance with subsection (d), of the penalty by each person to whom notice of noncompliance is given under paragraph (3) with respect to each noncomplying source for which such notice is given unless there has been a final determination granting a petition under paragraph (4)(B) with respect to such source;

"(8) authorize the State or the Administrator to adjust (and from time to time to readjust) the amount of the penalty assessment calculated or the payment schedule proposed by such owner or operator under paragraph (6), if the Administrator finds after notice of an opportunity for a hearing on the record that the penalty or schedule does not meet the requirements of this section; and

"(9) require a final adjustment of the penalty within 180 days after such source comes into compliance in accordance with subsection (d)(4).

"(c) If the owner or operator of any stationary source to whom a notice is issued under subsection (b)(3)—

"(1) does not submit a timely petition under subsection (b)(4)(B), or

"(2) submits a petition under subsection (b)(4)(B) which is denied, and

fails to submit a calculation of the penalty assessment, a schedule for payment, and the information necessary for independent verification thereof, the State (or the Administrator, as the case may be) may enter into a contract with any person who has no financial interest in the owner or operator of the source (or in any person controlling, controlled by or under common control with such source) to assist in determining the amount of the penalty assessment or payment schedule with respect to such source. The cost of carrying out such contract may be added to the penalty to be assessed against the owner or operator of such source.

"(d)(1) All penalties assessed by the Administrator under this section shall be paid to the United States Treasury. All penalties assessed by the State under this section shall be paid to such State.

"(2) The amount of the penalty which shall be assessed and collected with respect to any source under this section shall be equal to—

"(A) the amount determined by prorating on a quarterly basis (over the entire period for which such penalty is assessed) the costs which would be necessary for the source to attain and maintain compliance with the requirement with respect to which such penalty is assessed (taking into account planning costs; design costs; supply costs; equipment purchase, construction and installation costs; start-up, operating and maintenance costs; costs of capital; and other relevant costs), minus

"(B) the amount of any expenditure made by the owner or operator of that source during any such quarter for the purpose of bringing that source into, and maintaining compliance with, such requirement.

To the extent that any expenditure under subparagraph (B) made during any quarter is not subtracted for such quarter from the costs under subparagraph (A), such expenditure may be subtracted for any subsequent quarter from such costs. Notwithstanding the preceding provisions of this paragraph, regu-

lations under subsection (a) shall not require a noncompliance penalty for any such source (as determined under this paragraph, including any subtraction under subparagraph (B)) to exceed \$5,000 per day for each day during which the penalty is assessed with respect to that source.

"(3)(A) The assessed penalty required under this section shall be paid in quarterly installments for the period of covered noncompliance. All quarterly payments (determined without regard to any adjustment or any subtraction under paragraph (2)(B)) after the first payment shall be equal.

"(B) The first payment shall be due six months after the date of issuance of the notice of noncompliance under subsection (b)(3) with respect to any source or two years after the date of enactment of this section, whichever is later. Such first payment shall be in the amount of the quarterly installment for the upcoming quarter, plus the amount owed for any preceding period within the period of covered noncompliance for such source.

"(C) For the purpose of this section, the term 'period of covered noncompliance' means the period which begins—

"(i) two years after the date of enactment of this section, in the case of a source for which notice of noncompliance under subsection (b)(3) is issued on or before the date two years after such date of enactment, or

"(ii) on the date of issuance of the notice of noncompliance under subsection (b)(3), in the case of a source for which such notice is issued more than two years after the date of enactment of this section,

and ending on the date on which such source comes into (or for the purpose of establishing the schedule of payments, is estimated to come into) compliance with such requirement.

"(4) Upon making a determination that a source with respect to which a penalty has been paid under this section is in compliance and is maintaining compliance with the applicable requirement, the State (or the Administrator as the case may be) shall review the actual expenditures made by the owner or operator of such source for the purpose of attaining and maintaining compliance, and shall within 180 days after such source comes into compliance—

"(A) provide reimbursement with interest (to be paid by the State or Secretary of Treasury, as the case may be) at appropriate prevailing rates (as determined by the Secretary of the Treasury) for any overpayment by such person, or

"(B) assess and collect an additional payment with interest at appropriate prevailing rates (as determined by the Secretary of the Treasury) for any underpayment by such person.

"(5) Any person who fails to pay the amount of any penalty with respect to any source under this section on a timely basis shall be required to pay in addition a quarterly nonpayment penalty for each quarter during which such failure to pay persists. Such nonpayment penalty shall be in an amount equal to 20 percent of the aggregate amount of such person's penalties and nonpayment penalties with respect to such source which are unpaid as of the beginning of such quarter."

(b) Section 113(b) of such Act is amended by inserting the following after the first sentence thereof: "The Administrator may commence a civil action for recovery of any noncompliance penalty under section 122 or for recovery of any nonpayment penalty for which any person is liable under section 122(d)(5), or for both."

(c) Section 307 of such Act is amended by adding the following new subsection at the end thereof:

"(f) In any action respecting the promulgation of regulations under section 122 or the administration or enforcement of section 122, no court shall grant any stay, injunctive or similar relief before final judgment by such court in such action."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 105 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 105?

AMENDMENT OFFERED BY Mr. CARTER

Mr. CARTER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CARTER: Page 271, line 2, strike out "121(b) (1) and which" and insert in lieu thereof "121(b) (1) or an order under section 113 issued before the date of enactment of this section which has the effect of permitting a delay or violation of any requirement of this Act (including a requirement of an applicable implementation plan) which inability".

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, we have discussed this amendment. We have no objection to the amendment on this side of the aisle.

Mr. CARTER. Mr. Chairman, I thank the distinguished gentleman.

Mr. WAXMAN. Mr. Chairman, I move to strike the last word.

Mr. Chairman, if I might address an observation to the gentleman from Kentucky (Mr. CARTER), I did not have the opportunity to see his amendment. When I asked for copies, I was informed that none were available.

Mr. CARTER. Mr. Chairman, if the gentleman will yield, I have a few copies at the desk.

Mr. WAXMAN. I feel rather insecure in voting on an amendment that I am not informed about.

Mr. Chairman, may I ask the gentleman from Kentucky (Mr. CARTER) for an explanation of what the amendment would do.

Mr. CARTER. Mr. Chairman, if the gentleman will yield, this amendment would do nothing more than place sources which receive section 113 enforcement orders under the existing act prior to enactment of this bill on precisely the same footing as those sources which receive a delayed compliance order as provided in section 103 of this bill. That is, if such sources could show that the inability to comply resulted from reasons entirely beyond the control of the owner or operator, then a noncompliance penalty would not have to be paid. This is an equitable amendment.

Mr. WAXMAN. As I understand, this amendment applies the same section 113 provisions that would otherwise be under the bill under other similar circumstances; is that correct?

Mr. CARTER. Yes, it would treat sources with 113 orders the same as other sources.

Although it is not in my district, in Louisville, Ky., we actually had the first group of plants under the Louisville Gas and Electric Co. which went to the scrubber technique, and they have that process in operation at the present time. This provision applies to them. They have been trying valiantly to control their emissions and meet with the requirements of the Clean Air Act.

Mr. WAXMAN. Mr. Chairman, I thank the gentleman for his explanation.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kentucky (Mr. CARTER).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments to section 105? If not, the Clerk will read.

The Clerk read as follows:

#### COMPLIANCE DATE EXTENSIONS FOR COAL CONVERSION

SEC. 106. (a) (1) Section 119(c) (1) of the Clean Air Act is amended by striking out "1979" and inserting in lieu thereof "1981".

(2) The second sentence of section 119(c) (2) (C) of such Act is amended by striking out "1978" and inserting in lieu thereof "1980" and by striking out "1979" and inserting in lieu thereof "1981".

(b) The first sentence of section 119(c) (2) (C) of such Act is amended to read as follows: "Regulations under subparagraph (B) shall require that the source achieve the degree of emission reduction required under the applicable implementation plan for the date on which the compliance date extension expires."

(c) (1) Section 119(c) (1) of such Act is amended by inserting after such first sentence thereof the following: "Except as provided in paragraph (2) of this subsection, the Administrator shall also issue a compliance date extension to any coal-burning stationary source which is prohibited from using petroleum products or natural gas, or both, by reason of an order which is in effect under section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 and with respect to which a variance or compliance schedule had been obtained under the applicable implementation plan prior to issuance of such order in order to permit compliance with the applicable implementation plan by means of conversion to the use of petroleum products or natural gas as its primary energy source. Notwithstanding the preceding provisions of this subsection, the Administrator may refuse to grant a compliance date extension under this subsection in any case in which he finds that such extension may result in a significant endangerment to the public welfare. In making a finding under the preceding sentence the Administrator shall specify the basis of such finding."

(2) Subparagraph (A) of such section 119 (c) (1) is amended by striking out "or natural gas" and inserting in lieu thereof ", natural gas, or both".

(3) Section 119(c) (2) (B) of such Act is amended by adding the following at the end thereof: "Regulations under this subparagraph shall be amended not later than ninety days after the date of enactment of the Clean Air Act Amendments of 1977 to take into account such Amendments and may be amended or revised from time to time thereafter."

(d) Section 119(c) (2) (D) of such Act is amended to read as follows:

"(D) No compliance date extension issued

to a source under this subsection with respect to an air pollutant shall be effective if the national primary ambient air quality standard with respect to such pollutant is being exceeded at any time in the air quality control region in which such source is located. The preceding sentence shall not apply to a source if, upon submission by any person of evidence satisfactory to the Administrator, the Administrator determines (after notice and public hearing) —

"(i) that emissions of such air pollutant from such source will affect only infrequently the air quality concentrations of such pollutant in each portion of the region where such standard is being exceeded at any time;

"(ii) that emissions of such air pollutant from such source will have only insignificant effect on the air quality concentrations of such pollutant in each portion of the region where such standard is being exceeded at any time; and

"(iii) with reasonable statistical assurance that emissions of such air pollutant from such source will not cause or contribute to air quality concentrations of such pollutant in excess of the national primary ambient air quality standard for such pollutant."

(e) Section 119(c) (3) is amended to read as follows:

"(3) A source to which this subsection applies may, upon the expiration of a compliance date extension under this section, receive a delayed compliance order under the conditions, and in the manner, provided in section 121."

(f) Section 302 of such Act is amended by adding the following new subsection at the end thereof:

"(1) (i) The terms 'emission limitation' and 'emission standard', and 'standard of performance' mean a requirement of continuous emission reduction, including any requirement relating to the operation or maintenance of such source to assure continuous emission reduction.

"(2) (A) The degree of emission limitation required for control of any air pollutant under an applicable implementation plan under title I shall not be affected in any manner by (i) so much of the stack height of any source as exceeds good engineering practice (as determined under regulations promulgated by the Administrator) or (ii) any other dispersion technique. The preceding sentence shall not apply with respect to stack heights in existence before the date of enactment of the Clean Air Act Amendments of 1970 or dispersion techniques implemented before such date.

"(B) For the purpose of this paragraph, the term 'dispersion technique' includes any intermittent or supplemental control of air pollutants varying with atmospheric conditions.

"(C) Not later than six months after the date of enactment of this subsection, the Administrator shall, after notice and opportunity for public hearing, promulgate regulations to carry out this paragraph. For purposes of this paragraph, good engineering practice means, with respect to stack heights, the height necessary to insure that emissions from the stack do not result in excessive concentrations of any air pollutant in the immediate vicinity of the source as a result of atmospheric downdraft, eddies and wakes which may be created by the source itself, nearby structures or nearby terrain obstacles (as determined by the Administrator). For purposes of this paragraph, such height shall not exceed two and a half times the height of such source unless the owner or operator of the source demonstrates, after notice and opportunity for public hearing, to the satisfaction of the Administrator, that a greater height is necessary as provided under the preceding sentence. In no event may the Administrator

prohibit any increase in any stack height or restrict in any manner the stack height of any source."

(g) Section 119(c)(2)(A) of such Act is amended by striking out "and" at the end of clause (ii), striking out the period at the end of clause (iii) and inserting in lieu thereof "and", by adding the following new clause at the end thereof:

"(iv) the Governor of the State in which is located the source to which the proposed compliance date extension is to be issued gives his prior written concurrence."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 106 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

#### AMENDMENT OFFERED BY MR. ROGERS

Mr. ROGERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROGERS:

(h) Subtitle A of title I of the Clean Air Act is amended by adding the following new sections at the end thereof:

#### "ASSURANCE OF ADEQUACY OF STATE PLANS

"Sec. 129. (a) As expeditiously as practicable but not later than one year after date of enactment of this section, each State shall review the provisions of its implementation plan which relate to major fuel burning sources and shall determine—

"(1) the extent to which compliance with requirements of such plan is dependent upon the use by major fuel burning stationary sources of petroleum products or natural gas,

"(2) the extent to which such plan may reasonably be anticipated to be inadequate to meet the requirements of this act in such State on a reliable and long-term basis by reason of its dependence upon the use of such fuels, and

"(3) the extent to which compliance with the requirements of such plan is dependent upon use of coal or coal derivatives which is not locally or regionally available.

Each State shall submit the results of its review and its determination under this paragraph to the Administrator promptly upon completion thereof.

"(b)(1) Not later than 18 months after the date of enactment of this section, the Administrator shall review the submissions of the States under subsection (a) and shall require each State to revise its plan if, in the judgment of the Administrator, such plan revision is necessary to assure that such plan will be adequate to assure compliance with the requirements of this Act in such State on a reliable and long-term basis, taking into account the actual or potential prohibitions on use of petroleum products or natural gas, or both, under any other authority of law.

"(2) Before requiring a plan revision under this subsection, with respect to any State the Administrator shall take into account the report of the review conducted by such State under paragraph (1) and shall consult with the Governor of the State respecting such required revision.

#### "MEASURES TO PREVENT ECONOMIC DISRUPTION OR UNEMPLOYMENT

"Sec. 130. (a) After notice and opportunity for a public hearing,—

"(1) the Governor of any State,

"(2) the Administrator, or

"(3) the President (or his designee),

may determine that action under subsection (b) is necessary to prevent or minimize significant local or regional economic disruption or unemployment which may reasonably be anticipated to result from use of fuels other than locally or regionally available coal or coal derivatives by any source referred to in subsection (d) to comply with the requirements of a State implementation plan.

"(b) Upon a determination under subsection (a),—

"(1) the State or the Administrator in issuing a delayed compliance order under section 121(b)(1),

"(2) the Administrator in promulgating an implementation plan (or portion thereof) under section 110(c), or

"(3) the President (or his designee) by rule or order may prohibit any major fuel burning stationary source (or class or category thereof) from using fuels other than locally or regionally available coal or coal derivatives to comply with implementation plan requirements.

"(c) The State, in the case of action by the State under subsection (b), or the Administrator, in the case of an action by the Administrator or by the President under subsection (b), shall, by rule or order, require each source to which such action applies to—

"(1) enter into long-term contracts of at least ten years in duration (except as the President or his designee may otherwise permit or require by rule or order for good cause) for supplies of locally or regionally available coal or coal derivatives.

"(2) enter into contracts to acquire any additional means of emission limitation which the Administrator or the State determines may be necessary to comply with the requirements of this Act while using such coal derivatives as fuel, and

"(3) comply with such schedules (including increments of progress), timetables and other requirements as may be necessary to assure compliance with the requirements of this Act.

Requirements under this subsection shall be established simultaneously with, and as a condition of, any action under subsection (b).

"(d) This section applies only to major fuel burning stationary sources which are not in compliance with the requirements of an applicable implementation plan or which have been prohibited from burning oil or natural gas, or both, under any other authority of law.

"(e) Except as may otherwise be provided by rule by the State or the Administrator for good cause, any action required to be taken by a major fuel burning stationary source under this section shall not be deemed to constitute a modification for purposes of section 111(a)(2) and (4) of this Act.

"(f) For purposes of sections 121, 122, and 113, a prohibition under subsection (b)(1), and a corresponding rule or order under subsection (c), shall be treated as a requirement of section 121(c). For purposes of any plan (or portion thereof) promulgated under section 110(c), any rule or order under subsection (c) corresponding to a prohibition under subsection (b)(2), shall be treated as a part of such plan. For purposes of section 113, a prohibition under subsection (b)(3), applicable to any source, and a corresponding rule or order under subsection (c), shall be treated as part of the applicable implementation plan for the State in which subject source is located."

"(g) For the purpose of this section,—

"(1) the term 'locally or regionally available coal or coal derivatives' means coal or coal derivatives which is, or can in the judgment of the State or the Administrator feasibly be, mined or produced in the local or regional area (as determined by the Administrator) in which the major fuel burning stationary source is located.

"(2) the term 'major fuel burning stationary source' means any fossil fired stationary source with design capacity to pro-

duce 100,000,000 B.t.u./hr. (or its equivalent as determined by rule of the Administrator)."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read, printed in the RECORD, and that I be allowed to explain it.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. ROGERS. Mr. Chairman, really the purposes of this section are: First, to encourage the use of coal in ways that meet applicable Clean Air Act requirements; and second, to authorize States and the Administrator to require use of locally or regionally available coal where that is necessary to prevent serious economic disruption or unemployment. This is what we were discussing before, protection of local jobs.

This section is based on the recognition that use of oil or natural gas will be less and less reliable long term strategies for compliance with clean air requirements. Therefore, the amendment attempts to encourage planning and anticipatory action for compliance by means which are realistic and compatible with our Nation's energy needs.

Mr. MADIGAN. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Illinois.

Mr. MADIGAN. It seems very desirable, Mr. Chairman, but I wonder why they would not be using local or original coal anyway. Why would the gentleman require that they do that? I should think in view of the transportation costs they would be doing it anyway.

Mr. ROGERS. We authorize the States to impose this requirement if there is serious economic disruption. For instance, instead of burning out of State low sulfur coal, the State may want the source to burn high-sulfur coal mined locally so that that source would have that right to continue to operate and eventually meet the standards.

Mr. MADIGAN. In what cases would they be not authorized to do it, or are they not authorized to do it?

Mr. ROGERS. The States or the Administrator are not authorized to do it, unless a finding is made that it is necessary. If there is severe economic disruption, in other words, people losing their jobs, the State or Administrator could require use of locally or regionally available coal.

Mr. MADIGAN. I still do not understand—and I appreciate the gentleman's trying to help me understand—why they would not be burning their own coal in the first place and why the gentleman feels that it is necessary to mandate it.

Mr. ROGERS. For instance, a utility may decide it is going to go out of the State to get the lower sulfur coal, and this would allow the State or the Administrator to require the utility to use coal right close to that utility. In this way, we do not have to use energy to transport the coal across country.

Mr. MADIGAN. I assume that the local coal or original coal would be higher sulfur coal.

Mr. ROGERS. It may be. I think that generally would be true.

Mr. MADIGAN. Is the gentleman then saying that he would allow them to use that or that he would mandate them to use that?

Mr. ROGERS. This is an authorizing provision, not a mandatory provision. It is for those exceptional circumstances where people are losing jobs, and there would have to be a finding that this requirement would help get back those jobs.

Mr. MADIGAN. So then is this the amendment that the gentleman referred to earlier as being the amendment that the United Mine Workers are supporting?

Mr. ROGERS. That is correct.

Mr. MADIGAN. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. ROGERS).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments to section 106?

Mr. PICKLE. Mr. Chairman, I move to strike the last word.

I thank the Chairman for the opportunity to ask him a question. My question pertains to both section 106 and section 111. Since it comes in both sections, I think colloquy might be applicable at this time.

Mr. Chairman, two 600 megawatts coal-fired electrical generation units are currently under construction in my district. They are being built by the Lower Colorado River Authority and the city of Austin.

The LCRA is a nonprofit State agency which is responsible for providing electrical power for almost a million people in the Austin, Tex., area; and Austin generates electricity for its 300,000-plus citizens.

The LCRA and Austin have sold and will sell about \$450 million in revenue bonds to build these plants. Both units have received permits from the Texas Air Quality Board, which is the administrative agency for the EPA in Texas regarding the Clean Air Act, certifying that the units meet the emission limits required under the Clean Air Act. Both units will be fueled by low-sulfur coal which has already been contracted for.

My question, Mr. Chairman is this: On page 89 of the report to accompany H.R. 6161, it reads:

First, it is clear that use of low sulfur coal along in any existing source would constitute a continuous emission reduction system for the purpose of meeting emission limits required to be included in State implementation plans under section 110 of the Clean Air Act.

Would the LCRA units which I just described be considered "existing" units and would they, therefore, not be required to install scrubbers?

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. PICKLE. I yield to the gentleman from Florida.

Mr. ROGERS. I thank the gentleman for yielding.

As I understand the gentleman's description of the units, these two 600-megawatt units would not be required to

have scrubbers if they are certified to meet the clean air emission limits. Since, as I understand it, they have valid clean air permits issued to construct prior to the date of enactment of the bill, the two units would fall under the language the gentleman quoted from the committee report and would not have to use scrubbers.

Any new plant which gets its permit to construct after the date of enactment would have to use the best technology, but the plants referred to by the gentleman are grandfathered in.

Mr. PICKLE. I thank the chairman very much for those remarks. I am glad to have that clarification.

Mr. Chairman, this is very important to the LCRA and the nearly 1 million people in the nonurban areas of central Texas, and the people of Austin, Tex., which means 350,000 more people. Austin and the LCRA have spent 2 to 3 years finding the sort of coal that has low-sulfur content. The two government entities finally did find this coal in Montana. They paid a high price to get a 25-year supply. They are paying a high price to have it shipped by rail to Texas.

It would be a shame to make these two nonprofit entities spend nearly \$100 million for scrubbers that are not needed to protect the quality of air around their new electric generating plants.

Mr. ROGERS. I thank the gentleman, and I hope he will help us in other parts of the bill as well.

Mr. PICKLE. The gentleman from Texas hopes to do that.

The CHAIRMAN. There being no further amendments to section 106, the Clerk will read.

The Clerk read as follows:

#### STRATOSPHERE AND OZONE PROTECTION

Sec. 107. (a) Title I of the Clean Air Act is amended by adding at the end thereof the following new subtitle:

#### "Subtitle B—Stratosphere and Ozone Protection

##### "PURPOSES

"SEC. 150. The purposes of this subtitle are (1) to provide for a better understanding of the effects of human actions on the stratosphere, especially the ozone in the stratosphere, and (2) to provide for a better understanding of the effects of changes in the stratosphere, especially the ozone in the stratosphere, on the public health and welfare.

##### "DEFINITIONS

"SEC. 151. For the purposes of this subtitle—

"(1) the term 'halocarbon' means the chemical compounds  $\text{CFCl}_3$  and  $\text{CF}_2\text{Cl}_2$  and such other halogenated compounds as the Administrator determines by rule may reasonably be anticipated to contribute to reductions in the concentrations of ozone in the stratosphere;

"(2) the term 'stratosphere' means that part of the atmosphere above the tropopause.

#### "STUDIES AND RESEARCH BY ADMINISTRATOR OF ENVIRONMENTAL PROTECTION AGENCY

"SEC. 152. (a) The Administrator shall conduct a study of the cumulative effect of all substances, practices, processes, and activities which may affect the stratosphere, especially ozone in the stratosphere. The study shall include an analysis of the independent effects on the stratosphere especially such ozone in the stratosphere of—

"(1) the release into the ambient air of halocarbons,

"(2) the release into the ambient air of other sources of chlorine,

"(3) the uses of bromine compounds, and

"(4) emissions of aircraft and aircraft propulsion systems employed by operational and experimental aircraft.

The study shall also include such physical, chemical, atmospheric, biomedical, or other research and monitoring as may be necessary to ascertain (A) any direct or indirect effects upon the public health and welfare of changes in the stratosphere, especially ozone in the stratosphere, and (B) the probable causes of changes in the stratosphere, especially the ozone in the stratosphere.

"(b) The Administrator shall undertake research on—

"(1) methods to recover and recycle substances which directly or indirectly affect the stratosphere, especially ozone in the stratosphere,

"(2) methods of preventing the escape of such substances,

"(3) safe substitutes for such substance, and

"(4) other methods to regulate substances, practices, processes, and activities which may affect the stratosphere, especially ozone in the stratosphere.

"(c) (1) The studies and research conducted under this section may be undertaken with such cooperation and assistance from universities and private industry as may be available. Each department, agency, and instrumentality of the United States having the capability to do so is authorized and encouraged to provide assistance to the Administrator in carrying out the requirements of this section, including (notwithstanding any other provision of law) any services which such department, agency, or instrumentality may have the capability to render or obtain by contract with third parties.

"(2) The Administrator shall encourage the cooperation and assistance of other nations in carrying out the studies and research under this section. The Administrator is authorized to cooperate with and support similar research efforts of other nations.

"(d) (1) The Administrator shall undertake to contract with the National Academy of Sciences to study the state of knowledge and the adequacy of research efforts to understand (A) the effects of all substances, practices, processes, and activities which may affect the stratosphere, especially ozone in the stratosphere; (B) the health and welfare effects of modification of the stratosphere, especially ozone in the stratosphere; and (C) methods of control of such substances, practices, processes, and activities including alternatives, costs, feasibility, and timing. The Academy shall make an interim report of findings one year after the date of the enactment of this subtitle and a final report thirty days after the submission of the final report of the Administrator called for in subsection (f) (1) of this section.

"(2) The Administrator shall make available to the Academy such information in his possession as is needed for the purposes of the study provided for in this subsection.

"(e) (1) The Administrator shall establish and act as Chairman of a Coordinating Committee for the purpose of insuring coordination of the efforts of other Federal agencies carrying out research and studies related to or supportive of the research provided for in subsections (a) and (b) of this section.

"(2) Members of the Coordinating Committee shall include the appropriate official responsible for the relevant research efforts of each of the following agencies:

"(A) the National Oceanic and Atmospheric Administration,

"(B) the National Aeronautics and Space Administration,

"(C) the Federal Aviation Administration,  
 "(D) the Department of Agriculture,  
 "(E) the National Cancer Institute, and  
 "(F) the National Institute of Environ-  
 mental Health Sciences,

and the appropriate officials responsible for the relevant research efforts of such other agencies carrying out related efforts as the Chairman shall designate. A representative of the Department of State shall sit on the Coordinating Committee to encourage and facilitate international coordination.

"(3) The Coordinating Committee shall review and comment on plans for, and the execution and results of, pertinent research and studies. For this purpose, the agencies named in or designated under paragraph (2) of this subsection shall make appropriate and timely reports to the Coordinating Committee on plans for and the execution and results of such research and studies.

"(4) The Chairman may request a report from any Federal agency for the purpose of determining if that agency should sit on the Coordinating Committee.

"(5) Upon submission of the final report called for in subsection (f) (1) of this section, the Chairmanship of the Coordinating Committee shall be assumed by the Administrator of the National Oceanic and Atmospheric Administration; and the Environmental Protection Agency shall nominate and appropriate official to serve as a member. The purpose of the Coordinating Committee shall thenceforth be to ensure the coordination of research and study efforts related to the program of research provided for in section 102 of this Act. The responsibilities and duties of the Chairman and the Coordinating Committee shall otherwise be as provided in the preceding paragraphs of this subsection.

"(f) (1) Not later than two years after the date of the enactment of this subtitle, the Administrator shall report to the Interstate and Foreign Commerce Committee and the Science and Technology Committee of the House of Representatives and to the appropriate committees of the Senate, the results of the studies and research conducted under this section and the results of related research and studies conducted by other Federal agencies. The Administrator shall include in the report his recommendations for control of substances, practices, processes, and activities which in his judgment may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere, which effect may reasonably be anticipated to endanger public health or welfare. In devising these recommendations the Administrator shall take into account the feasibility and costs of achieving such control.

"(2) Prior to the submission of such final report, the Administrator shall submit quarterly interim reports to the Congress describing the progress of the research and studies and, insofar as possible, indicating anticipated results and conclusions. The first such report, due ninety days after the date of the enactment of this subtitle, shall include the plan and schedule for the research and study to be carried out. Subsequent interim reports shall update this plan and schedule and shall describe and explain revisions to and deviation from the plan.

"(3) If at any time prior to the submission of such final report, in the Administrator's judgment, any substance, practice, process, or activity may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere, and such effect may reasonably be anticipated to endanger public health or welfare, he shall promptly promulgate and submit regulations to the Congress respecting the control of any such substance, practice, process, or activity.

"(4) Any reports and recommendations required to be submitted under this subsection which are first submitted to the President, the Office of Management and Budget, or any

other department or agency of the United States in proposed form shall be submitted to the Congress in such proposed form as well as in final form.

#### "RESEARCH AND MONITORING BY NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION"

"SEC. 153. (a) The Administrator of the National Oceanic and Atmospheric Administration is directed to establish a continuing program of research and monitoring of the stratosphere for the purpose of early detection of potentially harmful changes in the stratosphere. He shall report to the Congress annually on the findings of such research and monitoring, with the first such report being due two years after the date of the enactment of this subtitle and containing plans for the research and monitoring to be carried out. Each report shall contain recommendations for actions (especially regulatory actions) by the Congress and by other Federal agencies.

"(b) In carrying out the program provided for in subsection (a) of this section the Administrator of the National Oceanic and Atmospheric Administration (1) shall enlist and encourage cooperation and assistance from other Federal agencies, universities, and private industry, and (2) shall solicit the views of the Administrator with regard to plans for the research involved so that any such research will, if regulatory action by the Administrator is indicated, provide the preliminary information base for such action.

#### "REGULATIONS"

"SEC. 154. Upon submission of the report required under section 152(f) (1), and after consideration of the research and study under section 152 and, consultation with appropriate Federal agencies and scientific entities, the Administrator shall propose regulations for the control of any substance, practice, process, or activity (for any combination thereof) which in his judgment may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere, if such effect in the stratosphere may reasonably be anticipated to endanger public health or welfare. Such regulations shall take into account the feasibility and the costs of achieving such control. Such regulations may exempt medical use products for which the Administrator determines there is no suitable substitute. Not later than three months after proposal of such regulations the Administrator shall promulgate such regulations in final form. From time to time, and under the same procedures, the Administrator may revise any of the regulations submitted under this subsection.

#### "OTHER PROVISIONS UNAFFECTED"

"SEC. 155. Nothing in this subtitle shall be construed to alter or affect the authority of the Administrator under section 303 (relating to emergency powers), under section 231 (relating to aircraft emission standards), or under any other provision of this Act.

#### "STATE AUTHORITY"

"SEC. 156. (a) Nothing in this subtitle shall preclude or deny any State or political subdivision thereof from adopting or enforcing any requirement respecting the control of any substance, practice, process, or activity for purposes of protecting the stratosphere or ozone in the stratosphere except as otherwise provided in subsection (b).

"(b) If a regulation of any substance, practice, process, or activity is in effect under this subtitle in order to prevent or abate any risk to the stratosphere, or ozone in the stratosphere, no State or political subdivision thereof may adopt or attempt to enforce any requirement respecting the control of any such substance, practice, process, or activity to prevent or abate such risk, unless the requirement of the State or political

subdivision is identical to the requirement of such regulation. The preceding sentence shall not apply with respect to any law or regulation of any State or political subdivision controlling the use of halocarbons as propellants in aerosol spray containers."

(b) Title I of such Act is amended by inserting immediately before section 101 the following:

#### "Subtitle A—Air Quality and Emission Limitation"

(e) (1) Section 113(b) (3) of such Act is amended by striking out "or section 119(g)" and inserting in lieu thereof "119(g), or any regulation under subtitle B".

(2) Section 113(c) (1) (C) of such Act is amended by striking out "or section 119(g)" and inserting in lieu thereof "section 119(g) or any regulation under subtitle B".

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 107 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. There being no amendments to section 107, the Clerk will read.

The Clerk read as follows:

#### PREVENTION OF SIGNIFICANT DETERIORATION

SEC. 108. (a) Title I of the Clean Air Act is amended by adding at the end thereof the following new subtitle:

#### "Subtitle C—Prevention of Significant Deterioration"

#### "PREVENTION OF SIGNIFICANT DETERIORATION"

"SEC. 160. (a) The purposes of this section are as follows:

"(1) to protect public health and welfare from any actual or potential adverse effect which in the Administrator's judgment may reasonably be anticipated to occur from air pollution (or from exposures to pollutants in other media, which pollutants originate as emissions to the ambient air), notwithstanding attainment and maintenance of all national ambient air quality standards;

"(2) to preserve, protect, and enhance the air quality in national parks, national monuments, national seashores, national recreation areas, and other areas of special national or regional natural, recreational, scenic, or historic value;

"(3) to insure that economic growth will occur in a manner consistent with the preservation of existing clean air resources;

"(4) to assure that emissions from any source in any State will not interfere with any portion of the applicable implementation plan to prevent significant deterioration of air quality for any other State; and

"(5) to assure that any decision to permit increased air pollution in any area where the national primary and secondary ambient air quality standards for any pollutant are not being exceeded is made only after careful evaluation of all the consequences of such a decision and after adequate procedural opportunities for informed public participation in the decisionmaking process.

"(b) In accordance with the policy of section 101(b) (1) and the purposes specified in subsection (a), each applicable implementation plan shall contain emission limitations and such other measures as may be necessary, as determined under regulations promulgated under subsection (c) to prevent significant deterioration of air quality.

"(c) (1) Except as may otherwise be permitted under subsection (d) in the case of air pollutants other than sulfur oxides and particulates each applicable implementation plan shall contain an area classification plan

based on maximum allowable increases in ambient concentrations of and maximum allowable levels of ambient concentrations of any air pollutant for which a national ambient air quality standard is established. In the case of an increase based on concentrations permitted under national ambient air quality standards for any period of twenty-four hours or less, such regulations shall permit such limitations to be exceeded during one such period per year. Such classification plan shall apply to all areas in each State where the national primary and secondary ambient air quality standards for any air pollutant are not being exceeded. Such classification plan shall provide for designation of all such areas as either class I, class II, or class III as to each such pollutant. Until such designation is effective, all such areas shall be deemed to have been designated as class II, except as may be otherwise provided under paragraph (3)(B).

"(2)(A) For any class I area, the maximum allowable increase over the baseline concentration of any pollutant subject to a national ambient air quality standard for each period of exposure shall not exceed 2 percent (10 percent in the case of particulates) of the pollution concentration permitted for each such period with respect to such pollutant under the national primary or secondary ambient air quality standard whichever is lower.

"(B) For any class II area, the maximum allowable increase over the baseline concentration of any pollutant subject to a national ambient air quality standard for each period of exposure shall not exceed one-fourth of the pollution concentration permitted for each such period with respect to such pollutant under the national primary or secondary ambient air quality standard, whichever is lower.

"(C) For any class III area, the maximum allowable increase over the baseline concentration of any pollutant subject to a national ambient air quality standard for each period of exposure shall not exceed one-half of the pollution concentration permitted for each such period with respect to such pollutant under the national primary or secondary ambient air quality standard whichever is lower.

"(D) The maximum allowable concentration of any air pollutant for which an increase is permitted under subparagraph (A), (B), or (C) above shall not exceed a concentration for such pollutant for each period of exposure equal to—

"(i) the concentration permitted under the national secondary ambient air quality standard, or

"(ii) the concentration permitted under the national primary ambient air quality standard,

whichever concentration is lowest for such pollutant for such period of exposure.

"(E) For the purpose of this section, the term 'baseline concentration' means, with respect to a pollutant, the level of concentration of such pollutant determined by adding—

"(i) the level of concentration determined for each period of exposure on the basis of plant capacity in existence on the date on which regulations respecting classification systems for prevention of significant deterioration of air quality initially became effective January 1, 1975,

"(ii) the concentrations for each such period of exposure attributable to new or modified sources which (before the date of enactment of this section) received permits under provisions of applicable implementation plans adopted pursuant to sections 110(a)(2)(D) and 110(a)(4),

"(iii) in the discretion of the Governor of the State, the concentrations for each such period of exposure attributable to any new or modified source which had filed, on or before January 1, 1975, a completed appli-

cation (as determined in accordance with regulations of the Administrator) for such a permit (but only if such permit is subsequently granted), and

"(iv) in the discretion of the Governor of the State, the concentrations for each such period of exposure attributable to other new or modified sources which are not subject to permit requirements under such provisions but which have reached a stage, on or before the date of enactment of this section, comparable to the stage at which permits are normally required under such provisions in the case of sources subject to such permit requirements.

"(F)(1) For purposes of determining the maximum allowable increase permitted under subparagraphs (A), (B), and (C), the allowable percentages shall be determined on the basis of national primary or secondary ambient air quality standards as in effect on the date of enactment of this section.

"(2) In the case of any standard promulgated on or after such date of enactment for a pollutant, or for a period of exposure, for which no such standard was promulgated before such date, the maximum allowable increases shall be determined on the basis of such standards as first promulgated and not on the basis of any subsequent revision thereof.

"(3)(A)(i) Prior to designation or redesignation of the classification of any area, notice shall be afforded and public hearings shall be conducted in areas proposed to be designated or redesignated and in areas which may be affected by the proposed designation or redesignation. Such notice shall be afforded not less than thirty days before such hearings. Prior to any public hearing, a satisfactory description and analysis of the health, environmental, economic, social, and energy effects of the proposed designation or redesignation shall be prepared and made available for public inspection (together with any comments and recommendations submitted under clause (ii)). Prior to any such designation or redesignation the description and analysis of such effects shall be reviewed and examined by the authorities referred to in subparagraph (C).

"(ii) Prior to the issuance of notice under clause (i) respecting the designation or redesignation of any area under this subsection, if such area includes any Federal lands, the State shall provide written notice to the appropriate Federal agency (or agencies) having authority over such lands (hereinafter in this subsection referred to as the Federal land manager) and afford adequate opportunity (but not in excess of sixty days) to confer with the State respecting the intended notice of designation or redesignation and to submit written comments and recommendations with respect to such intended notice of designation or redesignation. In designating or redesignating any area under this subsection with respect to which any Federal land manager has submitted written comments and recommendations, the State shall publish a list of any inconsistency between such designation or redesignation and such recommendations and an explanation of such inconsistency (together with the reasons for making such designation or redesignation against the recommendation of the Federal land manager).

"(iii) The Administrator shall promulgate regulations not later than six months after date of enactment of this subtitle to assure, insofar as practicable, that prior to any public hearing on designation or redesignation of any area, there shall be available for public inspection any specific plans for any new or modified major stationary source or development which may be permitted to be constructed and operated only if the area in question is designated or redesignated as class III.

"(B) In designating or redesignating areas under this subsection, the State shall make specific findings as to the desirability of designating or redesignating as class I each area of special environmental concern such as national recreation areas, wild and scenic rivers, national lakeshores and seashores, national forests, or other areas of specific national or regional natural, recreational, scenic or historic value. In no event shall any unit of the national wilderness preservation system or national park be designated or redesignated other than class I if such unit or park is in existence on the date of enactment of this section and, as of such date, exceeds twenty-five thousand acres in size. In no event shall any national monument, national primitive area, or national recreation area be designated or redesignated as other than class I if such monument or area is in existence on such date and, as of such date, exceeds one hundred thousand acres of Federal acreage. Any—

"(i) unit of the national wilderness preservation system or national park (other than a unit or park referred to in the second sentence of this subparagraph) which exceeds one thousand acres,

"(ii) national monument, national primitive area, or national recreation area (other than a monument or area referred to in the third sentence of this subparagraph) which exceeds ten thousand acres in size,

"(iii) international park (in excess of one thousand acres in size),

"(iv) national preserve (in excess of ten thousand acres in size),

shall initially be designated as class I, and may be redesignated only as class II. In no event shall any wild and scenic river, national lakeshore or seashore, national wildlife refuge, or national forest, be designated or redesignated other than class I or class II, if such river, lakeshore, seashore, refuge, or forest exceeds ten thousand acres in size. Any area required under this subparagraph to be designated, or initially designated, as class I shall be deemed to have been so designated on the date of the enactment of this section, and the requirements of subparagraph (C) shall not apply to such designation.

"(C) No area may be designated or redesignated by the State as class III under this section unless—

"(i) such designation or redesignation has been specifically approved by the Governor of the State, after consultation with the appropriate committees of the legislature if it is in session or with the leadership of the legislature if it is not in session (unless State law provides that such designation or redesignation must be specifically approved by State legislation), and if general purpose units of local government representing a majority of the residents of the area to be so designated or redesignated enact legislation (including for such units of local government resolutions where appropriate) concurring in the State's designation or redesignation;

"(ii) such designation or redesignation will not cause, or contribute to, concentrations of any air pollutant which exceed any maximum allowable increase level or maximum allowable concentration permitted under the classification of any other area; and

"(iii) such designation or redesignation is otherwise consistent with the requirements of this section.

"(D) The Administrator may disapprove the designation or redesignation of any area only if he finds, after notice and opportunity for public hearing, that such designation or redesignation does not meet the requirements of this section. If any such disapproval occurs, the classification of the area shall be that which was in effect prior to the designation or redesignation which was disapproved.

"(E) Not later than two years after the date of the enactment of this section (and at two-year intervals thereafter), the Administrator, after consultation with the Federal land manager, shall report to Congress on the status of Federal lands which are not required under this section to be designated as class I. Such report shall include his recommendations, if any, for legislative action to require such designation.

"(4) (A) Each applicable implementation plan shall require each new or modified major stationary source to obtain a permit to construct prior to commencement of construction and shall contain provisions for review prior to granting such a permit for any major stationary source in order to determine the effect that emissions from such source will have on air quality concentrations in any area which may be affected by emissions from such source. This paragraph shall not apply in the case of new sources described in paragraphs (2) (E) (ii), (iii), and (iv).

"(B) The review provided for in subparagraph (A) shall be preceded by an analysis, which may be conducted by the State (or any general purpose unit of local government) or by the major stationary source applying for such permit, of the ambient air quality at the proposed site and in areas which may be affected by emissions from such source for each pollutant subject to regulation under this section which will be emitted from such source. Such analysis shall be performed in accordance with regulations of the Administrator. Effective one year after date of enactment of this section, the analysis required by this subparagraph shall include continuous air quality monitoring data gathered for purposes of determining whether emissions from such source will exceed the maximum allowable increases or the maximum allowable concentration permitted under paragraph (2). Such data shall be gathered over a period of one calendar year preceding the date of application for a permit under subparagraph (A), unless the Administrator or the State (in accordance with the regulations of the Administrator) determines that a complete and adequate analysis for such purposes may be accomplished in a shorter period. The results of such analysis, in terms established by regulations of the Administrator, shall be included in any application for such permit. In promulgating regulations respecting the analysis under this paragraph, the Administrator shall not require the use of any automatic or uniform buffer zone or zones. Such regulations shall authorize such analysis to take into account the terrain and meteorology of the areas affected, the size and nature of the proposed source, the degree of continuous emission reduction which could be achieved by such source, and such other factors as may be relevant in determining the effect of emissions from a proposed source on any classified area. Any model or models designated under such regulations may be adjusted, upon a determination, after notice and opportunity for public hearing, by the Administrator that such an adjustment is necessary to take into account unique terrain or meteorological characteristics of an area potentially affected by emissions from a source applying for a permit required under this paragraph.

"(C) A permit under this paragraph may be issued to any major stationary source—

"(i) if any proposed permit has been subject to a public hearing with opportunity for interested persons to appear and submit written or oral presentations on the air quality impact of such source and other appropriate considerations;

"(ii) if emissions from such source will not cause, or contribute to, air pollution in excess of any maximum allowable increase

or maximum allowable concentration for any pollutant in any area; and

"(iii) if the requirements of this section applicable to such source have otherwise been met.

Each applicable implementation plan shall require any completed permit application (as determined in accordance with regulations of the Administrator) under this paragraph, or under section 110(a) (2) (D), to be granted or denied not later than 180 days after the date of filing of such completed application.

"(D) Each applicable implementation plan shall contain provisions requiring any person who owns or operates, or proposes to own or operate, a major stationary source for which a permit is required under this paragraph to conduct such monitoring as may be necessary to determine the effect which emissions from any such source may have, or is having, on air quality in any area which may be affected by emissions from such source.

"(E) For the purpose of the regulations which became effective January 1, 1975 to prevent significant deterioration of air quality, the term 'commencement of construction' means that the owner or operator, or prospective owner or operator, of a stationary source has undertaken a continuous on-site program of construction or modification of such source.

"(5) No later than one year after the date of enactment of the Clean Air Act Amendments of 1977, the Administrator shall promulgate regulations under this section specifying with reasonable particularity each air quality model or models to be used under specified sets of conditions for purposes of this section.

"(d) With respect to any air pollutant for which a national ambient air quality standard is established other than sulfur oxides or particulates, an area classification plan such as that referred to in subsection (c) shall not be required under this section if the implementation plan adopted by the State and submitted for the Administrator's approval or promulgated by the Administrator under subsection (e) (2) of this section contains other provisions which when considered as a whole, the Administrator finds will carry out the purposes in subsection (a) at least as effectively as such an area classification plan for such pollutant. Such other provisions referred to in the preceding sentence need not require the establishment of maximum allowable increases with respect to such pollutant for any area to which this section applies.

"(e) (1) Each State shall adopt and submit to the Administrator, after notice and public hearing, a plan or revision of a plan containing measures meeting the requirements of this section. With respect to sulfur oxides and particulates, such plan or revision shall be submitted no later than one year after the date of enactment of this section. With respect to any other pollutant for which a national ambient air quality standard has been promulgated prior to enactment of this section, such plan or revision shall be submitted no later than two years after the date of enactment of this section. With respect to any air pollutant for which a national ambient air quality standard is promulgated or revised after the date of enactment of this section, such plan or revision of such plan shall be submitted not later than two years after the date of promulgation or revision of such standard.

"(2) (A) The Administrator shall, within four months after the date required for submission of a plan under this subsection, approve such plan, or any portion thereof, if he determines that such plan was adopted in accordance with, and meets the requirements of, this section. If a State fails to submit

such a plan or if any plan, or portion thereof, is disapproved, the Administrator shall, within four months after the date required for submission of such a plan or after such disapproval, prepare and propose such regulations for such State as are necessary to meet the requirements of this section. After notice and opportunity for public hearing, but not later than ninety days after proposal, the Administrator shall promulgate such regulations with such modifications as he deems appropriate.

"(B) (i) In the case of regulations promulgated by the Administrator pursuant to this paragraph and section 110(c) for the purpose of this section, the Administrator shall not designate or redesignate the classification of areas to which this section applies.

"(ii) In the case of any such regulations of the Administrator promulgated following any period during which provisions of an approved State plan required for purposes of this section were in effect, the classification effective under such regulations of the Administrator for each such area shall be the classification designated or redesignated during such period pursuant to such provisions of the approved plan if such designation or redesignation was in accordance with the requirements of this section.

"(iii) In the case of such regulations of the Administrator promulgated where the designation or redesignation of any such area under the State plan was not in accordance with the requirements of this section or where provisions of a State plan required for purposes of this section have not been submitted and approved, the classification of each such area shall be as provided in subsections (c) (1) and (c) (3) (B) of this section.

"(3) Notwithstanding the maximum allowable concentrations permitted under subsection (c) (2) (D), in the case of any area where such concentrations are exceeded on the basis of plant capacity in existence on the date of the enactment of this section, no plan shall be required, as a condition for approval by the Administrator under this section, to reduce pollution concentrations in such area to such maximum allowable concentrations.

"(f) (1) In the case of any State which has a plan approved by the Administrator under subsection (e) (2), the Governor of such State may, after notice and opportunity for public hearing, issue orders or promulgate rules providing that, for purposes of determining compliance with the maximum allowable increases in ambient concentrations of an air pollutant, the following concentrations of such pollutant shall not be taken into account—

"(A) concentrations of such pollutant attributable to the increase in emissions from stationary sources which have converted from the use of petroleum products, or natural gas, or both, by reason of an order which is in effect under sections 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 over the emissions from such sources before the effective date of such order,

"(B) the concentrations of such pollutant attributable to the increase in emissions from stationary sources which have converted from using natural gas by reason of a natural gas curtailment pursuant to a natural gas curtailment plan in effect pursuant to the Federal Power Act over the emissions from such sources before the effective date of such plan,

"(C) concentrations of particulate matter attributable to the increase in emissions from construction or other temporary emission-related activities,

"(D) the increase in concentrations attributable to new sources outside the United States over the concentrations attributable

to existing sources which are included in the baseline concentration determined under subsection (c) (2) (E), and

"(E) concentrations of naturally occurring particulate matter.

"(2) No action taken with respect to a source under paragraph (1) (A) or (1) (B) shall apply more than five years after the effective date of the order referred to in paragraph (1) (A) or the plan referred to in paragraph (1) (B), whichever is applicable. If both such order and plan are applicable, no such action shall apply more than five years after the later of such effective dates.

"(3) No action under this subsection shall take effect unless the Governor submits the order or rule providing for such exclusion to the Administrator and the Administrator determines that such order or rule is in compliance with the provisions of this subsection.

"(g) The Administrator shall provide such technical assistance to States and localities as may be necessary to assist in carrying out this section.

"(h) (1) Until such time as an applicable implementation plan is in effect for any area which plan meets the requirements of this section to prevent significant deterioration of air quality with respect to any air pollutant, applicable regulations under this Act in effect prior to enactment of this section shall remain in effect to prevent significant deterioration of air quality in any such area for any such pollutant, except as otherwise provided in paragraph (2) of this subsection.

"(2) If any regulation in effect prior to enactment of this section to prevent significant deterioration of air quality would be inconsistent with the requirements of subsection (c) (2) and (c) (3) (B), then such regulations shall be deemed amended so as to conform with such requirements.

"(i) For exemption of certain nonprofit health or educational institutions from treatment as a major stationary source for purposes of this subtitle, see section 302(c) (2)."

(b) Section 110(a) (2) of such Act is amended by inserting the following new subparagraph at the end thereof:

"(J) It complies with the requirements of subtitle C of title I."

(c) Title III of such Act is amended by adding the following new section at the end thereof:

#### "STANDARDIZED AIR QUALITY MODELING

"Sec. 323. (a) Not later than six months after the date of the enactment of the Clean Air Act Amendments of 1977, and at least every three years thereafter, the Administrator shall conduct a conference on air quality modeling. In conducting such conference, special attention shall be given to appropriate modeling necessary for carrying out subtitle C of title I.

"(b) The conference conducted under this section shall provide for participation by the National Academy of Sciences, representatives of State and local air pollution control agencies, and appropriate Federal agencies, including the National Science Foundation, the National Oceanic and Atmospheric Administration, and the National Bureau of Standards.

"(c) Interested persons shall be permitted to submit written comments and a verbatim transcript of the conference proceedings shall be maintained.

"(d) The comments submitted and the transcript maintained pursuant to subsection (c) shall be included in the docket required to be established for purposes of promulgating or revising any regulation relating to air quality modeling under subtitle C of title I."

(d) Not later than one year after the date of enactment of this Act, the Administrator shall publish a guidance document to assist the States in carrying out their functions under subtitle C of title I of the Clean Air

Act with respect to pollutants, other than sulphur oxides and particulates, for which national ambient air quality standards are promulgated. Such guidance document shall include recommended strategies for controlling photochemical oxidants on a regional or multi-State basis for the purpose of implementing section 160 and section 110 of such Act.

(e) Not later than two years after the date of enactment of this Act, the Administrator shall complete a study and report to the Congress on the progress made in carrying out subtitle C of title I of the Clean Air Act and the problems associated with carrying out such section, including recommendations for legislative changes necessary to implement strategies for controlling photochemical oxidants on a regional or multi-State basis.

(f) The Clean Air Act is further amended by adding the following new section at the end thereof:

#### "NATIONAL COMMISSION ON AIR QUALITY

"Sec. 327. (a) There is established a National Commission on Air Quality which shall study and report to the Congress on—

"(1) the effects of the implementation of requirements on the States or the Federal Government under this Act to identify and protect from significant deterioration of air quality, areas which have existing air quality better than that specified under current national primary and secondary standards;

"(2) the economic, technology, and environmental consequences of achieving or not achieving the purposes of this Act and programs authorized by it;

"(3) available alternatives, including enforcement mechanisms to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and the productive capacity of its population, and to achieve the other purposes of the Act;

"(4) the technological capability of achieving and the economic, energy, and environmental and health effects of achieving or not achieving required emission control levels for mobile sources of oxides of nitrogen in relation to and independent of regulation of emissions of oxides of nitrogen from stationary sources;

"(5) air pollutants not presently regulated, which pose or may in the future pose a threat to public health or public welfare and options available to regulate emissions of such pollutants;

"(6) the adequacy of research, development, and demonstrations being carried out by Federal, State, local, and nongovernmental entities to protect and enhance air quality;

"(7) the ability of (including financial resources, manpower, and statutory authority) Federal, State, and local institutions to implement the purposes of the Act.

The Commission's study and report under paragraph (4) shall include analysis of the health effects of pollutants which are derivatives of oxides of nitrogen.

"(b) Studies and investigations conducted pursuant to paragraphs (1) and (2) of subsection (a) shall include—

"(1) the effects of existing or proposed national ambient air quality standards on employment, energy, and the economy (including State and local), their relationship to objective scientific and medical data collected to determine their validity at existing levels, as well as their other social and environmental effects;

"(2) the effects of limiting deterioration of air quality in areas identified as having air quality better than that required under existing or proposed national ambient standards on employment, energy, the economy (including State and local), the relationship of such policy to the protection of the pub-

lic health and welfare as well as other national priorities such as economic growth and national defense, and its other social and environmental effects.

"(c) The Commission shall, as a part of any study conducted under subsection (a) (1) of this section, specifically identify any loss or irretrievable commitment of resources (taking into account economic feasibility), including mineral, agricultural and water resources, as well as land surface-use resources.

"(d) Such Commission shall be composed of eleven members, including the chairman and the ranking minority member of the Senate Committee on Public Works and the House Committee on Interstate and Foreign Commerce (or delegates of such chairmen or member appointed by them from among representatives of such committees) and seven members of the public appointed by the President, by and with the advice and consent of the Senate. The chairman of the Commission shall be elected from among the members thereof.

"(e) The heads of the departments, agencies, and instrumentalities of the executive branch of the Federal Government shall cooperate with the Commission in carrying out the requirements of this section, and shall furnish to the Commission such information as the Commission deems necessary to carry out this section.

"(f) A report, together with any appropriate recommendations, shall be submitted to the Congress on the results of the investigation and study concerning subsection (a) (4) of this section no later than March 1, 1978, and the results of the investigation and study concerning subsection (a) (1) of this section no later than two years after the date of enactment of the Clean Air Act Amendments of 1977. The Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a study of the same matters required to be studied by the Commission under subsection (a) (1) and to submit such study to the Congress at the same time as required for the report of the Commission concerning such subsection. Funds shall be available in the same manner, and the Administrator shall have the same authorities and duties respecting such study, as provided in the case of the study authorized pursuant to section 202(c).

"(g) A report shall be submitted with regard to all other Commission studies and investigations, together with any appropriate recommendations, not later than three years after the date of enactment of this section. Upon submission of such report or upon expiration of such three-year period, whichever is sooner, the Commission shall cease to exist.

"(h) The members of the Commission who are not officers or employees of the United States, while attending conferences or meetings of the Commission or while otherwise serving at the request of the Chairman shall be entitled to receive compensation at a rate not in excess of the maximum rate of pay for grade GS-18, as provided in the General Schedule under section 5332 of title V of the United States Code, including traveltime and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence as authorized by law (5 U.S.C. 73b-2) for persons in the Government service employed intermittently.

"(i) There are authorized to be appropriated, for use in carrying out this section, not to exceed \$5,000,000.

"(j) In the conduct of the study, the Commission is authorized to contract with nongovernmental entities that are competent to perform research or investigations in areas within the Commission's mandate, and to hold public hearings, forums, and workshops to enable full public participation."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 108 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENT OFFERED BY MR. MAGUIRE

Mr. MAGUIRE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MAGUIRE: Page 300, line 25, strike out "In" and all that follows down through line 8 on page 301 and insert in lieu thereof: "No federal lands which are initially designated as Class I and which may be redesignated as Class II may be so redesignated unless the federal land manager concurs in such redesignation."

Mr. MAGUIRE. Mr. Chairman, the intent of this amendment, which I have offered together with my colleague, the gentleman from New Jersey (Mrs. FENWICK), is to provide a modicum of Federal protection for so-called discretionary class I Federal lands.

Under the provisions of the committee bill, large national parks, wilderness areas, monuments, primitive areas, and recreational areas are designated as mandatory class I. Under no circumstances may they be switched into a category which would permit dirtier air. They are permanent class I areas, and the States have no power to redesignate them as class II or class III.

However, smaller parks, wilderness areas, monuments, primitive areas, recreation areas and national preserves were placed in a second category which was discretionary. These areas were initially assigned class I status but States are free to redesignate them to class II at any time and solely at their own discretion. The presumptive class I category makes up only about 1.5 percent of all Federal holdings, but these lands are more important than their acreage might suggest.

I am in firm agreement with the basic approach taken by the committee to allow the States maximum latitude in designating their own lands, but I do believe we should have a further checkpoint with respect to these few smaller areas than we have presently in the draft legislation.

Let me show the Members very briefly two photographs of the kinds of areas we are talking about. They are small but they are as beautiful and as magnificent as some of the areas that are given greater protection in the bill. This one is from Hawaii and this one is from New Mexico.

Under the current provisions of the bill, national treasures such as Mount Hood National Wilderness Area in Oregon and the Big Thicket National Preserve in Texas could be reclassified as class II, a class judged by the EPA as able to accommodate the largest coal-fired powerplant ever planned or actually built. In other words, class II is a far cry from the protection of air quality standards which we should want to protect when we are dealing with such pristine areas.

Our amendment would simply give the Federal land manager, either the Secretary of the Interior or the Secretary of Agriculture, as the case might be, authority to approve or disapprove such a redesignation, taking into account the effect air quality degradation would have on the scenic or wilderness value of the specific land in question.

Mr. Chairman, in our view, the Federal Government has a right and a responsibility to oversee these lands, including matters of air quality, since they were set aside for the enjoyment of the entire Nation. Although these lands are smaller in size than the mandatory class I areas, these lands should not be thought of as unimportant or insignificant. National parks and wilderness areas would have to be at least 1,000 acres in size, and all other lands in this category are more than 10,000 acres.

The amendment would not reclassify these areas as mandatory class I. Furthermore, once the land manager has approved a redesignation to class II, he would not have authority to turn around and to reclassify it as class I.

So the amendment is hedged in by very considerable protections. It simply allows a bit more of a checkpoint before we go irrevocably to a dirty-air category for these few pristine lands.

Finally, our amendment would not significantly affect powerplant siting or otherwise interfere with the national energy program. In this regard, the 1975 FEA-EPA "Analysis of the Impact on the Electric Utility Industry of Alternative Approaches to Significant Deterioration," cited 74 powerplant sites projected for possible construction between now and 1983.

The agencies determined that not one of these 74 sites would be affected by either the mandatory or the discretionary class I designation; so to firm up the discretionary designation a bit does no harm whatever to the necessary program of powerplant construction in the next few years. In any case, the land manager would be free to take energy and local economic factors into account in deciding whether to approve or disapprove redesignation, and I think we can be confident he would do that.

Mr. Chairman, the simple fact that these lands are smaller than mandatory class I lands does not mean that they are on the whole any less pristine, beautiful or deserving of protection. Again, our amendment would not classify these areas as mandatory class I.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

(By unanimous consent, Mr. MAGUIRE was allowed to proceed for an additional 2 minutes.)

Mr. MAGUIRE. Mr. Chairman, out amendment would simply grant the land manager, as the representative of the American people, the right to analyze and approve State redesignations of these few class I areas on a case-by-case basis.

Mr. MADIGAN. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Illinois.

Mr. MADIGAN. Mr. Chairman, I am trying to determine exactly what would be affected by the amendment.

Mr. MAGUIRE. I have just handed the gentleman a list. I should have provided that before.

Mr. MADIGAN. We are talking about 4 national parks under 25,000 acres; 13 national monuments above 10,000, but under 100,000 acres; 9 national recreation areas in that same classification above 10,000 acres, but below 100,000 acres; 2 national preserves and 15 wilderness areas; is that correct?

Mr. MAGUIRE. That is correct.

Mr. MADIGAN. Mr. Chairman, if the gentleman will yield further, as I understand what this would do with these substantial parcels of land is that instead of the Governor or State legislature being able to reclassify these class II areas if they decided to do that; now we are going to say that the Federal land manager would, in effect, be able to overrule the State legislature and the Governor of the State; is that not correct?

Mr. MAGUIRE. That is correct. I might just say to the gentleman, what we are dealing with is only 1.5 percent of all Federal lands. That is a very small amount of land.

Mr. MADIGAN. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, just very briefly, if I may, the entire program has been presented up to this point as one guaranteeing a lot of involvement on the part of local officials, State legislatures, and the Governor of each State.

Now that we have reached this final stage in the development of this bill, we are going to substantially rewrite it and give an employee of the Federal Government—in this case the Federal land manager—the ability to override, overrule—veto, if you will—whatever local decisions would otherwise have been made. That is entirely contrary to everything that has been represented to us up to this point. I am very much opposed to that.

May I have the attention of the gentleman from Florida, the chairman of the subcommittee?

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield to me?

Mr. MADIGAN. I yield.

Mr. MAGUIRE. I might just point out to the gentleman that the basic architecture of this bill is still completely intact. We have class I, we have class II, we have class III areas. I would have wished that we would not have had a class III area, but the sense of the committee was that we needed that. The States can designate class II and class III areas as they see fit.

Thus, 99.5 percent of the land in this country is going to be taken care of in this bill apart from what my amendment deals with. My amendment deals with 0.5 percent of the total land area of the United States and 1.5 percent of the Federal land. It is really a very short list of areas, contained on 1½ pages. There are very few, perhaps 35 or 40 areas,

where we have an overriding interest of all the American people, and I hope the gentleman can keep that in mind.

Mr. MADIGAN. I would like to reclaim my time, because the gentleman is repeating what he said earlier.

I would like to have the attention of the gentleman from Florida (Mr. ROGERS) for the purpose of engaging him in a brief colloquy in the time I have remaining. Is it the intention of the chairman of the subcommittee to completely reverse his position, as it has been reported to us up to this point, by supporting this Maguire-Fenwick amendment?

Mr. ROGERS. Well, I do not think it does reverse my position completely. This amendment says that the land manager can give his concurrence on the redesignation of certain areas in discretionary class I. The small areas, for example, small wildernesses, perhaps represents 0.4 percent of all lands. All this says is that on certain lands, the State must obtain the concurrence of the land manager. I do not think it is that offensive. I have not been a proponent, but I do not think it is that offensive.

Mr. MADIGAN. Let me read to the gentleman one of the strong points that he makes in his report to the full Congress as being a reason for all of us to support this bill. I quote:

Because it removes the Federal Land Manager's authority to control classification of certain lands which is contained in the EPA regulations.

That is the selling point of this bill. But here, we are going to completely reverse that.

Mr. ROGERS. May I tell the gentleman that is still true for 99 percent of the Federal lands. This represents about 0.4 percent of all the land. But, as I said, I have not proposed this but I do not think it is that hurtful.

Mr. MADIGAN. I appreciate the fact that the gentleman did not propose it, and I wish he would not support it because I think he would be more consistent if he would not.

Mrs. FENWICK. Mr. Chairman, I move to strike the last word, and I rise in support of the amendment.

Mr. Chairman, I do support this amendment. I do not think it is an earth shaker. It is a very modest, small amendment that seeks to say that these Federal lands in which all the people now, and we hope for many generations to come, have an interest—this small proportion of the total of class I nonmandatory lands—before they are degraded as to air quality, shall be protected by requiring the concurrence of the Administrator. The fact that they are small makes it all the more important. They are not enormous areas.

They are areas which could be spoiled very easily. In many cases, the Administrator undoubtedly will concur with the decision of the local authorities. But the amendment does give protection, which I think is lacking, so that some of these smaller areas cannot be rapidly and easily degraded in response to local pressures which may be very hard for local

people to withstand. It is not a great big earthshaker. It is not going to do tremendous good. But in the interests of clean air now and in the future, it is a very valuable amendment. I hope it will be adopted.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mrs. FENWICK. I yield to the gentleman from California (Mr. WAXMAN).

Mr. WAXMAN. I thank the gentleman for yielding.

Mr. Chairman, I want to point out what has been already said by a number of speakers, that we are dealing here with smaller national parks, wilderness areas, monuments, recreation areas, primitive areas, and national preserves, which are designated as "presumptive" class I. In other words, they are initially designated as class I, but may be redesignated by the States to the "dirtier" class II category at any time, without Federal approval.

This amendment would not reclassify these areas as mandatory class I.

Mrs. FENWICK. I thank my colleague. It is just a little check, that is all, so that the air quality is not degraded.

Mr. SEIBERLING. Mr. Chairman, will the gentleman yield?

Mrs. FENWICK. I yield to the gentleman from Ohio (Mr. SEIBERLING).

Mr. SEIBERLING. I thank the gentleman for yielding.

Mr. Chairman, I strongly support this amendment. I happen to have spent a good many years of my life helping create the Cuyahoga Recreation Park area, which is now being put together and is a small national recreation area.

I do not want to leave the air quality in what will be the only really big open space in a huge metropolitan area to the sole discretion either of the present Governor or a future Governor. So while I would not object to a Governor initiating action to lower the air quality standards for such areas, I think the Federal managing agency should have the final say.

Mrs. FENWICK. I thank the gentleman for his remarks.

Mr. CARTER. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, in all good conscience I oppose this amendment. The purpose of this bill has been contrary to this concept throughout. I quote again from the committee report and the words of my distinguished friend:

By removing the Federal land manager's authority to control classification of Federal lands, which is contained in the EPA regulations.

Mr. Chairman, this may be small, it may be a small amount, but this is a foot in the door. And under this legislation, as it is written at the present time, the Governors of the States have charge of this and can, when it is appropriate, reclassify a class I area into a class II area after proper procedures are followed. I do not think this will be done on very many occasions, Mr. Chairman, but I feel that this is the beginning and

would result in Federal land management across the board.

In the committee report, also, it states:

These discretionary class I areas would convey class I status initially with subsequent reclassification to class II possible at the discretion of the State.

Right here we are changing that very significant portion of the bill.

So as a matter, in this case, of State rights, I oppose this intrusion, this foot in the door. Mr. Chairman, I urge my colleagues to oppose this amendment.

Mr. LEVITAS. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I am most happy to yield to the gentleman from Georgia.

Mr. LEVITAS. Mr. Chairman, I would like to commend the gentleman for his statement on this point. I think that if we were to adopt this amendment, our problem would be not the extent of land involved but the principle involved.

Many Members can support this legislation because of the flexibility it gives to the people who know best their regions and their areas. I think it is the height of arrogance to believe that some federally appointed land manager cares more about the environment, the natural areas, and the parks of a State than do the people who are the elected representatives, the Governor and the elected representatives in the legislatures.

Mr. Chairman, I think we would be making a terrible assault on the whole concept of this legislation if we were to adopt this amendment. I commend the gentleman from Kentucky (Mr. CARTER) for his statement, and I would like to associate myself with it.

Mr. CARTER. Mr. Chairman, I thank the distinguished gentleman from Georgia (Mr. LEVITAS), and I certainly agree with him on this matter. I strongly oppose this amendment.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield to me before his time expires?

Mr. CARTER. Yes, I yield briefly for a question, but not for a dissertation.

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman for yielding.

I just wondered if the gentleman might think, in light of what the gentleman from Georgia (Mr. LEVITAS) just said, that it might also be the height of naivete to think that a State or a locality is not going to be subjected to tremendous pressures which might cut across air quality values in federally preserved areas?

Mr. CARTER. Mr. Chairman, in answer to the gentleman's question, I will say that I do not agree with that at all.

I think that the people in our States know what they want. Certainly they are proud of their parks; they want to protect them, and they will continue to do that.

Speaking of the parks in my area, no one has ever attempted to take away any part of the park system; rather, they have tried to protect and defend them, and I want the States to have that right.

Mr. MAGUIRE. Mr. Chairman, would

the gentleman acknowledge that there is a difference between a State park, which is indeed a park set aside for the people of that State, and a Federal park?

Mr. CARTER. Yes, of course, but I do not think that bears on the question.

Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey (Mr. MAGUIRE).

The question was taken; and on a division (demanded by Mr. MAGUIRE) there were—ayes 16, noes 32.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. ROGERS

Mr. ROGERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROGERS: Page 320, line 1, after "(h)" strike out "The" and insert in lieu thereof "Effective with respect to each of the two fiscal years beginning after the date of enactment of the Clean Air Act Amendments of 1977, the".

Page 320, line 13, after "(1)" strike out "There" and insert in lieu thereof "Effective with respect to the two fiscal years beginning after the date of enactment of the Clean Air Act Amendments of 1977, there".

Page 320, line 14, after "section," insert "a total amount".

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. ROGERS. Mr. Chairman, all this amendment does is to correct problems relating to the budget, as requested by the Committee on the Budget. We have agreed to this with the Committee on Rules, and this will carry out that commitment.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, we will accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Florida (Mr. ROGERS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. BREAUX

Mr. BREAUX. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

On page 296, strike out lines 4 through 23 and insert in lieu thereof the following:

"(c)(1) Each applicable implementation plan shall contain an area classification plan based on maximum allowable increases in ambient concentrations of, and maximum allowable levels of ambient concentrations of, sulfur dioxide and particulate matter. In the case of increases based on concentrations permitted under national ambient air quality standards for any period of twenty-four hours or less, such regulations shall provide that the Governor of the State may, upon application of any person and after notice and opportunity for hearing, permit the maximum allowable increases specified for each pollutant to be exceeded during five percent of the hours of the year with respect to such pollutant in Class I and Class II areas. Whenever maximum allowable increases for any pollutant are exceeded for

two or more periods of exposure, if one or more of such periods is within a longer period of exposure for which a maximum allowable increase is also exceeded, for purposes of the preceding sentence the number of hours shall be determined only on the basis of such longer period. Concentrations of any pollutant for any period of exposure in any Class I area shall not be permitted under the preceding sentence to exceed the maximum allowable concentrations applicable to such pollutant for such period of exposure for Class II areas; and concentrations of any pollutant for any period of exposure in any Class II area shall not be permitted under such sentence to exceed the maximum allowable concentrations applicable to such pollutant for such period of exposure for Class III areas. Such classification plan shall apply to all areas in each State where the national primary and secondary ambient air quality standards for any air pollutant are not being exceeded. Such classification plan shall provide for designation of all such areas as either Class I, Class II, or Class III as to each such pollutant. Until such designation is effective, all such areas shall be deemed to have been designated as Class II, except as may be otherwise provided under paragraph (3)(B).

Mr. BREAUX (during the reading).

Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

Mr. BREAUX. Mr. Chairman, I would first like to commend the chairman of the committee and the members of the committee for the great deal of work that they have done in bringing this legislation to the floor.

I have discussed my amendment with both the ranking minority members of the committee and also with the chairman of the committee. I wish I could say that I had the chairman's enthusiastic support, but I will point out that I had accepted his suggestions in a couple of ways with respect to the original amendment that I proposed. I have changed the original amendment to incorporate some of the chairman's suggestions, although I am certain that he will not be in a position to support it. We did accept some of his recommendations.

Mr. Chairman, let me tell the members of the committee very simply what the amendment does. The Clean Air Act, of course, is a very, very complicated piece of legislation; but my amendment really is not complicated. Of course, the bill requires that each State, in their implementation plan, set out three different areas within their State and classify them as class I, class II, or class III areas. My amendment, very simply stated, states that the Governor of each State may, in his discretion—he does not have to; it is optional—after an opportunity for and notice of a public hearing, permit the maximum allowable increases specified in each of two pollutants, SO<sub>2</sub> and particulates, to be exceeded during 5 percent of the hours of the year with respect to such pollutants in class I and class II areas. What this simply means is that I am talking about what is happening in two areas, class I and class II.

Mr. Chairman, the way this system

operates, as I understand it, someone wishing to build something in a class II area or any area who comes in, has to use a very complicated computerized method to measure how much of the pollutants are emanating from that particular plant being operated. This is all before the plant is on the drawing board, before it has been constructed.

My amendment would simply say that the Governor can allow that for a class I or a class II area and allow them to exceed the increment standards for those respective categories during 5 percent of the number of hours of the year. This is one of the suggestions that we accepted from the committee chairman, which really tied down exactly what we meant.

Mr. Chairman, that means that for 438 hours out of 8,760 hours in a year, a class I area could allow their increment standards to be exceeded, but never more than the next highest class. Class II areas would have that same option, but could never exceed what the standards are for class III.

Mr. Chairman, let me show the Members how strict these classifications are.

We are concerned about human health and welfare, and the EPA has set out a high standard up here and said that these are the standards we cannot exceed and if we do exceed them, we might be endangering human health. A class I area can only be 2 percent of that health standard, and a class II area could only be 25 percent of that health standard, while a class III area could only be half of that health standard and still not have an amount harmful to human health.

What I am saying, Mr. Chairman, is that each one of these categories would have the option, at the discretion of the Governor, after an opportunity for a hearing, to permit a 5-percent increase. It could never exceed 438 hours in a year. It could not exceed that standard. There could be no exceptions. The same rule would apply universally.

Mr. Chairman, I sent out a "Dear Colleague" letter which gives the Members the classic example of what we are trying to cover in this situation.

Mr. Chairman, there is an application to build a coal-burning powerplant in Utah in a class II area. It clearly meets all the standards for the class II area.

The CHAIRMAN. The time of the gentleman from Louisiana (Mr. BREAUX) has expired.

(By unanimous consent Mr. BREAUX was allowed to proceed for 5 additional minutes.)

Mr. BREAUX. I thank the chairman and I thank the Members for this additional time.

Mr. Chairman, I would like to just explain that this is a classic example of what my amendment would address and try to correct. In Utah—not in my own State; I do not know of a single situation in Louisiana which this affects, so I do not have a parochial interest in it at all; this is just commonsense—there is an application to build a coal-fired electric generating plant to generate electricity for Los Angeles and Anaheim and other parts of California and also in Utah. They want to build in a class II area, and they want to meet all the standards of that class II area. There is

a class I area something like 8 miles to the west of that class II area. The computer model predicts—and they say that they are not really sure of the prediction—but the computer model predicts that 352 days of the year the wind current is going to blow away from that national park and away from the powerplants.

On those days there could be no problems in the class I area but the computer diffusion model predicted and the meteorological experts said that, well, maybe 13 days out of that year the wind might blow the other way and on those days it would blow over the class I area and it might exceed the increment standard for the class I area, which is 2 percent of what they say is healthy in the country, although with a 98-percent margin they could still be healthy but they say that on maybe 13 days out of the year it might affect the class I area. So, under those set of circumstances they would not be able to build a very needed electric coal-powered powerplant. It has to be built with the best available technology available. That means the best available on the market and the best means to take out the pollutants from the area that are available and that are known to man. It has to be built with all that vast technology.

My amendment would say that well, in this type of situation, the Governor, after notice of public hearings and an opportunity for public hearings, may, in his discretion, say that the class I area could exceed their increment standard 5 percent of the hours of a year. Five percent is approximately 18 days. It could never exceed this limitation. I think it is common sense, and I think it is reasonable because what we are looking at, may I say, Mr. Chairman, is the effect on the area over an annual period, not just a few hours of a year. The real determination of whether something is healthy for an area is the effect on that area over a period of a year, not just a period of 3 hours or a period of 24 hours.

Mr. EMERY. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I am happy to yield to the gentleman from Maine.

Mr. EMERY. Mr. Chairman, I thank the gentleman for yielding to me. I would like to engage in a short colloquy with the gentleman from Louisiana. I believe that some of the points the gentleman has raised are very, very valuable. I think his contribution is important. The question of concern to me is how you define the 438-hour variance? That figure is 5 percent of the hours in a year. But is it not a fact that under some scenario it would be possible for the air quality to exceed the projected standards for as much as 146 days, or maybe more, although admittedly it is not practical?

Mr. BREAUX. Is the gentleman from Maine referring to 146 hours or 146 days?

Mr. EMERY. I am referring to 146 days.

On that assumption, is it possible for the air quality to exceed the standards under the gentleman's amendment?

Mr. BREAUX. Under this amendment, never in any set of circumstances could you ever exceed the ambient air standard

which EPA set and said are the standards necessary for protection of health needs. Under my amendment you could never exceed even the annual increment of what you can do in class I, II, or III areas. Never could you exceed that standard for a year.

My amendment would simply allow for short periods during that year, amounting to no more than 5 percent of the 8,760 hours in the year, that you could do that, which calculates out to be about 438 hours out of those 8,760 hours.

It could be, but it is not likely, but it could be that you could have a 3-hour period in 1 day, or could spread that out until it added up to no more than 18 days of a year. But never could the exceeding of that increment standard go over a total of an amount equal to 18 days or to 438 hours out of an entire year.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. EMERY, and by unanimous consent, Mr. BREAUX was allowed to proceed for 2 additional minutes.)

Mr. EMERY. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Maine.

Mr. EMERY. I thank the gentleman for yielding.

My concern, as I have discussed with the gentleman earlier, is that under this amendment, although the goal is laudable and one that I support, given some flexibility, that we may be deteriorating air standards for over a longer period of time than we may really desire. For example, under some scenario we may be deteriorating air quality more than the accepted standard for 146 days—it may be 50, it may be 60, whatever it is.

Mr. BREAUX. If I may interrupt the gentleman, that is not really correct, because it never could exceed more than 18 days. It could be over the period longer than 18 days, but if we took only one hour of those days, it could never exceed the total number of hours that would add up to that.

Mr. EMERY. I thank the gentleman very much. However, as the gentleman has just pointed out, it would be conceivable that there would be some relaxation of air standards once a day every day of the year more or less, or it could be that there would be a relaxation for possibly a 3-hour test period for 146 additional days, and the rest of the days of the year would not be affected. The point is that under this amendment, as I read it, that there is a provision whereby some deterioration or some relaxation could occur when it would not be absolutely necessary.

What I would like to do or what I would prefer to see is some mechanism by which this amendment could be tightened up whereby it would be only 18 or 25 days of the year.

Mr. BREAUX. Let me say to the gentleman we had originally intended to offer an amendment that spoke in terms of days, but we found out that by speaking in terms of hours we could much more tightly draw the amendment to really tighten it up, so we speak only in hours and not days.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BROYHILL. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I would like to ask the gentleman from Louisiana (Mr. BREAUX) to stay in the well for the purpose of continuing this discussion that he was having with the gentleman from Maine (Mr. EMERY).

Is it not a fact that his amendment says that the regulation provides that the Governor of the State, upon application and after notice and opportunity for a hearing, could permit a variance up to the 5 percent? In other words, this is not going to happen automatically. You have to go to the Governor; you have to apply; you have the opportunity for notice and hearing, and the governor has some flexibility. In other words, the variance perhaps could not even go up all the way to the 5 percent; it could be somewhere in between, if the Governor so determined; is that not a fact?

Mr. BREAUX. Let me answer the gentleman this way. He is correct in his question and the implication of his question. I would say to the gentleman that the Chairman originally in a dear colleague letter indicated that I was not for States' rights, and it concerned me a great deal because I really am, so I changed the amendment and allowed the Governor discretion, after public hearing and notice of that public hearing, to do this. The gentleman from North Carolina is absolutely correct. It is in his discretion.

Mr. BROYHILL. That should satisfy the concern of the gentleman from Maine that if the State wants to make this decision, it can do that, and it also has some flexibility.

Mr. BREAUX. I think the gentleman made a good point, because the State always has the authority to say no, if they think it is going to exceed the 5 percent, or it is going to be carried out over a period longer than they would see fit to have it carried out.

I would say to the gentleman this: A key point on this is that what we are talking about is trying to handle problems that are going to occur because of computerized modeling in trying to plan what these plants are going to do if they are constructed in an area. We are not talking about existing facilities. This amendment is going to apply only to new facilities, and it is going to go into effect looking at a computerized model telling us what could happen if the weather and wind blow this way instead of that way. So I think we have to use a little commonsense in trying to clean up the air and at the same time come out with a strong workable bill. I will say to the gentleman from North Carolina it is strictly at the option of the Governor.

Mr. BREAUX. It is going to be a tool that they can use in trying to determine whether they are going to be able to accept a permit for a new facility to be built. It is as simple as that.

Mr. BROYHILL. I would also point out and I think the gentleman has already made this point that 362 micrograms is difficult to measure because it is so small. We are really talking about in this vari-

ance permitting not much extra pollution at all because the standard itself is so small that it is difficult to measure.

Mr. BREAUX. I think the EPA will admit that a class I increment standard is immeasurable. It is not measurable in that amount. We are only talking about what would be kicked out of a computer that would say it is 7.3 micrograms. That is what the computer would say. It is not even anything an EPA instrument can measure.

Mr. BROYHILL. So with respect to the SO<sub>2</sub> pollutants in a particular area, it would be impossible to measure the 2-percent increase over and above that.

Mr. BREAUX. That is exactly correct. It can only be measured by a computer as to whether this is present. It cannot be measured on any instrument as to whether it is present.

Mr. BROYHILL. What we are talking about is being able to permit some flexibility when it goes to the Governor, to permit some computerization of the information so as to determine what the pollution might be.

Mr. BREAUX. We are talking about flexibility and commonsense.

Mr. MAGUIRE. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, at first glance figures like 5 percent and 18 days per year sound as if they are very minor modifications to the basic provisions of this bill. However, if one looks at the numbers more closely to determine what the actual effect could be on air quality in a given region, on the amount of pollutants that would be permitted to be emitted from a given stationary source, plus the effect of the amendment on the structure of this bill, I think we would have to agree that the intent of the bill would be thoroughly undermined by this amendment and that pollution from a given stationary source and standards of regional air quality could be disastrously effected.

A close look at the amendment would show that class II would cease to exist with respect to the area given the variance. We would in effect be going to class III. And similarly, if there were a variance for class I to class II, we would be eliminating class I and going entirely to class II. Clearly this undermines the entire structure of the bill.

And, if we would move from class I to class II there would be no role, not even a consultative role, for the Federal land manager with respect to those national park areas which are given the protection of mandatory class I in the bill.

With respect to the actual figures, if we calculate out what 5 percent or 18 days per year means, it translates into increases in pollution from an individual plant under various alternative conditions of a minimum of 350 percent and a maximum of 1,200 percent.

This is because the worst 18 days of the year are on a declining curve and in relation to the entire year the worst 18 days would provide a very significant portion of the total amount of the pollution. If we slip from a class I to a class

II or from a class II to a class III, we set aside those worst 18 days as if they do not count at all and permit the same worst 18 days all over again. Let me repeat: This allows 3½ to 12 times the amount of pollution in these areas and we will in effect have abolished the very class with respect to which the variance is granted.

In addition to that, the gentleman has modified his amendment to allow the variance to be calculated out in terms of hours and he says it would be 5 percent of the hours in the year which is 438, if I heard the gentleman correctly.

This apparently means they could have violations every single day of the year, not 18 days a year, but every single day of the year; they could have an hour or more each day of violations which would completely undermine the intent and structure of this Act.

I think everybody should be very, very clear as they approach the vote on this amendment that this amendment destroys the significant deterioration section of this bill. There is absolutely nothing left of the significant deterioration section of this bill. If we want clean air, we must defeat this amendment, which is very far-reaching and destructive of the purposes of the act.

Mr. BREAUX. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Louisiana.

Mr. BREAUX. Mr. Chairman, I would rather be for clean air and commonsense, because we can have both.

Mr. MAGUIRE. Not under the gentleman's amendment; maybe under another amendment.

Mr. BREAUX. Mr. Chairman, if the gentleman will yield further, what the gentleman is saying, we could have a violation every day of the year. That is simply not correct. The gentleman sat in the hearings. The gentleman should know that if there is one violation in three of the standards every day in the year, we are talking about in excess of 900 or 1,000 hours. That is more than double what is allowed.

Mr. MAGUIRE. Even if the gentleman is correct, and I am not sure the gentleman is, there could then be violations 2 out of every 3 days.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

(By unanimous consent, Mr. MAGUIRE was allowed to proceed for an additional 2 minutes.)

Mr. MAGUIRE. Mr. Chairman, I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I think one thing we have to keep in mind, I know when the amendment was first broached to me yesterday, I thought about it in favorable terms. I did not see any real difference. I thought 1 day in 18 days is not a big deal, except when it was pointed out to me when we go to that 18 days, what we do is push the 18th day up to the 1st day and then we shift the whole curve.

Mr. MAGUIRE. That is exactly right.

Mr. HARKIN. If the gentleman will yield further, that is what is troubling to

me, that every other day of the year we are allowing more pollutants and the whole curve shifts. That is what has to be kept in mind.

Mr. MAGUIRE. The gentleman is exactly right. This has a very deleterious impact, not just on 18 days, or 5 percent of the hours, but on the entire year and it wipes out the categories the bill has provided for ambient air quality control.

Mr. CARTER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask the distinguished gentleman from Louisiana (Mr. BREAUX) some questions about the gentleman's amendment.

I would like to ask if the primary and secondary standards will be exceeded in this area for 5 percent of the days.

Mr. BREAUX. Well, the primary and secondary air standards would never under my amendment be exceeded. The only thing that could be exceeded under my amendment are 432 hours out of the year or in individual increment standards, but each of the root classes, the standards that EPA says are sufficient to maintain good health and welfare, could never be exceeded under my amendment.

Mr. CARTER. Mr. Chairman, as I understand, this is near a national park or national preserve of some sort; is that correct?

Mr. BREAUX. If it applies to class 1, it will also apply to a class 2 area, which might not be a national park.

Mr. CARTER. In class 1 areas, it is permitted that the level of 2 percent be exceeded 12½ times, I believe; is that correct? That is written in the legislation.

Mr. BREAUX. I would accept that.

Mr. CARTER. Will this exceed that 2 percent allowable increment of pollution in a class 1 area?

Mr. BREAUX. I am not really sure whether I understand the gentleman's question. I would say the only 5 percent variance it allows to be increased is the increment standards set out by the EPA, which is 2 percent of the primary and secondary standards, that would only be allowed to be exceeded by my amendment.

Mr. ROGERS. Will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Florida.

Mr. ROGERS. I would say this amendment would allow it to go up 12½ more than the 2 percent. It would allow it to go up 25 percent.

Mr. CARTER. Further, I would like to ask this question: In class II areas, of course, there is a limit in that of 25 percent above the baseline of pollution in that area. If I may also include the chairman in the colloquy, I would ask him if that is not true in class II areas.

Mr. BREAUX. That is true. Class II is 25 percent.

Mr. CARTER. Would this 25 percent above the baseline level permitted in class II areas be exceeded?

Mr. BREAUX. It would be able to be exceeded, but never more than that set in class III. It would be allowed to vary by those number of hours, 438 hours a

year, but never higher than the standard set by class III. It would allow it to exceed. That is the purpose of my amendment.

Mr. CARTER. But primary and secondary standards would not be exceeded?

Mr. BREAU. They will never be exceeded under any circumstances by my amendment.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Florida.

Mr. ROGERS. I think the question the gentleman has brought out points out the danger of this, because it would allow class I really to go up to class II in a national park area; and allow class II areas to go up to class III. So, this is the concern of the committee.

Mr. BROYHILL. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from North Carolina.

Mr. BROYHILL. But only for 5 percent of the hours. The purpose of the gentleman's amendment is to give flexibility for 5 percent of the hours only.

Mr. ROGERS. It is 5 percent of the hours as originally proposed by Mr. BREAU.

Mr. CARTER. I will say that the basic portion of this bill to me is primary and secondary standards of such stringency as will protect the public health and welfare. Of course, that is going to be written in the record. I know there is a long dissertation to the effect that there is no standard that will protect the public health and welfare in some instances, which may be true, but in such cases the standards should be lowered sufficiently.

If the primary and secondary standards are not exceeded at any time, then the public welfare, the public health, should be protected according to this legislation.

Mr. MOORHEAD of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I rise in support of the Breau amendment. In this legislation, which is vitally important to the people of the country for clean air quality, it is important that we consider the overall air quality for everyone, and that we use a little commonsense. The amendment that is being offered at the present time would permit only a very, very limited number of projects to be built under any circumstances. There are very few places where we have environmental situations where there are only 13 days of the year where there would be any chance of pollutants.

In the project that we are considering here, the Intermountain project, we have a project that is vitally important to at least 1 person out of 20 in this country. Southern California has a tremendous environmental problem. Today, most of our electricity is produced through steam generating plants.

Those steam generating plants burn oil. At the present time it is very difficult to get anything but dirty oil, so a lot of these plants are operating on variances. The people of southern California have more smog in the air because they are

not able to have projects of this kind that we are trying to build. The health of 4 or 5 million people of this country could be improved if the Intermountain project could be built. So this amendment is an environmental amendment. Anyone who says he wants to improve the health of the people of this country will support this amendment because it will improve the health of 1 person out of 20 in this country who live in southern California.

The project itself is located about 10 miles from Capital Reef National Park. For 2 years a study has gone on in that area to determine what the environmental conditions are, when there would be an overcast in the area, when visibility would be down, when it would be good. There is about 20 percent of the time when the environmental conditions in the park cut down visibility somewhat from natural causes. Under normal circumstances, one can see about 85 miles in the park. If this project goes into effect, for 13 days of the year visibility might be cut down by 5 to 10 miles, but the park is only 64 miles long. So there would be no noticeable difference whatsoever in visibility and no visible difference in the environment. But when we come to the strict terms of this act as it is presently written, it would probably prevent this coal-fired powerplant project from being developed at a time when we must convert to coal.

For that reason, if we are interested in the environment and America's energy needs we will let the Inter-Mountain project be built. It has been approved by both houses of the Utah Legislature, by the Utah Governor, by the California Legislature, by the Governor of California. These people are all vitally interested in the environment, perhaps more so than we are back in the Eastern part of the country because environment is so important in the West. They want to protect these areas. This particular project will provide 2,600 people with jobs in an area of Utah where jobs are very scarce. It would help those people tremendously. It would not hurt their environment. It is not going to reduce the visibility within the park. It is not going to hurt the health of a single individual. However, Mr. Chairman the Inter-Mountain project would promote essential economic growth, and since the powerplant in question would be coal fired, it would help us meet our energy needs as America moves from costly foreign oil to the utilization of our vast coal reserves.

It is important to us. It is important to the overall health of the people of this country. This amendment is in the national interest.

Mr. Chairman. I ask for an aye vote.

The CHAIRMAN. The time of the gentleman from California (Mr. Moorhead) has expired.

(On request of Mr. Maguire and by unanimous consent, Mr. Moorhead of California was allowed to proceed for 3 additional minutes.)

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD of California. I yield

to the gentleman from New Jersey (Mr. Maguire).

Mr. MAGUIRE. Mr. Chairman, is the gentleman aware that IPP, the Inter-Mountain Power Project group, testified before our subcommittee, the Subcommittee on Health and Environment, on March 29 of this year, that it could move its plant to a site east of the national park where it could be built without violating the class I increment? Is the gentleman aware of that?

Mr. MOORHEAD of California. Mr. Chairman, I am aware that over \$6 million has been spent on the present site and I am aware that there is no guarantee that should the site be moved, no serious or perhaps fatal obstacles would be encountered.

Mr. MAGUIRE. It is a \$4.2 billion project.

Mr. MOORHEAD of California. It is over a long-range period, yes.

Mr. MAGUIRE. So that \$6 million would be about one-tenth of 1 percent of the cost.

Mr. MOORHEAD of California. The fact is that this powerplant is environmentally sound. Electrostatic precipitators would remove 99.5 percent of all particulates and scrubbers would remove 90 percent of the SO<sub>2</sub>. The fact is, this country needs coal-fired energy. The fact is, this powerplant should not be prohibited by unreasonably restrictive legislation.

Mr. BREAU. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD of California. I yield to the gentleman from Louisiana (Mr. Breau).

Mr. BREAU. I thank the gentleman for yielding.

Mr. Chairman, I would like to say to the gentleman they could possibly move the plant 5,000 miles away, but they are going to run into other types of problems which will be equally as serious if not more serious than where it is going to be located.

One of those is a visual pollution problem at the site the gentleman is talking about. It will be moving in closer to where people live, work, and operate, and they do not want the plant there either.

Mr. MOORHEAD of California. Mr. Chairman, one thing we run into is this: This project has been approved environmentally by the people in Utah. It has gone through the steps that are necessary for it to go through.

They could perhaps move it someplace else, as the gentleman from Louisiana (Mr. Breau) has said, but then they might run into all kinds of obstacles. At the present time the project, where it is now located, is ready to go if it is not disturbed further.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. MOORHEAD of California. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, I just want to clarify the record for the Members. I think the Members need to know that this particular project has received no permits, and there has been no environmental impact statement issued for it.

The alternative site, which would not do violence to any of the classifications in the bill, is located in the same county. We are talking about costs that are in the tenths of 1 percent of the total cost of the plant. I think this is a classic case where we should not alter the basic structure of a law to take care of one specific situation when in fact that specific situation can be taken care of under the existing framework of the law simply by a very, very minor modification of the proposal.

So, Mr. Chairman, I would hope that the gentleman would not press his point.

AMENDMENT OFFERED BY MR. MCKAY AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. BREAUX

Mr. McKAY. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. McKAY as a substitute for the amendment offered by Mr. BREAUX: Strike out the text of the Breaux amendment and insert in lieu thereof the following:

"(c) (1) Except as may otherwise be permitted under subsection (d) in the case of air pollutants other than sulfur oxides and particulates, each applicable implementation plan shall contain an area classification plan based on maximum allowable increases in ambient concentrations of, and maximum allowable levels of ambient concentrations of, any air pollutant for which a national ambient air quality standard is established. In the case of an increase based on concentrations permitted under national ambient air quality standards for any period of twenty-four hours or less, such regulations shall permit such limitations to be exceeded during one such period per year and, in addition, in the case of the maximum allowable increase of sulfur dioxide for the three-hour period of exposure, a class II increment variance may be granted as provided in section 162. Such classification plan shall apply to all areas in each State where the national primary and secondary ambient air quality standards for any air pollutant are not being exceeded. Such classification plan shall provide for designation of all such areas as either class I, class II, or class III as to each such pollutant. Until such designation is effective, all such areas shall be deemed to have been designated as class II, except as may be otherwise provided under paragraph (3) (B).

Page 320, after line 9, insert:

(g) (1) Subtitle C of title I of the Clean Air Act is amended by adding the following new section at the end thereof:

**"CLASS II INCREMENT VARIANCE**

"Sec. 162. (a) For purposes of this subsection—

"(1) The term 'class II increment variance' means a variance granted under this section (prior to, or in conjunction with, a permit required under section 160(c) (4)) by the Governor of a State to a proposed new or modified stationary source of sulfur dioxide which permits such source to construct and operate in an area designated as class II under section 160 without regard to the maximum increase of sulfur dioxide allowable for such area under such section 160 for the three-hour period of exposure.

"(2) The term 'Federal land manager' has the same meaning as when used in section 160.

"(b) (1) After consultation with general purpose units of local government (in accordance with section 125) and State legislative representatives, and after notice and

opportunity for public hearings, upon application by the owner or operator of any proposed new or modified stationary source, the Governor of the State in which such source is proposed to be located may grant a class II increment variance to such source if—

"(A) such owner or operator demonstrates to the satisfaction of the Governor, and the Governor finds, that the conditions of subsection (c) have been met, and

"(B) the State establishes (and provides for enforcement of) such emission limitations as may be necessary to assure that the conditions of subsection (c) (2) will continue to be met.

Such opportunity for public hearings shall be provided at the State capitol and in each political subdivision in which the maximum allowable increase for sulfur dioxide for the three-hour period of exposure will be permitted to be exceeded by reason of the variance (as determined by the Governor on the basis of the application).

"(2) No variance granted under this section shall take effect unless—

"(A) the Governor provides the Administrator, and the appropriate Federal land manager (in any case in which Federal lands are located in the area in which the maximum allowable increases for sulfur dioxide would be exceeded by reason of the variance), with a written report supporting his findings, and

"(B) (i) the Administrator finds that the procedures required under paragraph (1) have been followed and concurs with the Governor's findings required under subsection (c), and

"(ii) in any case in which a report is required to be provided to a Federal land manager, the Federal land manager concurs with the Governor's findings required under paragraph (2) (D) of subsection (c).

The Administrator and appropriate Federal land managers, if any, shall, after notice and opportunity for public hearing, concur or refuse to concur in the Governor's findings for purposes of this paragraph and publish notice thereof in the Federal Register not later than 180 days following their receipt of the report required under subparagraph (A).

"(c) A variance may be granted only if the Governor finds that the following conditions have been met—

"(1) (A) the Administrator has promulgated regulations under subsection (d) specifying applicable models and modeling techniques to be used for purposes of this section.

"(B) construction and operation of the source at the site at which the source proposes to locate (or undertake a modification) has fewer or less severe environmental impacts than construction and operation at other reasonably available alternative sites, and

"(C) the source cannot construct and operate at the proposed site unless a variance is granted under this section, and

"(2) (A) emissions from the source will not affect concentrations in any area in which the class II maximum allowable increase of sulfur dioxide for 3 hours is permitted to be exceeded by reason of any other variance granted under this section.

"(B) the total number of days during which, in any calendar year, the class II maximum allowable increase for sulfur dioxide for the three-hour period of exposure will be exceeded by reason of the variance (when all modeled or monitored measurements of pollutant concentrations are aggregated) will not be more than 5 percent of the days of such year and only over an area of unpopulated terrain which is—

"(i) not less than 1,000 feet above the base of any stack used by the source to disperse emissions, and

"(ii) not more than 10 miles from any such stack.

"(C) the increases in concentrations of sulfur dioxide in such area over the baseline concentrations (determined under section 160) for the three-hour period of exposure will not exceed the maximum increases allowable for such period of exposure under section 160 for areas designated as class III, and,

"(D) emissions of all pollutants from the source will not cause or contribute to air pollution concentrations—

"(i) in any area in which a national primary or secondary standard is exceeded or in any area classified under section 160 which concentrations are in excess of the maximum concentrations (other than the specific increment with respect to which the variance is granted) specified for such area under section 160, or

"(ii) in the area in which the maximum allowable increases for sulfur dioxide will be exceeded by reason of the variance, which concentrations may reasonably be anticipated to cause harm to humans, animals, plant life, or visibility, or to any use, feature, or value of the area, or

"(iii) in any Federal area (other than a national forest) which cannot be designated other than class I or class II as specified in section 160(c) (3) (B), which concentrations are in excess of the maximum concentrations specified for such area under section 160(c) (2).

"(d) No source will be eligible for a variance under this section until the Administrator, by regulation, determines that there are generally available air quality models and modeling techniques which are sufficiently accurate to allow reliable and competent implementation of the provisions of this section. Such regulations shall specify such models and modeling techniques. Upon petition of a State, the Administrator shall determine whether or not such models and techniques are generally available, and if he finds in the affirmative, he shall specify such models and techniques.

"(e) For the purposes of this Act, the conditions contained in subsection (c) (2) shall be treated as requirements of the applicable implementation plan. If the Administrator determines that a source to which a variance is issued under this section is in violation of any condition of subsection (c) (2), he shall—

"(1) enforce such condition under section 113;

"(2) give notice of noncompliance and commence action under section 122; or

"(3) take any appropriate combination of such action."

(2) Section 113(b) (4) of such Act is amended by inserting "162(c) (2)" before "121."

**CONFORMING AMENDMENTS**

Page 263, line 14, after "facilities," insert "a variance under section 162 (relating to class II increment variances)."

Page 263, line 17, after "suspension," insert "variance."

Page 264, line 10, strike out "or".

Page 264, line 11, insert "or variances under section 162 (relating to class II increment variances)" after "indirect sources)".

Page 269, after line 22, insert: "(iv) any source which has received a variance under section 162 and is not in compliance with any emission limitations pursuant to such variance."

Mr. McKAY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment offered as a substitute for the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Utah?

There was no objection.

#### POINT OF ORDER

Mr. BREAUX. Mr. Chairman, I make a point of order against the amendment offered as a substitute for the amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. BREAUX. Mr. Chairman, I have discussed this amendment with the author of the amendment, the gentleman from Utah (Mr. McKay), and I think the amendment should be offered. However, I do not think it should be offered as a substitute for the particular amendment that is now pending.

The reason is, No. 1, that I think the amendment offered by the gentleman from Utah (Mr. McKay) goes considerably farther in bringing in other sections of the act that is before us than does my amendment.

My amendment does not speak to any duties or obligations of the Administrator of EPA. It does not put any authority on or require the Federal land manager to take any steps or actions in this 5-percent exception that my amendment provides for.

My amendment regulates class I in two areas. The amendment offered by the gentleman from Utah (Mr. McKay) only talks to class II areas.

My amendment regulates and pertains to two potential pollutants, SO<sub>2</sub> and particulates. The gentleman's amendment, as I understand it, only relates to particulates.

While the amendment offered by the gentleman from Utah (Mr. McKay) may be proper at some other point in this particular legislation, I would object to his offering it at this point because it is not germane and because it goes considerably farther than does the pending amendment.

The CHAIRMAN. Does the gentleman from Utah (Mr. McKay) desire to be heard on the point of order?

Mr. McKay. Yes, I do, Mr. Chairman.

The CHAIRMAN. The Chair will hear the gentleman.

Mr. McKay. Mr. Chairman, I think what the gentleman from Louisiana (Mr. Breaux) seeks to do is also what I seek to do in many respects, except that my amendment merely narrows what he is trying to do. It only deals with one pollutant, SO<sub>2</sub>, as the gentleman has indicated. It does not violate the principle or the intent of the act here proposed.

So, Mr. Chairman, I think this is just a narrowing of the language and becomes very valid in connection with the amendment.

The CHAIRMAN. Does the gentleman from Florida (Mr. Rogers) desire to be heard on the point of order?

Mr. Rogers. Yes, Mr. Chairman, I wish to speak against the point of order.

Mr. Chairman, both of the amendments to section 108 concern the same issues. They go to the increments and variances, and I think the amendment offered by the gentleman from Utah (Mr.

McKay) is very much in order as a substitute.

Mr. CARTER. Mr. Chairman, may I be heard on the point of order?

The CHAIRMAN. The Chair will hear the gentleman.

Mr. CARTER. Mr. Chairman, I wish to ask this question:

Does the amendment that is proposed by the gentleman from Utah (Mr. McKay) exceed the primary and secondary ambient air standards?

Mr. McKay. No, it does not.

Mr. CARTER. It will not exceed the standards at any time.

Mr. Chairman, if I may, I would like to ask the distinguished chairman of the subcommittee this question: Does either of these amendments actually exceed the primary and secondary ambient air standards?

Mr. ROGERS. Mr. Chairman, I think not.

Mr. CARTER. Mr. Chairman, I thank the distinguished subcommittee chairman, and I thank the gentleman from Utah (Mr. McKay).

The CHAIRMAN pro tempore (Mr. Danielson). The Chair has heard and considered the point of order and the arguments in support of and in opposition thereto and will now rule.

The McKay amendment is germane as a substitute for the Breaux amendment. The McKay amendment deals with the same subject of variances for sulfur dioxide pollutants. The Breaux amendment is broader insofar as it affects particulate matter pollutants as well as sulfur dioxide. The McKay substitute, while technically containing more language inserted at another place in section 108, nevertheless deals with the same subject in a more limited way.

The point of order is overruled.

Mr. McKay. I thank the chairman.

The CHAIRMAN. The gentleman from Utah (Mr. McKay) is recognized for 5 minutes in support of his amendment.

Mr. McKay. Mr. Chairman, I salute the chairman of the Subcommittee on Health and the Environment, Mr. Rogers, for his long and hard work on H.R. 6161, the Clean Air Act Amendments of 1977. He has struggled to develop a balanced bill which considers all competing interests. I am especially grateful for his interest in the potential impact of the legislation on the State of Utah, culminating in his personal visit to our State last December to discuss the bill with government, business, and environmental leaders. The amendment I offer today has been developed in consultation with him and for that assistance I am most grateful.

Mr. Chairman, my proposal would amend the prevention of significant deterioration provisions of the Clean Air Act Amendments, H.R. 6161. It would provide additional flexibility to States in allowing the construction and operation of new plants in clean air areas of the country. My amendment is entirely consistent with the objectives set out in section 108 of the committee bill. This section deals with prevention of significant deterioration of our clean air re-

sources, a goal which all Americans, but especially those of us lucky enough to be Utahans, strongly support.

While the goals of this section are laudable, I believe that the section could be more flexible and still advance these goals. As now drafted, I fear that these provisions, although necessarily stringent for other regions, could have a potentially severe impact on my State of Utah—perhaps the most rugged and mountainous State in the Nation.

Studies performed by both government and industry show that new plants can locate in Utah under the committee bill, but to escape high terrain, certain plants may seek environmentally unsound sites. My proposal would increase flexibility under the bill so that new plants could locate in areas which minimize the visual impact of the plant from highways, recreation areas, and scenic overlooks.

My amendment is a balanced remedy to the high terrain problem. It assures protection of the public health and the environment, but also assures that areas which are rugged and mountainous will not suffer discrimination under this prevention of significant deterioration policy. The approach I propose is simple: under the strictly specified conditions, the Governor of a State would be authorized to grant a limited variance to a proposed facility, allowing it to build even though it would produce class III pollution levels on high, mountainous terrain.

If I may, Mr. Chairman, let me explain how this proposed variance will work. Even though a stationary source would produce sulfur dioxide pollution exceeding class II levels, and even though the area has not been redesignated as class III, the Governor could grant a variance allowing the plant to construct and operate. The variance would allow SO<sub>2</sub> to reach class III levels on up to 18 days per year on isolated, unpopulated high terrain features in the vicinity of the plant.

Sufficient guidelines have been established to safeguard against arbitrary and ill-considered granting of the variance. Public hearings must be held and the State legislature and local governments must be consulted. The proposed plant's backers must show that the plant cannot be built without the variance and the proposed plant site is environmentally the most desirable site of those reasonably available. Furthermore, they must show that the variance will only apply to sulfur dioxide emissions, only on isolated, unpopulated terrain 1,000 feet or more above the elevation of the site, and that the increased pollution resulting under the variance will not cause harm to the area.

Upon approval of the variance by the Governor, his determination will be subject to review and verification by the EPA Administrator. The Federal land manager will have no review authority except with regard to the Governor's determination of lack of harm occurring to Federal lands under the variance.

So it is clear that sufficient guidelines are included, and that sufficient safeguards are provided. Any arguments

that this amendment opens the door to wholesale, uncontrolled pollution of clean air areas clearly is without foundation. My amendment simply provides the flexibility which protects against unreasonable hardships without weakening policy objectives. The proposed amendment allows for this kind of flexibility by providing a practical solution to real world problems without diminishing the priority which must be attached to the maintenance of clean air.

The variance procedure I am proposing is both reasonable and necessary. Without it, areas in this country of high and rugged terrain with valuable resources may be unintentionally restricted in the development of these resources. Such a policy would be inconsistent with the effort of this Nation to achieve energy independence. Furthermore, new plants might be forced to locate at environmentally unwise sites. The limited flexibility provided in my amendment will avoid these undesirable effects.

I urge my colleagues to adopt this amendment of such importance to Utah and, indeed, to the Nation as well.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. McKAY. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, may I say that I have been listening and we on this side have no trouble with the gentleman's amendment and I would support the intent of providing additional flexibility to states under "Prevention of Significant Deterioration." However, I do have a couple of questions that I would like to direct to the gentleman from Utah, Mr. McKAY, if I may.

As I understand it, the amendment allows a variance from the 3-hour sulfur dioxide increment up to the class 3 increment for high terrain areas. Is that correct?

Mr. McKAY. That is correct.

Mr. ROGERS. Do I also understand that class 2 increments can be exceeded by only 5 percent of the days of the year, which is 18 days per year?

Mr. McKAY. That is correct.

Mr. ROGERS. In the past EPA has interpreted the 5-percent variance approach as permitting the increment to be exceeded 18 days during the year at each receptor site at each location receiving a variance. Of course that would mean that if the increment could be exceeded for 18 days on each of 20 receptor sites, for example, the area actually would be class 3 without having been designated as such or redesignated as such. Is that the gentleman's intent?

Mr. McKAY. Absolutely not. The intent of the amendment is to allow the class 2 increment to be exceeded only on a total of 18 days per year, that means no more than 18 days in any and all directions, not 18 days at each receptor site. They may be exceeded no more than 5 percent of the days or 18 days, and that total would be arrived at by aggregating "all modeled and monitored measurements of pollutant concentrations." This

means that the class 2 increments could be exceeded no more than that.

Mr. ROGERS. Mr. Chairman, I am pleased to hear the gentleman from Utah state his intent is that the 18 days the class 2 increments could be exceeded means it is a total of 18 days at all receptor sites, not 18 days at each receptor. I concur with the gentleman.

One final question. This variance would be applicable to national forests, but not to other Federal areas which, under section 160, could not be redesignated to class 3; is that correct?

Mr. McKAY. That is correct.

Mr. ROGERS. On the basis of the responses of the gentleman from Utah, then, and after looking at his amendment carefully and going over it, I will support it strongly. I think it is carefully drawn; I think it does include adequate guidelines for the Governor and safeguards against its misuse; and I think it also as a result of those guidelines would avoid lawsuits. I think there is no doubt, then, that the committee approach would be enhanced.

Also I want to state that it is my understanding that the president of the Utah Power & Light Co., E. Allan Hunter, says that with this amendment they certainly would be allowed to do everything they need in Utah in the future, and that they support the bill completely, too, with this amendment.

Mr. McKAY. The gentleman is correct. That is my understanding.

Mr. ROGERS. And also the Salt Lake Chamber of Commerce.

Mr. McKAY. That is correct. There is an affirmation from the Salt Lake Chamber of Commerce.

Mr. ROGERS. It supports the bill.

Mr. McKAY. It supports the bill.

Mr. ROGERS. I thank the gentleman, and I strongly support his amendment.

Mr. MOORHEAD of California. Mr. Chairman, will the gentleman yield?

Mr. McKAY. I yield to the gentleman from California.

Mr. MOORHEAD of California. I thank the gentleman for yielding.

This amendment will take care of the needs of the power companies in Utah, but it would not allow construction of the IPP project; is that correct?

Mr. McKAY. No, I do not think that is true. In fact, there is some question as to whether IPP is going to go into the power plant situation of coal gasification at the present time.

The CHAIRMAN. The time of the gentleman has expired.

(At the request of Mr. MOORHEAD, and by unanimous consent, Mr. McKAY was allowed to proceed for 2 additional minutes.)

Mr. MOORHEAD of California. If the gentleman will yield further, as I understand his amendment, it would not allow a variation in the class I area; is that correct?

Mr. McKAY. That is correct.

Mr. MOORHEAD of California. That is necessary for the IPP project.

Mr. McKAY. I am not convinced that

that is altogether true. I propose a class I variance last year, which we got with some variation in the bill and which finally, of course, was defeated. But having reviewed this in many aspects, I came to the conclusion that this was a better solution to the problems that face the developers in the area in the State of Utah.

Mr. MOORHEAD of California. Mr. Chairman, because it does not allow the construction of the IPP project—and I am sure that it does not—I would ask for a "no" vote on the substitute.

Mr. CARTER. Mr. Chairman, I move to strike the last word.

I would like to ask the distinguished gentleman from Utah (Mr. McKAY) some questions. This amendment which the gentleman has proposed would permit the construction of projects in his great State; is that correct?

Mr. McKAY. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Utah.

Mr. McKAY. I thank the gentleman for yielding.

That is true, and in other mountainous States which have a similar high terrain problem.

Mr. CARTER. Yes, sir. By the same token, would it permit the construction of the IPP plant?

Mr. McKAY. The IPP plant?

Mr. CARTER. Yes, sir.

Mr. McKAY. I would guess there would have to be more modification to its original intent or original position, but it is my understanding that they could with some modification still proceed to build a powerplant.

Mr. CARTER. It is my understanding that they will use the best available control technology.

Here is one of the questions that I want to ask: I believe the gentleman stated that the construction of the gentleman's amendment will not permit violation of the primary and secondary ambient air standards.

Mr. McKAY. That is correct.

Mr. CARTER. Neither will the IPP: is that correct? Was that statement made?

Mr. McKAY. That is right.

Mr. CARTER. Was it acquiesced to by the chairman of the committee that the primary and secondary ambient air standards would not be exceeded by either? I am told that the State of California very much needs this project, and it does not have sufficient land on which to build it without exceeding the primary and secondary ambient air standards.

The gentleman knows that I am certainly sympathetic to his amendment, but if we are going to preserve in both cases the primary and secondary ambient air standards which protect the public health and the environment—and we put that in there very strongly that they have to be reestimated at least every 2 years or oftener and must be low enough to actually protect the public health and environment—then why, I ask my friend, should we favor one State

over another when the need is great for both?

Mr. McKAY. I do not think we are favoring one State over another. I think we are talking about geographic circumstances. If we had Kansas, that would not have an effect on Kansas because they do not have the high terrain problem, the high mountainous areas versus the low areas and the wind drafts go a little differently, so I do not think it has the same circumstance.

Mr. CARTER. I certainly am sympathetic with the gentleman but I have to have some sympathy with the other gentleman also.

Mr. McKAY. The gentleman is correct and I have great sympathy for the gentleman, and had I prevailed in my previous attempt I would have been in his camp, but seeing the facts of life and where it rests and trying to find some available way in which to provide for both, I came to this conclusion.

Mr. CARTER. Yes, sir. The fact of the matter is if we permit primary and secondary standards to be exceeded in any area of the United States, then there is no such thing as prevention of significant deterioration because at any time they are exceeded by any plant, be it stationary or any group of mobile sources, that pollution is wafted by the winds from west to east and we have significant deterioration whether we want it or not.

So the way to accomplish the purpose, the way to accomplish cleaner air is to observe these standards to begin with and treat all segments of industry just the same.

Mr. McKAY. I think we do. It is true that IPP would like a little further flexibility. There is no question about that, but I think they can survive under it at the present time. They stepped off of their building for other reasons than this only.

Mr. MAGUIRE. I move to strike the requisite number of words.

Mr. Chairman, I think it is very true that the McKay amendment, as the distinguished chairman of the subcommittee indicated, is much more tightly drawn, more carefully drawn than the Breaux amendment, and it is not pernicious, as is the Breaux amendment, in terms of totally destroying the classifications that the bill presently contains for the significant deterioration section.

I would urge all of my colleagues to support the McKay proposal as opposed to the Breaux proposal when the opportunity comes to vote as between the two of them.

However, I would hope that we would also on any final vote, vote "no" on either of these, whichever one of them may be successful in the meantime, because in both cases—and I am sure the gentleman from Louisiana (Mr. BREAUX) is anxious to make this point as well—we are dealing with a variance proposal resulting from specific circumstances in a given area. But in each case the new policy on variances is general, not specific and will

apply across the board throughout the country despite its origin in a specific local issue.

That is not the way that I believe we should legislate in this House, particularly in view of the fact that in each instance, Intermountain Power and Utah Power & Light, the matter can be taken care of without violating any of the provisions of the bill and in accordance with the provisions of the bill with only minor siting changes.

I would urge the House, after supporting the McKay amendment—which I hope we will because it is far, far less destructive of the bill than the Breaux amendment—that we then vote "no" on either of the amendments. A "no" vote is required if we are to preserve the structure of this legislation, which has been very carefully thought out and provides class II and class III categories with increments which permit any power plant thus far proposed for construction anywhere in this country to proceed. If we are not willing to do that, I do not think we are serious about clean air.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I will try to be very brief in stating my opposition to the McKay so-called substitute amendment to my amendment. I will try in doing so not to be too pernicious, as the gentleman from New Jersey has hinted.

I would join with the gentleman's statement and say we agree on the fact that the McKay amendment is not the amendment we want to adopt.

The chairman of the committee said that the Utah Power & Light Co. would favor the McKay amendment. Of course, they would. It takes care of their problem. It does not take care of anybody else's problem, but it certainly takes care of the problem of the Utah Power & Light Co., because they have to be operating in a class 2 area, but a co-op out there, a nonprofit co-op trying to build in a class 2 area, that might by computer model indications affect a class 1 area that it certainly does affect, then it does not solve their problem.

I might say to the gentleman that although the amendment of the gentleman from Utah is well-intentioned, I would say that the Inter-Mountain Power Project, the project of the co-op, would not be assisted, it would not be helped; they would be in no better situation than they are if the gentleman's amendment is not adopted, because it simply does not affect the class 1 area with they have some problems, as well as might many other plants around the country.

Mr. Chairman, let me state some of the other concerns I have about the gentleman's amendment. It only affects one particular pollutant, so. It is very narrowly drawn from the Utah Power & Light Co. It only applies to class 2. It is for a 3-hour period, not a 24-hour period.

We are not really biting the bullet. Let us not do it half way. It will not help anybody.

The thing that really concerns me

about the amendment of the gentleman from Utah is all the "ifs" that are contained in it. The Governor may allow a variance in one category if he finds it is necessary, if the Administrator of EPA concurs, if the Federal land manager concurs. I think the chances of all that happening in any situation are infinitesimal. We will have people who have a veto, other than the people in the State who are duly elected by the people in the State, making the choice. We will have the Federal land manager, who is a Federal bureaucratic employee, who is not responsible to anybody when an election comes up. We will let the Administrator of EPA in Washington have veto power. All these add up to a situation where the amendment is only going to take care of maybe one power company and not help the others we are really concerned with, the nonprofit co-op type situation, for which the amendment is not of any benefit at all.

Mr. JOHNSON of Colorado. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. Mr. Chairman, I would concur with the gentleman. I have a number of preferred oil, shale and coal developments, in my district. As I have tried to study this, it has been very difficult for me to understand all the ramifications of development versus the environment. Those in the West with all the problems will never take a chance of transferring from a class 1 discretion area of national forests to put it into a wilderness area, unless something like the gentleman's amendment is passed and we have some sort of variance procedure that is broader than the McKay amendment; so I endorse the gentleman's amendment.

Mr. SHUSTER. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Pennsylvania.

Mr. SHUSTER. Mr. Chairman, do I understand that the Governor must make such a request before such a transfer can be made?

Mr. BREAUX. Which amendment is the gentleman talking about?

Mr. SHUSTER. I am talking about the amendment of the gentleman from Louisiana.

Mr. BREAUX. My amendment says that the Governor may, upon request of the operator seeking a permit, after public hearing and after notice, grant such a discretion.

Mr. SHUSTER. So an official of the State is the man who will be speaking. I think that is eminently reasonable.

Mr. BREAUX. Not an employee of the public agency.

Mr. SHUSTER. I associate myself with the gentleman.

Mr. McKAY. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Utah.

Mr. McKAY. In response to the statements made earlier, under the bill any

new wildlife classification automatically becomes class II.

Mr. BURLISON of Missouri. Mr. Chairman, I move to requisite number of words.

Mr. Chairman, I want to commend the gentleman from Louisiana (Mr. BREAU) for the fine presentation he has made, and I would like to associate myself with his remarks. I rise in support of his amendment, and in opposition to the McKay amendment.

I am going to target my remarks to one category, and that is the nonferrous metals—copper, lead, and zinc.

In May, 1976, the Department of Commerce issued an important study on this subject. In addition to assuming that new smelters would use the best available pollution control technology, the Commerce study also assumed that there would be no other major industrial installations in the vicinity of new smelters. In other words, that the total incremental changes permitted under the House and Senate bills would be available to new smelters. I now would like to summarize the conclusion of this important study, turning first to copper. Commerce found that 77 percent of existing copper smelters could not be built in the class II areas provided for in the bill we are debating, and 69 percent could not be built in class III areas. The percentages for lead smelters are very similar. They found that 78 percent of existing lead smelters could not be built in class II areas, and that 62 percent could not be built in class III areas.

The figures for zinc smelters are less dramatic, but still troublesome. Thirty percent of existing smelters could not be built in either class II or class III areas. As one might expect, no new copper, lead or zinc smelters could be built in class I areas. Commerce did find, however, that the current EPA class III increments would have virtually no impact on the construction of new copper, lead or zinc smelters.

The Commerce study has a clear message: If Congress adopts this section of the bill without this amendment, most of the new copper and lead smelters that an expanding American economy will need will not be built, and a substantial fraction of the zinc smelters needed also will be halted.

In the case of new copper smelters, the situation appears to be even more dramatic. In February, the EPA completed a final draft of its study of non-deterioration's impact on the copper smelting industry. Specifically, the EPA study concludes, and I quote:

If, however, both land purchase to preclude violations outside the perimeters of a smelter and new technologies are not available, no new smelters will be constructed between 1983 and 1990. The freeze on capacity growth would cause the price to increase to 1.31 \$/lb. by 1985 which is 12 percent above the baseline forecast. The price would probably not increase beyond this level due to greatly increased copper imports which would rise to about 40 percent of U.S. consumption. The constraint on capa-

city growth would also adversely affect domestic production and employment levels.

Mr. Chairman, I find it very interesting that 3 months after completing this final draft, the EPA still has not released its final study. What does all this mean?

Mr. ICHORD. Mr. Chairman, will the gentleman yield?

Mr. BURLISON of Missouri. I yield to my colleague from Missouri.

Mr. ICHORD. Mr. Chairman, I have heard the statement given by my colleague from Missouri. I commend him, and I commend the gentleman from Louisiana for introducing his amendment. I associate myself with the remarks of both gentlemen.

First, it means that new jobs will not be created.

Second, it means growing American dependence on imports for vital industrial materials and an adverse impact on our trade balance.

Third, it means that if new smelters are not built, then fewer copper ore bodies will be developed in the West, fewer zinc mines will be brought into production in zinc-rich Tennessee, and a lot of Missouri lead may stay in the ground.

Let me be somewhat more specific. Between now and 1985, U.S. copper production should be expanded by about 60 percent, or about 1 million tons.

If that does not happen, copper imports, which now account for 10 percent to 15 percent of consumption, will rise sharply to about 40 percent.

Lead metal imports have been running about 10 to 15 percent of consumption, not counting scrap. If new smelters could be built, the United States might stop its import dependency and become a modest exporter of lead metal.

The CHAIRMAN. The time of the gentleman from Missouri (Mr. BURLISON) has expired.

(By unanimous consent, Mr. BURLISON of Missouri was allowed to proceed for 1½ additional minutes.)

Mr. BURLISON of Missouri. The situation in our zinc industry is far more critical than in copper and lead. In the past 6 years, this country has lost half of its zinc smelting capacity and this country is about 50 percent dependent upon imports.

Mr. Chairman, I believe the amendment offered by the gentleman from Louisiana (Mr. BREAU) will allow some additional, well-controlled smelters to be built in this country. It was not too long ago when we experienced shortages of industrial materials, the soaring prices and the use of vital raw materials for political purposes. We should not let this happen again, and a vote for the Breau amendment will lessen the chances that it will.

In summary, Mr. Chairman, I have simply said that this bill, without the Breau amendment, will trigger a phase-out of domestic production of non-ferrous metals. It will mean the end of non-ferrous metal independence of this country and will subject us to a black-

mail similar to the one we have experienced in recent history, and I am referring, of course, to the Arab petroleum embargo.

The McKay amendment is a very thinly veiled mirage or subterfuge embraced by the committee to defeat the Breau amendment. Let us defeat the McKay substitute and let us adopt the Breau amendment.

Mr. ICHORD. Mr. Chairman, I rise in strong support of the amendment of my colleague from Louisiana to section 108, the so-called nondegradation provisions.

Section 108 as it now stands provides for the designation of certain classes of lands based on their air quality, the most lenient of which is class III. Even in class III areas section 108 permits only limited development.

Mr. Chairman, all of us appreciate the fact that our air quality is a common resource and requires cooperative effort to prevent further significant deterioration. However, the provision of section 108 is stringent beyond the realm of commonsense.

Section 108 would limit development in nondeterioration areas to specific, allowable increases in pollutant concentrations. However, before a new facility can relocate that business or individual must demonstrate that these rigid increments would not be exceeded more than once per year.

This provision fails to take into account changes in meteorological conditions—conditions obviously beyond the control of mankind—when short-term violations may be impossible to prevent.

My colleague, Mr. BREAU, has offered a sensible remedy to this obvious absurdly stringent requirement. This amendment, recognizing the reality of changing weather conditions, merely allows short-term—24 hours or less—allowable increments to be exceeded in class I and class II areas up to 5 percent of the time, rather than only once as provided in the committee bill. In other words this amendment allows for weather changes approximately 438 hours a year rather than just once a year.

Mr. Chairman, we are not talking here about changing the air pollution increments which are severely limited by section 108. Congressman BREAU's amendment leaves this provision intact. And we are not talking about significantly affecting the air quality standards set by these clean air amendments.

What we are talking about is flexibility and commonsense which were so obviously absent when section 108 was drafted.

A vast portion of Missouri will be affected by the restrictions on economic development and job creation established by this bill.

My State, like so many other States, has suffered from the economic reversals faced by this country. Missouri is also a rural State which contributes to our good air quality but which means we are being penalized from further development, and the jobs for our people such development will mean, due to our own environmental

efforts and the agricultural nature of our State.

Missouri is a State of vigorous people who love and use our natural resources in a sensitive fashion. We are also a State of commonsense people, however, who can only foresee economic disaster for our rural State if we have to meet the "once per year" standard of section 108.

Enactment of the Breaux amendment leaves intact the essence of nondegradation standards but provides the flexibility to allow some economic expansion in these areas.

I have yet met a person who can count on the weather only once per year.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the study the gentleman was quoting has not analyzed this bill at all. This was a prior bill, 9 months ago, and all of the provisions have changed. In fact, it was good 2 years ago. So the study, while I know it concerns the gentleman, simply does not apply to this bill.

Mr. BURLISON of Missouri. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Missouri (Mr. BURLISON).

Mr. BURLISON of Missouri. I thank the gentleman for yielding.

Mr. Chairman, I would say to the gentleman that this draft I referred to, which was termed a final draft, has not been enlarged upon, it has not been revised, and it has not been made final.

I referred in my remarks to the fact that the EPA had not finalized this statement, so I agree with the gentleman on his remarks. That does not make the "final draft" inapplicable to the issues at hand.

Mr. ROGERS. Without question, it does, because these points were never considered. They assumed, No. 1, a pollution ceiling of no more than 75 percent of the lowest national standard. That is not in the bill at all. The bill contains a pollution ceiling of 100 percent of the lowest standard. The Commerce Committee study, which the gentleman quotes and refers to, states approximately 420 permanent mandatory class I areas. Actually in the bill there are 125 mandatory class I areas.

Under the study, they assumed—it was one of the basic assumptions—that all new smelters were required to use the best pollution controls regardless of cost. Actually, under the bill, the economic costs and energy impacts must be considered by EPA before it determines which control technology must be used.

It is also interesting to note that even assuming all of the overly restrictive provisions contained in the Commerce study, the proposal would not restrict expansion and growth of the domestic copper industry. In fact, the Commerce study showed that the class III increments in the bill would allow expansion of the existing smelters by 68 to 96 percent and allow construction of new smelters, increasing total national capacity from 54 percent to 208 percent. Yet the copper industry consultants project only a 30

percent increase for new smelter capacity by 1990.

Obviously the provisions in the bill have changed the whole issue, so the study has absolutely no validity as applied to this bill, and the gentleman can be assured that the committee would take this into consideration in changing the provision to make sure the copper industry can build far beyond what is projected even in the wildest projections.

Mr. BURLISON of Missouri. Mr. Chairman, will my friend, the gentleman from Florida, yield?

Mr. ROGERS. Certainly I yield to the gentleman from Missouri.

Mr. BURLISON of Missouri. Mr. Chairman, I will say to the gentleman that the experts with whom I have talked and who are vitally concerned and vitally interested in these three industries in the nonferrous metal category certainly do not share the conclusions that have been reached by the distinguished chairman of the subcommittee. They assure me that the statistics as cited are accurate, and I am inclined to accept the evidence and the conclusions from the experts with whom I have conferred and who are active in those three industries.

Mr. ROGERS. Mr. Chairman, I understand the gentleman's position.

May I say that the gentleman may accept the word of his experts, but I am just telling him what is in the bill. That is, of course, for his judgment.

I might also tell the gentleman that the United Steelworkers, representing the workers who have organized the copper industry at the smelters—and it is their workers who are interested in new jobs—fully support the bill. So perhaps the gentleman has received a little misinformation.

Mr. WAXMAN. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the McKay substitute.

Mr. Chairman, the utility industry is split over the type of variance needed in order for them to construct powerplants. We have two separate utilities that are involved in the two amendments that are before us, the McKay substitute and the Breaux amendment.

The Intermountain Power Project, which will deliver much of its electricity to Los Angeles—which is my district—wants a 5-percent variance from the class I increments, and, therefore, they are supporting the Breaux amendment. The Utah Power & Light has testified that they do not need a class I variance, but a 5-percent variance from the class II increments would satisfy them.

The arguments are overwhelmingly against any class I variance that we would have under the Breaux amendment. The amendment would mean serious, irreversible degradation of our national parks and other class I areas and would totally eliminate the bill's protection of these areas.

EPA and the subcommittee staff have analyzed the Breaux amendment pretty

carefully, and they have several conclusions that I want to reiterate to the Members here:

First, the variance would utterly revoke the protection afforded by the class I designation; it would allow construction of powerplants as large as 4,000 megawatts—and the Nation's largest now is 3,000 megawatts—less than 10 miles away from national parks and wilderness areas; it would allow ambient pollution levels 2 to 4 times greater than would be permitted without a variance; and it would allow each source's emission levels to be up to 12½ times more than that permitted without a variance.

IPP is pressing for this variance because its primary plant site is very near Capital Reef National Park, which will be designated a class I area.

Some people in Los Angeles, as my colleague from the Los Angeles area, the gentleman from California (Mr. MOORHEAD), has argued, think they ought to allow the IPP to go ahead and construct. But let me assure the Members that I have talked with the mayor of the city of Los Angeles, and he does not believe that.

Let me also assure the Members that in the testimony we received from IPP itself before the subcommittee, they admitted that IPP could move its plant to a site east of the park, where it could be built without violating the class I increments.

Mr. Chairman, the McKay amendment is asking for a variance of class II, and it is a very tightly drawn amendment. I happen to be not particularly crazy about any of these variances, because it seems to me that if we set a standard, we ought not to allow variances away from that standard.

Nevertheless, the McKay amendment is a reasonable one. It is tightly drawn. It will permit the construction of the Utah power and light project and not destroy the protection we want to give to class I areas.

Therefore, Mr. Chairman, I want to express an opinion contrary to that of my colleague, the gentleman from California (Mr. MOORHEAD), and as the only Californian on the Subcommittee on Health and Environment, say that I oppose the Breaux amendment and that I urge the adoption of the McKay amendment.

Mr. DUNCAN of Oregon. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Breaux amendment and in opposition to the McKay amendment.

Mr. Chairman, in rising in support of the Breaux amendment and in opposition to the McKay amendment, I do so with reluctance because of my friendship and respect for the gentleman from Utah (Mr. McKay).

I rise with some trepidation, with humility, the same trepidation and humility that those who both support and oppose this bill or the key parts of it must inevitably feel, because it is an infinitely complex subject. The facts are hard to come by. They are impossible to agree on, and they are frequently confused with opinions and predictions.

And, because men and women of good will recognize the impact which an unwise decision will have on the health and safety and livability of the environment on the one hand, and the need of our people for jobs and income and production and goods and food and housing, on the other, it is impossible for us to choose between health problems and social problems—of unemployment and hunger and poverty that lead to the riots of Watts and Bedford Stuyvesant. We must reconcile the two, and to do so it is necessary for us to compromise somewhat on the "no degradation" concept if these social problems are to be avoided, and if, indeed, the environmental movement itself is not to be endangered. There is evidence of the latter.

Mr. Chairman, this Congress itself moved to build the pipeline from Prudhoe Bay when it was delayed by environmental considerations; and in the special election in the State of Washington just this last week, I am told that one of the major issues was jobs versus environment. To the extent that it was an issue, the people spoke for jobs. Jobs require energy; conservation, yes, but new sources of energy are required.

It is not possible or desirable to consider energy and jobs in one compartment and the environment in the other.

We must interface the two in a reasonable fashion, and we can do it today.

Mr. Chairman, I believe the Breaux amendment does just that. As I understand it, it would relieve not only the single problem in Utah which the McKay amendment addresses, but it is directly applicable to a number of other energy-producing plants around the Nation, including one in Montana, located near the Cheyenne Indian Reservation, which would serve the Pacific Northwest, and another plant in northern California, in addition to the industrial plants which my friend from Missouri just mentioned, which produce essential commodities for the Nation and furnish these jobs that, tomorrow, we will be worried about.

Mr. Chairman, the Breaux amendment does not affect health and safety, and the gentleman from Kentucky (Mr. CARTER) emphasized that point not once, but twice. It does not destroy class I areas. Indeed, it puts a cap on the amount of degradation, and it must be approved, in any event, by the Governor after notice and a public hearing.

In fact, Mr. Chairman, as I understand the specific problem in Utah which the Breaux amendment will take care of and the McKay amendment will not. That plant is going to be prohibited, even though it is located in a remote area, some 8 or 9 miles from a class I area. Through a worst-case model study which is a mathematical computer projection, no more or no less reliable than the econometric projections which we use to try to predict unemployment and the level of the economy, this model study predicts—and listen to this—that on 352 days out of the year there will be no degradation, but on 13 days out of the year there is a possibility—and get "pos-

sibility"; it is not a probability, it is a possibility—that there will be a degradation of the quality of that air by an amount that is barely measurable by the technology which we have.

Mr. Chairman, it seems to me that to state that proposition in our economic climate of unemployment and energy shortage and inflation is to refute it.

For that reason, Mr. Chairman, and because of the need for energy and jobs and in the absence of an adverse impact on health and safety, I urge a "no" vote on the McKay amendment and a "aye" vote on the Breaux amendment.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. DUNCAN of Oregon. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I thank the gentleman for yielding.

I do want to point out that in order to provide for one plant in America, if we allow everyone to pollute for 142 days, that is not a very reasonable approach.

If the gentleman would yield still further, it is particularly unreasonable when the president of IPP in testifying before the committee said that they could move in the same county, have the same water rights protected and build their plant.

The CHAIRMAN pro tempore (Mr. EVANS of Colorado). The time of the gentleman has expired.

(By unanimous consent, Mr. DUNCAN of Oregon was allowed to proceed for 2 additional minutes.)

Mr. DUNCAN of Oregon. If I may recapture my time, the gentleman has mentioned the point before, the amendment offered by the gentleman from Louisiana (Mr. BREAU) does not permit pollution on 142 days. I suggested that it is 15 days. It has now been redrafted in terms of the request of the chairman to do it on an hourly basis, or on a three hourly basis of pollution. Let me add that no one, neither the gentleman from Kentucky (Mr. CARTER) or the gentleman now speaking, or anyone, wants to affect the safety of this country. But we never exceed the next allowable level of degradation and the degradation itself is predicted to be virtually immeasurable.

The Chairman mentions only one plant in Utah. I have mentioned northern California and I have mentioned the plant in Montana that needs to be expanded in order to supply energy and jobs in the Pacific Northwest and there are doubtless others. I know that there are many industrial plants that can be affected.

The CHAIRMAN. The time of the gentleman has again expired.

(On request of Mr. ROGERS, and by unanimous consent, Mr. DUNCAN of Oregon was allowed to proceed for 1 additional minute.)

Mr. ROGERS. Will the gentleman yield?

Mr. DUNCAN of Oregon. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I believe it is well to point out that the gentleman seems to say it is down to 15 days, but let

me suggest how many hours there are in a year. There are over 8,000 hours in a year.

Mr. DUNCAN of Oregon. I believe the figure mentioned was a maximum deviation of some 400 hours.

Mr. ROGERS. There are some 8,760 hours in a year. Five percent would be 442. On the 3-hour basis that would mean 3 into 442, or 147 days per year.

Mr. DUNCAN of Oregon. It is some 400 hours, as I am told. That does not mean that during that period of 400 hours out of the year that you are going to have pollution, it simply means it could go that high.

Mr. ROGERS. That is right.

Mr. DUNCAN of Oregon. But it does not mean that it necessarily would.

Mr. ROGERS. Will the gentleman yield?

Mr. DUNCAN of Oregon. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I thank the gentleman for yielding to me again.

But, of course, you could pollute about 150 days out of the year.

Mr. DUNCAN of Oregon. Let me say that the word "pollute," I would suggest to the gentleman, is a scare word, because the levels we are talking about, as the gentleman mentioned, on any occasion are virtually indistinguishable. We are not talking about the health and safety of the people.

The CHAIRMAN pro tempore. The time of the gentleman has again expired.

Mr. MARRIOTT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the McKay high-terrain variance amendment.

Utah is fortunate to be the repository of significant reserves of coal and other fossil fuels. The supplies of coal and oil shale resting under the rugged landscape of Utah would be sufficient to provide America's total energy requirements for several decades. With the Nation facing the certainty of the need to convert to coal and other domestic resources, Utah stands ready and willing to help us to move toward greater energy independence.

But Utahans recognized the necessity to protect against the unnecessary and unplanned deterioration of clean air. If we thoughtlessly let our air become polluted, if we fail to conserve this increasingly scarce resource, we simply will not be able to simultaneously provide new jobs and protect the public health.

So Utah stands ready to develop its resources—carefully and soundly—while it protects its clean air from unnecessary deterioration.

I know the sponsors of this bill have tried to work out a reasonable approach to prevention of significant deterioration. But in Utah, because of our rugged terrain, the bill's provisions potentially may have an unintended, but nevertheless, severe impact. This is so because the State is a succession of mountain ranges, narrow valleys, and high mesas and plateaus. It would be very difficult to

build a large coal-fired powerplant, for instance, anywhere in Utah, so that its emissions would not strike a mountain or a cliff face. Under the bill, therefore, with its tight restrictions on new pollution increases, large new sources of pollution would have to either build smaller, perhaps uneconomical plants, or build large plants in environmentally undesirable sites.

The McKay amendment would assure that the bill has the flexibility under prevention of significant deterioration requirements to assure that new plants can locate in the best location, both from an economic and an environmental standpoint. It does so by authorizing the Governor to grant to a new plant a carefully defined variance permitting sulfur dioxide pollution levels to increase up to class III levels on 5 percent of the days of the year, or 18 days in total, at all receptor sites in all directions from the plant. Of course, as my colleague indicated, this is a high terrain variance only; that is, it is applicable only to isolated, unpopulated, high-terrain features 1,000 feet or more above the elevation of the plant.

The safeguards against improper use of this variance authority have already been spelled out by my colleague, Mr. McKay. As he has stated, there is no question that this is a tightly drawn, well-balanced amendment. It will provide needed flexibility to the bill without endangering the goals which the section seeks to advance. It applies only to extreme terrain conditions where a necessity for the variance has been clearly demonstrated.

In other words, I do not think a more carefully constructed, more reasonable amendment could be proposed. I urge my colleagues to support the McKay amendment.

Mr. SIMON. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I guess we are all provincial from time to time looking at the problems of the Nation through the problems in our districts. All of a sudden we find ourselves in some kind of a fight between two utilities in Utah that I do not know anything about. But I do know of some problems in southern Illinois—territory not much different from that which my friend, the gentleman from Kentucky (Mr. CARTER) represents and just across the river from my friend, the gentleman from Missouri (Mr. BURLISON).

I have in my district the Shawnee National Forest, and thanks to the help of some of the Members here, we adopted an amendment that protects the Shawnee National Forest from strip mining. We just barely adopted it, but we adopted it and it became law. I am interested in protecting that national forest.

I am also interested in protecting the air of that national forest, but I also have in my district a lot of coal mining. I also have a district with the lowest average family income of any district in the State of Illinois. I have four coun-

ties with about 20 percent unemployment, and we need jobs. I want practical answers that protect the air and yet give jobs.

The McKay amendment does not provide any flexibility for an area like mine. It is fine for Utah but not for my area. The Breaux amendment provides flexibility, but, in my opinion, too much flexibility. I have discussed with the gentleman from Maine (Mr. EMERY) the possibility of changing this to meet the criticisms of the chairman of the committee, the gentleman from Florida (Mr. ROGERS), and I have also discussed this with the gentleman from Louisiana (Mr. BREAU). Let me ask the gentleman from Louisiana whether in reply to criticisms from the gentleman from Florida (Mr. ROGERS)—which I think have some validity—he would be willing to accept an amendment through unanimous consent or however we would do it, if the McKay amendment is defeated, that would say, leaving the hours in, "Except that in no case may such maximum allowable increases for all pollutants be exceeded during more than 18 days"? So there is an 18-day limitation. It is a practical limitation.

Mr. BREAU. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to the gentleman from Louisiana.

Mr. BREAU. I thank the gentleman for yielding.

I would say to the gentleman that we put in the hour setup to really try and tighten it down. In no way did we ever intend that we would have more than 18 days exceeding that allowable standard. So if the gentleman's suggestion is that we say that we have a maximum of 5 percent of the hours in a year that we can exceed this level, but that it can occur in no more than 18 days out of that year, I would say to the gentleman in the spirit of compromise I would be willing to accept that suggestion as an amendment to my amendment.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I will yield to the gentleman from Florida, but before I yield to the gentleman from Florida let me say my position would be in opposition to the McKay amendment and in support of the amendment of the gentleman from Louisiana provided that qualification is in there.

Mr. Chairman, I yield to the gentleman from Florida, the chairman of the committee, for whom I have great respect, and I would tell the gentleman I am supporting his bill.

Mr. ROGERS. I appreciate the spirit of the gentleman in trying to work out a compromise.

The committee would still be concerned with his proposal because the Breaux amendment affects both class I and class II, but particularly class I with which I am concerned. These are the national parks, the areas that belong to all people, and to allow that pollution to be increased. This is our concern.

Mr. SIMON. If I may just interrupt, I would say I share that concern because

we have a national forest in my district and I want to protect that national forest, but also I do not want to prevent jobs from coming in.

Mr. ROGERS. The national forests are category II and not category I.

Mr. SIMON. That is not the way I read the bill.

Mr. ROGERS. I would be glad to have the staff give the gentleman that assurance, that national forests are not class I areas.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I would say to the gentleman that this legislation is so drawn in order to protect our air and I would oppose dropping the primary and secondary standards below the point of protecting the public health.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. CARTER, and by unanimous consent, Mr. SIMON was allowed to proceed for 2 additional minutes.)

Mr. CARTER. Mr. Chairman, if the gentleman will yield further, in no way can we exceed the secondary standards which protect the environment and the national forest the gentleman is talking about, but I want to tell the gentleman that if we would permit exceeding those standards, then certainly I would oppose that legislation.

The only difficulty I have with the McKay amendment, and I have great respect for this fine man, is that it is for one area and one plant. I think we should have equal justice for all. I do not know anything about the IPP particularly except that it is out there and will furnish electricity to the great city of Los Angeles, but it seems when we slice the thing up we should be evenhanded.

I thank my distinguished friend for yielding.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. EMERY, and by unanimous consent, Mr. SIMON was allowed to proceed for 1 additional minute.)

Mr. EMERY. Mr. Chairman, will the gentleman yield?

Mr. SIMON. I yield to my colleague, the gentleman from Maine.

Mr. EMERY. Mr. Chairman, I thank the gentleman from Illinois for yielding.

I am very interested in the proposed change that the gentleman in the well has mentioned. I would like to tell the gentleman, should the pending substitute fail, it has been my intention to offer a substitute that I have discussed with the gentleman that would change the hour provision to an 18-day provision, and if some suitable language can be worked out to accomplish that I would be happy to join the gentleman in the well to clear up that difficulty. I think it would be useful if those of us who have that concern could agree on one amendment and then write another one afterward.

Mr. SIMON. I think that is a practical solution, and if the gentleman from Maine and the gentleman from Louisiana can get together on an amendment, I think that makes sense and protects an area like mine and at the same time does not permit massive assaults on the air quality.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

(On request of Mr. BROYHILL and by unanimous consent, Mr. SIMON was allowed to proceed for 1 additional minute.)

Mr. BROYHILL. Mr. Chairman, will the gentleman yield for a comment?

Mr. SIMON. I yield to the gentleman from North Carolina.

Mr. BROYHILL. Mr. Chairman, I wonder if the gentleman is aware of the language in the amendment that this is not an automatic variance. An application must be made to the Governor.

Mr. SIMON. I understand.

Mr. BROYHILL. And the Governor of course could permit this up to that amount. So it really is to give some flexibility, and the Governor would have of course to take into consideration factors that might exist in that particular State.

Mr. SIMON. I am very much aware of that and that is a protection. I have concerns, as I look at my district, however, with just the hours in the bill because I know there is not going to be adequate monitoring 24 hours of every day, so it looks to me like that is too large a loophole. If we can have an agreement on only so many days, then we have some adequate protection and some flexibility.

Mr. BROWN of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I think we have probably adequately clarified this issue. It had not been my intention to speak on it, but since it is a matter which relates somewhat directly to southern California, I would like to make my own position clear.

I feel that the bill we have before us is an excellent bill. It has been carefully drawn by the subcommittee and the full committee under the leadership of the distinguished chairman and the ranking minority Member. I think they have brought to us a bill which we should all be able to accept. I want to commend them for that.

Mr. Chairman, with regard to the problem represented by the Breaux amendment and the McKay substitute amendment, I have been torn, because even the people who are involved in California are of mixed feelings about the matter. I have had visits from the commissioners of the publicly owned power utility in Los Angeles, who expect to obtain power from the Inter-Mountain project. They lead me to feel that they support the Breaux amendment, because it represents the most expeditious way of moving ahead to meet their needs for power. Of course, anything which will allow them to generate their power requirements without adding to the pollution in the Los Angeles basin, they are very highly in support of and want to proceed with. However, the mayor of the

city of Los Angeles and the State officials responsible in this particular situation have a different point of view from the commissioners of the utilities themselves. There are other publicly owned utilities, that will also benefit from this project, supporting the Breaux amendment.

Mr. Chairman, after listening to the excellent debate on this matter and considering all of the various facts that have been brought forth here, I am inclined to feel that for me, and I may not represent a typical position at all, the best position is to support the McKay amendment, which does narrow the variations permitted under the present language of the bill, which provides a continuing safeguard against the degradation of a class 1 area and which will not materially handicap proceeding with development on a powerplant, even if it does require a slight change of sites.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I appreciate the statement of the gentleman from California. I think it is interesting for the House to note that the two Congressmen who are affected, the two Congressmen from the State of Utah, support the McKay amendment. The gentleman from California and the committee support the McKay amendment and the Chamber of Commerce of Utah supports it. I would hope the House would support the McKay amendment and vote down the Breaux amendment.

Mr. BROWN of California. Mr. Chairman, I thank the gentleman from Florida.

As I say, this is not an easy decision to make and each has to look at it from his own point of view. I look at it, frankly, from the standpoint of strong environmental control; but I am not about to adopt a position that will prevent southern California from getting the power it needs or the jobs it needs to sustain its economy. I have that problem before me very strongly in the case of the Kaiser Steel plant in my own district, which is the largest single pollutant source in the whole State of California.

Mr. Chairman, I have found that reasonable compromises can be worked out to protect both these values. I think the McKay amendment and the committee bill is the kind of compromise we need in the present situation and I support them.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Utah (Mr. McKay) as a substitute for the amendment offered by the gentleman from Louisiana (Mr. Breaux).

The question was taken; and on a division (demanded by Mr. BREAUX) there were—ayes 20; noes 25.

Mr. ROGERS. Mr. Chairman, I demand a recorded vote.

#### POINT OF ORDER

Mr. BREAUX. Mr. Chairman a point of order. The vote was announced. No one was standing when the vote was announced.

The CHAIRMAN. There was no inter-

vening business. The point of order is not well taken and is therefore overruled.

#### RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from Florida (Mr. ROGERS) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 170, noes 237, answered "present" 1, not voting 25, as follows:

[Roll No. 285]

## ANSWERED "PRESENT"—1

Bafalis

## NOT VOTING—25

|              |          |               |
|--------------|----------|---------------|
| Abdnor       | McEwen   | Skelton       |
| Bedell       | Metcalfe | Skubitz       |
| Brooks       | Moakley  | Spence        |
| Clawson, Del | Poage    | Steers        |
| Dent         | Pressler | Teague        |
| Florio       | Price    | Thompson      |
| Forsythe     | Pursell  | Young, Alaska |
| Holt         | Roe      |               |
| McCloskey    | Sisk     |               |

The Clerk announced the following pairs:

On this vote:

Mr. Thompson for, with Mr. Teague against.

Mr. Moakley for, with Mr. Florio against.

Mr. Price for, with Mr. Skelton against.

Mr. Metcalfe for, with Mr. McCloskey against.

Mr. BRINKLEY and Mr. RONCALIO changed their vote from "aye" to "no."

Mr. LONG of Maryland changed his vote from "no" to "aye."

So the amendment offered as a substitute for the amendment was rejected.

The result of the vote was announced as above recorded.

AMENDMENT OFFERED BY MR. EMERY AS A SUBSTITUTE FOR THE AMENDMENT OFFERED BY MR. BREAUX

Mr. EMERY. Mr. Chairman, I offer an amendment as a substitute for the amendment.

The Clerk read as follows:

Amendment offered by Mr. EMERY as a

substitute for the amendment offered by Mr. BREAUX: In lieu of the matter proposed to be inserted by the Breaux amendment insert the following:

"(c)(1) Each applicable implementation plan shall contain an area classification plan based on maximum allowable increases in ambient concentrations of, and maximum allowable levels of ambient concentrations of, sulfur dioxide and particulate matter. In the case of increases based on concentrations permitted under national ambient air quality standards for any period of twenty-four hours or less, such regulations shall provide that the Governor of the State may, upon application of any person and after notice and opportunity for hearings, permit the maximum allowable increases specified for such pollutants to be exceeded during not more than 18 days during any annual period in Class I and Class II areas.

Concentrations of any pollutant for any period of exposure in any Class I area shall not be permitted under the preceding sentence to exceed the maximum allowable concentrations applicable to such pollutant for such period of exposure for Class II areas; and concentrations of any pollutant for any period of exposure in any Class II area shall not be permitted under such sentence to exceed the maximum allowable concentrations applicable to such pollutant for such period of exposure for Class III areas. Such classification plan shall apply to all areas in each State where the national primary and secondary ambient air quality standards for any air pollutant are not being exceeded. Such classification plan shall provide for designation of all such areas as either Class I, Class II, or Class III as to each such pollutant. Until such designation is effective, all such areas shall be deemed to have been designated as Class II, except as may be otherwise provided under paragraph (3)(B).

Mr. EMERY (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Maine?

There was no objection.

Mr. BROYHILL. Mr. Chairman, will the gentleman yield?

Mr. EMERY. I yield to the gentleman from North Carolina.

Mr. BROYHILL. Mr. Chairman, I have had an opportunity to examine the amendment offered by the gentleman from Maine (Mr. EMERY), as a substitute for the amendment offered by the gentleman from Louisiana (Mr. BREAUX) and, as I see it, the amendment only makes one change and that is on 5 percent of the days rather than 5 percent of the hours. Is that correct?

Mr. EMERY. That is correct.

Mr. BROYHILL. Mr. Chairman, I believe under those circumstances I would personally be willing to accept the amendment offered by the gentleman from Maine (Mr. EMERY) as a substitute for the amendment offered by the gentleman from Louisiana (Mr. BREAUX).

Mr. EMERY. I thank the gentleman.

Mr. COHEN. Mr. Chairman, will the gentleman yield?

Mr. EMERY. I yield to my colleague, the gentleman from Maine.

Mr. COHEN. Mr. Chairman, I thank the gentleman for yielding.

As I understand the amendment it means that any violation during any portion of one day would constitute a vio-

lation for the entire day, so, under your substitute amendment there could be no violation that would exceed a total of 18 days, as proposed under the original Breaux amendment, where you could have 3 hours during the course of 1 day and spread it out over 100 odd days.

Mr. EMERY. That is correct. It is designed to correct that situation. I do not believe that was the intent of the amendment offered by the gentleman from Louisiana (Mr. BREAUX).

Mr. COHEN. So to exceed the limitation of any monitoring period during the course of 1 day, that would mean that constitutes a violation for that 1 day and there cannot be more than 18 days during the course of an entire year.

Mr. BREAUX. Mr. Chairman, will the gentleman yield?

Mr. EMERY. I yield to the gentleman from Louisiana.

Mr. BREAUX. Mr. Chairman, I would say the amendment offered as a substitute by the gentleman from Maine (Mr. EMERY) is a good amendment. It simply says that any variation could only occur 5 percent of the time, in no case could that period extend more than 18 days in a year. That was really the intent of my amendment. I believe this clarifies it and spells out exactly what it means. I certainly support it. I would hope every Member will support the substitute and then support my amendment as amended by the substitute amendment.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. EMERY. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I support the amendment offered by the gentleman from Maine (Mr. EMERY) as a substitute for the amendment offered by the gentleman from Louisiana (Mr. BREAUX).

Mr. EMERY. I thank the gentleman from Kentucky.

Mr. MARRIOTT. Mr. Chairman, will the gentleman yield?

Mr. EMERY. I yield to the gentleman from Utah.

Mr. MARRIOTT. Mr. Chairman, I would like to rise in support of the amendment offered by the gentleman from Maine as a substitute for the amendment offered by the gentleman from Louisiana.

I believe it will solve the problems of IPP and other powerplants. I support the amendment.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take this time in order that the Members will know what they will be voting on. This amendment offered by the gentleman from Maine (Mr. EMERY) to the amendment offered by the gentleman from Louisiana (Mr. BREAUX) and the Members may not know this, says that industries can build right up next to a national park and can pollute the park when there is no need for it.

As a matter of fact, this is introduced basically for the IPP plant in Utah. The testimony before the committee was that the Utah plant could be built by shifting it a few miles. It is an undertaking of some \$4.2 billion out there, and by

shifting a few miles—and permits have not even been granted yet; I think they may have invested \$6 million out of \$4 billion—they can avoid polluting the parks that belong to all of the people of this country. They can shift. They still have all of their water rights, because it is in the same county.

The committee has gone over this problem, and to allow now an exemption that is applied nationwide to handle the problem really of one plant, when the vice president of the company himself said in testimony to the committee, it could be built a few miles away. I think is not a proper course to take.

Certainly the Emery amendment is some improvement, should it be adopted—and I presume it will since the author said he would accept it. I would hope that the House would reject this approach. It is contrary to cleaning up the air. It is contrary to keeping the parks clean and does not require any showing of need for the variance. There are no criteria in the amendment to guide a Governor at all. We are going to open here again this whole subject to court suits. This is the problem. If they think they have got problems, wait until the litigation starts.

I would urge that the Committee of the Whole look at this carefully. I think it should be rejected, and our committee would urge a no vote on the Breaux amendment.

Mr. CARTER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the recent amendment which we had would have permitted construction of a powerplant in Utah, and that was quite all right with my good friend, the distinguished gentleman from Florida (Mr. ROGERS). But now when it comes to constructing another plant, this is all wrong—or to use the same measuring stick for all segments of industry is wrong.

We know that the primary and secondary standards which are written into this law protect the public health. The secondary standards protect the environment. By no stretch of the imagination can nor will this hurt national parks. I would be the first to oppose it if it did. It just uses a broad brush and gives equity to two different companies, one which would provide power to the city of Los Angeles and perhaps others in the country, and also my distinguished friend from the great State of Utah who had the preceding amendment would be permitted to construct his plant. We just would give the same right to all people, not just to one.

But remember, one of the things is a basic limitation in this bill which I have supported since its beginning 2 years and 2 months ago, and that is that primary and secondary standards be strong enough to protect the public health, strong enough to protect the environment, and that means our national parks.

Mr. BROYHILL. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from North Carolina.

Mr. BROYHILL. I thank the gentleman for yielding.

I ask the gentleman this question: As he knows, in Class I a 2-percent increase or increment would be permitted over the baseline that is measured for the pollutants that are in that park; is that correct?

Mr. CARTER. That is correct.

Mr. BROYHILL. The gentleman from Kentucky has had scientific training, scientific background, and experience. Does the gentleman know if one can measure 2 percent of 365 micrograms, which is the daily 24-hour standard?

Mr. CARTER. It is my understanding that we cannot at the present time.

Mr. BROYHILL. That is 365 millionths of a gram.

Mr. CARTER. A microgram is a millionth of a gram; that is correct.

Mr. BREAUX. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I take the time to try to explain this amendment, because, when the Breaux amendment was discussed, many of the Members who are here now were not on the floor. I think I would like to explain exactly what my amendment does if we accept the Emery amendment to my amendment.

Basically the country under this act is going to be divided up into three separate classes, into class I, class II, and class III. In each one of these categories the EPA has set a national air quality standard which is way up here on a high level, and class I can only be 2 percent of what that higher level is set at. In other words, if they say this is the level we can have increments in the air that is not going to harm our health and welfare, then a class I area can have only 2 percent of that standard, the class II area can have only 25 percent of that ambient air standard, and class III, which is a highly industrialized area, can have up to 50 percent of what they say is still all right for our health and welfare.

My amendment says that the Governor of a State in his State implementation plan may at his discretion, after notice and after a public hearing, say to a class I and a class II area that they can exceed the increment. The levels allowable in this class I area can be exceeded no more than 5 percent of the time in a year.

The amendment offered by the gentleman from Maine (Mr. EMERY) would say that means it could occur in no more than 18 days out of a year.

How high can we increase the class I standards? Not any higher than class II standards. And the class II cannot go higher than the class III standards. And then the class II is only one-quarter of what they say is all right for our health and welfare and class III is only one-half.

It applies only to new plants and new facilities that still have to use all the best technology and science available to man before they can construct any facility. The classic example is set out in a "dear colleague" letter I sent out. If, for example, the plant was going to be built in a class II area which is 8 or 10 miles away from a class I area, that would be fed into the computer, and, if the computer said there are 152 days out

of the year when the wind is going to blow from the class I area and across the powerplant, and maybe only 13 days a year that it might blow across the class I area, my amendment says in that situation we should use commonsense and allow the Governor of a State, duly elected, to decide whether he will permit then a 5-percent exemption only to go to class II—never above.

Mr. DUNCAN of Oregon. Mr. Chairman, will the gentleman yield?

Mr. BREAUX. I yield to the gentleman from Oregon.

Mr. DUNCAN of Oregon. Is it not true that it would be applicable all over the United States and other plants would be affected besides the one the gentleman pointed out in Utah?

Mr. BREAUX. It applies to all States.

I would ask the Members to adopt the Emery amendment to my amendment and then accept my amendment.

Mr. MAGUIRE. Mr. Chairman, I move to strike the last word.

Mr. Chairman, there is something very appealing about the notion that we are going to be moderate and flexible by dealing with only 18 days out of 365 when winds might blow in an unusual direction.

The fact of the matter is, however, that when we take those 18 days and set them aside, what actually happens is that on every other day of the year we will have higher levels of pollution than we would otherwise have been permitted to have. The curve looks something like this. The worst day is up here. The next worst 5 days are here, and the next 5 days, and so on, and the curve slopes down according to the variable conditions of the air in the area.

Once we have eliminated those first 18 days, at which point we get down to pollution levels of about 30 percent of what we started with, we then would start the whole curve at the top again—the worst pollution day—and carry it out over a slope for the entire 365 days of the year.

Now, that is not easy to grasp. It took me several sessions with the subcommittee staff and a pencil to figure that out. But that is the actual effect of the Breaux amendment, even as amended by the gentleman from Maine (Mr. EMERY).

The practical result of that is that if the computer projections of the gentleman from Louisiana (Mr. BREAUX) on how the wind is going to blow turn out to be wrong we are going to have increased pollution, dramatic increases in pollution of our pristine national parks and wilderness and other areas on potentially every day of the year. Maybe it would only be 360 days. Maybe it would be only 250 days. But the purpose of this legislation is precisely to protect areas to different standards depending on the values we want to ascribe to those areas. A class I area is for the purpose of protecting our national park, wilderness, and recreation and other such areas to a standard as close to its natural pristine character as we can. If we accept this amendment now, we will in effect dispense with class I and we will have nothing but Class II and Class III in terms of the air degradation that we are going to permit.

Moreover, the Class II areas will even be permitted under the modified Breaux amendment to accept pollution levels throughout the entire year at levels permitted for Class III areas; so we can easily see what we have in the end is virtually no significant deterioration policy at all.

The gentleman from Louisiana (Mr. BREAUX) also talks about 25 percent up and 50 percent up, as if these increments were absolute percentages and maximums relative to the ambient air quality standards. In fact, they are not. The committee bill permits a Class II or Class III area to get up to as dirty as the ambient air standards permit. In any area we start not from zero but from where we are already and go 25 or 50 percent above that. So we are talking about the significant deterioration section which the committee and others have worked on for 5 years, which is going to be eliminated from this bill if this amendment is approved.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, the point the gentleman makes is valid. It is true that in talking about significant deterioration, we start with the existing pollution in the area. That is the baseline. Then if we move, as the gentleman has stated, to class II, we can go 25 percent above that. Then if we go to a class III, we can go up 50 percent; so if the base in an area is right now 50 percent, and the standard is assumed to be 100, and we go to a class III area, we can go to 100 percent, so that the pollution could reach the very standard itself.

Many people do not know this, and I know it is difficult to understand, but it is a problem and it would cause significant problems if we adopt the Breaux amendment.

The CHAIRMAN. The time of the gentleman from New Jersey has expired.

(By unanimous consent, Mr. MAGUIRE was allowed to proceed for an additional 4 minutes.)

Mr. MAGUIRE. Mr. Chairman, the chairman is absolutely right. I would just like to add that the class I area is an area in which we do not want to build powerplants, by definition. A class II area is an area in which we do want to build powerplants. All 74 powerplants that were projected to be built in this country, which the FEA and EPA analyzed a year ago, could all be built in the class II areas recommended by the committee and would not have to be resited.

Mr. HARKIN. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Iowa.

Mr. HARKIN. Mr. Chairman, I thank the gentleman for yielding. I know when the Breaux amendment was brought up to me yesterday, I thought about it in very favorable terms. I could not see the difference between 1 day and 18 days. What is the big deal? But in looking at the way the curve shifts, we can draw it out for ourselves on a piece of paper; if it moved that 18th day, we have a shift in the curve.

If we take that 18th day and move it over on that graph, and then we draw the new curve corresponding to that, what we are in effect doing is shifting the whole curve. What we are doing is allowing more pollutants in the air in those Class I areas on every other given day of the year. Do not be confused by percentages, Class I, Class II. One can thank about it in very simple terms. If we adopt the Breaux amendment, we are not saying that we are going to allow more pollution on just 18 days; we are going to allow more pollution on every other day of the entire year. That is a simple fact.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Texas.

Mr. ECKHARDT. I thank the gentleman for yielding to me. I can say this because I am not on the subcommittee, but I would hope that the Committee of the Whole House would listen to the subcommittee on this point. Too frequently, I think, we come over here after a dear colleague letter and rather glibly, rather inconsiderately, vote against the subcommittee that has been dealing with this very complex question for a very long while.

Both the chairman of the committee and the gentleman in the well have wrestled with this problem for a long time, and if we permit a few special considerations of the type that is sought by the Breaux amendment to be carried out, it will be difficult for us to find out which of our mountain ranges is called the Great Smokies.

Mr. GARY A. MYERS. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. To clarify the point the gentleman is trying to build his case on, it seems to me that what he is saying is that we would be dealing with a new base, a base on which we take 18 worst days out and now establish a new base.

Mr. MAGUIRE. That is correct.

Mr. GARY A. MYERS. Is the gentleman saying that the base is going to be continually changed? It was my impression that the base was going to be established as of a date certain, regardless of what is built after that. If that is true, then the base should always remain the same. Those of us who look on the Breaux amendment favorably think that is the case.

Mr. MAGUIRE. If I may reclaim my time, the fact of the matter is that when we calculate it out mathematically, model it out, the facts are that we eliminate the viability of the class I area and it becomes equivalent to what the committee wanted to provide for a class II area. The same thing happens in class II which, given a variance, becomes the equivalent of a class III area. According to the FEA-EPA study there are no powerplants which require class III areas. All can be constructed in class II areas.

If, by chance, there is one which cannot be constructed in a class II area, the Governors have the ability to designate

it as a class III area, which I am sure they will do. So, the subcommittee provides all the flexibility that is ever needed.

Mr. GARY A. MYERS. Mr. Chairman, I move to strike the last word.

The reason I rise at this point is because I asked the gentleman from New Jersey a specific question, and I believe he failed to answer it. It seems to me that what we are dealing with here is trying to establish what is going to occur or not going to occur as a result of the Breaux amendment.

I think most of us who look favorably on the Breaux amendment have this interpretation. As a result of the bill, there will be a base established, a base that is certain and based on historical data. That has nothing to do with whether a new plant at some future date is going to be sited which occasionally will violate that standard.

If that is the case, then the case the gentleman from New Jersey and the gentleman from Iowa (Mr. HARKIN) were trying to argue before the House is inaccurate.

Mr. MAGUIRE. If the gentleman will yield—

Mr. GARY A. MYERS. I would like to finish the question I asked the gentleman before, which he failed to answer.

It would seem that the amendment does not then extract the worst 18 days, because we do not know what the worst 18 days are when the base is established. Will the gentleman from New Jersey tell me whether or not it is true that a base is set at a date certain—is that his interpretation of this bill?

Mr. MAGUIRE. If the gentleman is correct, his point is still irrelevant to the point the gentleman from Iowa and I were making.

Once we set aside the worst 18 days, regardless of what base we are starting from, we start with the 19th day as if it were the first day, and all the rest of the days of the year will then conform to the curve we have, and pollution will be greater on every single one of those days.

Mr. GARY A. MYERS. I thank the gentleman for his contribution, which really did not answer the question.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. I thank the gentleman for yielding.

Mr. Chairman, I have seen more information bandied about today than I have in my life. There will not be more than 18 days in the year in which this level can be exceeded. To do so would be a violation of the law, and the company would be subject to a severe penalty.

Mr. GARY A. MYERS. Is the gentleman saying there would be never more than 18 days in the year?

Mr. CARTER. There would be 18 days in the class I areas that they might exceed that.

Mr. GARY A. MYERS. The 2 percent?

Mr. BROYHILL. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from North Carolina (Mr. BROYHILL).

Mr. BROYHILL. I thank the gentleman for yielding.

Mr. Chairman, under the terms of the amendment, class I allows for a 2-percent increment. That is almost immeasurable. The Breaux amendment provides 18 days of the year you can exceed that, but all of the rest of the days you have to stay within that increment.

Mr. GARY A. MYERS. I thank the gentleman.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. GARY A. MYERS. I yield to the gentleman from Kentucky (Mr. CARTER).

Mr. CARTER. At no time can the primary or secondary standards be exceeded, to protect the public welfare and the environment. They cannot be exceeded at any time.

Mr. GARY A. MYERS. I thank the gentleman.

Mr. WAXMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman and members of the committee, I want to go over a few points. We have already heard a discussion of this issue. The Breaux amendment supposedly gives to the Governor the power to waive that requirement that we are putting into the class I and allow the 5 percent variance. But there is no criteria in this amendment from which the Governor would act. It would leave him only to act under whatever political pressures might be exerted upon him.

I think the important point for all of us to understand in the Breaux amendment is that the Breaux amendment will change the whole structure of the class I, class II and class III criteria which we now use to protect those areas of the country which are cleaner than the national health standard. The reason we want to protect those areas is not because we want to have them clean for cleanliness sake, it is because we want to control the growth of those areas. If we allow the area open for whomever comes in first, there are not going to be any areas left for those who want to come in and utilize the national resource of clean air.

We have the class I for national parks because we value the national parks more than those areas which are nearer the standard and can justifiably be used up more for growth and more business. We want to protect the class I. What this amendment does is to allow one powerplant that is asking at this time to build right next to a national park to supply energy to the city of Los Angeles. I am the only California member on the Subcommittee on Health and Environment, and I am from Los Angeles. Let me tell the Members I do not want it. I do not want to build a powerplant in an area which will ruin a national park, when they can move a few miles away and still build a plant.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from Florida (Mr. ROGERS).

Mr. ROGERS. I thank the gentleman for yielding.

Mr. Chairman, may I just remind the Members of what the class I areas are? They are the national parks, which this House and the Congress has said we want to keep pristine clear. They are the national wilderness areas of over 25,000 acres, and they are the national monument and national recreational areas and national primitive areas of over 100,000 acres. Do the Members know how many areas in the Nation are covered by class I which we have asked to be kept clear and pure for the people of this country?

Only 125. The figure is only 125. Now we, by this amendment, if it were to be adopted, would allow those areas to be invaded by air pollution after we have made the judgment that we do not want pollution in our national parks to which people are coming for the purpose of recreation. There is no need for it.

The class II areas and the class III areas are where the plants are to be built under the committee approach, and we ought to keep the 125 areas to which I referred clean and pure. It is simple. There is no problem with that.

Mr. Chairman, the Breaux amendment should be defeated.

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. WAXMAN. I yield to the gentleman from Texas.

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman tell us what class Los Angeles is in?

Mr. WAXMAN. Los Angeles exceeds the primary standards. We are talking about a powerplant that is near a national park, not in Los Angeles but to serve Los Angeles.

The CHAIRMAN. The time of the gentleman from California (Mr. WAXMAN) has expired.

(On request of Mr. CHARLES WILSON of Texas and by unanimous consent, Mr. WAXMAN was allowed to proceed for 1 additional minute.)

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman yield further?

Mr. WAXMAN. I yield to the gentleman from Texas.

Mr. CHARLES WILSON of Texas. Mr. Chairman, I think the gentleman from California (Mr. WAXMAN) has put his finger on exactly what the issue is, and that is that the gentleman from Los Angeles, who is in a class III area, would like to control the growth in other parts of the country. That includes, of course, my district, which is a class I district.

I would like to say that we do not need the gentleman's help, and if he can get Los Angeles in a class I area, then we might be interested in his protection of us.

Mr. WAXMAN. Mr. Chairman, if the gentleman will allow me to recapture my time, the gentleman from Texas (Mr. CHARLES WILSON) has misunderstood the

significance of what we are talking about when we provide for protecting those areas that are now cleaner than the standard.

Los Angeles is dirtier than the health standards, and we want to protect the people there. But we are not talking about that.

We are talking about the areas that are in class II and class III. I do not believe that Texas is in class I, because it is not all a national park. Most of it is class II or class III, and that allows for growth. But we do not want to allow variances to be given away, because if we do, whoever comes in first will dirty it up so that it will exceed all the health standards, and then we might find that there is no more room left even for industry and economic growth.

#### PARLIAMENTARY INQUIRY

Mr. COHEN. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. COHEN. Mr. Chairman, is it correct that the initial vote is going to come on the Emery amendment to the Breaux amendment, the Emery amendment being an 18-day substitute which the gentleman from Louisiana (Mr. BREAU) accepts?

The CHAIRMAN. The Chair will state that the vote will come first on the Emery substitute for the Breaux amendment. That is the first vote that will be in order.

Mr. MCCORMACK. Mr. Chairman, I rise in support of the Breaux and the Emery amendments.

Mr. Chairman, we have listened to this degradation argument for quite a long time, and I think it is important that we discuss it rationally, and in the context of the real world in which we are going to be living.

For instance, the Carter administration's energy proposals call for tripling our coal consumption during the balance of this century. This means constructing about 500 new coal plants and getting them on the line sometime soon. It will not be possible to trap all the particulate matter and all the sulfur dioxide from these plants, no matter what technology we use. I think it is important to recognize that Western coal is dirty coal in terms of particulates, and it is very difficult to remove all that particulate matter when the coal is burned.

I come from an area that contains a lot of class I land, so I am concerned with this matter, but I think we should look realistically at these standards for class I land. The standard for class I land is  $7\frac{1}{2}$  micrograms per cubic meter. The Breaux amendment would, on 18 days each year, would allow increasing that to  $18\frac{3}{4}$  micrograms per cubic meter.

Now, for comparison, a single cigarette produces 10,000 micrograms of particulate matter. Let me repeat that. A single cigarette produces 10,000 micrograms of particulate matter. The standard we have for class I land is  $7\frac{1}{2}$  micrograms per cubic meter, and we would be proposing to increase it to  $18\frac{3}{4}$  on 18 days each year.

If we were to carry these limitations to its logical extreme, it would be illegal for a person to walk through much of my district smoking a cigarette.

Mr. Chairman, let us understand something of the magnitude of the numbers we are using. Let us support the Breaux and the Emery amendments.

Mr. MARRIOTT. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the Emery substitute class I and class II variance amendment.

I do not believe that it is the intent of this Congress to create a stiff and invariable standard that would unnecessarily and unreasonably curtail the development of electrical energy which the southwestern part of America is in dire need of. The Emery amendment would allow some flexibility in the proposed clean air amendments which we now have before us.

It would serve to protect our environment, while at the same time allowing us to develop greater sources of energy. An example of the need for Congressman Breaux's amendment is the Intermountain Power Project, better known as the IPP.

The IPP is a 3,000-megawatt coal-fueled electric generating station which is proposed to be built in south-central Utah. The plant is being proposed by a group of 23 cities located in Utah and the California cities of Los Angeles, Anaheim, Riverside, Burbank, Pasadena and Glendale. The total population of the cities participating in the project, and therefore the number of people depending on this project to meet their future energy needs, is approximately 3,700,000.

This plant could provide approximately three-quarters of the electrical energy needs of the Utah cities and over one-third of the California cities' electrical energy needs.

We have estimated that operation of the intermountain power project will save over \$800 million annually by eliminating purchases of low sulfur oil from foreign countries. Instead, the use of Utah coal will create 2,500 jobs in Utah and the rest of the country and provide substantial additional revenues to the State of Utah.

As of this date, the project has spent more than \$6 million in engineering and environmental studies. This facility has been designed to minimize environmental impact and fully utilize the best available pollution control technology.

However, the provisions contained in the Clean Air Act amendments would prohibit the building of this environmentally sound project.

The reason that this project would be prohibited from being built is that it is located approximately 8 miles from the Capital Reef National Park, which would be classified as a class I area with allowable pollution increases of only 2 percent of the national ambient air quality standards. During approximately 350 days of the year, the prevailing winds blow out of the park toward the power project and thus only insignificant

amounts of pollution, if any, from the project would impact on the park.

During roughly 13 days of the year, however, certain air inversions occur in this area which cause the winds to blow from the plan to the part. Thus, on approximately 13 days of the year, the very stringent 2-percent increment may be violated, but even on those few days, environmental analyses indicate that the pollution from the plant would not exceed the tight class II increment. The class II increment is only 25 percent of the national ambient air quality standards.

This proposed facility provides a revealing example of an environmentally sound electric-generating facility which would supply pollution-free power to an area which cannot accommodate further pollution, would provide jobs in an economically depressed area of Utah and would increase tax revenues to State and local governments in the amount of \$30 to \$40 million, but which cannot be built because of the stringent and inflexible requirements of this provision of H.R. 6161.

If we adopt Mr. EMERY's amendment, we will allow projects such as IPP to provide the energy which is absolutely necessary for our Nation. This is but an example of some of the relief a 5 percent class I variance would provide.

In summary, Mr. EMERY's amendment is a rational and reasonable approach to allowing some flexibility in the proposed Clean Air amendments.

Certainly the class I standards, even with the 5 percent variance proposed by Mr. EMERY, will be more than sufficient to protect our choice national parks and reserves and yet allow for the jobs and energy we need. I urge my colleagues to support the Emery amendment.

Mr. Chairman, I would like to take this opportunity to say this: Having come from Utah, where this IPP plant is located, which seems to be where the controversy centers, I would like to say that I sincerely believe we ought to have a variance from class I and class II standards, and I do not think 5 percent is unreasonable.

What this really boils down to on the one hand is this: A 3,000-megawatt plant, with 22 cities in Utah and California being serviced by it—that is 3.7 million people being serviced—a savings of \$800 million by eliminating the purchase of sulfur oil from foreign countries, 5,000 new jobs, and a tax revenue base for the State of Utah or from \$30 million to \$40 million.

On the other hand, all we are asking is 13 days out of the year when the wind blows toward the canyon, allowing this company to have a class II variance. On 352 days of the year they would have to maintain the class I standard.

Mr. Chairman, this is simply a compromise. To me, we have to have a compromise on clean air and achieve energy independence by 1985.

Therefore, Mr. Chairman, I sincerely hope that we support the Emery substitute amendment.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words.

The CHAIRMAN. Without objection, the gentleman from Florida (Mr. ROGERS) may be recognized again.

Is there objection to the request of the gentleman from Florida?

Mr. LATTI. Mr. Chairman, I object. The CHAIRMAN. Objection is heard.

Mr. GIBBONS. Mr. Chairman, I move to strike the requisite number of words.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. GIBBONS. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I thank the gentleman.

I will only make one point very quickly.

This is the same thing as putting a city of 500,000 people, with the same amount of pollution, next to a national park. It is the same thing as allowing the largest coal-fired powerplant, 3,000 megawatts, to be built next to a national park.

Mr. Chairman, that is what we will be doing, and I want the Members to know it.

When people go out to those parks, they will not be able to see the scenic vistas. If one cigarette is used, one cigarette is only so much; but it is that whole park, which the gentleman did not tell us about. If everyone in the park was smoking cigarettes at the same time, which is what we are talking about, then no one could see anything.

Mr. Chairman, I hope the Members will think about that.

I urge rejection of the Breaux amendment.

Mr. GIBBONS. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Maine (Mr. EMERY) as a substitute for the amendment offered by the gentleman from Louisiana (Mr. BREAUX).

The amendment offered as a substitute for the amendment was agreed to.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Louisiana (Mr. BREAUX), as amended.

The question was taken; and the Chairman announced that the ayes appeared to have it.

#### RECORDED VOTE

Mr. WAXMAN. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 237, noes 172, answered "present" 1, not voting 23, as follows:

[Roll No. 286]

## ANSWERED "PRESENT"—1

Bafalis

## NOT VOTING—23

Abdnor McCloskey  
 Bedell Metcalfe  
 Brooks Poage  
 Clawson, Del. Pressler  
 Dent Price  
 Florio Rangel  
 Ford, Mich. Roe  
 Forsythe Sisk

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Rangel against.  
 Mr. Skelton for, with Mr. Florio against.  
 Mr. Abdnor for, with Mr. Ford of Michigan against.  
 Mr. Spence for, with Mr. Price against.  
 Mrs. Smith of Nebraska for, with Mr. McCloskey against.  
 Mr. Del Clawson for, with Mr. Metcalfe against.

Mr. GLICKMAN, Mr. MEEDS, and Mrs. HECKLER changed their vote from "no" to "aye."

Mr. STOKES and Mr. TUCKER changed their vote from "aye" to "no."

So the amendment, as amended, was agreed to.

The result of the vote was announced as above recorded.

Mr. LEVITAS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I am pleased to see that the amendments which I offered to the section on significant deterioration in last year's clean air bill remain part of the bill this year, along with the amendment on rule review. During our consideration of last year's bill, I raised several questions with the gentleman from Florida regarding the difference between the EPA's regulation figures for the SO<sub>2</sub> 3-hour class II increment level and those contained in the bill. Our discussion appears in the CONGRESSIONAL RECORD of September 9, 1976, at pages 29547-29548.

As a result of our exchange, I was satisfied that the increments in the bill were reasonable and balanced. Mr. Chairman, may I assume that the responses given by the gentleman from Florida (Mr. ROGERS) at that time remain valid in our consideration of this year's bill?

Mr. ROGERS. Mr. Chairman, if the gentleman will yield, yes; I have reviewed those statements and the statements I made last year about the class II increments also apply to this year's bill. The gentleman from Georgia can be assured they do remain valid.

Mr. LEVITAS. Mr. Chairman, I thank the gentleman from Florida for his as-

surances and I commend the gentleman for his efforts in behalf of this legislation.

The CHAIRMAN. Are there further amendments to section 108? There being none, the Clerk will read section 109.

The Clerk read as follows:

## TRAINING

SEC. 109. (a) Section 103(b) of the Clean Air Act is amended by striking out paragraph (5), redesignating the following paragraphs accordingly, and adding the following at the end thereof: "In carrying out the provisions of subsection (a), the Administrator shall provide training for, and make training grants to, personnel of air pollution control agencies and other persons with suitable qualifications. Reasonable fees may be charged for such training provided to persons other than personnel of air pollution control agencies but such training shall be provided to such personnel of air pollution control agencies without charge."

(b) Section 103(b) of such Act is amended by striking out "training," in paragraph (1); by striking out the period at the end of paragraph (4) and inserting in lieu thereof "; and"; and by inserting the following paragraph at the end thereof:

"(5) conduct and promote coordination and acceleration of training for individuals relating to the causes, effects, extent, prevention, and control of air pollution."

(c) Paragraph (5) of such section 103(b) is amended by inserting after "qualifications" the following: "and make grants to such agencies, to other public or nonprofit private agencies, institutions, and organizations for the purposes stated in subsection (a) (5)."

(d) Subsection 103 is further amended by adding a new subsection at the end thereof as follows:

"(g) For purposes of subsection (b) (5), there are authorized to be appropriated \$7,500,000 for each of the three fiscal years beginning after the date of enactment of the Clean Air Act Amendments of 1977."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 109 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 109?

AMENDMENT OFFERED BY MR. BROWN OF CALIFORNIA

Mr. BROWN of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Brown of California: On page 321, at the end of line 25, add the following new subsection:

"(e) The Administrator of the Environmental Protection Agency shall consult with the House Committee on Science and Technology on the environmental and atmospheric research, development and demonstration aspects of this Act. In addition, the reports and studies required by this Act that relate to research, development and demonstration issues shall be transmitted to the Committee on Science and Technology at the same time they are made available to other committees of the Congress."

Mr. BROWN of California. Mr. Chairman, I offer this as a technical amendment, which I hope the committee will see fit to accept. It is not a substantive amendment, but is intended to clarify certain jurisdictional matters which exist because of the rules of the House.

I offer it primarily as a vehicle for elucidating these peculiar jurisdictional problems which exist as between the Commerce Committee and the Committee on Science and Technology.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield.

Mr. ROGERS. Mr. Chairman, I have no problem with this amendment. I think there is some question on the jurisdiction over demonstration projects, but I think it is within the jurisdiction of the Commerce Committee. However, I think research and development is in the Science Committee's jurisdiction. So, I have no objection to having those reports and having consultations with his committee. I would have no objection to the amendment.

Mr. BROWN of California. I thank the gentleman.

Mr. MADIGAN. Mr. Chairman, will the gentleman yield?

Mr. BROWN of California. I yield to the gentleman from Illinois.

Mr. MADIGAN. Mr. Chairman, we have had an opportunity to look at the gentleman's amendment on this side, and have no objection to it.

Mr. BROWN of California. Mr. Chairman, at the risk of imposing on the Members, I would merely like to explain very briefly some additional points behind my offering this amendment. As the Members know, the House in its wisdom adopted rules which placed environmental research and development within the jurisdiction of the Committee on Science and Technology. I have not encountered, nor has the Committee on Science and Technology, any difficulty whatsoever in our dealings with the Commerce Committee. We have had extremely good cooperation with the distinguished chairman of the subcommittee, the gentleman from Florida, and other members of the Commerce Committee. On the matters which relate to the joint jurisdictions, we have had good cooperation.

We have actually engaged in joint hearings on matters of mutual interest, and I anticipate no trouble in the future on this matter. It was not because of any such anticipation that I offer this amendment. There are a number of provisions in this very lengthy bill which will have an impact on research and development, and it was my desire to indicate this and to indicate that it was my expectation that we would continue to have the same sort of harmonious cooperation on the total program as we have had in the past.

I might say that the same situation does not obtain in the other body, as they have not made the change in jurisdiction that we have. As a consequence, there will be a problem in the Senate-passed bill in that it will probably include matters which, because of the rules of the House, are not germane to this bill under our rule. I wanted to have this indicated in the RECORD and, of course, to indicate to the committee that I hope that they will vigorously defend the ju-

isdictional rules of the House and will not accept nongermane amendments from the other body at the time when this very important measure goes to conference.

I am sure that this will be the case and that, as in the past, the conferees from the conference committee will protect the rights and interests of the members of the Committee on Science and Technology.

I submit herewith a brief outline of the areas in which there is some impact by this bill (H.R. 6161) upon the jurisdiction of the Science and Technology Committee over environmental research and development. I reiterate that there has been in the past the fullest cooperation between the two committees on all such areas of mutual interest and I am sure that such cooperation will continue.

New section 316(a) on page 237 authorizes funds and excludes research, development and demonstration under this act.

Page 243, section 108(c) is amended by calling for an update of the NO<sub>x</sub> criteria within 6 months of passage of the act. This would involve an impact on research programs.

Page 243, there is provision for a study concerning the effect on public health of sulfates, radioactivity, cadmium, arsenic and POM's—polycyclic organic matter.

Page 247, section 102(a) provides for a new section in title III calling for economic impact statements to be prepared by the Administrator on any major rule-making action.

Page 284, section 107 of the bill amends title I of the Clean Air Act to add a new subtitle b, stratosphere and ozone protection. This is similar to language reported out of our committee incorporated by the Commerce Committee about 2 years ago. Language therein provides for a short-term study by EPA to provide the basis for regulation; that is, it covers stratospheric chemistry, health effects, methods of control. There is also provision for an oversight type of study by the National Academy of Sciences.

Subsection (e) on page 284 provides for the establishment of a coordinating committee of other Federal agencies, chaired by EPA during the course of the EPA study. Two years after enactment of the act, EPA is to report on its study, and at that point the chairmanship of the coordinating committee is given to NOAA. At that point the coordinating committee is to be focused on long-range early warning type research. However, the language in the present bill on page 289, line 17, states that the coordinating committee is to coordinate research related to "the program of research provided for in section 102 of this act." It provides that if EPA finds something really bad they can promulgate regulations to be submitted to the Congress for their veto at any time before the study is completed.

Section 153 on page 291 provides for a research and monitoring program by NOAA for early warning purposes. Page

292, section 154, provides for regulations based on this study, and on page 293 there is State authority to enforce their own regulations.

Page 314, section 323, provides for standardized air quality modeling. There are to be annual conferences on air quality modeling with special emphasis on modeling necessary for carrying out subtitle (c) of title I. Subtitle c of title I is prevention of significant deterioration. It provides for participation by the National Academy of Sciences, State and local air pollution control agencies, appropriate Federal agencies, including the National Science Foundation, NOAA, and the National Bureau of Standards. Proceedings are to be published.

Page 315 provides for a study and report to Congress on the progress made in carrying out subtitle c of title I, including strategies for controlling photochemical oxidants.

Also on page 315, subsection (d), this calls for publication of guidance, documents to assist States in carrying out their functions under subtitle C with respect to pollutants other than sulfur oxides and particulates. Page 316, new section 327 provides for a National Commission on Air Quality to study and report to the Congress on effects of implementation of the act, the economic technology and environmental consequences of achieving or not achieving the purposes of this act, available alternatives and the technological capability of achieving and the economic, energy, and environmental health effects of achieving or not achieving pollution control levels for mobile sources of oxides of nitrogen, air pollutants presently not regulated, the adequacy of R. & D. and demonstrations, and, finally, the ability of governments to implement the purposes of the act. The study is to include the relationship of standards to objective scientific and medical data collected to determine their validity and the effects of limiting the deterioration of air quality in areas having good air at the present time. The language provides that ranking Members of Senate Public Works and House Commerce Committees are represented on the study commission. Clearly, S. & T. should also be there. The report is to be made by March 1, 1978.

Page 320, section 109, amends section 103(b) by striking out paragraph (5) and adding a new paragraph having to do with training for personnel of air pollution control agencies. Such training is to include that on the causes, effects, extent, prevention, and control of air pollution.

Page 322, section 110, amends section 109 of the Clean Air Act to provide for a review of national ambient air quality standards and criteria every 2 years. There shall be an independent scientific review committee from the National Academy of Sciences to review the standards and make recommendations to the Administrator, including needs for additional research. Clearly, this effort should be somehow coordinated with the Science Advisory Board.

Page 330, section 112, amends section 111 to provide for variances for new control technologies that have not been adequately demonstrated yet show promise. Purpose is to encourage innovation. This might be the output of a research project. This will give the Administrator a chance to find out whether or not such a new technology will really work.

Page 345, section 117, inserts a new section 127 on nonattainment areas, and on page 346 there is provision that the National Commission on Air Quality referred to above shall consider nonattainment matters.

Page 357, title II begins there on mobile sources. Section 201 adds a new section 318, calling for a study to review indirect sources. It provides for an oversight study by the National Academy of Sciences.

Page 384, section (c), provides for a new section 214 on a study of unregulated pollutants from motor vehicles. The study will characterize and quantify emissions and determine the effects of such pollutants from all sort of vehicles and engine tanks from all sorts of vehicles and engines now in use or likely to come into use. Report to be made 1 year after enactment and submitted to the Congress. Such report should be submitted to S. & T. specifically.

Page 388, line 15, paragraph (ii) refers to a National Academy of Sciences study and investigation under subsection (c), which needs to be looked into. I cannot tell what it is about out of context.

Page 391, subsection (c) provides for a study of the possibility of increased use of cost-effectiveness analyses in devising strategies for the control of air pollution and provides for a report to Congress.

Page 391 inserts a new section 217 to provide for a study of particulate emissions from motor vehicles. Studies show a concern for effects on health and welfare of such emissions, including the relationship to fuels and fuel additives. It shall also include tire debris and asbestos from brake linings. It calls for a report to Congress not later than 2 years after enactment.

Page 398, new section 215, provides for inspection and maintenance of motor vehicle emission controls. This is, in essence, a monitoring operation and is very complicated because of the unknown relationship between the certification test cycle, the inspection and maintenance test cycle and actual driving emissions. Language on page 399 provides that calibration, instrumentation and maintenance of the testing facilities be adequate.

Page 407, subsection (d), provides for a study by the Federal Trade Commission on anticompetitive effects resulting from any warranty required on replacement parts.

Page 416, line 21, provides for a Federal Trade Commission study of the effect on small businesses of regulations on vapor recovery, to study the effect of the ability of such marketers to compete in gasoline markets. Report to be made to the House Commerce Committee.

Page 426 provides for a determination by the Administrator of the feasibility of

requiring new motor vehicles to utilize onboard gasoline vapor control technologies, which would avoid the necessity of having filling stations recover such emissions.

Page 427, new section 218, provides for a study of the problem of carbon monoxide intrusion into the passenger area of sustained use motor vehicles. This shall include sources and levels of carbon monoxide and the effects on the passengers as well as effects of methods of monitoring and testing. It requires a report to Congress.

Page 430, section 211 of the act, is amended having to do with regulations for the testing of fuels and fuel additives. It needs to be examined in context.

Page 431, section 209, is amended by adding provisions for the testing of new motor vehicles by States. This relates also to vehicle inspection and maintenance under section 217.

On page 443, paragraph (3) refers to data used in rulemaking under administrative procedures section 307 of the act. This section describes how scientific data on which the proposed rule is based shall be handled and included in the docket made available to the public. It also provides on the next page that the proposed rule shall set forth any findings by the Scientific Review Committee established under section 109(d) and the National Academy of Sciences.

Page 463, section 310 of the bill adds a new subtitle D to title I of the act. This is entitled, "Prevention of Environmental Cancer and Heart and Lung Disease." New section 170 provides for the establishment of a task force on environmental cancer and heart and lung disease composed of representatives from the EPA, NCI, the Heart and Lung Institute, NIEHS, and others. The task force shall develop a comprehensive research program on the relationship between environmental pollution and cancer, heart and lung diseases to make recommendations for comprehensive strategies to eliminate risks of cancer associated with pollution, engage in other research as necessary to reduce the incidence of environmentally related cancer and heart and lung disease, coordinate research and control efforts between relevant agencies with respect to such diseases, and report to Congress annually on their progress. This section also provides that the task force shall consider smoking. This seems to be basically a research section, and I think we ought to get involved in it.

Page 467, section 312 of the bill amends the Clean Air Act by adding a new section 321 providing for a study of fine particulates by EPA in cooperation with NAS. The study is to be on the relationship of size, weight and composition of particulates to health and welfare effects, and on the availability of control technology.

Also, page 467, a new section 322 provides that the Administrator shall establish an air quality monitoring system throughout the United States. This system would provide for uniform monitoring methods. It would provide for sta-

tions in major urban areas and other appropriate areas. It would provide for daily analysis and reporting of air quality, and it would provide for record keeping with respect to such monitoring data and for periodic analysis and reporting to the public. It provides for cooperation with other agencies and specifically mentions the National Weather Service.

Page 469 adds a new section 313(a), Economic Controls Study, which provides that the CEQ shall undertake a study of economic measures for the control of air pollution which could (1) strengthen the effectiveness of existing methods of controlling air pollution; (2) methods which could provide incentives to abate air pollution to a greater degree than is currently required; and (3) methods which could serve as the primary incentive for controlling air pollution problems not addressed by any provision of this act. With respect to item (1), above, the study should concentrate on identification of air pollution problems for which existing control methods actually provide economic incentives to delay compliance and formulation of economic measures which would provide a positive incentive for compliance without interfering with such existing methods of control. With respect to item (2), above, the study shall concentrate on identification of air pollution problems for which existing control methods may not be sufficiently extensive to achieve all desired goals and formulation of economic measures for such air pollution problems which would provide addition; that is, more extensive, incentives to reduce air pollution without interfering with the effectiveness of existing methods of control or creating new problems. With respect to item (3), above, the study shall concentrate on identification of air pollution problems for which no existing methods of control exist and formulation of economic measures to control such pollution and a comparison of the environmental and economic impacts of the economic measures with those of any alternative regulatory methods which can be identified.

Page 472 provides in new section 315 (a) for a study of assistance to workers displaced by environmental regulations.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. Brown).

The amendment was agreed to.

The CHAIRMAN. Are there other amendments to section 109?

There being none, the Clerk will read section 110.

The Clerk read as follows:

#### REVIEW OF STANDARDS

Sec. 110. Section 109 of Clean Air Act is further amended by adding the following new subsection at the end thereof:

"(d) (1) Not later than eighteen months after the date of the enactment of this subsection, and at two-year intervals thereafter, the Administrator shall complete a thorough review of the criteria published under section 108 and the national ambient air quality standards promulgated under this section and shall promulgate such new standards and make such revisions in existing standards as may be appropriate under subsection (b).

"(2) (A) The Administrator shall appoint an independent scientific review committee composed of seven members including at least one member of the National Academy of Sciences, one physician, and one person representing State air pollution control agencies.

"(B) Not later than one year after the date of enactment of this subsection, and at two-year intervals thereafter, the committee referred to in subparagraph (A) shall complete a review of the criteria published under section 108 and the national primary and secondary ambient air quality standards promulgated under this section and shall recommend to the Administrator any new national ambient air quality standards and revisions of existing standards as may be appropriate under subsection (b).

"(C) Such committee shall also (i) advise the Administrator of areas in which additional knowledge is required to appraise the adequacy and basis of existing, new, or revised national ambient air quality standards, (ii) describe the research efforts necessary to provide the required information, (iii) advise the Administrator on the relative contribution to air pollution concentrations of natural as well as anthropogenic activity, and (iv) advise the Administrator of any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such national ambient air quality standards."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 110 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 110?

There being none, the Clerk will read section 111.

The Clerk read as follows:

#### NEW SOURCE STANDARDS OF PERFORMANCE

Sec. 111. (a) (1) (A) Section 111(a) (1) of the Clean Air Act, defining standard of performance, is amended to read as follows:

"(1) The term 'standard of performance' means—

"(A) with respect to any air pollutant emitted from a particular category of source to which subsection (b) applies, the standard which reflects the degree of emission reduction achievable through the application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated; and

"(B) with respect to any air pollutant emitted from a particular source to which subsection (d) applies, a standard which the State (or the Administrator under the conditions specified in subsection (d) (2)) determines is applicable to that source and which reflects the degree of emission reduction achievable through the application of the best system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated for that category of sources."

(B) Section 111(a) of such Act is further amended by adding the following new paragraph at the end thereof:

"(7) The term 'technological system of continuous emission reduction' means—

"(A) a technological process for production or operation by any source which is inherently low-polluting or nonpolluting, or

"(B) a technological system for continuous reduction of the pollution generated by a source before such pollution is emitted into the ambient air, including precombustion cleaning or treatment of fuels."

(2) Section 111(b) (1) (B) of such Act is amended by striking out "may, from time to time," in the next to last sentence thereof and by inserting in lieu thereof "shall, at least every four years, review and, if appropriate,"

(3) Section 111 of such Act is amended by inserting after subsection (f) the following new subsections:

"(g) If after notice and opportunity for public hearing, any person establishes to the satisfaction of the Administrator that an alternative technological system of continuous emission reduction will achieve a reduction in emissions of any air pollutant at least equivalent to the reduction in emissions of such air pollutant achieved under the technological system applicable to a source under subsection (a) (1), the Administrator shall permit the use of such alternative technological system by the source for purposes of compliance with such subsection (a) (1) with respect to such pollutant.

"(h) (1) Not later than nine months after the date of enactment of this subsection, the Administrator shall promulgate regulations specifying the categories of major stationary sources which are not included on the list required under subsection (b) (1) (A). Not later than one year after such date of enactment, and at annual intervals thereafter for three additional years, the Administrator shall include 25 percent of such specified categories of sources in such list under subsection (b) (1) (A).

"(2) In determining priorities for listing of unlisted categories of major stationary sources for the purpose of paragraph (1), the Administrator shall consider—

"(A) the quantity of air pollutant emissions which each such category will emit, or will be designed to emit;

"(B) the extent to which each such pollutant may reasonably be anticipated to endanger public health or welfare; and

"(C) the mobility and competitive nature of each such category of sources and the consequent need for nationally applicable new source standards of performance.

"(3) Before promulgating any regulations under this subsection or listing any category of major stationary sources as required under this subsection, the Administrator shall consult with appropriate representatives of the Governors and of State air pollution control agencies.

"(1) (1) Upon application by the Governor of a State showing that the Administrator has failed to specify in regulations under subsection (h) (1) any category of major stationary sources required to be specified under such regulations, the Administrator shall revise such regulations to specify any such category.

"(2) Upon application of the Governor of a State, showing that any category of stationary sources which is not included in the list under subsection (b) (1) (A) contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare (notwithstanding that such category is not a category of major stationary sources), the Administrator shall revise such regulations to specify such category of stationary sources.

"(3) Upon application of the Governor of a State showing that the Administrator has failed to apply properly the criteria required to be considered under subsection (h) (2), the Administrator shall revise the list under

subsection (b) (1) (A) to apply properly such criteria.

"(4) Upon application of the Governor of a State showing that—

"(A) a new, innovative, or improved technology or process which achieves greater continuous emission reduction has been adequately demonstrated for any category of stationary sources, and

"(B) as a result of such technology or process, the new source standard of performance in effect under subsection (b) for such category no longer reflects the greatest degree of emission limitation achievable through application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, and any non-air quality health and environmental impact and energy requirements) has been adequately demonstrated,

the Administrator shall revise such standard of performance for such category accordingly.

"(5) Upon application by the Governor of a State showing that the Administrator has failed to list any air pollutant which causes, or contributes to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness as a hazardous air pollutant under section 112, the Administrator shall revise the list of hazardous air pollutants under such section to include such pollutant.

"(6) Upon application by the Governor of a State showing that any category of stationary sources of a hazardous air pollutant listed under section 112 is not subject to emission standards under such section, the Administrator shall propose and promulgate such emission standards applicable to such category of sources.

"(7) Unless later deadlines for action of the Administrator are otherwise prescribed under this section or section 112, the Administrator shall, not later than three months following the date of receipt of any application by a Governor of a State, either—

"(A) find that such application does not contain the requisite showing and deny such application, or

"(B) grant such application and take the action required under this subsection.

"(8) Before taking any action required by subsection (h) or by this subsection the Administrator shall provide notice and opportunity for public hearing.

"(j) As a condition for issuance of any permit required under this title, the owner or operator of each new or modified stationary source which is required to obtain such a permit must show to the satisfaction of the permitting authority that the technological system of continuous emission reduction which is to be used at such source will enable it to comply with the standards of performance which are to apply to such source and that the construction or modification and operation of such source will be in compliance with all other requirements of this Act."

(b) (1) Section 111(d) (1) of such Act is amended by striking out "emission standards" in each place it appears and inserting in lieu thereof "standards of performance" and by adding at the end thereof the following new sentence: "Regulations of the Administrator under this paragraph shall permit the State in applying a standard of performance to any particular source under a plan submitted under this paragraph to take into consideration, among other factors, the remaining useful life of the existing source to which such standard applies."

(2) Section 111(d) (2) of such Act is amended by adding at the end thereof the following new sentence: "In promulgating a standard of performance under a plan prescribed under this paragraph, the Administrator shall take into consideration, among

other factors, remaining useful lives of the sources in the category of sources to which such standard applies."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 111 be considered as read, printed in the RECORD and open to amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 111?

AMENDMENT OFFERED BY MR. MADIGAN

Mr. MADIGAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MADIGAN: Page 330, after line 14, insert:

(c) Section 111 of such Act is amended by adding the following new subsection at the end thereof:

"(k) Any regulations promulgated by the Administrator under this section applicable to grain elevators shall apply only to grain elevators which have a storage capacity in excess of 2.5 million bushels."

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Florida (Mr. ROGERS).

Mr. ROGERS. Mr. Chairman, we have looked at this amendment. We think it is reasonable. It gives some exemption to small grain operators. We would accept the amendment on this side.

Mr. MADIGAN. Mr. Chairman, I thank the gentleman for his remarks.

Mr. BROYHILL. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from North Carolina (Mr. BROYHILL).

Mr. BROYHILL. I thank the gentleman for yielding.

Mr. Chairman, I have had a chance to discuss this with the gentleman. I think his amendment does correct a problem that he has brought to our attention, and I would suggest that we accept the amendment.

Mr. MADIGAN. I thank the gentleman from North Carolina for his remarks.

Mr. ANDREWS of North Dakota. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from North Dakota (Mr. ANDREWS).

Mr. ANDREWS of North Dakota. I thank the gentleman for yielding, and I would like to commend the gentleman from Illinois for offering this amendment.

Mr. Chairman, this is a worthwhile amendment. It will save costs for the small operators at a time when the price of grain is already depressed. These are small country elevators out in the small towns, and they simply cannot afford this type of retrofitting. I am pleased that the chairman of the committee has accepted the amendment, and he has done it in the best interest of agriculture.

Mr. MADIGAN. Mr. Chairman, I thank the gentleman from North Dakota for his remarks.

Mr. KINDNESS. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Ohio (Mr. KINDNESS).

Mr. KINDNESS. I thank the gentleman for yielding, and I would like to commend the gentleman for offering this amendment.

I, of course, will not be offering an amendment which was an alternative course to this amendment. It was never intended, apparently, in 1970 that the country grain elevators would be included within the coverage of the Clean Air Act. The amendment offered by the gentleman from Illinois (Mr. MADIGAN) certainly does the job of carrying out the original intent.

Mr. MADIGAN. Mr. Chairman, I want to thank the gentleman from Ohio for his contribution.

Mr. GRASSLEY. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Iowa (Mr. GRASSLEY).

Mr. GRASSLEY. Mr. Chairman, I want to congratulate the gentleman from Illinois for offering this amendment. It takes care of a problem which needs to be taken care of.

Mr. Chairman, regulations written by Federal agencies all too often have two major defects: First, their impact is seldom weighed via a cost-benefit analysis; and second, they are often written by people who have little if any expertise in the particular area they regulate. On January 13 of this year, the Environmental Protection Agency proposed regulations to control grain dust emitted by elevators and feed mills. Unfortunately, the EPA did not take into account before issuing its proposals that increased operating costs of \$76 million would result, and that capital expenditures in the billions would be needed to provide grain handling facilities with the equipment needed to comply with the EPA mandate. Nor did the EPA take steps to determine, via personal interviews and elaborate tests in rural areas, if the air in and around country elevators is a health hazard.

While I would prefer to see the House have a veto power over any set of regulations issued by any Federal agency, I fully support Representative KINDNESS' amendment to insure that small country elevators will be exempted from the EPA's proposed source performance regulations. Until the regulators in Washington realize that there is a "real world" west of the Potomac, Congress is going to have to see to it that the interests of the average citizen are protected. In this instance, consumers worldwide might pay a higher price for products made of grain, in order to pay the cost of pollution-control devices which would be of little value to anyone. If the consumer did not bear the cost, the burden would then be on the producer; frankly, I do not think this kind of news would be welcome by wheat producers in Kansas, Oklahoma, and other Plains States, or by farmers in my home State of Iowa.

Mr. MADIGAN. Mr. Chairman, I wish to say that I appreciate the support of the committee.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. MADIGAN).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments to section 111?

There being none, the Clerk will read section 112.

The Clerk read as follows:

#### VARIANCES FOR TECHNOLOGY INNOVATIONS

SEC. 112. (a) Section 111 of the Clean Air Act is amended by inserting after subsection (e) the following new subsection:

"(f) (1) (A) Any person proposing to own or operate a new source may request the Administrator for a variance from the requirements of this section with respect to any air pollutant to encourage the use of an innovative technological system or systems of continuous emission reduction which have not been determined by the Administrator to be adequately demonstrated. The Administrator may, with the consent of the Governor of the State in which the source is to be located, grant a variance under this paragraph, if the Administrator determines after notice and opportunity for public hearing, that—

"(i) there is a substantial likelihood that the proposed system will achieve greater continuous emission reduction than that required to be achieved under the standards of performance which would otherwise apply, or achieve at least an equivalent reduction at lower cost in terms of energy, economic, or non-air quality environmental impact, and

"(ii) the owner or operator of the proposed source has demonstrated to the satisfaction of the Administrator that the proposed system will not cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation, function, or malfunction.

In determining whether an unreasonable risk exists under clause (ii), the Administrator shall consider, among other factors, whether and to what extent the use of the proposed technological system will cause, increase, reduce, or eliminate emissions of any unregulated pollutants; available methods for reducing or eliminating any risk to public health, welfare, or safety which may be associated with the use of such system; and the availability of other technological systems which may be used to conform to standards under subsection (b) of this section without causing or contributing to such unreasonable risk. The Administrator may conduct such tests and may require the owner or operator of the proposed source to conduct such tests and provide such information as is necessary to carry out clause (ii) of this subparagraph. Such requirements shall include a requirement for prompt reporting of the emission of any unregulated pollutant from a system if such pollutant was not emitted, or was emitted in significantly lesser amounts without use of such system.

"(B) A variance under this paragraph shall be granted on such terms and conditions as the Administrator determines to be necessary to assure—

"(i) emissions from the source will not prevent attainment and maintenance of any national ambient air quality standards, and

"(ii) proper functioning of the technological system or systems authorized. Any such terms or condition shall be treated as a standard of performance for the purposes of subsection (e) of this section and section 113.

"(C) The number of variances granted under this paragraph with respect to a proposed technological system of continuous emission reduction shall not exceed such number as the Administrator finds necessary to ascertain whether or not such system will achieve the objectives specified in clauses (1) and (11) of subparagraph (A).

"(D) A variance under this paragraph shall extend to the sooner of—

"(i) a date (not more than ten years after the date on which the variance is granted) determined by the Administrator, after consultation with the owner or operator of the source, taking into consideration the design, installation, and capital cost of the technological system or systems being used, or

"(ii) the date on which the Administrator determines that such system has failed to—

"(I) achieve at least an equivalent continuous emission reduction to that required to be achieved under the standards of performance which would otherwise apply, or

"(II) comply with the condition specified in paragraph (1) (A) (11),

and that such failure cannot be corrected.

"(2) (A) If a variance under paragraph (1) is terminated under clause (11) of paragraph (1) (D), the Administrator shall grant a waiver from the requirements of this section for such period as may be necessary for procurement, installation, and test operation of a technological system or systems such as will comply with standards of performance under subsection (b) of this section. Such period shall not extend beyond the date two years from the time such waiver is granted.

"(B) A waiver granted under this paragraph shall set forth a compliance schedule containing increments of progress which require compliance with the applicable standards of performance as expeditiously as practicable and include such measures as are necessary and practicable in the interim to minimize emission. Such schedule shall be treated as a standard of performance for purposes of subsection (e) of this section 113."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 112 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 112?

There being none, the Clerk will read section 113.

The Clerk read as follows:

#### CONTROL OF POLLUTION FROM FEDERAL FACILITIES

SEC. 113. (a) Section 118 of the Clean Air Act, relating to control of pollution from Federal facilities, is amended—

(1) by inserting "(a)" after "118", and

(2) by striking out "shall comply with Federal, State, Interstate, and local requirements respecting control and abatement of air pollution to the same extent that any person is subject to such requirements" and inserting in lieu thereof "and each officer, agent, or employee thereof, shall be subject to, and comply with, all Federal, State, Interstate, and local requirements, administrative authority, and process and sanctions respecting the control and abatement of air pollution in the same manner, and to the same extent as any nongovernmental entity. The preceding sentence shall apply (A) to any requirement whether substantive or procedural (including any recordkeeping or reporting requirement, any requirement respecting permits and any other requirement whatsoever), (B) to the exercise of any Fed-

eral, State, or local administrative authority, and (C) to any process and sanction, whether enforced in Federal, State, or local courts or in any other manner. This subsection shall apply notwithstanding any immunity of such agencies, officers, agents, or employees under any law or rule of law. No officer, agent, or employee of the United States shall be personally liable for any civil penalty under this title."

(b) Section 118 of such Act is amended by striking out "The President may exempt" and inserting in lieu thereof:

"(b) The President may exempt."

(c) Section 118(b) of such Act, as amended by subsection (b) of this section, is amended by inserting the following immediately before the last sentence thereof: "In addition to any such exemption of a particular emission source, the President may, if he determines it to be in the paramount interest of the United States to do so, issue regulations exempting from compliance with the requirements of this section any weaponry, equipment, aircraft, vehicles, or other classes or categories of property which are owned or operated by the Armed Forces of the United States (including the Coast Guard) or by the National Guard of any State and which are uniquely military in nature. The President shall reconsider the need for such regulations at three-year intervals."

(d) Section 302(e) of such Act is amended to read as follows:

"(e) The term 'person' includes an individual, corporation, partnership, association, State, municipality, political subdivision of a State, and any agency, department, or instrumentality of the United States and any officer, agent, or employee thereof."

(e) Section 304(e) of such Act is amended by inserting at the end thereof the following: "Nothing in this section or in any other law of the United States shall be construed to prohibit, exclude, or restrict any State, local, or interstate authority from—

"(1) bringing any judicial action or obtaining any judicial remedy or sanction in any State or local court, or

"(2) bringing any administrative action or sanction in any State or local administrative agency, department or instrumentality, against the United States, any department, agency, or instrumentality thereof, any officer, agent, or employee thereof under State or local law respecting control and abatement of air pollution. Notwithstanding any other provision of law, no such action brought against any such person in any State or local court may be removed to a court of the United States under any authority of law. For provisions requiring compliance by the United States, departments, agencies, instrumentalities, officers, agents, and employees in the same manner as nongovernmental entities, see section 118."

(f) (1) The second sentence of section 111 (c) (1) is amended by striking out "(except with respect to new sources owned or operated by the United States)".

(2) The second sentence of section 112(d) (1) is amended by striking out "(except with respect to stationary sources owned or operated by the United States)".

(3) The second sentence of section 114 (b) (1) is amended by striking out "(except with respect to new sources owned or operated by the United States)".

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 113 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 113?

There being none, the Clerk will read section 114.

The Clerk read as follows:

#### WAIVER OF MAINTENANCE OF EFFORT REQUIREMENT

SEC. 114. Section 105(b) of the Clean Air Act is amended by inserting at the end thereof the following: "The Administrator, after notice and opportunity for a public hearing and upon making a general finding of good cause and appropriate specific findings, may waive the prohibition of the third sentence of this subsection. For the purpose of this subsection, the term 'finding of good cause' may include a finding that—

"(1) denial of the grant would result in extreme hardship;

"(2) the general purpose unit of government, or higher applicable unit of government, of which such agency is a part has declared the existence of a financial emergency and is thus unable to meet the requirements of this subsection; or

"(3) the circumstances which made such agency unable to meet the requirements of this section were beyond its control."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 114 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 114?

There being none, the Clerk will read section 115.

The Clerk read as follows:

#### ENERGY OR ECONOMIC EMERGENCY AUTHORITY

SEC. 115. Section 110(f) of the Clean Air Act is amended to read as follows:

"(f) (1) Upon application by the owner or operator of a fuel burning stationary source, and after notice and public hearing, a temporary emergency suspension of any part of an applicable implementation plan with respect to such source may be issued by the Governor of the State in which such source is located and may take effect immediately pending approval or disapproval by the Administrator.

"(2) A temporary emergency suspension under this subsection shall be issued only if the Governor of such State finds that—

"(A) there exists in the vicinity of such source a temporary economic or energy emergency involving actual or threatened high levels of unemployment or loss of necessary energy supplies for residential dwellings; and

"(B) such unemployment or loss can be totally or partially alleviated by such emergency suspension.

Not more than one such suspension may be issued for any source on the basis of the same set of circumstances or on the basis of the same emergency.

"(3) A temporary emergency suspension issued by a Governor under this subsection shall remain in effect for a maximum of four months. The Administrator shall, within such four-month period, approve such suspension if he determines that it meets the requirements of paragraph (2) of subsection (a).

"(4) This subsection shall not apply in the case of a plan provision or requirement promulgated by the Administrator under subsection (c) of this section.

"(5) The Governor may include in any temporary emergency suspension issued under this subsection a provision delaying for a period identical to the period of such suspension any compliance schedule (or incre-

ment of progress) to which such source is subject under section 119 or 121 of this Act, upon a finding that such source is unable to comply with such schedule (or increment) solely because of the conditions on the basis of which a suspension was issued under this subsection."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 115 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there any amendments to section 115?

There being none, the Clerk will read section 116.

The Clerk read as follows:

#### VISIBILITY PROTECTION

SEC. 116. (a) Subtitle C of title I of the Clean Air Act, as added by section 108 of this Act, is amended by adding the following new section at the end thereof:

#### "VISIBILITY PROTECTION FOR FEDERAL CLASS I AREAS

"SEC. 161. (a) (1) Congress hereby declares as a national goal the prevention of any future, and the remedying of any existing, impairment of visibility in mandatory class I Federal areas which results from manmade air pollution.

"(2) Not later than eighteen months after the date of enactment of this section, the Administrator shall complete a study and report to Congress on available methods for implementing the national goal set forth in paragraph (1). Such report shall include recommendations for—

"(A) methods for identifying, characterizing, determining, quantifying, and measuring visibility impairment in Federal areas referred to in paragraph (1), and

"(B) modeling techniques (or other methods) for determining the extent to which manmade air pollution may reasonably be anticipated to cause or contribute to such impairment, and

"(C) methods for preventing and remedying such manmade air pollution and resulting visibility impairment.

Such report shall also identify the classes or categories of sources and the type of air pollutants which, alone or in conjunction with other sources or pollutants, may reasonably be anticipated to cause or contribute significantly to impairment of visibility.

"(3) Not later than twenty-four months after the date of enactment of this section, and after notice and public hearing, the Administrator shall promulgate regulations to assure (A) maximum feasible progress toward meeting the national goal specified in paragraph (1), and (B) compliance with the requirements of this section.

"(b) Regulations under subsection (a) (3) shall—

"(1) provide guidelines to the States, taking into account the recommendations under subsection (a) (2) on appropriate techniques and methods for implementing this section (as provided in subparagraphs (A) through (C) of such subsection (a) (2)), and

"(2) require each applicable implementation plan for a State in which any such class I area is located (or for a State the emissions from which may reasonably be anticipated to cause or contribute to any impairment of visibility in any such area) to contain emission limits, schedules of compliance and such other measures as may be

necessary to make maximum feasible progress toward meeting the national goal specified in subsection (a), including—

"(A) except as otherwise provided pursuant to subsection (c), a requirement that each major stationary source (as defined in section 302(o)) which is in existence on the date of enactment of this section, but which has not been in operation for more than 15 years as of such date, and which emits any air pollutant which may reasonably be anticipated to cause or contribute to any impairment of visibility in any such area, shall procure, install, and operate, as expeditiously as practicable (and maintain thereafter) the best available retrofit technology for controlling emissions from such source for the purpose of eliminating or reducing any such impairment, and

"(B) a long-term (10 to 15 years) strategy for making maximum feasible progress toward meeting the national goal specified in subsection (a).

"(c) (1) The Administrator may, by rule, after notice and opportunity for public hearing, exempt any major stationary source from the requirement of subsection (b) (2) (A), upon his determination that such source does not or will not, by itself or in combination with other sources, emit any air pollutant which may reasonably be anticipated to cause or contribute to a significant impairment of visibility in any mandatory class I Federal area.

"(2) Paragraph (1) of this subsection shall not be applicable to any fossil-fuel fired powerplant with total generating capacity of 750 megawatts or more.

"(3) An exemption under paragraph (1) shall be effective only upon concurrence by the appropriate Federal land manager or managers with the Administrator's determination under such paragraph.

"(d) Before holding the public hearing on the proposed revision of an applicable implementation plan to meet the requirements of this section, the State (or the Administrator, in the case of a plan promulgated under section 110(c)) shall consult in person with the appropriate Federal land manager or managers and shall include a summary of the conclusions and recommendations of the Federal land managers in the notice to the public.

"(e) In promulgating regulations under this section, the Administrator shall not require the use of any automatic or uniform buffer zone or zones.

"(f) For purposes of section 304(a) (2), the meeting of the national goal specified in subsection (a) (1) by any specific date or dates shall not be considered a 'non-discretionary duty' of the Administrator.

"(g) For the purpose of this section—

"(1) in determining maximum feasible progress there shall be taken into consideration the costs of compliance, the time necessary for compliance, and the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any existing source subject to such requirements;

"(2) in determining best available retrofit technology there shall be taken into consideration the costs of compliance, the energy and nonair quality environmental impacts of compliance, any existing pollution control technology in use at the source, and the degree of improvement in visibility which may reasonably be anticipated to result from the use of such technology, but in no event shall post-combustion flue gas desulfurization be required by the Administrator as best available retrofit technology for any fossil-fuel fired powerplant with total generating capacity of less than 750 megawatts which is in operation on date of enactment of this section;

"(3) the term 'Federal land manager' has the same meaning as when used in section 160.

"(4) the term 'manmade air pollution' means air pollution which results directly or indirectly from human activities;

"(5) the term 'as expeditiously as practicable' means as expeditiously as practicable but in no event later than five years after the date of approval of plan revision under this section (or the date of promulgation of such a plan revision in the case of action by the Administrator under section 110(c) for purposes of this section);

"(6) the term 'mandatory class I Federal areas' which may not be designated as other than class I under the regulations of the Administrator relating to prevention of significant deterioration of air quality; and

"(7) the terms 'visibility impairment' and 'impairment of visibility' shall include reduction in visual range and atmospheric discoloration."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 116 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

#### AMENDMENT OFFERED BY MR. MADIGAN

Mr. MADIGAN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MADIGAN: Page 434, line 9, strike out the period at the end thereof and insert in lieu thereof: ", unless the owner or operator of any such plant demonstrates to the satisfaction of the Administrator that such powerplant is located at such distance from all such mandatory class I Federal areas that such powerplant does not or will not, by itself or in combination with other sources, emit any air pollutant which may reasonably be anticipated to cause or contribute to significant impairment of visibility in any such area."

Mr. MADIGAN (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. MADIGAN. Mr. Chairman, this amendment pertains to the maintenance of visibility protection and simply puts the language of the bill more in line with the testimony of the Administrator of EPA, Mr. Costle, who indicated before us in the committee hearing that he thought we ought to be dealing only with those situations where visibility would be significantly impaired.

This amendment has been worked out by the staff of the minority, and it has, I believe, the agreement of the majority.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, we believe this amendment offers a correct approach, and we have no objection to its adoption.

Mr. MADIGAN. Mr. Chairman, I would appreciate the support of the

committee for my amendment, and I yield back the balance of my time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. MADIGAN).

The amendment was agreed to.

The CHAIRMAN. Are there other amendments to section 116?

There being none, the Clerk will read section 117.

The Clerk read as follows:

**AREA FAILING TO ATTAIN OR MAINTAIN NATIONAL AMBIENT AIR QUALITY STANDARDS AFTER THE REQUIRED ATTAINMENT DATE**

Sec. 117. Title I of the Clean Air Act is amended by inserting the following at the end thereof.

**"NONATTAINMENT AREAS**

"SEC. 127. (a) Not later than one year after the date of enactment of this section, and every two years thereafter, the Administrator shall study and report to Congress on the air quality, health, welfare, economic, energy, and social effects of—

"(1) provisions implementing this section; "(2) the Administrator's interpretative regulation published in 41 Federal Register 55524-30, December 21, 1976, including any modification thereof; and

"(3) alternative proposals or strategies to attain and maintain all national ambient air quality standards.

The National Commission on Air Quality established by section 327 shall include within its study and report to Congress its analysis of the air quality, health, welfare, economic, energy, and social effects of the policies referred to in this subsection. The study under this section shall analyze and quantify, insofar as practicable, the relative contributions of manmade and natural emissions to air pollution concentrations in excess of any national ambient air quality standard.

"(b) (1) Not later than six months after the date of enactment of this section, the Administrator shall promulgate regulations to carry out this section with respect to each nonattainment area for each air pollutant for which national ambient air quality standards have been promulgated.

"(2) Until such date as the applicable implementation plan for any State conforms to the requirements of this section with respect to nonattainment areas therein, the Administrator's interpretative regulation published in 41 Federal Register 55524-30, December 21, 1976, as may be modified by rule of the Administrator, shall be in effect in such State.

"(c) Notwithstanding the requirements of section 110(a)(2)(A)(i) and (ii), the Administrator, after notice and opportunity for public hearing, shall approve, under section 110(a)(2), provisions of an implementation plan for such State which relate to attainment and maintenance of national ambient air quality standards in any nonattainment area if he determines that such provisions were adopted by the State after reasonable notice and public hearing and that such provisions—

"(1) identify all nonattainment areas in the State for each air pollutant for which a national ambient air quality standard for any period is promulgated;

"(2) assure attainment of each such national ambient air quality standard in each such area as expeditiously as practicable, but not later than December 31, 1982, except that, with respect to photochemical oxidants, if in the judgment of the Administrator it is not practicable to attain such standard for such pollutant in any such area by such date, such provisions assure attainment of such standard in such area as expeditiously as practicable, but in no event later than De-

cember 31, 1987, and assure maintenance of each such standard in each such area after the date required for attainment;

"(3) require, in the interim, reasonable further progress to assure attainment of each standard in each such area by the date required under paragraph (2);

"(4) include a comprehensive, accurate, current inventory of actual emissions from all sources (as provided by rule of the Administrator) of each such pollutant for each such area and provides for revision and resubmission of the revised emissions inventory every two years thereafter;

"(5) expressly identify and quantify the emissions of any pollutant which the Administrator has determined under regulations under subsection (b)(1) must be taken into account for purposes meeting the requirements of this section, including—

"(A) the allowable emissions, if any, of any such pollutant resulting from the construction and operation of major new or modified stationary sources for each such area;

"(B) the emissions of any such pollutant resulting directly or indirectly from areawide and nonmajor stationary source growth (mobile and stationary) for each such area;

"(C) the emissions of any such pollutant from unregulated sources, fugitive emissions, and other uncontrolled or partially uncontrolled sources for each such area;

"(D) the emissions and air quality concentrations of any such pollutant resulting from, or related to, new, modified and existing indirect sources, taking into account the provisions under sections 110(a)(2)(I) and 124 for each such area;

"(E) the emissions of any such pollutant resulting from extension or elimination of transportation control measures under section 123 for each such area;

"(F) the actual emissions of any such pollutant resulting from in-use motor vehicles in each such area (as determined pursuant to information published by the Administrator);

"(G) the new motor vehicle emission standard for any such pollutant in effect for each such area;

"(H) the emissions of any such pollutant resulting from stationary sources to which delayed compliance orders are or have been issued under section 113(b) or 121 for each such area;

"(I) the emissions of any such pollutant resulting from fuel switching by stationary sources, including conversions to coal, curtailments of natural gas, burning fuels with higher pollution characteristics, extensions under section 119, or other action referred to in section 128 of this Act for each such area;

"(J) emissions of any such pollutant from any source or facility owned or operated by the Federal Government, including emissions pursuant to an exemption under section 118 of this Act for each such area; and

"(K) emissions of any such pollutant from any source in excess of the allowable emission limitations for each such area;

"(L) emissions and air quality concentrations of any such pollutant which originate outside such area but which are transported to such area; and

"(M) such other appropriate factors as the Administrator may specify by rule;

"(6) identify and commit the financial and manpower resources necessary to carry out the plan provisions required by this subsection;

"(7) contain emission limitations, schedules of compliance and such other measures as may be necessary to meet the requirements of this section;

"(8) requires permits for the construction and operation of new or modified major stationary sources in accordance with the requirements of subsection (d); and

"(9) evidence public, local government, and State legislative involvement and consultation in accordance with section 125 of this Act and includes (A) an identification and analysis of the air quality, health, welfare, economic, energy, and social effects of the plan provisions required by this subsection and of the alternatives considered by the State, and (B) a summary of the public comment on such analysis.

"(d) If a State plan contains provisions permitted under subsection (c)(5)(A), providing for an allowance for emissions of pollutants from new or modified stationary sources the emissions form which will cause or contribute to concentrations of any pollutant in a nonattainment area for such pollutant, such plan shall provide that a permit to construct and operate may be issued to any such source if such permit requires the proposed source to comply with the lowest achievable emission rate (as defined in subsection (e)(3)) and if after notice and opportunity for a public hearing—

"(1) the applicant for such permit demonstrates that emissions of such pollutant resulting from the proposed new or modified major stationary source will not cause or contribute to emission levels which exceed the allowance permitted for such pollutant for such area from new or modified major stationary sources under subsection (c)(5)(A);

"(2) (A) revised emission inventories have been submitted as required under subsection (c)(4) for such area, and (B) the most recent revised emission inventory for such area demonstrates, and the Administrator concurs in the State's determination, that reasonable further progress has been achieved for such pollutant for such area during the period covered by such inventory;

"(3) the owner or operator of the proposed new or modified source has (A) demonstrated that all major stationary sources owned or operated by such person (or by any entity controlling, controlled by, or under common control with such person) in such State are subject to emission limitations and are in compliance, or on a schedule for compliance, with all applicable emission limitations and standards under this Act, and (B) certified that all such sources in any other State are in compliance, or on a schedule for compliance, with all applicable emission limitations and standards under this Act; and

"(4) the issuance of the permit will not cause (or materially contribute to) concentrations of any air pollutant for which national ambient air quality standards have not been promulgated which pose a significant risk to public health.

"(e) For the purpose of this section—

"(1) the term 'reasonable further progress' means with respect to any plan provisions required under this section, reductions in emissions of the applicable air pollutant in equal amounts every two years during the period beginning on the date of approval of such plan provisions and ending on the date required for attainment of a national ambient air quality standard for such pollutant under subsection (c)(2), which reductions are sufficient to assure such attainment by such date under subsection (c)(2);

"(2) the term 'nonattainment area' means, for any air pollutant—

"(A) an area which is shown by monitored data or which is projected by air quality modeling (or other methods determined by the Administrator to be reliable) to exceed any national ambient air quality standard for such pollutant; and

"(B) any area for which no adequate monitored data or basis of projection exists as of such date, unless such area is classified by the State as subject to the requirements of section 160 of this Act.

"(3) the term 'lowest achievable emission

rate' means for any source that rate of emissions which reflects—

"(A) the most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable, or

"(B) the most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent.

In no event shall the application of this term permit a proposed new or modified source to emit any pollutant in excess of the amount allowable under applicable new source standards of performance; and

"(4) the terms 'modification' and 'modified' mean the same as the term 'modification' as used in section 111(a)(4) of this Act.

"(f) The Administrator shall have no authority to promulgate, implement, or enforce regulations under section 110(c)(1) relating to plan provisions required under subsection (c) of this section. Nothing in this subsection shall be construed to restrict the Administrator's authority under section 110(c) to promulgate, implement, and enforce regulations referred to in subsection (b)(2) of this section with respect to any State until such date as the applicable implementation plan for such State conforms to the requirements of this section.

"(g) Notwithstanding section 209(a), any State which has plan provisions approved under this section may adopt and enforce for any model year standards relating to control of emissions from new motor vehicles or new motor vehicle engines and take such other actions as are referred to in section 209(a) respecting such vehicles if—

"(1) such standards are identical to the California standards for which a waiver has been granted for such model year, and

"(2) California and such State adopt such standards at least two years before commencement of such model year (as determined by regulations of the Administrator).

"(h) The Administrator shall issue guidance documents for purposes of assisting States in implementing requirements of this section respecting the lowest achievable emission rate within the meaning of subsection (e)(3). Such a document shall be published not later than 9 months after the date of enactment of this section and shall be revised at least every two years thereafter.

"(i) Nothing in this section shall be construed to provide that any permit may be issued to any source under this section if emissions from such source will exceed any emission limitation, or violate any other requirement, under subtitle C."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 117 be considered as read, printed in the Record, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDMENT OFFERED BY MR. MOSS

Mr. MOSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. Moss: Page 356, after line 2, insert:

(b) Section 110 of such Act is amended by adding the following new subsection at the end thereof:

"(b)(1) No grant which the Administrator is authorized to make to any applicant for construction of sewage treatment works in any area in any State may be withheld, conditioned, or restricted by the Administra-

tor on the basis of any requirement of this Act except as provided in paragraph (2).

"(2) The Administrator may withhold, condition, or restrict the making of any grant for construction referred to in paragraph (1) only if he determines that—

"(A) such treatment works will not comply with applicable standards under section 111 or 112.

"(B) the State does not have in effect, or is not carrying out, a State implementation plan approved by the Administrator which expressly quantifies and provides for the increase in emissions of each air pollutant (from stationary and mobile sources in any area to which either section 127 or subtitle C applies for such pollutant) which increase may reasonably be anticipated to result directly or indirectly from the new sewage treatment capacity which would be created by such construction.

Mr. MOSS (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the Record.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. MOSS. Mr. Chairman, the amendment I have at the desk is designed to clarify and restrict the Environmental Protection Agency's authority to use the Clean Air Act as a basis for withholding, conditioning, or restricting grants for construction of sewage treatment works.

Grants for the construction of sewage treatment works are specifically designated by the Federal Water Pollution Control Act as major Federal actions significantly affecting the quality of the human environment. This designation triggers the requirement of the National Environmental Policy Act of 1969 that an environmental impact statement be prepared.

The Environmental Protection Agency considers air pollution impacts to be among the environmental impacts that must be considered in an environmental impact statement concerning a grant for construction of sewage treatment works. The reasoning of the Environmental Protection Agency is as follows.

If the capacity of, and area served by, a sewage treatment plant is increased, a corresponding increase in residential construction may be accommodated. Increased residential construction would allow population growth in the area. Population growth may cause increased air pollution by, for example, increasing the number of automobiles and vehicle miles traveled in the area. The sewage treatment grant may result, therefore, in adverse impacts on air quality.

This amendment strikes a balance between the need to allow residential construction in order that population growth may be accommodated, and the need to insure that population growth be accommodated in an environmentally sound manner.

The authority of the Environmental Protection Agency to withhold, condition, or restrict a grant for construction of a sewage treatment plant on the basis of the Clean Air Act would be limited to specific enumerated circumstances, which limitation would insure agreement with the general scheme of the act.

The circumstances include:

First, noncompliance with the applicable standards of performance for new stationary sources;

Second, noncompliance with the applicable national emission standards for hazardous air pollutants;

Third, failure of a State to have in effect or to carry out a State implementation plan that expressly and appropriately provides for the increased emissions associated with expanded sewage treatment capacity; or

Fourth, anticipated noncompliance with the provisions of such State implementation plan in effect and being carried out by a State.

The basic theme of this amendment is balance. It is designed to balance economic and environmental considerations. As a measure of its success in striking such a balance, the amendment is supported not only by the National Association of Home Builders but also, I trust, by my esteemed colleague, the chairman of the Subcommittee on Health and the Environment. I urge the adoption of my amendment.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, I would say to the gentleman from California (Mr. Moss) that we have discussed this amendment with the gentleman. The staff has gone over the amendment; and as far as I am concerned, we have no objection to the amendment.

Mr. MADIGAN. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Illinois.

Mr. MADIGAN. Mr. Chairman, I thank the gentleman for yielding.

We have had an opportunity to review his amendment. We feel it is a good one, and we are pleased to have the opportunity to support it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from California (Mr. Moss).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. McCORMACK

Mr. McCORMACK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. McCORMACK: On page 355, strike out line 4 and all that follows down through line 16.

On page 355, line 17, strike out (h) and substitute (g).

On page 355, line 24, strike out (i) and substitute (h).

Mr. McCORMACK. Mr. Chairman, the amendment that I have placed before the House would delete lines 4 through 16 on page 355, contained in section 117.

This particular part of the bill is duplicative. The same provision appears in section 221 for a second time.

Mr. Chairman, the amendment that will be submitted presently by the gentleman from Michigan (Mr. DINGELL) will include a provision to strike this material from title II. I propose to strike this material in title I at this time. If the Dingell amendment is adopted, then my amendment will simply be a perfecting amendment. If the Dingell amendment

is not accepted, this provision will only appear one time in the bill, rather than twice.

Mr. Chairman, the bill as it is written, would allow any State to choose the same automotive emission standards as are presently being used by the State of California. As the Members may know, California has had its own emission standards which are somewhat more restrictive than the national standards.

Mr. Chairman, this dual set of standards has worked because California has a very large population, and because it is isolated from the rest of the country physically in such a way that there are no major communities located on the State border with adjacent States.

However, Mr. Chairman, the bill, as it is now written, is an invitation to chaos and confusion.

Mr. Chairman, let us suppose that Ohio or New Jersey or some other State in the Midwest or in the East were to choose the same standards as California, but standards different from those of all of the other States around it.

In such a State the law would require that all new cars offered for sale meet California standards.

Mr. Chairman, in California today the fuel penalty under the California standards is 11 percent. Also, the automobiles are more expensive. Therefore, there would be an invitation to the residents of any State which chooses stricter standards to cross State borders and buy cars in an adjacent State. It would, quite literally, be an invitation to violate the law in order to get a car that costs less money to buy, and which gets better gasoline mileage.

Mr. Chairman, I think it is important for us to understand that what has happened in the case of California is unique because most of their population is concentrated in the Los Angeles area or in the San Francisco region, where they have unique meteorologic conditions, and where higher standards are probably more appropriate than they are in most of the rest of the country. However, the actual impact of adoption of those standards by other States would indeed be very small.

For instance, a State must give a 2-year notice before adopting new standards. Thus the law could not take effect before the 1980 model cars. At that time the only difference between the California standards for 1980 and the standards under the Dingell amendment or the administration bill, which for 1980 are both the same, would be that  $\text{NO}_x$  emissions would be 2 grams per mile under the national standards, but 1 gram per mile under the California standards.

After 2 more years, all standards become the same anyway. So what the bill says is that any State could opt for the California standards but they would not go into effect until 1980. They would be effective only for 2 years, and they would create very substantial confusion.

What I am attempting to do with this amendment is to minimize unnecessary

confusion and additional cost to consumers. By 1982 the  $\text{NO}_x$  emissions will be the same under the administration bill, the Dingell amendment, and the California standards. There really is not any justification for causing unnecessary confusion. I urge support for my amendment, to remove such confusion.

Mr. ROGERS. Mr. Chairman, I rise in opposition to the amendment.

This amendment is offered to give more authority to the States. It allows the State to make the judgment on whether it desires to try to move to the California standards or whether it would maintain Federal standards.

As the Members I am sure know, there are presently two sets of standards, one for 49 States on new auto pollution and one specifically for California which represents about 10 percent of the market.

It is the feeling of the committee that if there are States, such as Colorado, which have a very heavy pollution problem, that might desire to adopt and enforce the California option for themselves they may do so. The gentleman has indicated that dire consequences may come about. But if they are all that dire, then I am sure the State would not make that judgment. No one will force the State to make a judgment. It is left up to the State. They can either do it or not do it. Notice is required so the process will be very orderly. If a State decides to make that change to clean up the air, clean up the automobile, it can adopt and enforce the California standards which are more strict than the Federal. A State can do that by giving 2 years notice to the automobile manufacturing companies. So there is no problem. It will work very smoothly. The States would have the right to adopt only the standards which are identical to the California standards.

If the McCormack amendment were to be adopted, it really is setting forth an antienergy policy. It would be antienergy because it would adversely affect the potential for coal conversions. Also, if a State decided to move in and help clean up the automobile, it means that the State could have more factories built and more jobs in their areas. Some States may want to do that. More jobs could be created by allowing the California standards to be implemented in some States, particularly those which have high pollution. New Jersey might want to move in this direction, because that State maintains that 510 new factories could not come in if they do not have that right.

So there are many reasons why States might want to do this. They also might want to grant greater health protection for their citizens. We think they ought to be given that option. Why should we not give them such an option? Why should a State be denied such an option if it wants to do this?

I think we should defeat the amendment offered by the gentleman from Washington (Mr. McCORMACK) because it would deny States the right to make

an independent judgment as to whether they want to implement the California standards or the Federal standards.

It is an anti-State's rights amendment. Again I would urge defeat of the McCormack amendment.

Mr. BROYHILL. Mr. Chairman, I move to strike the last word, and I rise in support of the amendment offered by the gentleman from Washington (Mr. McCORMACK).

Mr. Chairman, back in the 1970 act, Congress made the policy decision at that time that the emission standards would be in effect nationwide except that because of the particular problems, atmospheric conditions and meteorological problems existing in California, that the State of California could adopt more stringent emission standards.

What the committee would have us do is to have a balkanized policy that exists all over the country which would result not only in the consumption of more energy but substantially higher consumer costs.

I can assure those Members who are interested that this would also cost jobs if this language is left in the bill and this new policy adopted. I would urge that we retain the policy that was adopted in this Congress back in 1970 and adopt the amendment offered by the gentleman from Washington (Mr. McCORMACK).

Mr. DINGELL. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I think we had better have a look at what the amendment does. I support the amendment very strongly. I urge my colleagues to do likewise. Let met set out the reasons why.

Under the California exemption, it is only required that the California standards must be at least as stringent as Federal standards, which means they can be different, but not necessarily better. The amendment offered by the able gentleman from Washington (Mr. McCORMACK) returns things to the status in which they have been since the original Clean Air Act was enacted and since the California exemption was adopted.

There is an enormous penalty from every consumer concern with regard to the committee bill on this section. That is corrected by the amendment offered by the gentleman from Washington. First of all, according to every study that has been made, there is somewhere between a 12 and a 20 percent penalty in terms of fuel under the California standards. The California automobile costs more than a 49-State car by somewhere between \$150 and \$350, and half of that is charged off against purchasers in the other 49 States.

Now in regard to a fuel penalty, it is substantial. The fuel penalty is still further exacerbated by the fact that EPCA, the major energy legislation which was passed by this Congress during the last Congress, imposes a requirement on the producer that automobiles should meet fixed standards with regard to fuel consumption. It has been possible for manufacturers to calculate whether or not and how the manufacturers would meet the standard. There is a penalty of \$50 a car

imposed here for knowing what the mix of States is. But there is no way that the auto industry can shoot at the kind of moving target that the committee bill would impose upon us because the mix of cars amongst the several States would change on an almost daily basis.

What are the health benefits in the committee bill over the existing standards? The Members will hear that debate, I will tell my colleagues, very shortly, but the hard fact is that the health and environmental benefits of the California standards over the 49-State standards in terms of health benefits is very, very small.

Last of all, in California there is an enormous penalty in terms of the number of cars available. Ask our colleagues from California what percentage of the models of automobiles is available in the State of California? The fact of the matter is that about half the models available elsewhere and about half the model mix is available in the State of California. That is a hard circumstance on the buyer.

Let us take a look at the effect on populated border areas. If one lives in New York or New Jersey, or if one lives on the border between Virginia and Maryland, or if one lives in Texarkana, Tex., he is going to have a tough time getting the car he wants, and he is going to have a hard time selling it because it may be that just across the river or just across the State line the car that he has cannot be sold, or he cannot buy the car he wants in the State in which he lives.

To summarize the problem, I think the bill which the amendment would correct is very significant. There is a penalty to the consumer somewhere between \$150 and \$350 per car. This is real, and it can be documented.

The bill creates a shortage of model availability in the States in which the California standards would be imposed. About half the cars are produced. There is a fuel penalty of somewhere between 12 and 18 percent in the States which use the California standards. There is an additional consumer cost of about \$150 to \$350 in those States. And last of all, we force into the Nation a Balkanization of a kind that the Founding Fathers sought to prevent when they originally adopted the Constitution, and that was to say that through it that we are one Nation, not a whole collection of Balkans with different marketing and pricing standards.

Mr. WIRTH. Mr. Chairman, if the gentleman from Michigan will yield, is the gentleman telling me if the State of Colorado or the State of Washington wants to set a standard as tough as the California standard that we would be precluded from doing so?

Mr. DINGELL. Under existing law that is the fact. California came in a few years ago and said: "We have a special set of problems that have to be met by a special law."

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(On request of Mr. WIRTH, and by unanimous consent, Mr. DINGELL was al-

lowed to proceed for 1 additional minute.)

Mr. DINGELL. So we responded by giving them a special exemption.

Mr. WIRTH. If the gentleman will yield further, could the gentleman tell me how the ability of the State of California or the State of Colorado or the State of Michigan, or wherever it may be, to set its own standard is unconstitutional, as the gentleman is suggesting? What is unconstitutional about that?

Mr. DINGELL. The Constitution provides that whenever the Federal Government speaks the States are not able to act in that area, and we have done so in the Clean Air Act, except with a special exemption which we have enacted for the State of California, and then I have just described the penalties as a result of that.

Mr. WIRTH. If the gentleman will yield further, what we are doing by voting "yes" on this amendment is making it impossible for any other State to set the standard California has set. Is that correct?

Mr. DINGELL. Yes, and that is highly desirable because there is no benefit to anybody by allowing the kind of proliferation of standards that would be occasioned here.

Mr. MAGUIRE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, actually it is very ironic that the gentleman from Michigan (Mr. DINGELL) should be speaking in support of this amendment. It is doubly important that we keep this amendment in this section in view of the amendment which the gentleman from Michigan intends to offer to title II.

First of all, the gentleman's amendment to title II would wipe out a provision which would permit New Jersey or Colorado or Michigan or Washington, or any State that might have an inspection maintenance program, to have the ability to put into effect standards equivalent to those in California. Now the gentleman wants to eliminate our fallback position as well.

But aside from that obvious point, it is very ironic indeed that the gentleman from Michigan, who will seek to amend title II to have this Congress abandon the statutory standards for two out of three pollutants that we have had standards set for since 1970—and he wants to do that nationally—should now turn around and say to my State or to any other State that if they disagree with such a backwardsliding national policy, and if they have tougher problems than the Nation generally, they should nevertheless not be permitted to adopt standards which are permitted to be in effect for one of the other States in the Union.

My State of New Jersey is the most densely populated State in the Union. It has some of the most serious pollution problems in the United States. It has more automobile traffic than it knows what to do with—from inside the State and from other States. The pollution is related to automobile traffic. Cancer rates in New Jersey and across the country are related to this and other kinds of pollution.

My State wants to be able to do what California is doing, and as I understand it some other States might also wish to do so. Why should we not be permitted to do that, I would ask the sponsor of this amendment or the gentleman from Michigan? What possible reason could there be? I heard the statements but I did not hear any adequate explanations.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. Surely. I yield to the gentleman.

Mr. McCORMACK. Mr. Chairman, I will be glad to try to put the case the best I can. If the gentleman will recognize what we are talking about is a period of 2 years from 1980 to 1982. It would only apply in that period, because it requires a 2-year lead, a State requires a 2-year lead time. It cannot go into effect for 1980 and the standards, apparently, will be the same in 1981 as the California standards.

Mr. MAGUIRE. Mr. Chairman, let me put it more precisely. If the gentleman from Michigan (Mr. DINGELL) succeeds in title II in wiping out the statutory standards for carbon monoxides and nitrous oxides, would it not seem logical that some States might want to proceed on a more stringent schedule consistent with the State of California? If so, this could continue into the early 1980's or even beyond that.

Mr. McCORMACK. Mr. Chairman, if the gentleman will yield further, if the gentleman wanted to put that for a national standard, the reason it was not established as a national standard is because there are certain practicalities to getting it done quicker.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, in point of fact, the California standards on carbon monoxide are higher during most of the years of the schedule than the proposals that are being pushed forward by the committee. They are 9 grams per mile, instead of 3.4 grams per mile. If the gentleman takes a purest attitude on this, the gentleman would strongly feel no one wants to go higher than the State of California.

Mr. MAGUIRE. How can the gentleman question the right of my State to go to higher standards along with California if California and we both decide it is necessary?

Mr. DINGELL. Each part of the country has pollution problems. We ought to produce a car in a highly mobile society where people travel thousands of miles across every State of the Union on almost a daily basis which meets the air quality standards in every State. An automobile licensed in Maine does not necessarily stay in Maine.

Mr. MAGUIRE. The gentleman is making my argument. We ought to do the best we can across the country. If the gentleman's amendment prevails, we will not do the best we can across the country. Therefore, I would like my State, or any State that cares to do so, to have tougher standards.

Mr. CARTER. Mr. Chairman, I move

to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, it seems to me that we should not deny the right we have given to California or other States with similar problems.

Mr. Chairman, we have one State right now, the State of the distinguished gentleman from Colorado (Mr. WIRTH), which has specific problems today over in the city of Denver. Are we going to tell them they cannot solve their pollution problems, just as California is solving theirs? Of course, these are special circumstances where we have areas of air inversion and terrible pollution. Of course, there is a penalty, as one of my friends has stated, to the consumer. This penalty, I say to my friend, is in cancer. Let us talk about that a little bit. Seventy-five to 90 percent of the cancer in this country is caused by environmental causes. This year 690,000 people will have cancer, 385,000 of them will die, 1,055 will die each day. One out of every four that is within the sound of my voice will probably have cancer in his lifetime.

This is the reason why we should permit other States to adopt the same standards as the State of California.

Mr. WIRTH. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from Colorado.

Mr. WIRTH. Mr. Chairman, I thank the gentleman for yielding and I thank the gentleman for pointing out the concerns of the people from California for clean air.

Recently a poll was taken by the University of Denver concerning the wishes of people in the Denver metropolitan area. More people were concerned about dirty air and concerned about the cancer-causing nature of that dirty air than any other single issue that was asked to talk about.

Mr. Chairman, the gentleman is absolutely correct. The people in this country are concerned and ought to have the right to determine whether they want to have the softer standards or the very tough California standards.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, I want to concur with the statements made by my colleague, the gentleman from Kentucky. It is up to the State to have a lot of say over what is going to happen to the people in its area, not only on questions of health, but on questions of growth.

If we are going to have a conversion to coal, which is going to use up a lot of clean air, it seems to me reasonable for some States to decide for themselves that perhaps they want a car that is going to use less of this clean air so that they can provide more clean air for industrial growth. I think we ought to leave that decision to the States.

It seems to me ironic that those Members who, on the Breaux amendment,

argued that the States ought to have that power to make that variance, should come along now and argue that we ought not let the States make this decision. I think that we ought to let them make that decision for themselves.

We are not asking for a proliferation of standards, only for two standards—California and a national standard. If a State wants to choose one as opposed to the other, it should have that right.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, I would like to associate myself with the remarks of the gentleman from California and the gentleman from Kentucky. Here, we are also talking about a State being able to make a rational choice about economic growth or environmental protection.

The Environmental Protection Commission tells us that if we do not have tougher safeguards, we are not going to be able to build new factories, or we will have to tell people that they cannot drive their cars at all.

What we would like to do is deal with that in a rational, sane bill, saying that we will have somewhat tougher standards for cars so that we can protect our air resources.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. McCORMACK).

The question was taken; and the chairman announced that the yeas appeared to have it.

Mr. McCORMACK. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

So the amendment was rejected.

AMENDMENT OFFERED BY Mr. GAMMAGE

Mr. GAMMAGE. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GAMMAGE: Page 356, insert the following after line 2:

(j) The implementation of the provisions of subsection (b) through (i) shall be deferred pending completion of the initial study of (a) above. Upon completion of such study, the Administrator of the Environmental Protection Agency shall recommend to the President and to the Congress any alternate proposals or strategies to attain and maintain all national ambient air quality standards to insure a fair and effective policy for meeting these standards in the future for controlling new industrial growth in areas now violating primary air quality standards.

(k) Notwithstanding the requirements of 110(a) (2) (A) (i) the deadlines for achievement of the national primary air standards shall be extended during the period of initial study under (a) plus an additional 60 days for Congressional action on such recommendation.

(l) Until such date as the Congress shall act upon such recommendation, the Administrator's interpretative regulation published in 41 Federal Register 55524-30, December 21, 1976, as may be modified by rule of the Administrator shall be in effect. Notwithstanding the foregoing, operating permits may be issued to those applicants who were granted new source construction permits prior to the date of enactment of

these amendments and who are able to demonstrate that the emissions are within the limitations set forth in such construction permits.

Mr. GAMMAGE. Mr. Chairman and members of the committee, this is basically a technical and perfecting amendment to correct a hiatus in the proposed legislation before us today. Basically, the amendment would do several things.

It would leave intact a 12-month study in section 117, which is consistent with the President's recommendation. It would defer the implementation of subsections (b) through (i) until the EPA had completed its study and reported to the President and to the Congress. It would extend the deadline for achievement of ambient air standards until 60 days after the completion of the study containing the recommendations to the President and to the Congress. It would insure the legality of construction permits up until the time of the enactment of this amendment, and it will permit the granting of operating permits for facilities now under construction, provided that they meet the emission limitations as set forth in their construction permits.

This language does not alter one word of the language in this bill. It maintains the standards imposed by the amendment added in committee by my distinguished colleague, the gentleman from Texas (Mr. ECKHARDT). It leaves intact the criteria requirements this bill imposes. This amendment perfects the bill by making it consistent with the President's policy statement of May 23, with his goals of full employment and with his proposals for economic stimulus and increased and desperately needed energy availability. In his environmental policy statement of May 23, President Carter ordered the Administrator of EPA to review the Agency's regulations controlling new industrial growth in nonattainment areas and to recommend both to the White House and to the Congress a "fair and effective policy for meeting these standards in the future."

Mr. Chairman, this bill itself mandates such a study for an initial period of 1 year. Why? Because the President knows, the authors of this bill know, the committee knows, the EPA knows, and the Members know that there is an acute lack of knowledge surrounding the technical requirements of this legislation. We do not know if the provisions contained here will be fair and effective or whether they can or will solve our environmental problems.

What we do know is that if these provisions are adopted without some period of relief while we acquire the necessary knowledge, the energy needs of this country cannot be met, and the economic stimulus proposals already dealt with by this body will become a very expensive farce.

Over 50 percent of the entire refining capacity of this country is in nonattainment areas. A study by the Federal Energy Administration demonstrates that these areas would be unable to meet

the standards of this legislation if there were a total shutdown of all of the stationary hydrocarbon emission sources.

Projected growth demands indicate a need to construct the equivalent of 26 150,000-barrel-a-day refineries by 1990 to provide gasoline, to provide heating oil, and to provide any number of other products.

Where are we going to build them?

If these facilities, both for refining and petrochemicals, cannot be built at their feed stock sources, where will they be constructed? Venezuela? Saudi Arabia? Kuwait? Abu Dhabi? Will they be built by the OPEC countries?

Will we then become dependent upon that distinguished group for a large part of our refined products as well as our crude oil? Will we export our refineries, our chemical plants, our petrochemical plants, and our jobs?

The CHAIRMAN. The time of the gentleman from Texas (Mr. GAMMAGE) has expired.

(By unanimous consent, Mr. GAMMAGE was allowed to proceed for 2 additional minutes.)

Mr. GAMMAGE. Mr. Chairman, let me ask the Members: Will we export all these things only so we can then become dependent on imports, not of just crude oil but of refined products, including gasoline, heating oil, fertilizers, and medicines?

Coal conversion is a big part of the proposed energy plan. The President suggests that we almost double our mining and consumption of coal.

How can we do this? Can we mine it under the requirements of this bill? Can we ship it under the requirements of this bill, even in a slurry pipeline? Can we burn it under the requirements of this bill? I think not.

Where are we going to find a provision for coal conversion in this country under the requirements of this bill?

Mr. Chairman, the areas shown in red on this map of the United States, including Alaska and Hawaii, are nonattainment areas for suspended particulates.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. GAMMAGE. Not at this time.

Mr. Chairman, let me ask this: What about the exploitation of geopressure reserves? What about the construction of superport facilities, some of which are already being constructed abroad. What about the strategic petroleum reserve?

We all want clean air. We all want jobs and economic stimulus. We all want more and new energy, but we do not and we cannot operate in a vacuum.

Mr. Chairman, this amendment retains the standards proposed in the bill. It does not eliminate the guidelines or the requirements of technology, monitoring, or pollution abatement required by this bill.

All this amendment does is perfect the bill by allowing relief during the period of the study it requires—the one ordered by President Carter, the one which we hope will give us the information necessary for future honest and intelligent action by Congress to achieve, in the President's words, a "fair and effective policy" to accomplish the environmental

standards we want and which we all agree are so necessary if we are going to have the good health to enjoy a stimulated economy and an abundance of energy.

The CHAIRMAN. The time of the gentleman from Texas (Mr. GAMMAGE) has again expired.

(On request of Mr. MAGUIRE and by unanimous consent, Mr. GAMMAGE was allowed to proceed for 2 additional minutes.)

Mr. GAMMAGE. Mr. Chairman, even this period of relief, we would find if we read the amendment, would continue to impose the very rigid requirements already imposed by previous legislation and by the EPA in the granting of construction and operating permits.

Mr. Chairman, this is a clean air amendment. It is a reasonable amendment. It keeps us out of the bell jar, out of the vacuum, and puts us into reality, with our feet firmly on the ground and our heads in clean air.

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield?

Mr. GAMMAGE. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I have looked at the gentleman's amendment, and I frankly do not understand a couple of key points, and I would like to ask the gentleman to clarify them for me.

What happens during this first year in which the requirements are deferred? Is EPA's existing trade-off policy in effect during that year?

Mr. GAMMAGE. EPA's existing trade-off policy is deferred as to those construction permits that were issued prior to the effective date of this act. It does permit the State authorities to issue operating permits for those constructions that were authorized prior to the effective date of this act.

This amendment does require them to comply with the requirements included in the construction and operating permits, and it does comply with present Federal law.

Mr. MAGUIRE. Mr. Chairman, does that mean that if we agree to this amendment today, over the next 3 months, let us say, after the passage of the bill in the House today and the enactment of the law, anybody could scramble and rush to his nearest permit giver and get a permit?

The CHAIRMAN. The time of the gentleman from Texas (Mr. GAMMAGE) has expired.

(On request of Mr. MAGUIRE and by unanimous consent, Mr. GAMMAGE was allowed to proceed for 2 additional minutes.)

Mr. MAGUIRE. Mr. Chairman, will the gentleman yield further?

Mr. GAMMAGE. I yield to the gentleman from New Jersey.

Mr. MAGUIRE. Mr. Chairman, to continue my statement, they would all rush to get a permit, and then they would qualify under the gentleman's amendment, regardless of any other constraints; is that correct?

Mr. GAMMAGE. No.

Mr. MAGUIRE. They get a permit

prior to the enactment. That is what the language says.

Mr. GAMMAGE. What it means is that they can obtain permits prior to the effective date of this act for construction. They can obtain operating permits for operating that construction in compliance with the existing Federal environmental law and existing State agency requirements. It must be in compliance with Federal law. It does not let them off the hook so that they could build a carbon black plant which would blacken the whole countryside. They have to comply with the Federal requirements on the issuance of these permits.

Mr. MAGUIRE. If the gentleman will yield further, could a State revise this plan during this period under the existing language in the committee bill, that is, under the Eckhardt amendment, or would they be precluded from doing so during that period?

Mr. GAMMAGE. No. The State would not be precluded from revising its plan. It could revise its plan.

This amendment basically requires study and delays the effective date of the provisions of this act insofar as any permits for construction issued prior to the effective date of this act are concerned.

Mr. MAGUIRE. Mr. Chairman, I thank the gentleman.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. GAMMAGE. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, if I can read the English language, the amendment says, "The implementation of the provisions of subsections (b) through (i)"—those are the provisions that provide for a revised plan—"shall be deferred pending completion of the initial study of (a) above."

Mr. GAMMAGE. Mr. Chairman, we are talking about this section, section 117.

Mr. ECKHARDT. This means, as I see it, that the State may not revise its plan under (b) until the study has been completed under (a). Is that not what the language says?

Mr. GAMMAGE. (a) requires the study before the implementation of (b) through (i) of the specific provisions under those subsections so that added specifications may be met. However, it does not mean that the State cannot revise its plan. What it means is that they cannot be required to comply with the requirements of those particular subsections until the study is completed.

Mr. ECKHARDT. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I think I can read the English language.

The first sentence of this provision says: "The implementation of the provisions of subsection (b),"—subsection (b) is the section that permits a revised plan in order to take care of the problems existing in nonattainment areas—"through (i) shall be deferred pending completion of the initial study of (a) above."

Mr. Chairman, the initial study of (a)

above embraces a study of what ought to be done about some rather complex chemical emissions, as well as certain pollutants like oxidants which may be formed as the result of emissions and other substances entering the atmosphere from natural sources.

Therefore, Mr. Chairman, what this amendment provides is that the State cannot even try another approach to a solution of the whole problem until it makes a complete study. At the end of that time, it is permitted to move in accordance with a plan under the authority that we had devised in the bill.

In addition to this, it is provided in subsection (k) of the amendment that "Notwithstanding the requirements of 110(a)(2)(A)(i) the deadlines for achievement of the national primary air standards shall be extended during the period of initial study under (a)"—that means until the initial study is completed, which is contemplated to be within a year—"plus an additional 60 days for congressional action on such recommendation."

Then, Mr. Chairman, (1) provides: "Until such date as the Congress shall act upon such recommendation, the Administrator's interpretive regulation"—that is the regulation that provides for the trade-off policy—"shall be in effect."

Mr. Chairman, what we would do if we accepted this amendment is defer getting at the real problem. Under the section as it appears in the bill, there is a deadline with respect to other of the pollutants than the oxidants of 1982.

That is a good deal of time to allow for taking care of a problem that should, in many instances, have been taken care of some time ago. Admittedly, the question of oxidants is more difficult.

Therefore, under the language of the bill, a time is permitted to meet the oxidant deadlines—that would be in effect now but for the passage of this bill—of as much as 10 years from now. During that 10 years, in equal 2-year increments, the plant may proceed to reduce those elements of its emission which are what are called precursors to the oxidant level.

This does not mean that each 2 years you have to reduce the ambient air oxidant level a certain amount. It only means that, for instance, the State of Texas would decide it would want to reduce hydrocarbons and nitrous oxide a certain amount in each 2-year period, and that should be in equal increments.

Let us face this question squarely: If we do not start cleaning up now, if we wait until we study for a time and then 60 days afterward, we are nevertheless going to be confronted at the end of that period with the same problem we have now. This is like the situation that so frequently exists with respect to automobile pollution, a situation in which virtually nothing is done as we get close to the deadline and then we are urged to relax the standard.

Our bill does not do this. It gives the needed flexibility with respect to construction in nonattainment areas by virtue of the trade-off plan. The trade-off plan would permit us to reduce pol-

lutants in several different ways, one of which was discussed in the last amendment; that is, for instance, if we decide to utilize the California plan with respect to automobiles, or, for instance, choose to put into effect some provision requiring the checking of automobile emissions within an area, or choose any one of a number of ways used to reduce the load on the environment then, by this means, we can buy some further leeway for more industrial construction. All of these choices or means are permissible under the trade-off system.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. ECKHARDT was allowed to proceed for 2 additional minutes.)

Mr. ECKHARDT. Then the trade-off plan takes care of this gap until the Air Quality Board, in Texas, for example, can adopt a plan which provides for additional construction of plants that will employ the best technology during an extended time until ambient limitations would be imposed.

The bill is carefully written. The bill is fair. If enacted it will not cut down construction because the trade-off system will permit enough time for the State to meet its specific problem and afford the necessary flexibility by a revised plan under section 127(b), and the following.

So, Mr. Chairman, I strongly urge that we not adopt an amendment that has been presented to this committee for the first time about 15 minutes ago. The first time I saw it was about 15 minutes ago, yet I have been working with the committee and, wherever possible, with the gentleman from Texas, for a week. And now we are called upon here to delay further, until a study is made, the problem of doing something about pollution.

Mr. MAGUIRE. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, I think it is very important as we consider this amendment that we keep our minds fixed on the fact that we are here talking about life and health and that, therefore, the somewhat abstruse discussion of what kind of a schedule we are going to be operating on really has to be evaluated in relation to that fact.

The gentleman from Texas (Mr. ECKHARDT) came up with a formula which was adopted by the committee, which says that we are going to have a schedule starting now—not allowing for any intermediate free-for-all periods—to implement the standards with respect to oxidants, just like we do with respect to anything else, whereas the amendment that has been offered here would dispense with at least a portion of that chronology with respect at least to some of the pollutants.

On oxidants, let us look at what the data tells us. I am quoting from the three-agency study of May 19, 1977:

"Toxicological work with experimental animals confirms that exposures to relatively low levels of ozone—one of the photochemical oxidant products—"produce numerous changes in cell and organ structure and function including

changes indicative of chronic lung disease and increased susceptibility to infection," reduced voluntary activity, chromosomal aberrations, and neonatal mortality rates that are higher. The synergistic potential of oxidants taken together with other air pollutants cannot even be calculated, nor can a quantification be made of what are regarded as major adverse effects of ozone on natural ecosystems or on agriculture.

So we are talking about asthma and chronic lung disease, and irritation of the eye and respiratory tract, and impairing the function of the heart and lung and other organs. So when we vote on this, let us keep that in mind and let us stick to a schedule as proposed rather than abandoning in yet one more place our very important task of protecting the public health of the people of this country.

Mr. ROBERT W. DANIELS, JR. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment offered by my colleague. There is no disagreement that some modification of the air quality attainment dates is necessary—under current law, virtually all industrial expansion will grind to a halt as of May 31. This amendment, however, is a superior alternative to the attainment date changes in the bill as reported.

The committee's attainment language would allow States until 1987 to meet photochemical oxidant standards, but require prior assurance that the State's nonattainment areas can meet a rigid timetable which guarantees equal reductions, every 2 years, in hydrocarbons and other photochemical oxidant precursors. This ignores the reality that greater pollutant reductions may occur in later years, as newer cars and other improved clean air technology takes hold. Moreover, it will inevitably result in EPA dictation of many of a State's implementation plan policies.

By contrast, this amendment would simply require the State to continue progress, year by year, toward attainment of the 1987 photochemical oxidant standards. It allows the States and localities to choose their own mix of policies—whether they include mandated auto inspections, or transportation and parking controls, or whatever—so long as the goal of cleaner air is vigorously pursued. It would require the use of "best available control technology" on new emission sources, so that air quality problems in nonattainment areas are not further aggravated as new industry enters.

In short, Mr. Chairman, this amendment would assure progress toward the 1987 air quality goals, but in a fashion that allows States and localities to make their own decisions about specific, potential new industries. Federal dictation, unemployment, and economic chaos could be avoided. Clean air, and not repeal of the 20th century, should be our goal in the Clean Air Act.

An excellent illustration of the current problem is the Fourth District of Virginia, where, as additional views to the committee's report point out, the Hamp-

ton Roads Energy Co. is currently attempting to construct an oil refinery. The potential benefits for Portsmouth and the rest of the Tidewater, Va., area include new jobs, increased tax revenues, and increased refining capacity at a time of energy crisis; the clean air-related problems include, of course, increased contributions to photochemical oxidant levels in a nonattainment area. Although the proposed refinery will produce fewer hydrocarbons annually than are emitted naturally by the Great Dismal Swamp, a nearby national wildlife refuge, the Clean Air Act could block the refinery's construction without regard to long-range goals and local desires. Without this amendment, Portsmouth and the State of Virginia would not be free to reach their own conclusions on this specific industrial source, even though the State might assure yearly progress toward the 1987 clean air goals.

Finally, Mr. Chairman, I would reaffirm that EPA's so-called trade-off or off-set policy is no solution. It allows the location of new emission sources in a nonattainment area only if offsetting emission reductions are achieved from other sources. Thus, pollution becomes a marketable commodity; and we witness the unique spectacle of the Hampton Roads Energy Co., attempting to build a refinery by buying off dry cleaning plants. Pollution becomes, under the trade-off policy, a useful product for sale or barter with a potential new industry. The trade-off policy assigns an economic value to pollution and invites a developer to buy off another's, even a competitor's, existing emissions capacity.

This amendment is a sane, constructive alternative. It will carry forward the clean air fight, without destroying potential jobs and local decisionmaking. As long as Virginia can make continued progress toward our clean air goals, then so important a decision as the Portsmouth oil refinery should be made by Portsmouth, by her Tidewater neighbors such as Chesapeake and Suffolk, and by the Commonwealth of Virginia—not by Federal fiat. The same flexibility should be available to our colleagues' States and districts, and I urge their favorable consideration of the amendment before us.

Mr. KRUEGER. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the amendment.

Mr. Chairman, I rise in support of this amendment for a number of reasons. First of all, I should like to read briefly a paragraph from Mr. John L. Blair, the chairman of the Texas Air Control Board, in a statement that he made on May 20, just 5 days ago. Mr. Blair, the chairman not of Exxon, not Dow, but of the Texas Air Control Board, said 5 days ago:

If I have the support of my fellow members, I intend to instruct the staff to cease all efforts to convince the Environmental Protection Agency of the futility of attempting strict enforcement of the Federal Clean Air Act, and to begin immediately to implement literally the obvious intent of Congress.

I must point out that, if adopted as Board policy, my proposal will have profound effects on the people of Texas, on their jobs,

and on their life styles. The policy I propose—

Which is to accord with the EPA regulations—will mean no new industrial facilities may be constructed in any of the major metropolitan areas of the State. It will mean that growth will come to a grinding halt.

Mr. Chairman, currently over 90 percent of those parts of the country in which we monitor the Clean Air Act are already in violation of existing clean air standards, and the President of the United States said 2 days ago in his environmental statement:

I have instructed the Administrator of the Environmental Protection Agency to review his agency's regulations controlling new industrial growth in areas now violating air quality health standards and to recommend to me and to the Congress a fair and effective policy for meeting these standards in the future. Adoption of new legislative provisions in this area should await the results of this review.

What we are doing in this amendment is simply to offer an additional year in which this matter can be studied so that industrial growth will not have to grind to a halt in 90 percent of the United States of America. Without this amendment I would hate to think what might happen to the hopes of the American people who are looking for increased jobs but who might very well find that the EPA would not allow those jobs because of its existing tradeoff policy.

This amendment would keep the trade-off policy but it would also allow the trade-off policy to be studied. It would not close the book on it and lock it into public policy for years to come.

Furthermore, those construction projects approved by State environmental agencies during the period of uncertainty about nonattainment policy would be permitted to proceed and receive operating permits from the same State agency while this matter is studied. Without this amendment, we might very well have, as the head of the Air Control Board said, no further construction in many parts of the U.S.A.

This is a very reasonable amendment. It simply accords with the President's desire to have further study in this area. It also means that other States will not, like Texas, face the fact or possibility that our Air Control Boards might say: "No further industrial growth at all because of what you have done in Congress."

Mr. GARY A. MYERS. Mr. Chairman, will the gentleman yield?

Mr. KRUEGER. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. Mr. Chairman, I have not had an opportunity to see the exact wording of the amendment. I tried to communicate with the gentleman's office a little earlier.

I am very much concerned about the nonattainment areas. I believe people in the whole Northeastern United States, the people who live in those areas should be very much concerned about the impact of the Clean Air Act on their facilities.

Is it not true even with this amend-

ment any new facility would still have to meet the best available technology? There is no relaxing on that.

Mr. KRUEGER. This does not relax standards. It alters the attainment date and it also will give to the State environmental agencies the authority that would otherwise be given entirely to EPA and left entirely in Federal hands.

Mr. GARY A. MYERS. It is also true that without some relief my area of the United States will have to refuse plans for expansion of plants that are the cleanest plants that can be built.

Mr. KRUEGER. The gentleman is correct. Under the bill as presently written his State would have no chance of escaping the trade-off policy for the next 10 years. The waiver that this legislation holds out to his State and others in the same situation is a waiver on paper only. It places impossible preconditions on the State environmental agencies and would require the implementation and enforcement of extremely severe and controversial policies. No State could enforce their policies, and probably would not even suggest them. Therefore, the existing section 117 of the bill would provide no relief from trade-off for the next 10 years. We recommend instead that we allow the trade-off policy to continue, under study and in a more relaxed atmosphere, for the next year only, and at the end of that time the Congress and President together can decide the most fair, equitable and desirable method of dealing with the nonattainment problem. At that time we will have the facts; we do not have them now.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(On request of Mr. GARY A. MYERS, and by unanimous consent, Mr. KRUEGER was allowed to proceed for 3 additional minutes.)

Mr. KRUEGER. The only thing the present bill does without these alterations is to assure a trade-off policy which has not been really tried and been put into effect and that trade-off policy, as we know, would require some businesses to close before others could open. It would make us marketers in pollution. People would buy up pollution rights. That policy ought to be studied.

Mr. GARY A. MYERS. Could the gentleman describe the difference between that and his amendment?

Mr. KRUEGER. Between what is now being proposed and what was proposed in the committee?

Mr. GARY A. MYERS. Between what is in the bill and what is in our amendment.

The difference between what is in the bill and what is in our amendment is that what is in our amendment allows all existing construction grants which State and environmental agencies have already approved, if those State and environmental agencies continue to approve them. Without this, there might very well be a rollback by the EPA and abrogation of the industrial construction grants that have already been given by various States. That is the great danger of the present act, that construction

might very well stop, as has been indicated by the gentleman from Virginia; it might grind to a halt.

Mr. GARY A. MYERS. Mr. Chairman, if the gentleman will yield further, of course, the difference between the gentleman's amendment and the bill with respect to facilities which have not yet received any grants, do they still have to do the trade-off?

Mr. KRUEGER. They would still have to receive approval from their State environmental agencies, but it would not be the EPA. It would be the State agencies that do it.

Mr. GARY A. MYERS. But it would not be a trade-off.

Mr. KRUEGER. It would be under the trade-off policy, but the State would interpret that trade-off policy, rather than have it in the hands of the EPA.

Mr. GARY A. MYERS. If the gentleman will allow me to address one point with respect to the President's energy policy, it seems to me the President has said to the environmentalists that the switch to coal is not going to be an environmental hazard, because he will not require the switch in those nonattained areas until there is a level of free air freed up in those regions. I think that has to be addressed, because what that means to me is that those areas that have oil-fired generating facilities who are not able to convert, they will, of course, have first priority to sponge up any new clean air that is freed up in the region.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(At the request of Mr. GARY A. MYERS, and by unanimous consent, Mr. KRUEGER was allowed to proceed for 1 additional minute.)

Mr. GARY A. MYERS. Mr. Chairman, will the gentleman yield further?

Mr. KRUEGER. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. Mr. Chairman, if the gentleman will continue to yield, it seems to me what we are first facing is even a worse situation than we faced last year with this bill, because now we have sitting on the sidelines waiting to extract and utilize any clean air that is freed up, these conversions from oil to coal, which will further restrict the growth of the industrial facilities within these nonattained areas.

Mr. KRUEGER. The gentleman is correct. When we convert to coal for electric generation, there will be increased pollution. That is why we believe the trade-off policy should be put in to require an additional year's study; the President's hope is that we might defer the new legislative proposals until he has had a chance to review the trade-off policy and all possible alternatives. I support his request and think it is a good policy at this time.

I think those of us who favor industrial growth should support the amendment.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words. I rise in opposition to the amendment.

Mr. Chairman, all of the arguments that have been advanced for the adoption of this amendment relate to the

situation under existing law. They do not go to what the bill does, because the bill has a study in it. The amendment's sponsor wants a study. The committee bill has a study. As a matter of fact, there are two studies, one on the standards themselves under section 110 of the bill and one on the specific issues in this section.

Now, what the Gammage amendment does is this. It continues EPA's trade-off policy which is now in effect. It requires these trade-offs be met for new industry to come into a nonattainment area. The amendment freezes that for a year.

The committee bill already handles the interim situation by saying to the State, "You may continue under that EPA policy for a year, or you can expeditiously move to change your plan."

According to the amendment of the gentleman from Texas (Mr. ECKHARDT), which was adopted in committee and is now section 117 of the bill, a State may have up to 10 years to attain photochemical oxidant standards if that is the earliest they can be met.

Now, section 117 of the bill says, "You will have to have an equal incremental advancement to reach the standards, but you can spread it over as much as 10 years."

So a State can quickly respond to that, revise its plan, and have the new building go ahead, so long as it is making that progress to clean up the air.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. KRUEGER. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, I must say, I agree with the gentleman in that we are going about this in an even-handed manner with an ongoing study and requiring that certain progress be met every 2 years.

However, Mr. Chairman, there is one part of this amendment which I think we should give serious consideration to, and I think my friends should consider it as a separate amendment. That is in part (1), and I quote:

Notwithstanding the foregoing, operating permits may be issued to those applicants who were granted new source construction permits prior to the date of enactment of these amendments and who are able to demonstrate that the emissions are within the limitations set forth in such construction permits.

Mr. Chairman, I feel that these people who have been granted these permits prior to the date of enactment of this legislation should be permitted to continue, but I think that the Eckhardt amendment, which is in the bill, is good. I would suggest that perhaps we give some thought and leniency to the idea of permitting these permits that have been granted to go on to construction.

Mr. ROGERS. I would say to the gentleman that I think I have no problem with that last sentence of the amendment if it is offered in a separate amendment. But I certainly agree with Representative ECKHARDT that the Gammage amendment is not a good amendment. It should not be adopted.

Mr. CARTER. I would say the gentleman is eminently correct.

Mr. KRUEGER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Texas.

Mr. KRUEGER. The gentleman from Florida has just said that this would take away judgment from the State. On the contrary, this amendment is one which would allow the States to proceed with the industrial construction that they have already granted permits to; whereas, under the present bill, the EPA might very well turn down construction permits already granted by State implementation agencies.

The difference between this amendment and the study required under the bill as it stands is, quite simply, the fact that it does grant the States the power to consider for themselves whether or not to proceed.

Mr. ROGERS. May I say to the gentleman that he is incorrect if he feels that the bill would take away the State's power on the permits. As long as those permits were validly issued and meeting the act's requirements they could qualify under this bill for operating permits.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Texas.

Mr. ECKHARDT. The place where it takes power away from the State is during that year, plus 60 days, of the study. That is the point the gentleman from Kentucky (Mr. CARTER) made a moment ago. This is a forked amendment.

The CHAIRMAN. The time of the gentleman from Florida has expired.

(On request of Mr. ECKHARDT and by unanimous consent Mr. ROGERS was allowed to proceed for 1 additional minute.)

Mr. ECKHARDT. As the gentleman from Kentucky has pointed out, it would permit, and perhaps should permit, persons already having authorization for construction operations to proceed, but it stops everybody else, regardless of how meritorious their claims might be, until the end of the study. If those two points were divided, we would have an entirely different question here.

Mr. ROGERS. May I say that the National Governors Conference supports the committee bill here; the mayors, the county governments and State legislatures. This bill enlarges State discretion, and we will allow them up to 10 years for meeting oxidant standards. I think the amendment should be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. GAMMAGE).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 22; noes 18.

Mr. ROGERS. Mr. Chairman, I demand a recorded vote, and pending that, I make the point of order that a quorum is not present.

The CHAIRMAN. Evidently a quorum is not present.

The Chair announces that pursuant to

clause 2, rule XXIII, he will vacate proceedings under the call when a quorum of the Committee appears.

Members will record their presence by electronic device.

The call was taken by electronic device.

#### QUORUM CALL VACATED

The CHAIRMAN. One hundred Members have appeared. A quorum of the Committee of the Whole is present. Pursuant to clause 2, rule XXIII, further proceedings under the call shall be considered as vacated.

The Committee will resume its business.

#### RECORDED VOTE

The CHAIRMAN. The pending business is the demand of the gentleman from Florida (Mr. ROGERS) for a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 162, noes 242, answered "present" 1, not voting 28, as follows:

[Roll No. 287]

#### NOT VOTING—28

|              |          |               |
|--------------|----------|---------------|
| Abdnor       | Florio   | Skelton       |
| Badham       | Forsythe | Skubitz       |
| Bedell       | Ketchum  | Spence        |
| Brooks       | Metcalfe | Steers        |
| Broomfield   | Poage    | Teague        |
| Clawson, Del | Pressler | Weaver        |
| Cunningham   | Price    | Wiggins       |
| Dent         | Roe      | Wilson, C. H. |
| Eriksen      | Sawyer   |               |
| Findley      | Sisk     |               |

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Florio against.  
Mr. Spence for, with Mr. Metcalfe against.  
Mr. Skubitz for, with Mr. Charles H. Wilson of California against.

Mr. Cunningham for, with Mr. Steers against.

Mr. Erlenborn for, with Mr. Price against.

Messrs. STEIGER, RUSSO, GEPHARDT, BROWN of Michigan, RUPPE,

FOUNTAIN, and FITHIAN changed their vote from "aye" to "no."

Mr. COUGHLIN changed his vote from "no" to "aye."

So the amendment was rejected.

The result of the vote was announced as above recorded.

The CHAIRMAN. Are there further amendments to section 117?

If not, the Clerk will read section 118.

The Clerk read as follows:

#### INTERNALIZATION OF COST

SEC. 118. (a) Section 110(a)(2) of such Act is amended by inserting at the end thereof a new subparagraph (K) to read as follows:

"(K) it requires the owner or operator of each major stationary source to pay to the permitting authority as a condition of any permit required under this Act a fee sufficient to cover—

(1) the reasonable costs of reviewing and acting upon any application for such a permit, and

(ii) if the owner or operator receives a permit for such source, whether before or after the date of enactment of this subparagraph, the reasonable costs (incurred after such date of enactment) of implementing and enforcing the terms and conditions of any such permit; and".

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 118 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there amendments to section 118?

There being none, the Clerk will read section 119.

The Clerk read as follows:

#### CODIFICATION AND PUBLICATION OF APPLICABLE IMPLEMENTATION PLANS

SEC. 119. Section 110 of such Act is further amended by inserting a new subsection (g) at the end thereof to read as follows:

"(g) (1) Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977 and annually thereafter, the Administrator shall assemble and publish a comprehensive document for each State setting forth all requirements of the applicable implementation plan for such State and shall publish notice in the Federal Register of the availability of such documents. Each such document shall be revised as frequently as practicable but not less often than annually.

"(2) The Administrator may promulgate such regulations as may be reasonably necessary to carry out the purposes of this subsection."

Mr. ROGERS (during the reading). Mr. Chairman, I ask unanimous consent that section 119 be considered as read, printed in the RECORD, and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

The CHAIRMAN. Are there amendments to section 119? The Chair hears none.

Are there further amendments to title I?

#### AMENDMENT OFFERED BY MR. MILLER OF CALIFORNIA

Mr. MILLER of California. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MILLER of California: Page 357, after line 10, insert the following:

**VESSEL AND VESSEL TERMINAL FACILITIES**

SEC. 120. (a) Section 116 of the Clean Air Act is amended by inserting at the end thereof the following: "It is the intent of Congress that, with regard to the control and abatement of air pollution from a facility associated with vessel activity which is located in the territorial seas of the United States, or the contiguous zone, or air pollution from vessels which are arriving at, departing from, or engaged in oil transfer or other activities while located at such facility, each coastal State adjacent (as determined by the Administrator) to the waters in which such facility is located may adopt and enforce emission standards, emission limitations, or other requirements (substantive and procedural) respecting control and abatement of air pollution with respect to such facility or vessels. The preceding sentence shall not apply to the extent that any such standard, limitation, or requirement would cause a vessel to violate any law or regulation of the United States (including any safety-related requirement), nor to the extent that the Administrator determines, after notice and opportunity for a public hearing and after consultation with the Secretary of Transportation, that any such standard, limitation, or requirement would cause a vessel to violate a previously established standard, limitation, or requirement of another State and, therefore, constitutes an unreasonable burden on interstate commerce. For purposes of this section, and section 110(a)(2)(M), the terms 'coastal State', 'contiguous zone', and 'territorial seas' have the same meaning as when used in the Federal Water Pollution Control Act."

(b) Section 302(o)(1) of such Act is amended by inserting at the end thereof the following: "For the purpose of this subsection, the emissions of any air pollutant from vessels referred to in section 116 shall be deemed to be direct emissions from any facility associated with such vessel activity."

(c) Section 110(a)(2) of such Act is amended by striking out "and" after subparagraph (K); by striking out the period at the end of subparagraph (L) and inserting "; and" in lieu thereof; and by inserting a new subparagraph as follows:

"(M) if such plan is for a coastal State, such plan contains emission limitations applicable to facilities associated with vessel activity (if any) and to vessels, as provided in section 116."

Mr. MILLER of California (during the reading). Mr. Chairman, I ask unanimous consent that the amendment be considered as read and printed in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. MILLER of California. Mr. Chairman, the amendment I am proposing today would clarify existing law to make certain that States may regulate emissions from floating oil separation and treatment facilities, and vessels loading and unloading in U.S. navigable waters and the contiguous zone.

I believe this is already permitted by the Clean Air Act implicitly and submit for the record legal memoranda from the Federal Energy Administration and the Environmental Protection Agency which reach the same conclusion. However, I

believe provision for such regulation should be expressly included in the Clean Air Act.

When the Clean Air Act amendments were passed in 1970 they did not expressly address the potential problem of pollution activity beyond the 3-mile limit having an adverse effect on air quality onshore. The reviews, permit controls, and emission standards in force within the 3-mile limit are not presently applied by the Federal Government or State and local agencies to offshore operations.

A recent study done for the Governor's Office of Planning and Research in California found that the ambient air quality standards mandated by the Clean Air Act cannot be met in the South Coast Air Basin with increasing volumes of hydrocarbon vapors blowing onshore from offshore tanker loading and oil processing facilities.

My amendment would clarify and confirm the right of each coastal State to adopt and enforce emission standards for vessels and vessel terminal facilities. Several measures have been discovered which could be adopted to mitigate the volume of hydrocarbons which are emitted.

Passage of this amendment would assure responsible development of our Outer Continental Shelf resources. This clarification is supported by the Federal Energy Administration, the Environmental Protection Agency, and the California State Air Resources Board.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. MILLER of California. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, the gentleman from California has introduced an important amendment. I am concerned about the air pollution generated in our navigable waters and contiguous zone. Is there a specific case in California which clearly illustrates the need for this amendment?

Mr. MILLER of California. Yes, the Exxon case is an outstanding example. Exxon was issued a permit by Santa Barbara County to build an onshore processing facility. Exxon did not like the Coastal Commission's requirements for its proposed onshore processing plant, so Exxon is building a processing plant 5 miles offshore. The platform is under construction and a tanker is being converted in Japan for this operation.

Exxon was given a permit by the Department of the Interior for this offshore platform and separation and treatment plant. This will be the first floating facility of this type in the world.

Mr. WAXMAN. Did Exxon obtain a permit from the Environmental Protection Agency or the State air resources board to construct this floating facility?

Mr. MILLER of California. No, Exxon claimed that a permit was not necessary.

A recent study found that if Exxon is not required to meet any air emission standards, the pollution from this operation will have a significant effect on local ozone concentrations, which could have an adverse effect on the health, economy, and agriculture in this area.

If the marine terminal of this floating facility loads at 25,000 barrels per hour, as it is being designed to, it could increase the peak ozone level onshore by 160 percent.

Tanker loading in Santa Barbara and Ventura Counties is currently venting 277 tons of hydrocarbons a year into the atmosphere. If total Santa Barbara Channel oil production reaches 200,000 barrels per day in 1985, as predicted, and there are no controls on tankers and oil processing facilities, hydrocarbon emissions could exceed 2,000 tons per year.

Mr. WAXMAN. Will the passage of this amendment play an important role in the ability of coastal States to meet primary and secondary ambient air quality standards?

Mr. MILLER of California. Yes, recent studies indicate that ambient air quality standards cannot be met in the South Coast Air Basin unless the hydrocarbon vapors from tankers and oil-processing facilities are mitigated.

Mr. WAXMAN. Does the term "facility" include both stationary and floating facilities?

Mr. MILLER of California. Yes, the vessel and vessel terminal facilities amendment applies to vessels, stationary facilities, and floating facilities, such as the Exxon facility just mentioned.

Mr. WAXMAN. States would have the authority under this amendment to adopt and enforce emission standards for vessels and vessel facilities in the navigable waters of the United States and in the contiguous zone?

Mr. MILLER of California. That is correct, except to the extent that any standard, limitation, or requirement would cause a vessel to violate any law or regulation of the United States, or any international agreement to which the United States is a party, or would cause a vessel to violate any other State's standard, limitation, or requirement.

Mr. WAXMAN. Will the Environmental Protection Agency be involved in enforcing these emission standards?

Mr. MILLER of California. The Environmental Protection Agency has the authority to adopt and enforce emission standards for vessels and vessel terminal facilities only if the State fails to do so.

Mr. WAXMAN. States would have the authority to establish requirements that are both substantive and procedural, respecting the control and abatement of air pollutants emitted from vessels and vessel facilities?

Mr. MILLER of California. That is correct.

Mr. WAXMAN. For the purposes of monitoring and enforcement, air pollutants emitted from a tanker when it is engaged in activities while located at a facility would be charged to that facility?

Mr. MILLER of California. That is correct.

Mr. WAXMAN. Does this amendment include all existing and new sources of air pollution emitted from vessels and vessel terminal facilities in the U.S. navigable waters and in the contiguous zone?

Mr. MILLER of California. Yes, this amendment includes both new and existing sources.

Mr. WAXMAN. Is the technology available to meet the air quality standards which would be mandated by this amendment?

Mr. MILLER of California. Yes, several measures have been discovered which could be adopted to mitigate the volume of hydrocarbons which are emitted: loading tankers slowly; partial loading; limiting simultaneous tanker loading without a predetermined radius; using pipelines rather than tankers for transport; and using onshore processing facilities rather than offshore alternatives.

Jeff Swartz, counsel for Interstate and Foreign Commerce, suggested that you move to revise and extend the rest of your remarks, including the EPA and FEA memo's.

Loading tankers slowly is one of the easiest ways to reduce hydrocarbon emissions. Loading rates for tankers are typically in the 8,000 to 10,000 barrels per hour range. The floating Exxon facility is being constructed to load at a rate of 25,000 barrels per hour. If this were slowed down to 6,000 barrels per hour the peak ozone concentration onshore would be almost halved.

Partial loading of tankers is another way to cut down on hydrocarbon emissions. Much of the hydrocarbon-rich vapor which is liberated during loading lies very near the liquid surface and thus is released only as the crude reaches the top of the tank. Hydrocarbon emissions could be reduced 31 percent if final true ullage—distance between liquid surface and roof of the tank—of 15 feet was maintained. This measure alone would represent a reduction of over 2,400 pounds of hydrocarbons for every 100,000 barrels loaded.

Additional minimization of tanker impacts might be possible if timing and siting considerations were followed. For example, it is clear that multiple tanker loadings on one day could yield significantly higher study area ozone concentrations than in a case of one tanker per day; the effect would be magnified if the marine terminals were relatively close together.

Using pipelines rather than tankers for transport is a very effective way to reduce hydrocarbon emissions. At a level of 200,000 barrels per day of crude oil production, tanker emissions total 2,075 tons per year with no controls; if that same volume of oil were transported in a pipeline the emissions would only be 214 tons. Thus, a land pipeline is favored over tanker transport.

Using onshore processing facilities rather than offshore alternatives is another way hydrocarbon emissions can be reduced. Emission rates are higher, per unit throughput, for the offshore processing facility versus the onshore one. In addition, the offshore facility costs the oil company more to construct and maintain, and it has a smaller total capacity. Exxon's onshore site was designed for 80,000 barrels per day, and the offshore alternative is only being designed for 60,000 barrels per day.

Mr. WAXMAN. What about the vapor recovery system, is this still too dangerous to use; has it been perfected yet?

Mr. MILLER of California. The best estimate to date is that it will take another 3 to 5 years to develop a shipboard vapor recovery system which will meet the Environmental Protection Agency and Coast Guard standards.

Safety considerations are an important aspect of this amendment and will not be sacrificed. It should be feasible to meet the clean air standards by using the other mitigation measures mentioned.

Mr. WAXMAN. I support the amendment as introduced by the gentleman from California.

Mr. MADIGAN. Mr. Chairman, I move to strike the last word.

If I can have the attention of the gentleman from California who is offering the amendment, I would like to ask a question. Is it his intent, and would it be the result of this amendment, that the State of California or any other coastal State would be enabled by his amendment to control the emissions of international vessels?

Mr. MILLER of California. Well, I believe that is already the law, and the legal memoranda I referred to states that is the law. Under section 10 of existing law, they have the ability to go ahead and do this, but that has been drawn into question. What I am trying to do is to clarify two issues; one, they have to deal with tankers offloading within coastal waters and, two, also extend jurisdiction of State standards for the facilities outside coastal waters beyond three miles, but not beyond twelve miles, as is the case with the Exxon platform.

Mr. MADIGAN. I would agree with the gentleman that the law may enable now the State of California or any other State to regulate emissions from facilities, but I do not think there is anything in any law now that enables a State—whatever State it might be—to regulate emissions from international vessels.

Mr. MILLER of California. It is exactly the colloquy we are having which is the reason for the amendment. Some of the people suggested that, in fact, is the case now. Other people suggested that it has not. One of the conditions we had when we had the problem in the Exxon facility was whether or not we could enforce it. Hopefully, by this amendment, we will be able to set those standards, because the very real problem is that they are within the air basin of the State and those hydrocarbons and pollutants are pouring onshore and restricting growth in the State.

Mr. MADIGAN. I do not think what the gentleman is proposing to do is even within the jurisdiction of the State environmental protection agency, nor for that matter the Federal agency. Has the gentleman checked the State Department for any comments with regard to this amendment?

Mr. MILLER of California. No, I have not.

Mr. MADIGAN. Well, Mr. Chairman, I think we ought to look at this very closely, because I suspect that what we are doing is adopting an amendment that may very well violate international treaties

to which the United States is a party, and also the Law of the Sea Conference I would urge the Members to vote against this amendment.

Mr. ASHBROOK. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Could the gentleman, who is obviously well-informed in this area, indicate to this Member, who is not that conversant with this particular bill, whether or not this would affect offshore loading of oil coming in from the Alaska pipeline?

Mr. MADIGAN. Absolutely. I do not think there is any question about that.

Mr. MILLER of California. If the gentleman will yield further, I believe we have that jurisdiction if the Federal Government grants the power to the State. We now have that jurisdiction over the 12-mile zone.

Mr. MADIGAN. But I do not think that is true in the case of international vessels. The gentleman may very well be intending to do something that will involve the ability of the State of California or other coastal States to control emissions.

Mr. MILLER of California. Let me state that the purpose here is to get to the vessels which are offloading or onloading within the boundaries of the State of California.

Mr. MADIGAN. I am going to have to ask for my time back.

I am sure what the gentleman is proposing to do would have that effect. But I am equally sure that it would violate international treaties that this country is a party to, as well as the provisions of the Law of the Sea Conference. I think it is an area we should not get into here.

Mr. FISH. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from New York (Mr. FISH).

Mr. FISH. I thank the gentleman for yielding.

Mr. Chairman, as the ranking minority member on the Select Committee on Outer Continental Shelf, as well as a delegate to the Law of the Sea Conference which just opened up this past week, I will state that a committee of that Conference is dealing with ocean pollution. It will not be meeting for the next 2 or 3 weeks. I do think we would be doing mischief here at this point, with as little as we know about the gentleman's amendment, to adopt an amendment like this.

Mr. MILLER of California. Mr. Chairman, if the gentleman will yield, it would help if the author of the amendment could hear the discussion that is taking place. The House is not in order.

Mr. MADIGAN. Mr. Chairman, the gentleman from New York (Mr. FISH), who is a delegate to the Law of the Sea Conference, just indicated that the adoption of this amendment could do nothing but play mischief to the best interests of the United States as those interests will be represented at the Conference.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. MADIGAN. I yield to the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. I thank the gentleman for yielding.

Mr. Chairman, I would like to ask the author of this amendment whether this is aimed at prohibiting the importation of Alaskan crude through the port of Long Beach. This House has already voted that we cannot sell that Alaskan oil to Japan.

My concern is whether or not this House, having already voted against selling Alaskan oil to Japan, and having that concern about our desire to get that oil into the United States we can force out Arab crude, would by this amendment be in a position now to be saying we are not going to allow that to come into California or give California the authority to say it is not going to come into California; because if we do that, we are just not going to get that Alaskan oil and the prospect of that Alaskan oil setting up there in the port of Valdez and not available to us.

Mr. CARTER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to this amendment.

I want to state that if California does not want that oil down there, I think it should come on down to the Midwest, as it should have, in the first place.

These are the reasons why I oppose this amendment:

First, it will place an extreme burden on commerce, and it is probably unconstitutional; it puts vessels under both State and Federal control; it destroys uniformity of rules for international commerce; it may trigger reprisals abroad; it adds unnecessary costs for questionable benefits; it may jeopardize the vessel and facility safety; it gives coastal States control over resources belonging to all States; there is no evidence that emissions outside 3 miles contribute to air pollution ashore; any further extension of the contiguous zone would carry this authority out further; it discriminates by not covering all vessels passing in this region; and it creates a burden on the taxpayers to have to pay for new reinforcement required.

Therefore, Mr. Chairman, I strongly oppose this amendment.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. CARTER. I yield to the gentleman from California (Mr. MILLER).

Mr. MILLER of California. Mr. Chairman, I would like to say to the gentleman that he has raised the issue of whether or not Long Beach wants this oil, whether or not the State of California wants this oil. This amendment is designed so that the oil can get there. Right now the State has the power to issue the regulations, but they will not issue the regulations because they do not believe they have the power to enforce them.

Mr. CARTER. Mr. Chairman, I thank the gentleman for his contribution.

Mr. MILLER of California. Mr. Chairman, it appears that the gentleman does not want to hear the answer.

Mr. CARTER. Mr. Chairman, I thank the gentleman for his answer. I am glad to see one person who wants oil in California. Personally, I think it should have come down through Canada to the Midwest. That is the way it should have come.

Mr. Chairman, I oppose this amendment and I ask the Members to oppose it.

Mr. MAGUIRE. Mr. Chairman, I move to strike the requisite number of words.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from California (Mr. MILLER) so that the gentleman may have time to answer the questions that were directed to him with respect to his amendment.

Mr. MILLER of California. Mr. Chairman, just let me say this to the Members of the House:

Under existing law, the State of California has the power to impose regulations and to impose conditions on vessels coming into its waters. The State can impose those regulations today, and nobody argues that, neither the Federal Government nor anybody in the State government nor the parties involved in the controversy at the port. But the State has said it will not issue those regulations because they do not believe they have the power to enforce them in terms of incoming vessels. So they will not give the permit so that these vessels can come into the port. They have withheld that.

Obviously what we will do by this amendment is to take away that argument of nonenforcement so we can get on with that project, and then those 500,000 barrels of oil can be offloaded at the port and they can be distributed for the energy needs of this country. That is what this amendment does.

The amendment also says that where they have a facility that is outside the 3-mile limit but inside 12 miles offshore, it has an impact on the air basin, and that the State shall have the right to set up standards for that facility.

What we have today is this: We have the Exxon Co., with the support of the last administration, thumbing its nose at the State of California and within 5 miles offshore building a facility that will dump thousands of tons of materials and pollutants into the air and prohibit construction onshore, and nobody can do anything about it.

So, Mr. Chairman, we are saying that a State ought to have the right to have that say over growth policies within the State, and that nobody ought to be able to set up a runaway facility without any controls by the State. So this amendment is designed to bring energy sources on line, not to prohibit them.

Mr. Chairman, perhaps that is a strange position for this gentleman to be in, but that is the case. The amendment is designed to try to get the facility completed and on its way.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. MAGUIRE. I yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, it is my understanding that FEA has had contact with the committee, and that the agency really originated this request, because they thought the existing law implicitly authorizes such State regulation but felt that the law should be clarified expressly. Otherwise they feel there will be litigation concerning this issue that would further delay the bringing in of Alaskan oil.

Mr. Chairman, I do not think there is anything devious about the amendment. FEA has really encouraged this to be done to clarify the situation. If we do make State authority express, I think the oil could then be distributed and sent all over the country. It is my understanding that this was done with the support of FEA.

Mr. MILLER of California. Mr. Chairman, if the gentleman from New Jersey (Mr. MAGUIRE) will yield further, I will submit for the record the legal memorandums of FEA and EPA that called for this legislation so that this issue can be clarified.

Mr. BROWN of Ohio. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like first to ask the gentleman from Florida (Mr. ROGERS) if he has some kind of a letter, some kind of a formal notification, or some indication in the hearings that the FEA wants this amendment for the purpose of clarifying the situation in the Port of Long Beach.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I would be happy to yield to the gentleman from Florida.

Mr. ROGERS. Mr. Chairman, we did ask for a letter. Mr. O'Leary is sending it; it is on its way. It has not yet arrived. However, this is the advice that FEA has given us.

Mr. BROWN of Ohio. Mr. Chairman, let me explain to the Members what my concern is.

My concern is that we have a conflicting situation out in California. I am not sure I know who all the players are, except that I do know that one of the players who is involved at the State level and is concerned with the environmental issue is Mr. Quinn, and he apparently does not want the oil from Alaska to come in through California.

The Port of Long Beach is very anxious to have the oil brought in through the Port of Long Beach. There is a pipeline that runs from some point a little bit east of the Port of Long Beach. That pipeline previously was used to deliver natural gas from Texas, and it could be reversed to carry that oil from the Port of Long Beach through the Central Valley and to Midland, Tex., where it could be refined and then distributed to the Midwest and the eastern part of the country.

If that occurs, then we will obviously have that Alaskan oil used in the United States and we will force out, to some extent, the Arabian crude that we are im-

porting at very high costs to every American and to our Government because of the balance-of-payments situation.

The Port of Long Beach, as I said, supports moving this oil through its port. The State of California, however, looking at this situation and being concerned about environmental problems, has said not to Exxon, I think, but to Standard Oil of Ohio and the others who are part of the Alaskan production complex, "If you will reduce the pollution in the area of the Port of Long Beach to the extent that the pollution is decreased by off-loading these vessels, we might consider giving you the opportunity to do that."

As a result, at least one company has undertaken a very interesting proposition. They have been going around and buying up dry cleaning establishments in order to reduce the pollution on an equivalent basis with the pollution that would occur if the oil were brought into the port.

The State of California, as I understand, has, at least informally, said, "We are not sure whether a 1-for-1 exchange of pollution is enough. Maybe you should do it on a 3-to-1 or a 4-to-1 basis."

Mr. Chairman, that gets into a little bit of a tit-for-tat negotiation when, it seems to me, that we might be saying to California in this amendment, "We will give you carte blanche to make any decision you want."

Frankly, as someone who feels that we ought to bring that oil into the United States and that we ought to force out that Arabian crude, I am not sure that I want to support this proposition. In California they can control the Port of Long Beach. That is fine, but I also understand that what the gentleman is trying to give them here is control of all those vessels that come down the California coast.

Mr. Chairman, I just think that might be a little "much," with all due respect to the gentleman and to his amendment.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from California.

Mr. MILLER of California. Mr. Chairman, one of the things that Sohio is trying to do in getting the right to offload the oil is saying, "We will put various standards on the tankers. We will specially construct some tankers and modify other tankers that will carry this oil."

The State says, "That is a mandate, but we do not think we have the power to mandate you to do this since the tankers will move through international waters."

Mr. BROWN of Ohio. Is the mandate necessary?

The CHAIRMAN. The time of the gentleman from Ohio (Mr. Brown) has expired.

(On request of Mr. MILLER of California and by unanimous consent, Mr. Brown of Ohio was allowed to proceed for 1 additional minute.)

Mr. MILLER of California. Mr. Chairman, will the gentleman yield further?

Mr. BROWN of Ohio. I yield to the gentleman from California.

Mr. MILLER of California. To continue, Mr. Chairman, the point is this, that this takes away the State's argument in terms of those delays. If they really want to get this oil moving through, if Sohio is really intent on making these modifications, the State cannot continue this argument that somehow they cannot agree to these modifications if the company is willing to agree to their part of the proposal.

I am taking that argument away from them so that we can get on with the project.

Mr. BROWN of Ohio. Does the gentleman from California assure me that the State of California is going to let this oil come in if we respond as he would suggest to this amendment?

Mr. MILLER of California. That would be a matter for the Governor of my State. I will not attempt to speak for him.

Mr. BROWN of Ohio. That is what worries me, because it seems to me that this arms the State of California with one more vehicle, one more method of putting leverage or putting the arm on the rest of the country.

Mr. MILLER of California. It takes away that leverage.

Mr. BROWN of Ohio. I am sorry. I do not know that I want to express that much confidence in the gentleman's amendment because it seems to me that anybody who is willing to go in and buy "mom and pop" dry cleaning establishments in order to cut down on pollution ought to have the opportunity to do so.

Mr. ROGERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I do not think that this amendment is to keep out oil. It is for just the opposite purpose. It is to assist in bringing it in. At least, the FEA people have told us so.

Mr. Chairman, I would be willing to say that if we do not get that FEA letter confirming that position, I would make every effort to strike this out in conference.

Mr. CARTER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Kentucky.

Mr. CARTER. Mr. Chairman, may I ask the chairman of the subcommittee whether he wants it brought into this country in 49 different ways from the upper State of Alaska. Does the gentleman want 49 different sets of controls? Would that be right, for us to permit that? Does not the gentleman really think that this is in contravention of the Constitution of the United States?

I would like to ask the chairman of the subcommittee whether he feels that way.

Mr. ROGERS. I believe this, I think it says, as I understand it, that if there is conflict between States that that would be preempted by the EPA. In other words, they would not allow that to occur.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, let me

say that I believe there is some misunderstanding on this, and that it is my understanding, and I hope I am correct in understanding this, that one of the big impasses in bringing oil into the United States is that of the Sohio project, but that because this is limited to the port of Long Beach, the State of California wants to have a clarification as to the Sohio project, so that the oil can be brought in.

Passage of this amendment would alleviate the impasse that is there now in granting Sohio a permit.

The Sohio project is one of the principal transportation systems proposed to move North Slope crude oil to the interior of the United States. Standard Oil of Ohio, Sohio, is seeking a permit from the State of California's Air Resources Board for a marine oil terminal at Long Beach. The State of California is reluctant to agree to the permit conditions proposed by Sohio, which conditions would have the indirect effect of regulating offshore tanker operations from 2 to 12 miles offshore, until it is convinced that it would have the legal authority to enforce such conditions. Until the parties reach an agreement on the major legal issue, it appears that the permitting process for the project will remain at an impasse.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Mr. Chairman, let me say that none of the members of the energy committee have been advised by anybody concerning this, including the FEA, as far as I know. It would seem to me that you are trying to tell us that California does not want to agree to let this oil in until they have some additional authority that we can give them through this amendment.

I do not think we should give them that authority. If they want to prohibit it, they can do so by controlling the Port in Long Beach. But what occurs to me is that we are giving the State of California additional leverage to say they cannot only control the Port of Long Beach, but the tankers offshore, and keep them from coming in at any other place.

Mr. WAXMAN. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from California.

Mr. WAXMAN. Mr. Chairman, as I understand the contention of the State of California, they believe they have that power already. They are negotiating with Sohio. I think we all agree that there ought to be that project there if they can work out an agreement. They are not asking for powers they do not have but they want to be sure that they have the power. FEA and EPA say they already have the power in California to do this. They are asking for clarification. If the FEA in any way balks at this or if there is some complication then I would not pursue this in the conference because I think the representation we are making here on the floor is based on the repre-

sentation we have had from California officials who say that the administration is for this, for the very reasons the gentleman from Ohio should be for it.

Mr. ROGERS. Mr. Chairman, let me add, that if we find we do not, in fact, get a letter from the FEA saying that this would assist the Alaskan oil project, then I would move to strike this in the conference.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. ROGERS. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would like to know whether this amendment gives California the power to exclude Alaskan oil?

Mr. ROGERS. No, it does not give power to the State of California to exclude oil.

Mr. OTTINGER. Or to refuse the transit of oil in the United States?

Mr. ROGERS. It would help bring it in.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DICKS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to follow up on what the gentleman from New York (Mr. OTTINGER) has just said. The fact is that this amendment would not bar or would not give California the authority to bar Alaskan oil from coming into California. I would ask the gentleman from California (Mr. MILLER) if that is his understanding.

Mr. MILLER of California. The answer is "no," it will not. If they want to do that, the law already provides for that.

Mr. DICKS. I thank the gentleman.

Mr. ANDERSON of California. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the district I represent includes the Port of Long Beach that wants to bring the Alaskan oil into this country, and they were the ones who originally contacted us in direct opposition to the Miller amendment. Donald B. Bright, director of environmental affairs, Port of Long Beach, made the initial contact.

Also the Port of Los Angeles, which is in my congressional district, is opposed to this amendment. Mr. Larry White Neck, chief engineer, Port of Los Angeles, was the one who informed me of their opposition.

I thought, perhaps, the opposition was just my area, so I made further inquiries.

I found out that the California Association of Port Authorities, Mr. Fred Crawford, president of and speaking for the association, is against the amendment.

The Pacific Coast Association of Port Authorities, Mr. Robert G. Earley, president, who is also harbor commissioner of the Port of Tacoma, Wash., is opposed.

The Port of San Francisco, Mr. Tom Soules, port director speaking for the port, is opposed.

The Port of Oakland, Mr. Walter A. Abernathy, deputy executive director,

speaking for the port, is opposed to the amendment.

The Port of Stockton, Mr. Owen E. Block, acting port director, speaking for the port, is opposed to this amendment.

The Port of Redwood City, Mr. Paul Freeman, assistant port manager, speaking for the port, is against this amendment.

Mr. Donald J. Barney, director of community development of the Port of Portland, Oreg., said he was in opposition to the amendment.

The Port of Benecia, Calif., Mr. George Plant, port director speaking for the port, is opposed to the amendment.

Mr. Edward J. Millan, general manager of the Port of Hueneme, speaking for the port, opposes the amendment.

Practically every port official of every port we contacted voiced their opposition to the Miller amendment, and they are opposing it because they say it would result in confusion.

Mr. Chairman, under the Miller amendment, each State could adopt different rules that could undoubtedly vary between the various States and, of course, I am thinking in particular of the Pacific Coast States of Washington, Oregon, and California. Also under this amendment, the rules could vary within a State, such as California. California currently has 11 air quality control regions.

If a tougher regulation was adopted in one of the southern districts than was adopted by a northern district, an incoming ship would undoubtedly unload at the port with the easier requirements.

This could result in more pollution. For example, in the case where a ship unloaded in the port with the easier requirements, but where the shipment was actually destined to another port area, the shipment would then have to be trucked to that other part of the State. Which would mean the using of more fuel, there would be more mobile emissions, and thus more pollution.

All in all, these port officials felt that this amendment would also result in confusion to those in charge of the unloading tankers and ships, which in turn might result in more oil spills.

In California as I mentioned, we have 11 air quality control regions. I have been told that the California Air Resources Board "created" rule 213 so that it affects the southern coast region only. Apparently the State board was not satisfied with what the southern coastal region was doing and thus set up a rule that applied only to that south coastal region. It has been reported that this may have been "to keep Sohio out." But whatever the reason, it surely has resulted in confusion.

A second point was brought out that could be titled "Constraint of Trade." For example, supposing a Greek grain ship was going through the shipping lanes of Washington, Oregon, northern and southern California, and supposing each of them had adopted different regulations. Which regulation would the captain of the Greek ship abide by?

Another concern they raised was that this amendment could result in the question of "What is the law?" Currently, we have the EPA in charge of the Clean Air Act. We have the Coast Guard in charge of tanker safety. At least these two agencies are under one head—the Federal Government. But if we were to add the States with different regulations, there would result the difficult question as to who legally is in charge.

Mr. Chairman, the various officials of the various ports I talked to seem to feel that currently the Coast Guard and the EPA together already have the authority to set the necessary national standards. Let us keep these national standards as simple and as uncomplicated as possible. I ask for the defeat of this amendment.

Mr. CARTER. Mr. Chairman, will the distinguished gentleman yield?

Mr. ANDERSON of California. I yield to the gentleman from Kentucky.

Mr. CARTER. I thank the gentleman for yielding.

I just want to compliment the distinguished gentleman for what he is saying. I think it is eminently correct, and I, too, oppose the amendment.

Mr. ROGERS. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of California. I yield to the gentleman from Florida.

Mr. ROGERS. I thank the gentleman for yielding.

May I say that since there is evidently more misunderstanding than we have understood, I would suggest that the author of the amendment might want to withdraw the amendment at this time to let this be checked out and get the confusion over. It was our understanding that there was no real opposition and that the FEA wanted it. This appears not to be so.

I would ask the gentleman from California if he would be agreeable to that course of action.

Mr. MILLER of California. Mr. Chairman, will the gentleman yield?

Mr. ANDERSON of California. I yield to the gentleman.

Mr. MILLER of California. I thank the gentleman for yielding.

I think as long as we can work on the amendment, these people having raised opposition—because of the points raised by the gentleman from Long Beach and the other gentleman from California (Mr. HANNAFORD), Mr. Chairman, I ask unanimous consent to withdraw the amendment and to offer it hopefully at a later time, because I think it would in fact facilitate the agreement that is necessary. I appreciate the remarks of the gentleman from California (Mr. ANDERSON) and the remarks of those people involved.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. Are there further amendments to title I? There being none, we will commence with title II, and the Clerk will read section 201.

The Clerk read as follows:

# TITLE II—AMENDMENTS RELATING PRIMARILY TO MOBILE SOURCES

Ms. OAKAR. Mr. Chairman, I rise today in support of the Dingell-Broyhill substitute amendment to title II of H.R. 6161, the Clean Air Act Amendments of 1977.

This amendment corrects what I believe to be a serious shortcoming in the legislation that we now have under consideration.

The present form of the mobile source amendments to the Clean Air Act, as contained in H.R. 6161, puts undue hardship on the auto industry and ultimately on the workers that the automakers employ. The present timetable for reduction of hydrocarbon, carbon monoxide, and nitrogen oxide emissions could result in the loss of thousands of jobs. Unemployment could rise dramatically as automakers cut back production and they await the technological advances required to meet the emissions standards being demanded. This, I am sure, is not the intention of the Congress.

Environmental concerns are, of course, to be given the weighty consideration that they are due. Likewise, the economic and social implications of our legislation must be given serious consideration. The amendment being offered by the gentleman from Michigan and the gentleman from North Carolina allows the auto industry the flexibility it needs to develop effective and environmentally sound auto emission controls while being mindful of and sensitive to the jobs of thousands of autoworkers. Thousands of autoworkers in the 20th Congressional District would be dramatically affected should the Dingell-Broyhill amendment not pass.

By 1983, the desired levels for hydrocarbons and nitrogen oxide emissions—as prescribed by the Commerce Committee—will be realized under the Dingell-Broyhill provisions. Moreover, carbon monoxide emissions will be substantially reduced from present levels.

Another important consideration is the effect of this legislation on the efficient use of auto fuel. The Dingell-Broyhill emissions standards will save—by several accounts—over 2 billion gallons of gasoline each year. This is a savings of over 140,000 barrels of oil every day of the year. Without this amendment, fuel consumption could be from 8 to 20 percent higher than it need be.

I urge my colleagues to vote for the adoption of the Dingell-Broyhill amendment. It insures that our environmental and health initiatives are joined in a reasonable and evenhanded way with the economic and technological considerations that will impact on the assembly line laborer and the industrialist.

Mr. ROGERS. Mr. Chairman, I had hoped that we could get to the Dingell-Broyhill amendment today. I do not think that is possible now, because we must adjourn at 5:30. Therefore, Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. NATCHER) having assumed the Chair, Mr. DANIELSON, Chairman of the Committee of the

Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes, had come to no resolution thereon.

## REPORT ON RESOLUTION 531 PROVIDING FOR EXPENSES OF INVESTIGATIONS AND STUDIES CONDUCTED BY THE AD HOC COMMITTEE ON ENERGY

Mr. THOMPSON, from the Committee on House Administration, submitted a privileged report (Rept. No. 95-365) on the resolution (H. Res. 531) to provide for the expenses of investigations and studies to be conducted by the Ad Hoc Committee on Energy, which was referred to the House Calendar and ordered to be printed.

## PERMISSION FOR CONSIDERATION OF HOUSE RESOLUTION 531 ON MAY 26, 1971

Mr. THOMPSON. Mr. Speaker, I ask unanimous consent for consideration on tomorrow of House Resolution 531.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

## NINTH ANNUAL REPORT OF NATIONAL ADVISORY COUNCIL ON ECONOMIC OPPORTUNITY—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Education and Labor:

### To the Congress of the United States:

I am transmitting herewith the Ninth Annual Report of the National Advisory Council on Economic Opportunity.

The report is based on the activities of the Council prior to my term of office. The recommendations of the Council will be considered as this administration reviews the role of the Community Services Administration.

JIMMY CARTER.

THE WHITE HOUSE, May 25, 1977.

## JOHN W. MCCORMACK AWARD TO GILMAN G. UDELL

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BRADEMAS. Mr. Speaker, I rise at this time for the privilege of inviting all Members of the House to come to a reception tomorrow morning at 9 a.m. in the Rayburn room for the annual presentation of the John W. McCormack Award of Excellence to Congressional Employees. This will be the seventh time we will gather to honor a distinguished employee for years of dedicated public service to the American people and the House of Representatives.

The recipient of the John W. McCormack Award for 1976 is Gilman G. Udell, the superintendent of the House document room. Gil has served with us for more than 30 years—longer than all but five Members of the House—under five Speakers from both parties. A native of Bangor, Wis., he came to the House in 1946 as an assistant in the document room after serving 4 years in the U.S. Army during World War II. He was promoted to assistant superintendent on February 5, 1949, and became superintendent on July 25, 1957.

Gil Udell does not have a high-profile job but it is an important one that affects all of us every day. He was chosen for this award from among the thousands of House employees deserving and eligible because of an exceptional performance in a demanding job and a dedication to the highest standards of public service.

Gil joins a celebrated roster of persons honored over the years, beginning with our late Parliamentarian, Lew Deschler, who received the first John W. McCormack Award for 1970.

Others, Mr. Speaker, who received this special recognition from the House were Turner N. Robertson, chief page, for 1971; Bob Menaugh, superintendent of the Radio-TV Gallery, for 1972; Ernest Petinaud, headwaiter of the House dining room, for 1973; Charles A. Henlock, administrative officer of the Architect's Office, for 1974; and Tom Iorio, Deputy Sergeant at Arms and pair clerk for the majority, for 1975.

Mr. Speaker, the John W. McCormack Award is a testimonial both to an outstanding employee and to our former Speaker, whose solicitude for all Members and employees of the House is well known. Speaker McCormack joins with us in congratulating Gil Udell on this well-deserved recognition.

The presentation tomorrow will be presided over by our distinguished Sergeant at Arms, Ken Harding, who chaired the committee of officers of the House which selected Gil Udell for the award this year. Speaker O'NEIL will present the award, and I would again urge Members to join us on this significant occasion.

## GENERAL LEAVE

Mr. BRADEMAS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the John W. McCormack Award to Gilman G. Udell.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

## LAND AND WATER CONSERVATION FUND ACT OF 1965

Mr. PHILLIP BURTON. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the bill (H.R. 5306) to amend the Land and Water Conservation Fund Act of 1965, and for other purposes, with Senate amendments thereto and concur in Senate amendments Nos.

1 and 3 and concur in Senate amendment No. 2 with an amendment.

The Clerk read the title of the bill.

The Clerk read the Senate amendments, as follows:

Page 3, line 16, strike out all after "the" down to and including "paragraph." in line 22 and insert: Senate."

Page 4, strike out all after line 3 over to and including line 9 on page 5.

Page 5, strike out all after line 9 over to and including line 4 on page 6 and insert:

Sec. 2. (a) (1) For the purpose of improving the effectiveness and efficiency of the management of the Roosevelt National Forest, Colorado, and coordinating the acquisition of lands within the forest which are suitable for such management with the acquisition of lands for parks and recreation purposes pursuant to subsection (b) of this section, the Secretary of Agriculture is authorized to acquire those privately owned lands within the boundaries of the forest which are suitable for national forest purposes and which were adversely affected by the Big Thompson flood of July 31, 1976, and such other adjacent private lands within the boundaries of the forest as are available and suitable for national forest purposes.

(2) Lands identified for acquisition pursuant to paragraph (1) of this subsection which lie within the Big Thompson/North Fork Floodways, designated pursuant to the National Flood Insurance Act of 1968 (82 Stat. 572), as amended, shall be acquired at the fair market value of such lands (not including any improvements thereon) immediately prior to the occurrence of the flood: *Provided*, That such lands shall (i) be unimproved, or (ii) include structures which have sustained damage amounting to 50 per centum or more of their market value.

(3) Lands identified for acquisition pursuant to paragraph (1) of this subsection which are not lands described in paragraph (2) of this subsection shall be acquired at no less than appraised fair market value based on an appraisal of each parcel of such lands approved by the Secretary of Agriculture under the authority of section 11 of the Act of August 3, 1956 (70 Stat. 1034, U.S.C. 428a(a)).

(4) Moneys appropriated to carry out this subsection shall be available until expended or until January 1, 1980, whichever is earlier.

(b) Notwithstanding any other provision of law, in the case of lands acquired for the Big Thompson/North Fork Canyons Recreational Lands Acquisition Project in Larimer County, Colorado, for which financial assistance is authorized under section 6(e)(1) of the Land and Water Conservation Fund Act of 1965 (78 Stat. 987, as amended; 16 U.S.C. 4601-4 et seq.), if such lands are located within the Big Thompson/North Fork Floodways and are (i) unimproved or (ii) include structures which have sustained damage amounting to 50 per centum or more of their market value, such assistance may be provided for an amount equal to the market value of such lands (not including any improvements thereon) immediately prior to the occurrence of the Big Thompson flood of July 31, 1976.

The Clerk read the House amendment to Senate amendment numbered No. 2, as follows:

In lieu of Senate amendment No. 2 insert the following:

"(5) Section 7 is amended by adding the following new subsection:

"(c) BOUNDARY CHANGES: DONATIONS.—Whenever the Secretary of the Interior determines that to do so will contribute to, and is necessary for, the proper preservation, protection, interpretation, or management of an area of the national park system, he may, following timely notice in writing to the Committee on Interior and Insular Affairs of

the House of Representatives and to the Committee on Energy and Natural Resources of the Senate of his intention to do so, and by publication of a revised boundary map or other description in the Federal Register, (i) make minor revisions of the boundary of the area, and moneys appropriated from the fund shall be available for acquisition of any lands, waters, and interests therein added to the area by such boundary revision subject to such statutory limitations, if any, on methods of acquisition and appropriations therefor as may be specifically applicable to such area: *Provided, however*, That such authority shall expire ten years from the date of enactment of the authorizing legislation establishing such boundaries; and (ii) acquire by donation, purchase with donated funds, transfer from any other Federal agency, or exchange, lands, waters, or interests therein adjacent to such area, except that in exercising his authority under this clause (ii) the Secretary may not alienate property administered as part of the national park system in order to acquire lands by exchange, the Secretary may not acquire property without the consent of the owner, and the Secretary may acquire property owned by a State or political subdivision thereof only by donation. Prior to making a determination under this subsection, the Secretary shall consult with the duly elected governing body of the county, city, town or other jurisdiction or jurisdictions having primary taxing authority over the land or interest to be acquired as to the impacts of such proposed action, and he shall also take such steps as he may deem appropriate to advance local public awareness of the proposed action. Lands, waters, and interests therein acquired in accordance with this subsection shall be administered as part of the area to which they are added, subject to the laws and regulations applicable thereto."

Mr. PHILLIP BURTON during the reading). Mr. Speaker, I ask unanimous consent that the Senate amendments and the House amendment be considered as read and printed in the Record.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. SEBELIUS. Mr. Speaker, I do not object to that request, but I do reserve the right to object to the first unanimous consent request.

The SPEAKER pro tempore. Without objection, the reading of the amendments will be dispensed with.

There was no objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. SEBELIUS. Mr. Speaker, I reserve the right to object.

I yield to the gentleman from California to explain the content of the amendments and what the gentleman proposes to do.

Mr. PHILLIP BURTON. Mr. Speaker, the Senate adopted three amendments, which I will explain:

Acceptance of Senate amendment No. 1: Mr. Speaker, H.R. 5306, as passed by the House of Representatives on April 4, contained a provision which would state the intent of Congress that the land acquisition program for the existing units of the National Park System be completed within 3 complete fiscal years following the enactment of this legislation. Senate amendment No. 1 deletes this specific intention of Congress.

In discussing this difference with members of the Senate Committee on Energy and Natural Resources, I find

that there is no basic disagreement with the principle that the National Park Service proceed expeditiously to complete the acquisition program. There is a legitimate concern, however, that a 3-year deadline imposed at this time could lead to hardships in some cases. Therefore, I urge that my colleagues join me in agreeing to Senate amendment No. 1.

We would certainly expect the administration to come forward with a positive program to acquire these remaining lands in the near future. Any untoward delay in this will only mean that much higher prices will have to be paid for these lands when they are ultimately purchased, and the threat of damage to the character of these areas will exist in the interim. Acceptance of the Senate amendment will permit a more flexible program to be developed for these acquisitions.

Further amendment of Senate amendment No. 2: Mr. Speaker, H.R. 5306 in its original form contained a provision permitting the Secretary of the Interior to make minor boundary adjustments in National Park System units, and to accept lands adjacent to these areas by donation. The Senate deleted this aspect of the bill.

After discussions with the interested Senators, we propose to restore this language but with three additional changes.

First, the Secretary would be required to publish a revised boundary description in the Federal Register whenever a minor boundary revision or the acceptance of an adjacent property by donation takes place.

Second, the authority to make minor boundary changes will expire 10 years after the enactment of the authorizing legislation fixing the boundaries of a park system unit.

Third, prior to making a minor boundary change or accepting a tract of land by donation, the Secretary is to consult with the local unit of government, as well as providing local public notice of the proposed action.

These changes will provide for more complete public review, while permitting the Secretary this latitude in these instances, and I urge that this further amendment be adopted.

Acceptance of Senate amendment No. 3: Mr. Speaker, the final Senate amendment simply improves the section in H.R. 5306 which provided for the valuation of certain lands within the Big Thompson/North Fork Floodways in Colorado. The amendment will permit the U.S. Forest Service to value these lands which it may acquire in a similar manner to that method previously described in the bill for recreation land acquisition in this area by the State of Colorado. We will now have a consistent standard for valuing these lands, regardless of the acquisition agency. I urge the acceptance of this amendment.

Mr. SEBELIUS. Mr. Speaker, I continue to reserve the right to object.

Mr. Speaker, I very reluctantly lend my support, and urge the support of my colleagues, in the adoption of the amendments to H.R. 5306 which are now before us. Let me make myself clear in my indication of less than enthusiastic endorsement. I strongly supported this bill as it

originally passed the House last month. However, the bill now before us embodies Senate amendments which severely impair the intended impact and workability of the bill. Particularly, the Senate deleted the House provision which stated that it was the intent of the Congress that the backlog of all land acquisition for the National Park System be completed within 3 complete fiscal years following the enactment of this bill.

I want to point out that our National Park System yet has approximately 26,235 acres of both unimproved lands and developed private "inholdings"—worth an estimated \$84,370,000—within older units of the system—those authorized prior to 1960. These are lands which have long been intended by the Congress to be acquired, yet they still remain within private ownership. There is a significantly greater acreage and dollar figure of privately owned lands and developments within park system areas authorized since 1960—which also are intended by the Congress to be acquired.

The House bill intended that this entire backlog would be expeditiously acquired, so as to promptly eliminate the adversity of private inholdings within the public's national parks areas, and to simultaneously save the Nation's taxpayers from overpaying for these areas due to the great cost escalation resulting from continually delayed acquisition action. Escalation of land values in many of these areas is in the neighborhood of 15 percent annually. Prompt acquisition of these lands now—which is intended to ultimately happen anyway—would result in a very substantial savings of tax dollars.

Despite the Senate's aversion to specifically legislating a short term time frame for substantially completed acquisition for the National Park System, the House has been firm in its intention that the funding authorized by this bill for acquisition by all affected agencies would be undertaken expeditiously.

Specifically, the National Park Service's opportunity purchase program should not stand in the way of expending authorized and appropriated acquisition dollars and promptly completing the elimination of all unauthorized private holdings within units of the National Park System. Consequently, some condemnation actions, already authorized in many cases but heretofore not often exercised, may come to be a more essential ingredient of the immediate future to accomplishing the objective of private inholdings reduction and elimination.

In conformance with the thrust of this legislation, I strongly suggest that the National Park Service formally report quarterly to the appropriate committees of the House and the Senate as to the acquisition program accomplishments of the preceding year—by fiscal year—and the planned acquisition program of the upcoming next 2 fiscal years, broken down on a quarterly basis. In this manner, the Congress can have some periodic indication of the degree to which the Service is successfully moving toward the prompt elimination of private holdings within the National Park System.

Mr. Speaker, I also believe it would be appropriate for each other agency

which benefits from funding appropriated from the special account authorized by this bill, to likewise devise a similar quarterly reporting procedure for the benefit of the appropriate congressional committees, and I urge them to do so.

Mr. Speaker, despite the fact this bill does not still retain its strength as originally passed by the House, it still provides additional meritorious features which will significantly contribute to the preservation of some of America's most precious natural resources, and I urge my colleagues to support its approval.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. SEBELIUS. Mr. Speaker, I very reluctantly lend my support and withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

A motion to reconsider was laid on the table.

#### APPOINTMENT OF CONFEREES ON H.R. 2, SURFACE MINING CONTROL AND RECLAMATION ACT OF 1977

Mr. UDALL. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (H.R. 2) to provide for the cooperation between the Secretary of the Interior and the States with respect to the regulation of surface coal mining operations, and the acquisition and reclamation of abandoned mines, and for other purposes, with a Senate amendment thereto, disagree to the Senate amendment, and request a conference with the Senate thereon.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Arizona? The Chair hears none, and appoints the following conferees: Messrs. UDALL, PHILLIP BURTON, SEIBERLING, RONCALIO, BINGHAM, SKUBITZ, and BAUMAN.

#### VERNON THOMSON, CHAIRMAN, FEDERAL ELECTION COMMISSION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. FRENZEL) is recognized for 5 minutes.

Mr. FRENZEL. Mr. Speaker, rarely do we take the opportunity to praise a Chairman of a regulatory agency, especially when we are the group they are regulating. However, I believe that it is both necessary and appropriate to note the accomplishments of the ex-Chairman of the Federal Election Commission, the Honorable Vernon Thomson, who completed his term as Chairman this month.

Vern Thomson served in this body for 14 years as the Representative from the Third District in Wisconsin. Previously, he served in the Wisconsin State Legislature, as attorney general, and as Governor of Wisconsin. He has always been a courageous, effective public servant. His term as Chairman of the Federal Election Commission was no exception.

Chairman Thomson assumed the

chairmanship shortly after the FEC was reconstituted after the Supreme Court decision—Buckley against Valeo. He had only 5 short months to put the Commission's house in order before the November election. The Congress, in its wisdom, had not only reconstituted the Commission but laid upon the FEC many, major changes in the election law. It was not an easy task to complete before the November election.

Under Vern's direction, the Commission drafted and developed a new, comprehensive set of regulations. The conciliatory manner and even handed direction of the Chairman was instrumental in the resolution of many difficult partisan issues. The Commission requires a two-thirds vote for approval of any policy, but has three Democrats and three Republicans. Forging a two-thirds consensus requires skill and diplomacy of a high order, and a high confidence level by all Commissioners. Chairman Thomson had, and demonstrated, those abilities.

A second accomplishment and one for which the chairman was personally responsible, was the reduction in time required by the FEC to respond to advisory opinion requests and other correspondence. We have all experienced delays and difficulties obtaining prompt and responsive answers to questions. The process is not perfect yet. But, under Vern's direction, the response time has been drastically reduced and the backlog almost eliminated.

Another difficult task was the revision and refinement of compliance procedures and the initiation of enforcement action. The chairman guided the Commission through its first major enforcement action under the public financing law, recently culminating in a request for a return to the U.S. Treasury of \$300,000 in public funds. Other actions have been taken to assure compliance with the provisions of the law and still more are in process. The Commission's conduct in its enforcement proceedings has been substantially professionalized.

There were many skeptics in this body when the Congress created the Federal Election Commission. Few believe it was possible to restrict partisanship to a minor role in the agency's formal deliberations. Yet, under Chairman Vernon Thomson's thoughtful and effective leadership, there has been little evidence of partisanship.

Mr. Speaker, I am honored to call to the attention of my colleagues the achievements of one of our former Members, Vern Thomson, in the implementation of our campaign financing and disclosure laws during his productive term as Chairman of the Federal Election Commission.

#### PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. SARASIN) is recognized for 5 minutes.

Mr. SARASIN. Mr. Speaker, on May 24, 1977, I was absent from the House for part of the legislative session. Had I been present, I would have voted in the following fashion:

Rollcall No. 282: H.R. 6885—Internal security assistance—passed the measure to amend the Foreign Assistance Act of 1961 to authorize international security assistance programs for fiscal year 1978, to amend the Arms Export Control Act to make certain changes in the authorities of that act, "yea"; and rollcall No. 283: H.R. 6161—clean air—the rule (H. Res. 589) under which the bill was considered, "yea."

#### HONORING CAPTAIN CHAPMAN AND HONORING ALL VETERANS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. MILLER) is recognized for 5 minutes.

Mr. MILLER of Ohio. Mr. Speaker, it is with a great deal of pride that I note the dedication of the 1550th Aircrew Training and Test Wing's Chapman Hall at Kirkland Air Force Base, N. Mex.

The impressive center which was formally dedicated by Air Force officials earlier this month, is an academic center and museum. Housed in the new facility are the only two helicopter flight simulators in the Air Force. Also, included in the building is the Aerospace Rescue and Recovery Service Museum. The flight simulators will be used to train student pilots. The museum contains memorabilia of rescue service activities dating back to 1946.

The center, Mr. Speaker, was named for Capt. Peter Hayden Chapman II, an outstanding young pilot who lost his life while in the service of this country in Vietnam. Captain Chapman was downed while maneuvering his helicopter to rescue an aircraft crash victim. Captain Chapman's death occurred only 2 weeks before the conclusion of his tour of duty in Vietnam. He had orders for service at Andrews Air Force Base with Air Force 1.

I bring the heroism of Captain Chapman to the attention of the Congress not only to pay tribute to this outstanding flyer but also to pay tribute to all those men and women who have served this Nation in our Armed Forces.

As we prepare to commemorate Memorial Day, 1977, let us remember the service of those who have died to keep America strong. It might be easy to take our democratic system for granted. It might be easy to overlook the price young Americans have paid to keep this country "the land of the free." But we must not forget. We cannot forget. We must renew our spirit of service and rededicate our energies to keeping America strong.

Captain Chapman and those who have died in the service of this Nation upheld the highest traditions of America's Armed Forces and of this Nation. At the very least, we owe America's future an equal measure of dedication.

#### PERSONAL EXPLANATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Montana (Mr. MARLENEE) is recognized for 5 minutes.

Mr. MARLENEE. Mr. Speaker, on Monday, May 23, I was unavoidably ab-

sent during votes on two of the suspensions. Had I been present I would have voted "yea" on rollcall No. 271, H.R. 1862, Veterans Disability Compensation and Survivors Benefits Act, and "yea" on rollcall No. 272, H.R. 6501, increased compensation for certain disabled veterans.

Also on Tuesday, May 24, I was meeting with my constituents attending the White House Conference on Handicapped, and missed rollcall No. 283, House Resolution 589, the rule for consideration of the Clean Air Act. Had I been present, I would have voted "yea."

#### WHALEN SAYS DOCTORS SUPPORT RECOMMENDATIONS FOR MEDICAL RECORDS PRIVACY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

Mr. WHALEN. Mr. Speaker, you may recall that in January of this year I sponsored a briefing for Members of Congress and staff on the subject of medical records privacy. This program was an outgrowth of my continuing interest in the general subject of assuring the confidentiality of so-called third-party records, such as those kept for bank, telephone, and credit transactions.

The principal speaker at last January's program was Columbia University Prof. Alan F. Westin. Dr. Westin, a noted scholar and expert in the privacy field, had just released his report to the National Bureau of Standards, entitled, "Computers, Health Records, and Citizen Rights."

In association with the congressional briefing, I placed in the CONGRESSIONAL RECORD of January 12, on page 1046, a summary of the Westin report. Also, I inserted at that point the two basic sets of recommendations that were included in the report.

Knowing that many health care professionals in my district are concerned about the issues of confidentiality of patient records, I subsequently sent a letter to most physicians in my district, summarizing the Congressional briefing. Along with this communication I sent a reprint of the January 12 CONGRESSIONAL RECORD statement, and I invited comments.

A number of doctors did write back to me, Mr. Speaker, and I am pleased to report that they were unanimous in their support for tough safeguards for protecting the privacy of personal health records. Most respondents fully endorsed the recommendations contained in Professor Westin's report. And all agreed that it is necessary for us to examine fully the privacy issues raised by increased dissemination and automated retrieval of health records.

At this point, I would like to share with you and our colleagues a sampling of the comments I received from physicians in Ohio's Third Congressional District.

One of the first responses came from a general practitioner who obviously has given much thought to the issue of medical records privacy and patients' rights to confidentiality. His letter helps to il-

lustrate the problems faced not only by the patient, but also by the conscientious doctor. In part, he wrote:

A patient no longer has any confidentiality and we as physicians are helpless to do anything about it.

We have to give to the insurance companies diagnoses of every patient applying for insurance, collecting on disability, for time off, to all industries covering the same topics, to the Motor Vehicle Bureau, to the Civil Service regarding its employees, to the Board of Education, etc., etc.

I have a patient sign our own release form and if I think the disclosure of the information might be harmful to their job I tell them so. The patients are in the middle because if this information is not given they do not receive their compensation for whatever reason it may be.

Some of my patients have lost their jobs as a result of medical information required and there is nothing that I can do about it. . . .

Sometimes disclosing a medical disability will cost the patient a promotion and this will be given to another person of equal ability without a medical disability.

Insurance companies are harassing us for detailed information regarding an applicant for insurance and they want complete information from a chart, maybe containing 200 or 300 pages, of the dates, times, prescriptions, diagnoses, laboratory work and X-rays taken on this patient over a period of perhaps 10, 15 years or more. This is a human impossibility and after our report, which takes some days to get out, the patient may be rejected for insurance and we are held to blame.

Filling out a medical report to social security for disability is also a major feat and the paper work keeps on increasing.

I do not know where all of this will end.

The patient is now a number in a vast paper machine with no respect to confidentiality. We doctors must report the truth and in many instances this backfires on us.

Another doctor commented as follows:

. . . I was interested to read about your press conference with Dr. Alan Westin. You are doing a wonderful job in this most important area, the importance of which has just begun to dawn on many of us.

A great deal of unnecessary data collection would be forestalled, it seems, if the rule could be established that no agency should have any data, personal or otherwise, which is not needed to carry out its legally defined function. Of course, the collection of personal identifiers should be restricted to those instances where it is specifically authorized in law or by executive order of the President. This is the provision in the Privacy Act of 1974 as I understand it. If this is true perhaps citizens should be alerted to check these points out before giving out information.

Reflecting my own thoughts about the question of who should ultimately control access to third-party records of a personal nature, another general practitioner wrote:

I think that it is important to remember that Medical Records are private and not public property.

The records are really the property of the Patient. The Patient should be the one to determine whether records or parts thereof should be released to a third party.

In a similar vein, an orthopedist in Dayton made this observation about the key recommendations of the Westin report:

I have read through . . . the twelve Basic Principles for safeguarding privacy of health

data systems. One comment I would like to make that I did not see in the Twelve Basic Principles, I feel there should be a statement that if a patient does not want any of his personal information to be used or to be passed on to any other agency I would like to see a clear statement that any privileged private information of any patient would not be used by any agency if not authorized by the patient. I do not feel that in these Twelve Basic Principles, that that course is properly delineated, otherwise everything else I have reviewed seems quite pertinent and timely to me.

Finally, we have this straightforward statement by another orthopedist in my district:

I believe that it is absolutely essential that every health data system should be under strict guidelines to protect the individual citizen's rights. As you know, computer control with wide distribution through insurance company files without prior authorization from the patient, is in strict violation of a person's individual rights as a citizen and wide distribution of individual personal information should be severely restricted.

I believe that it is absolutely necessary that information release forms be specifically filled out and the individual should be aware as to who is receiving the information and it should be used over a limited period of time and should not be available to all people that may be desirous of information, particularly insurance companies. Personal data can change from time to time and to have no limit on this certainly is not fair to the individual.

Data used in research should also be limited to statistical analysis rather than related to individual patient identification except under certain extenuating circumstances where the individual should have the privilege of restricting the dissemination of the information.

As you know, the entire problem has changed because of the wide dissemination of information and computer systems that pass information back and forth on request.

Mr. Speaker, from the mail I have received, I can only conclude that there is strong support in the medical profession, at least in the Dayton area, for the medical records privacy recommendations contained in the Westin report on "Computers, Health Records, and Citizen Rights." I am pleased to see the high degree of interest and awareness about this issue amongst physicians in the Dayton area and I shall attempt to keep them, and you, informed of any new, significant developments in this field.

#### LEGISLATION AMENDING INTERNAL REVENUE CODE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Massachusetts (Mrs. HECKLER) is recognized for 5 minutes.

Mrs. HECKLER. Mr. Speaker, as one who is deeply concerned about the plight of the small business community in this country, I would like to bring to the attention of my colleagues a bill which I introduced today.

This bill addresses a major problem of small businessmen: The need for reform in the tax structure so as to spur capital growth. Specifically, it amends the Internal Revenue Code of 1954 to allow small businesses to use a larger portion of their first \$150,000 of earnings. It establishes a tax schedule of 20 percent for the first \$50,000, 22 percent for the next \$50,000,

and 48 percent for the excess over \$150,000.

Taxing the first \$150,000 of corporate income at lower rates is essential to small businesses' survival, in view of the startup costs, risk factors, and inflated expenses which these businesses face. The need for a tax break was recognized by Congress 39 years ago, when the first \$25,000 in earnings was exempted from the 48 percent tax rate, and reiterated by this body 2 years ago when the \$25,000 was increased to \$50,000.

Mr. Speaker, the \$50,000 represents half a loaf, at a time when small business, in terms of capital needs, requires a full loaf. Revitalization is required, to allow small businesses, which account for 97 percent of all businesses in the United States, to flourish and grow, with the eventual benefits of additional jobs, increased tax revenues, and lowered unemployment and welfare costs.

Therefore, I urge my colleagues to support the legislation which I introduced today, in order to help small businesses attract the capital which is vital to their existence, and to this Nation's economy.

#### ASHBROOK AMENDMENT TO HATCH ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. ASHBROOK) is recognized for 30 minutes.

Mr. ASHBROOK. Mr. Speaker, in the past week, we have witnessed a frenzied effort to explain away, gloss over or, in some instances, distort the action of the House of Representatives last Wednesday night when my Hatch Act amendment was adopted by a 229 to 168 vote. I understand the problem of the union leaders advocating this bill. They thought they had everything in order and, therefore, must look for every conceivable ploy to explain away what I think was a sound action the majority of the Members took. They use such words as "confusion, misunderstanding, and misrepresentation" in attacking the Ashbrook amendment.

First, it is alleged that very little time was spent on the amendment. This is correct, but it certainly cannot be blamed on the sponsor of the amendment. Anyone referring to pages 15424 and 15425 of the May 18 CONGRESSIONAL RECORD can see precisely what happened. I offered the amendment and very clearly explained its implications. Rather than recite whatever reasons the sponsors of the bill now have for opposing my amendment, my friend from Missouri, Chairman CLAY, immediately moved that all debate end within 20 minutes and by a division vote of 110 to 58 this motion was agreed to. At no time did the majority discuss my amendment. Thus all debate, repeat all debate, was shut off on the motion of the majority party.

Second and probably the worst insult to the intelligence of the Members of the House, the union leaders now complain that the Members simply did not know what they were doing. Let me make several observations. It is generally known after 17 years that I have been a steadfast critic of union power grabs and it is inconceivable that anybody,

whether they had read the amendment or not, would not understand my amendment would be in the nature of a limitation on what I believe to be union excesses. Monday's Washington Post seems to put this point in perspective in the following quotation:

In the old days it would have been enough to say that Ashbrook was for the amendment and labor against it, said a leading Democrat after the late night vote. But that approach doesn't work anymore.

Yes, Mr. Speaker, that approach does not work anymore but at least it is generally known what side I am on. I have never misrepresented that.

Furthermore, I personally delivered a copy of the amendment to the majority counsel and the minority counsel more than 5 hours before my amendment was brought before the Members of the House. Several Members requested copies and all were given one, because they were available on request. The amendment was read in its entirety—even though printed copies were distributed, I did not make the usual time-saving request for the Clerk to dispense with the reading of my amendment.

It is very hard to argue that Members did not know what they were doing.

Third, probably the strangest criticism of my amendment to the argument that it is something different or novel and it would apply to Federal employee unions different restrictions than those faced by, say, UAW unions in Detroit. This is a specious argument and for anyone who will read the debate, they will note that on numerous occasions proponents of H.R. 10 indicated they, too, were concerned with making broad changes, because of the different nature of Federal employees particularly in regulatory agencies such as OSHA.

Repeal of the Hatch Act as provided in H.R. 10 would permit things to be done which previously were prohibited and thus remove some protection workers now have against intimidation and union activities they may not agree with. The Ashbrook amendment recognizes this situation and would preserve certain protections. Except from the point of view of the employee unions who want the power, what is wrong with that?

It all comes down to whether you are interested in the individual Federal employee or the employee unions. Those who are concerned about preserving the protections properly accorded to Federal employees do not need to apologize for voting for my amendment. Those who worry about the wrath of the Federal employee unions might well have political concerns about supporting my amendment.

If Federal employees are now going to be permitted to engage in partisan political activity, there should be some protection for those who want no part in partisan political activities—particularly if they are forced to belong to a union. The Executive order governing labor management relations in Federal service establishes exclusive monopoly compulsory representation. The union certified as bargaining agent is given the privilege of representing all persons in the unit. Every person in the unit must accept the union as his bargaining agent regard-

less of his or her wishes so Federal workers are under pressure to join the union as they are compelled to accept representation. It is wrong to use their dues money, paid as a condition of that pressured membership, for political activities they want no part of.

#### ANALYSIS OF AMENDMENT

Mr Speaker, I hope my colleagues will take a good look at the amendment we adopted before they listen to the distortions being distributed by the union leaders. There are two parts to the amendment. The first part reads:

"(d)(1) No employee organization (including any national or international union, council, or department which includes such organization, or any affiliate of such organization), or officer, employee, or agent thereof, shall directly or indirectly intimidate, threaten, coerce, command, or directly or indirectly attempt to intimidate, threaten, coerce, or command—

"(A) any employee for the purpose of interfering with the right of any employee to vote as such employee may choose, or of causing any employee to vote, or not to vote, for any candidate or measure in any election;

"(B) any employee to give or withhold any political contribution; or

"(C) any employee to engage, or not to engage, in any form of political activity whether or not such activity is prohibited by law.

This section has sound statutory precedence. Numerous laws are already in effect to prohibit intimidation of voters and other attempts to wrongfully influence voting: 18 U.S.C. section 594 makes it illegal to intimidate, threaten, or coerce any person to vote or not vote as he chooses; 18 U.S.C. section 597 prohibits offering, soliciting, or receiving an expenditure to influence a person's vote; 18 U.S.C. section 600 outlaws promising Government employment or any other benefit in reward for political activity; 18 U.S.C. section 601 forbids using deprivation of Government employment or other benefits as a means of eliciting a political contribution.

In addition, H.R. 10 contains numerous provisions aimed at preventing intimidation and coercion of employees. In particular, section 7323 prevents the use of official authority or influence by an employee to either interfere with an election or else intimidate, threaten, coerce, command, or influence an individual to vote or not vote as he chooses, to give or withhold a political contribution or engage or not engage in political activity.

The Ashbrook amendment simply extends these employee protections against intimidation, threats, and coercion so as to cover employee organizations. If we are truly concerned about preventing employee coercion, then we should apply it to all those who could apply coercion, including Federal employee organizations.

The second part of the amendment is admittedly more controversial. It reads:

(2) No portion of any dues, fees, or assessments levied on the membership of any employee organization referred to in paragraph (1) of this subsection by such organization shall be used by such organization for any political purpose or by any political education or action committee of such organization for any purpose.

This approach is hardly new. Statutes prohibiting labor organizations—as well

as corporations and national banks—from making a direct contribution or expenditure in Federal elections have been on the books for years.

Section 313 of the 1907 Corrupt Practices Act, as amended in 1947, is as follows (italics added):

*It is unlawful for any national bank, or any corporation organized by authority of any law of Congress, to make a contribution or expenditure in connection with any election to any political office, or in connection with any primary election or political convention or caucus held to select candidates for any political office, or for any corporation whatever, or any labor organization to make a contribution or expenditure in connection with any election at which Presidential and Vice Presidential electors or a Senator or Representative in, or a Delegate or Resident Commissioner to Congress are to be voted for, or in connection with any primary election or political convention or caucus held to select candidates for any of the foregoing offices, or for any candidate, political committee, or other person to accept or receive any contribution prohibited by this section.*

The basic substance of this act is still law today, now codified as 2 U.S.C. section 441. It bars labor organizations from making any contribution or expenditure from their institutional funds in connection with a Federal election, primary, convention or caucus. The only exceptions are internal communications by a labor organization to its members and families; nonpartisan registration and get out the vote campaigns by a labor organization aimed at its members and families; and the establishment, administration, and solicitation of contributions to a separated segregated fund to be utilized for political purposes.

Nevertheless, it has been suggested that the Ashbrook amendment is duly restrictive. A careful reading of the amendment will show that not to be the case.

It should be emphasized the Ashbrook amendment only prohibits the use of dues, fees, or assessments levied on members from being used for political purposes. It in no way prevents Federal employee organizations from soliciting and receiving voluntary contributions from its members and placing these contributions into a separate fund. With a separate fund the organization may engage in almost any political activity it wishes. If employees want to voluntarily give money to the organization to work for or against a candidate, that is perfectly legal under the amendment. This protects the individual union member's right to dissent by preventing unions from using his or her money to support a political party or candidate he might oppose.

Nor does the Ashbrook amendment prohibit purely informational activities. The organization is free, for example, to use institutional funds to print a notice of an upcoming election just as it would be free to print news of any upcoming event of possible interest to members. So also would it be free to print in its regular internal communications selected votes showing the record of particular candidates on the issues.

Passage of H.R. 10 would permit many activities previously prohibited by law, thereby removing some of the protections employees now have against intimidation and activities they may not agree with.

The Ashbrook amendment will preserve these protections for the worker.

#### CONCLUSION

The Hatch Act's primary assumption is that there are basic differences between a Federal employee and one in the private sphere. H.R. 10 provides basic distinctions between the Federal employee and the employee in the private sphere. Mr. CLAY, in his opening statement on H.R. 10 states:

In developing this legislation the committee has been guided by the importance of striking the proper balance between the right of Federal employees to participate in the political life of this Nation at all levels and the right of the public to impartial, non-political, administration of the law.

Before the bill was amended on the floor Mr. CLAY pointed out several areas where the bill made distinctions between Federal and non-Government employees. These distinctions appear as prohibitions on and protections for Federal employees. They include:

First, prohibition on use of official authority, influence or coercion with respect to voting or otherwise engaging in political activity: Government position gives powers not held by non-Governmental employees;

Second, prohibits solicitations of political contributions by superior officials: No such specific prohibition on voluntary contribution solicitations by superiors in private sphere; and

Third, prohibition on political activity by Federal employees in "restricted positions."

Amendments showing distinction between Federal Government employees and private sphere employees include:

Solarz amendment to tighten restrictions on soliciting of political contributions by Federal employees from those seeking contracts: Those being regulated—OSHA, SEC, et cetera—or those who have interests "which may be substantially affected by the performance or nonperformance of such employee's official duties."

Federal employee involvement in the political process raises very different issues than involvement of employees not working for the Government. This can be seen in the distinctions drawn above and in such additional areas as prohibitions on FBI members and CIA officials. These prohibitions serve as both a protection for the employee and the public as a whole.

#### GOLDEN ANNIVERSARY OF THE POLISH AMERICAN HOME, BAYONNE, N.J.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. LE FANTE) is recognized for 5 minutes.

Mr. LE FANTE. Mr. Speaker, last Saturday, May 21, 1977, the Polish American Citizens Club Women's Auxiliary celebrated its golden anniversary at the Polish American Home in Bayonne, N.J.

Established in 1927 for the purpose of promoting civic and political participation among its members, this sororitorial association has continuously served throughout its long and meritorious history as a bastion against apathy and in-

difference. And while the Women's Auxiliary of the Polish American Citizens Club has remained steadfastly committed to the cause of good government, they have over the years expanded the scope of their activities in an effort to more effectively meet the needs of the community.

Today, five decades after their club received its charter, the women's auxiliary is involved in many worthwhile charitable and social endeavors, in addition to their ongoing and outstanding contribution to the educational needs of both the youth and the adults of our community.

Mr. Speaker, 50 years ago, the original membership of the Auxiliary of the Polish American Citizens Club listed 13 women, of which Mrs. Martha Ghizzone is the sole surviving individual. A fine and gracious woman, Mrs. Ghizzone epitomizes the spirit that has made the women's auxiliary such a resounding success in the city of Bayonne. And it is heartening to know that after five decades, the leadership of this association is still in capable and dedicated hands in the person of Mrs. Anne Rutkowski, the current president, and Mrs. Julia W. Chodkiewicz and Mrs. Wanda Lempa, chairlady and cochairlady, respectively, for the 50th anniversary celebration.

I know that the entire city of Bayonne joins me in extending sincerest congratulations to the women of the Polish American Citizens Club upon the occasion of their golden jubilee. I thank them for their unselfish contribution to our community and wish them continued good fortune in the future.

#### DEDUCTING STATE GASOLINE TAX FOR FOUR-CYLINDER CARS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio, Mr. VANIK is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, in light of our national commitment to implement a comprehensive energy program and reduce our consumption of oil and gasoline, I am distressed with present IRS regulations which reduce the gasoline tax deduction by 50 percent for four cylinder automobiles. We must utilize our tax system to the utmost to encourage energy conservation and efficiency.

Section 164(a) (5) of the Internal Revenue Code allows a deduction for State and local taxes on the sale of gasoline, diesel fuel, and other motor fuels, for taxpayers who itemize deductions. Pursuant to broad legislative authority in section 7895 of the Internal Revenue Code, the IRS has formulated administrative rules to implement the provisions of section 164(a) (5) of the code. These administrative rules and regulations have the force and effect of law when Congress acquiesces to them.

The IRS provides a State gasoline tax table on page 14 of the instructions for form 1040, to be used to determine the amount of State gasoline tax which is deductible in lieu of each taxpayer formulating individual estimates. The instructions that accompany the table state that "if your car had four cylinders or less, deduct half the amount."

In light of our urgent commitment to

energy conservation, I have urged IRS Commissioner Kurtz to modify these instructions and provide equal treatment for tax purposes to four cylinder cars. The present IRS regulation, slashing the gasoline tax deduction by 50 percent for four-cylinder automobiles, is a tax disincentive for their purchase and use.

It is contrary to the spirit of the Carter energy proposals to provide the owners of four-cylinder engines one-half the tax deduction provided the owners of the large cars and the "gas guzzlers."

#### A TRIBUTE TO MR. ALEX HALEY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mrs. COLLINS), is recognized for 5 minutes.

Mrs. COLLINS of Illinois. Mr. Speaker, I take this time to express my admiration and appreciation for one of America's greatest symbols of national pride and exemplary achievement, Mr. Alex Haley.

The national pride engendered by the phenomenon of "Roots" has touched us all, regardless of race or color, as a reminder of the virtues of heritage and its positive effects. Notwithstanding the impact that Mr. Haley has made on the history of the American experience, he has gone further to pave the way for the progress of black Americans by his crowning achievement of being the first black ever to be awarded a Pulitzer Prize in the special category. The encouragement and standard for excellence that he has rendered by his accomplishments are indeed worthy of praise.

I invite my colleagues to join me in saluting a notable American—Mr. Alex Haley.

#### THE NEED FOR POLE ATTACHMENT LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Colorado (Mr. WIRTH) is recognized for 30 minutes.

Mr. WIRTH. Mr. Speaker, today Mr. BROYHILL and I, along with 15 of our colleagues are introducing legislation to permit State or Federal Government regulation of the attachment of television cable to utility poles. This bill, termed "unfinished business" from the last Congress by the distinguished chairman of the Communications Subcommittee, Mr. VAN DEERLIN, is similar to legislation reported late in the last session on which the House never voted.

The reason for this legislation is simple—cable television operators are generally prohibited by local governments from constructing their own poles to bring cable service to consumers. This means they must rely on the excess space on poles owned by the power and telephone utilities. These utilities, however, have responded in traditional monopolistic fashion, offering cable operators "take it or leave it" terms. Not only does this situation hamper the expansion of cable television service, but in at least one instance, it resulted in ongoing cable service being cut off to consumers.

As the committee report of last year observed:

If the (cable) operator is unable to nego-

tiate an acceptable contract with the owners of these poles, he has no legal forum to hear his complaint except in those few states that have assumed jurisdiction over this issue.

This legislation would provide such a forum which, under guidelines outlined in the bill, would operate at either the State or Federal level.

For 9 years cable operators have sought relief on this problem from the Federal Communications Commission. The FCC has repeatedly "studied" the issue, never resolving it. Finally, earlier this year, the FCC determined it had no jurisdiction over cable television pole attachments absent congressional authorization. The time is at hand to provide that authority, while assuring the State agencies which want to occupy the field are not precluded from doing so.

I am pleased to say to my colleagues that this legislation is supported not only by the National Cable Television Association but also by the National Association of Regulatory Utility Commissioners. That these two parties, representing the affected industry as well as the State officials involved, are in accord on this legislation is significant. It indicates that the legislation not only solves a pressing problem but also respects the principles of State sovereignty and responsibility.

As might be expected, utility companies are opposed to this legislation. In comments solicited by Chairman VAN DEERLIN on this draft, the utilities expressed the belief that there was no problem in the pole attachment area. Their more specific objections centered around the rental formula in the bill which calls for establishment of a "just and reasonable rate." So that my colleagues may more fully understand the position of the utilities and the precise functioning of the bill and its rental formula, I am inserting the conclusion of my remarks, some supplementary material on this issue as well as comments on the concerns expressed by the utilities.

Clearly, Mr. Speaker, consumers now receiving cable television as well as consumers who desire access to this service in the future will benefit from this bill's attempt to protect them from the abusive monopoly power of the utilities. I am encouraged by the leadership both in the last Congress and presently which our distinguished subcommittee chairman, Mr. VAN DEERLIN, has shown on this issue. I am hopeful that under his leadership this body will act quickly to approve this legislation.

I insert at this point in the RECORD the text of the bill along with an explanation of the bill's formula and a summary of and comments on the utility companies' positions on this proposal:

H.R. 7442

A bill to amend the Communications Act of 1934 to provide for the regulation of utility pole attachments

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title II of the Communications Act of 1934 (47 U.S.C. 201 et seq.) is amended by adding at the end thereof the following new section:

#### "UTILITY POLE ATTACHMENTS

"SEC. 224. (a) As used in this section—

"(1) The term 'utility' means any person who provides telephone services or electric energy to the public and who owns or con-

trols poles, ducts, conduits, or rights-of-way used, in whole or in part, for wire communication. Such term does not include any corporation or other similar entity owned by the Federal Government.

"(2) The term 'Federal Government' means the Government of the United States or any agency or instrumentality thereof.

"(3) The term 'pole attachment' means any attachment for wire communication on a pole, duct, conduit, or other right-of-way owned or controlled by a utility.

"(4) The term 'usable space' means the space on a utility pole above the minimum grade level which can be used for the attachment of wires and cables.

"(b) (1) The Commission shall regulate the rates, terms and conditions for pole attachments in any case in which such rates, terms, and conditions are not regulated by any State authority.

"(2) A just and reasonable rate, whether prescribed by the Commission or by State authority, shall assure the utility the recovery of not less than the additional costs of providing pole attachments nor more than the actual capital and operating expenses of the utility attributable to that portion of the pole, duct, or conduit used by the pole attachment. Such portion shall be the percentage of the total usable space on a pole, or the total capacity of the duct or conduit, that is occupied by the pole attachment."

#### COSPONSORS

#### COMMENTS ON VIEWS IN OPPOSITION TO POLE ATTACHMENT LEGISLATION

The Chairman of the House Communications Subcommittee, Mr. Van Deerlin, requested all interested parties to file comments with the Subcommittee relative to proposed legislation to regulate the rates, terms and conditions of cable television attachments to utility poles and ducts. The principal criticism of the proposed legislation which has been agreed to by the National Association of Regulatory Utility Commissioners and the National Cable Television Association came from the utility companies. Their concern centered around the operation of the rental formula in the bill which calls for the establishment of a "just and reasonable rate."

The floor for such a pole attachment rate would be the incremental costs to the utility of providing the attachment. The ceiling would be a percentage of the fully allocated costs associated with the pole, based on usable space. The submitted comments evidenced considerable misunderstanding as to how this formula works out in practice. The following is an amplification of the principles involved.

#### Background

Utility pole costs can be separated into two basic categories: (1) the capital costs associated with construction, ownership and replacement of the poles, and (2) operating expenses associated with maintenance, repair and administration.

As a general matter, utility companies have not planned or constructed poles to provide for the attachment of third party users such as cable television. Rather, they have licensed cable television companies to occupy surplus space on poles, where available, for so long as such space is unneeded for utility purposes. Where such excess space is not available, the cable operator has traditionally been required to bear the entire capital cost of constructing a larger pole. Similarly, if the utility needs the space to which cable is attached, the cable operator must vacate the pole or bear the entire capital cost of constructing a new pole.

#### PROTECTION FOR THE UTILITY: DETERMINATION OF MINIMAL RATES

Cable television attachments cause no capital cost to the utilities. All the costs associated with "make ready" such as preparing the pole and actually attaching the television cable would, under this legislation, continue to be paid by the cable television companies.

Thus the only added cost to the utility resulting from the pole attachment would be administrative costs. The legislation is designed to permit utilities to recover any and all of these incremental costs. This, however, is only the floor for the rate determination established in the bill, and is designed to insure that rates are not set which result in the utilities subsidizing cable companies. Higher rates are also permitted in a formula which allows the utilities to recover a proportion of all their costs based on the amount of usable space occupied by the television cable.

#### PROTECTION FOR THE CABLE TELEVISION LICENSEE: DETERMINATION OF MAXIMUM RATES

The ceiling rental rate would be calculated by using a formula which can be expressed, as follows: A equals the average cost of a pole, B equals non-capital expenses expressed as a percentage of A, and C equals the share of the annual costs to be borne by cable television. Multiplying  $A \times B \times C$  would result in the annual pole attachment rate.

Elements A and B in this formula are relatively easy to determine from the public records of the utilities. The principal concern of those commenting on the proposal related to factor C, the share of annual costs.

Under the ceiling concept contained in subsection (b), the method of assigning responsibility for the annual costs of a pole is to determine the percentage of usable space which is licensed to the cable television licensee (not just the space occupied by some commenters feared). Cable television is almost always assigned 1 foot of space for the attachment of its facilities and, therefore, its responsibility factor can be expressed as one over the total amount of usable space. The latter figure depends on the length of the utility pole.

For example, there are seven feet of usable space on a 30 foot pole and 15 feet of usable space on a 45 foot pole. The average pole in use by a particular utility is ascertainable from utility records and thus the share factor for cable television can be easily calculated. Contrary to the fears of the commenters, the share, once calculated, applies to the entire pole. Thus, for example, the share factor would be 14% (one seventh of the usable space) on a 30 foot pole calculated on the basis of the costs attributable to all of the pole. This same share analysis applies equally to duct arrangements.

This share concept can be analogized to an apartment house situation. The renter of one of the ten units pays the cost of that unit plus one-tenth of the cost of all common areas. He does not pay one-half of the cost of the common areas just because only one other person occupies the other nine units, but rather he pays his one-tenth share of all costs attributable to the building.

#### IS THERE A POLE ATTACHMENT PROBLEM?

Several of the utilities commenting on the proposed legislation alleged that there really is no problem and that the complaints of the cable television industry are isolated and unique. During the Communications Subcommittee's 1976 Hearings on this subject (which resulted in the full committee reporting a bill), the National Cable Television Association demonstrated that pole rental rates have increased dramatically in the past few years without regard to the costs associated with the attachments. The effect of this was to thwart the growth of cable television service to consumers. In some instances the disputes between cable systems

and utilities over allegedly unfair rates resulted in a discontinuation of cable television to those dependent on the service.

Evidence was produced during the Subcommittee Hearings showing that the average pole attachment rate increase was 47% from 1973 through 1976. A list of increases submitted in August, 1976, included 23 telephone and electric utilities in 16 states. NCTA supplemented this list in commenting on the proposed legislation and 9 new increases were noted, many of them more than doubling the previous rates. All of this activity does not even include AT&T which is the largest single pole owner in the country. They are constrained by an FCC-instigated agreement which largely maintains the status quo until 1979. In the bargaining which preceded this agreement in 1975, AT&T sought rate increases averaging 33%.

Finally, several parties said that there would be no problem if cable television became joint owners of the poles and/or ducts. This may well be so, and it is certainly an option which this legislation does not preclude, but it is not a solution to the problem which should be mandated. The problem of unfair rates, terms and conditions exists, and as long as cable systems are licensees on a utility's poles, that relationship is in need of regulation.

Mr. BROYHILL. Mr. Speaker, will the gentleman yield?

Mr. WIRTH. I yield.

Mr. BROYHILL. Mr. Speaker, I am today introducing, with Mr. WIRTH and others, a bill to regulate the rates, terms and conditions of attachments of television cable to utility poles and conduits. Extensive hearings by the House Subcommittee on Communications have firmly established that the power and telephone utilities exercise extensive control over these attachments of television cable to the national communications pathway on poles and conduits.

Last year a similar bill was reported by the Committee on Interstate and Foreign Commerce but did not receive floor consideration in the dying days of the 94th Congress. One of the major issues in the committee's deliberations last year was the relationship between State regulatory agencies and the Federal Communications Commission. I, for one, was very concerned that the Federal agency would usurp the power of the State agencies and worked to prevent such a situation in last year's bill.

I am pleased to report that this year the question of Federal/State regulatory jurisdiction has been resolved in a very equitable manner. As a result, this legislation has been endorsed by the National Association of Regulatory Utility Commissioners, representing the State agencies. The bill has also been endorsed by the National Cable Television Association.

Mr. Speaker, this bill is badly needed. If consumers are to enjoy the expanded diversity of cable television service the cable must, obviously, reach their homes. This bill establishes the mechanism to assure that the service necessary to reach the homes—poles and conduits—is made available fairly and reasonably.

#### GENERAL LEAVE

Mr. AKAKA. Mr. Speaker, I ask unanimous consent that all Members may be permitted to revise and extend their remarks and to include extraneous matter on the subject of the special order today

of the gentleman from Colorado (Mr. WIRTH).

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Hawaii?

There was no objection.

#### HEARING SCHEDULE LEGISLATIVE BRANCH DISCLOSURE ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from North Carolina (Mr. PREYER) is recognized for 5 minutes.

Mr. PREYER. Mr. Speaker, as chairman of the Select Committee on Ethics, I take time to advise Members that the hearings scheduled for Wednesday, May 25, on the Legislative Branch Disclosure Act have been cancelled because of the conflict with floor activity on the Clean Air Act. Hearings on the Disclosure Act will be held on the mornings of Thursday, June 2, and Tuesday, June 7. Time and place of the hearings will be announced later.

#### INTERNATIONAL SECURITY ASSISTANCE ACT

Mr. BRADEMAs. Mr. Speaker, I ask unanimous consent to extend my remarks and include extraneous matter at this point in the Record and also that my remarks be inserted in the permanent Record of May 24 following passage of the bill H.R. 6884.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Indiana?

There was no objection.

#### INTERNATIONAL SECURITY ASSISTANCE ACT

Mr. BRADEMAs. Mr. Speaker, I am greatly pleased that the Republican motion to recommit the International Security Assistance Act for fiscal year 1978 with instructions to eliminate all restrictions on military assistance to Turkey was defeated by the House of Representatives by such an overwhelming margin.

In its decisive action on this matter—by a margin of 256 to 150—The House has supported the recommendations of its Committee on International Relations and has made clear its determination to play a strong and constructive role in working with the Carter administration in seeking a solution to the problems of our allies in the eastern Mediterranean and in encouraging a just settlement of the Cyprus tragedy.

In this connection, Mr. Speaker, I wish to say that on Sunday, May 22, 1977, I was privileged to hear President Carter deliver one of the finest statements on foreign policy I have ever heard by an American President. In his address, delivered at the commencement exercises of the University of Notre Dame, in the district I have the honor to represent, the President set forth what he described as the "five cardinal premises" of what he called "a new American foreign policy—a policy based on constant decency and its values, and an optimism in its historical vision."

First—

Said President Carter—

we have reaffirmed America's commitment to human rights as a fundamental tenet of our foreign policy.

Second, we have moved deliberately to reinforce the bonds among our democracies...

Third, we have moved to engage the Soviet Union in a joint effort to halt the strategic arms race...

Fourth, we are taking deliberate steps to improve the chances of lasting peace in the Middle East...

Fifth, we are attempting, even at the risk of some friction with our friends, to reduce the danger of nuclear proliferation and the worldwide spread of conventional arms.

Mr. Speaker, I salute President Carter for articulating in simple but eloquent words these fundamental bases of American foreign policy, and I cite his address at Notre Dame in order to form the context for my own comments concerning one issue that is raised by the bill before us today, the issue posed by the invasion in August 1974 by the Government of Turkey of the Island of Cyprus.

Mr. Speaker, on September 16, 1976, Gov. Jimmy Carter, as a candidate for the Presidency of the United States, made the following statement about the conduct of American policy toward Turkey under the Ford-Kissinger administration:

The Administration failed to uphold either principle or the rule of law in the conduct of our foreign policy. American law requires that arms supplied by the United States be used solely for defensive purposes.

And Governor Carter went on to declare:

The United States must pursue a foreign policy based on principle and in accord with the rule of law.

Mr. Speaker, I agreed with that statement then, and I applaud it today. It is central to the issue of normalizing U.S. military relations with Turkey.

Likewise, Mr. Speaker, in Detroit on May 12, 1976, Governor Carter referred to the defense cooperation agreement which Secretary Kissinger had negotiated with Turkey, and said that:

I feel most distressed that Mr. Kissinger's recent agreement with the Turkish government was not coupled with an agreement which promised more rapid progress toward a just solution for the Cyprus tragedy. In my judgment, we would be negligent of the moral issues and courting longer-range disaster if we fail to couple the improvement in relations with Turkey with increased fair progress on the Cyprus issues...

Mr. Speaker, I agreed with that statement then, and I applaud it today.

Moreover, in a letter dated November 5, 1976—after the Presidential election—Vice President-elect WALTER F. MONDALE dealt with the question of resuming normal military relations with Turkey, and said the following:

I have very strong reservations over the wisdom of granting arms assistance to Turkey in light of that country's continuing inability to show needed flexibility in helping to reach a just settlement that will allow the return of the refugees to their homes, and insure Cyprus' independence, sovereignty and territorial integrity. Moreover, I take particular exception to supplying arms assistance as an incentive to make Turkey more amenable to negotiating fairly.

Mr. Speaker, I agreed with Senator MONDALE's statement then and I applaud it today.

Mr. Speaker, these several statements form the backdrop for consideration of the question of U.S. military support for Turkey.

In dealing with this question, Mr. Speaker, I believe it essential that we keep in mind five fundamental principles:

First. The first principle prohibits the use of weapons supplied by the United States for offensive purposes. This fundamental principle of American foreign policy has been written into the laws of our land, and I believe that it commands wide support in our country.

Second. The second principle is that of the rule of law, a principle which requires that our laws be enforced by the executive branch of our Government.

The provisions of two laws, Mr. Speaker, the Foreign Assistance Act and the Foreign Military Sales Act, contains language specifically mandating—requiring—a halt to any further U.S. arms to any country receiving arms from this country, whether by grant or sale, if those arms are used for aggressive purposes.

These laws, to reiterate, mandate a cutoff of further U.S. arms, and it was the failure of the Ford-Kissinger administration to enforce these laws after Turkey used American-supplied tanks and bombs, guns and planes, ships and bullets, to mount a second invasion of Cyprus, in August of 1974, that caused Congress to vote an embargo on arms to Turkey. I note, Mr. Speaker, that in taking this action, Congress did not seek to write new laws but rather to insure that existing laws were enforced.

Let me also emphasize, Mr. Speaker, that Congress did not take such a step following the first Turkish action on Cyprus, in July of 1974, but only in the wake of the second, clearly offensive, invasion conducted the following month.

Third. The third principle we must assert, Mr. Speaker, is that of discouraging the worldwide spread of military arms. President Carter has been rightly concerned about the dangerous increase in armaments around the world—a concern he eloquently voiced in his speech at Notre Dame Sunday.

Clearly, a failure on the part of the Carter administration to enforce statutory restraints in the use of arms supplied by the United States would run directly counter to this policy.

Fourth. The fourth principle we must keep in mind, Mr. Speaker, again as so nobly voiced in the President's Notre Dame address, is a reaffirmation of America's commitment to human rights as "a fundamental tenet of foreign policy."

This is a concern which, I am confident, we in Congress share, and I applaud the determination expressed by the President to examine carefully the human rights records of the nations with which we deal.

In this connection, and in respect of the particular issue to which I am addressing myself—the resumption of normal U.S. military relations with Turkey—I am constrained to refer to the report of the European Commission of Human Rights of the Council of Europe concerning Turkish actions on Cyprus.

For, Mr. Speaker, it must be observed that this highly respected Commission found Turkey guilty of violating six articles of the European Convention on Human Rights during its continuing illegal occupation of Cyprus.

The report cited these violations:

First, systematic killings of innocent civilians committed on a substantial scale; second, rapes of women of all ages from 12 to 71; third, torture of prisoners and persons detained; fourth, looting and robbing on an extensive scale; and fifth, continuing violations of human rights by refusing to allow the return of refugees to their homes.

Mr. Speaker, it is clear that beyond these obvious violations, the Turkish occupation of Cyprus and the continual presence there of large numbers of military personnel constitute a massive, ongoing violation of basic human rights. Neither the Carter administration, committed to the protection and promotion of human rights, nor we in Congress who share that commitment, can without making a mockery of it, ignore the harsh evidence of Turkish violation of human rights in Cyprus.

Fifth. The fifth principle, Mr. Speaker, which must guide us in this matter is the need for a prompt, just and humane settlement of the Cyprus tragedy. For the reason that Congress insisted on cutting off military aid to Turkey was the wrongful use of American arms by Turkey in the August 1974 invasion of Cyprus; Congress acted to insist that our statutory prohibition on the offensive use of American weapons be effected and that the laws of our land be enforced. Just as clearly, therefore, Mr. Speaker, the resumption of normal military relations between the United States and Turkey is inextricably linked to progress toward a solution on Cyprus.

Mr. Speaker, to repeat Jimmy Carter's Detroit statement of May 12, 1976:

In my judgment, we would be negligent of the moral issues and courting long-range disaster if we fail to couple the improvement in relations with Turkey with increased fair progress on the Cyprus issue.

Mr. Speaker, I believe that Governor Carter's view of the problem 1 year ago was correct and that what he said then holds true in May 1977.

Nor, Mr. Speaker, has Jimmy Carter been the only one to recognize the dangers inherent in failing to link resumption of normal military relations with Turkey to progress on Cyprus. On July 10, 1975, Mr. Cyrus Vance, together with Mr. George Ball, both men much experienced in dealing with the problem of Cyprus, testified before the House International Relations Committee on the Turkish arms question, and dealt in a joint statement with what they termed "the central question" in the dispute over lifting the arms embargo against Turkey. Messrs. Vance and Ball said this:

How can we preserve the credibility of these conditions if we are prepared to ignore them in the case of Turkey in a highly visible situation which all the world is watching?

That Turkey used the arms we provided in violation of the relevant American laws and of the express language of the bilateral agreement that governed their transfer is not in dispute. That issue has been settled by an

opinion of the Comptroller General in unequivocal language.

The question now is: Should the Congress wipe out the penalties of violation, which, in express terms, would render Turkey ineligible for further American weapons until the Turkish Government takes steps to purge itself by some serious move to settle its dispute with Greece and to remove its troops from Cyprus? To do so might dangerously undercut the conditions we have imposed on the use of all the arms we have provided up to this point under our various military aid and military sales programs.

There is, it seems to us, grave danger that, in the highly political atmosphere that now prevails in Ankara, the Turkish Government would regard this measure (a partial lifting of the embargo) as a vindication of its past actions and as removing any pressure to make significant concessions toward a Cyprus settlement.

Finally, and in many ways this is the most important point, we are seriously concerned that this so-called compromise would create a widespread impression that no nation that has acquired arms from the United States need any longer pay attention to the conditions on which those arms were made available but would be free to use them in pursuit of its own interests in local conflicts."

Mr. Speaker, the appraisal of Cyrus Vance and George Ball is as accurate now as it was when first offered. And yet, Mr. Speaker, where are we today?

The Government of Turkey has made no move whatsoever toward a settlement of the Cyprus problem in nearly 3 years. Despite this lack of movement, the Carter administration proposed an arms package for Turkey which would have:

First, authorized an increase in foreign military sales to Turkey from \$125 million in fiscal year 1977 to \$175 million, a 40-percent increase, in fiscal year 1978;

Second, authorized, over and above that proposed increase, an additional \$344 million in FMS cash transactions to permit Turkey to purchase 40 new F-4 fighter-bombers from the United States;

Third, removed restrictions of the consideration of a defense cooperation agreement with Turkey, which agreement had been negotiated by the Ford administration last year in an effort to circumvent the limited embargo then in effect.

Mr. Speaker, such a proposal would have provided for a level of U.S. military assistance more than three times that which was supplied under the Ford-Kissinger administration, a fact of which I believe many Members may not have been aware.

Passage of the bill as originally proposed by the State Department would have been a clear signal to the Turkish Government that there was no need for it to be forthcoming on a Cyprus solution. Such an action by Congress would have been a signal to other countries receiving American arms to ignore both the bilateral agreements between those nations and the United States and our laws governing the use of such arms.

And equally important, Mr. Speaker, congressional approval of the bill as originally proposed would have added still more fuel to the already flammable situation in the eastern Mediterranean.

Mr. Speaker, it is encouraging that both the House International Relations and Senate Foreign Relations committees

rejected both the proposed F-4 provisions and those which would have weakened the standards respecting the formulation of base agreements. I commend the committee members for their actions on this matter.

The continued intransigence of the Turkish Government offers no justification for a 40 percent increase in FMS grants but its inclusion will, we must all be hopeful, encourage the leaders of Turkey to work actively toward a settlement of the Cyprus question.

Mr. Speaker, both Greece and Turkey are longtime allies of the United States, and I want to see—as I am sure we all do—a resumption of good relations between the United States and each of them as well as cordial relations between Greece and Turkey. The conditions which poison their relationship with one another continue to impose strains on their relationships with us as well.

And, Mr. Speaker, I favor a vigorous and effective NATO to strengthen our own own security and that of our allies, and I hope that the day will not be distant when both Greece and Turkey will play their full role in NATO and that the people of Cyprus will soon know a time of peace and justice.

#### LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. DEL CLAWSON (at the request of Mr. RHODES), on account of death in family.

#### SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. STANGELAND) to revise and extend their remarks and include extraneous material:)

Mr. FRENZEL, for 5 minutes, today.

Mr. SARASIN, for 5 minutes, today.

Mr. MILLER of Ohio, for 5 minutes, today.

Mr. MARLENEE, for 5 minutes, today.

Mr. WHALEN, for 5 minutes, today.

Mrs. HECKLER, for 5 minutes, today.

Mr. ASHBROOK, for 30 minutes, today.

(The following Members, at the request of Mr. AKAKA) to revise and extend their remarks and include extraneous material:)

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. LE FANTE, for 5 minutes, today.

Mr. KOCH, for 5 minutes, today.

Mr. VANIK, for 5 minutes, today.

Mr. CAVANAUGH, for 5 minutes, today.

Mrs. COLLINS of Illinois, for 5 minutes, today.

Mr. WIRTH, for 30 minutes, today.

Mr. FORD of Michigan, for 5 minutes, today.

#### EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

(The following Members (at the request of Mr. STANGELAND) and to include extraneous matter:)

Mr. YOUNG of Florida in five instances.  
Mr. PURSELL.  
Mr. DICKINSON.  
Mr. FISH.

Mrs. HECKLER.  
Mr. SNYDER in two instances.  
Mr. HAGEDORN.  
Mr. KEMP in three instances.  
Mr. KETCHUM.  
Mr. ANDERSON of Illinois.  
Mr. COUGHLIN.  
Mr. BOB WILSON.  
Mr. MCKINNEY.  
Mr. DERWINSKI.  
Mr. COHEN.  
Mr. DORNAN.

(The following Members (at the request of Mr. AKAKA) and to include extraneous material:)

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.  
Mr. McHUGH.  
Mr. MOLLOHAN.  
Mr. FRASER in five instances.  
Mr. MILLER of California in three instances.

Mr. HAMILTON.  
Mr. EILBERG in three instances.  
Mr. STUDDS.  
Mr. MURTHA.  
Mr. LEHMAN.  
Mr. EDGAR in two instances.  
Mr. REUSS.  
Mr. BROOKS.  
Mr. BENJAMIN.  
Ms. OAKAR.  
Mr. UDALL in two instances.  
Mr. APLEGATE in two instances.  
Mr. DRINAN in two instances.  
Mr. HAWKINS.  
Mr. LUKE in two instances.  
Mr. McDONALD in two instances.  
Mr. COTTER.  
Mr. HARRINGTON.  
Mr. WON PAT.  
Mr. RISENHOVER.  
Mr. WHITE.  
Mr. LLOYD of California.  
Mr. HARKIN.  
Mr. OTTINGER.  
Mr. ROGERS in five instances.

#### SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 195. An act to amend title 28, United States Code, to provide that Bottineau, McHenry, Pierce, Sheridan, and Wells Counties, North Dakota, shall be included in the Northwestern Division of the Judicial District of North Dakota; to the Committee on the Judiciary.

#### BILLS PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on the following dates present to the President, for his approval, bills of the House of the following titles.

On May 23, 1977:

H.R. 3437. An act to make certain technical and miscellaneous amendments to provisions relating to vocational education contained in the Education Amendments of 1976; and

H.R. 3662. An act granting the consent of Congress to the Mississippi-Louisiana Bridge construction compact.

On May 24, 1977:

H.R. 6401. An act to authorize appropriations for the administration of the Deepwater Port Act of 1974.

#### ADJOURNMENT

Mr. AKAKA. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 30 minutes p.m.) the House adjourned until tomorrow, Thursday, May 26, 1977, at 10 o'clock a.m.

#### EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1569. A letter from the Administrator, Federal Energy Administration, transmitting a report covering the month of January 1977 on gasoline service station market shares, pursuant to section g(c)(2)(A) of the Emergency Petroleum Allocation Act of 1973; to the Committee on Interstate and Foreign Commerce.

1570. A letter from the Secretary of Commerce, transmitting the annual report of the Maritime Administration covering fiscal year 1976 and the transition quarter; to the Committee on Merchant Marine and Fisheries.

1571. A letter from the Secretary of Transportation, transmitting a corrected version of the revised estimate of the cost of completing the National System of Interstate and Defense Highways, previously submitted pursuant to 23 U.S.C. 104(b)(5); to the Committee on Public Works and Transportation.

1572. A letter from the Comptroller General of the United States, transmitting a report on deficiency payments on unplanted crops (CED-77-77, May 24, 1977); jointly, to the Committees on Government Operations, and Agriculture.

1573. A letter from the Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to implement the Agreed Measures for the Conservation of Antarctic Fauna and Flora of the Antarctic Treaty and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries, and Science and Technology.

#### REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. DENT: Committee on House Administration. House Resolution 531. Resolution to provide for the expenses of investigations and studies to be conducted by the Ad Hoc Committee on Energy (Rept. No. 95-365). Referred to the House Calendar.

Mr. FOLEY: Committee on Agriculture. S. 1240. An act to extend the time for conducting the referendum with respect to the national marketing quota for wheat for the marketing year beginning June 1, 1978 (Rept. No. 95-366). Referred to the Committee of the Whole House on the State of the Union.

#### PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. PERKINS:

H.R. 7420. A bill authorizing the construction, repair, and preservation of certain public works on rivers and harbors for navigation, flood control, and for other purposes;

to the Committee on Public Works and Transportation.

By Mr. CONTE (for himself and Mr. BRODHEAD):

H.R. 7421. A bill to amend title II of the Social Security Act to provide that any individual may qualify for disability insurance benefits and the disability freeze if he has 20 quarters of coverage (and meets the other conditions of eligibility therefor), regardless of when such quarters were earned; to the Committee on Ways and Means.

By Mr. DICKINSON:

H.R. 7422. A bill to limit the jurisdiction of the Supreme Court and of the district courts in certain cases; to the Committee on the Judiciary.

By Mr. ERTEL:

H.R. 7423. A bill to amend the Sherman Act to impose an additional fine against any person who is convicted of violating any provision of the act and to require the distribution of the funds collected by the fine to certain persons who suffered a direct monetary loss as a result of the violation; to the Committee on the Judiciary.

By Mr. FISH (for himself, Mr. BEDELL, Mr. DUNCAN of Tennessee, Mr. PURSELL, and Mr. WALSH):

H.R. 7424. A bill to amend the Internal Revenue Code of 1954 to provide incentives for the development and use of sources of energy other than fossil fuels; to the Committee on Ways and Means.

By Mr. FRENZEL:

H.R. 7425. A bill to amend the Age Discrimination in Employment Act of 1971 to make unlawful those seniority systems and employee benefit plans which require the retirement of individuals who are 40 years of age or older; to the Committee on Education and Labor.

By Mr. HAMILTON:

H.R. 7426. A bill to limit the use of passenger motor vehicles and chauffeurs by Federal officers and employees; to the Committee on Government Operations.

By Mr. HANNAFORD (for himself, Mr. PRITCHARD, Mr. AUCOIN, Mr. BADILLO,

Mr. BURGNER, Mrs. BURKE of California, Mr. PHILLIP BURTON, Mr. COHEN, Mr. DUNCAN of Tennessee, Mr. EDWARDS of Oklahoma, Mr. FRASER, Mr. GUYER, Ms. HOLTZMAN, Mr. KETCHUM, Mr. KINDNESS, Mrs. LLOYD of Tennessee, Mr. McCLOSKEY, Mr. MOAKLEY, Mr. MOSS, Mr. NEAL, Ms. OAKAR, Mr. PATTERSON of California, Mr. PEPPER, Mr. QUIE, and Mr. RICHMOND):

H.R. 7427. A bill to allow service performed by women as members of telephone operating units of the Army Signal Corps during World War I to be considered active duty in the Army for purposes of all laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

By Mr. HARRIS (for himself and Mr. PANETTA):

H.R. 7428. A bill to amend the Internal Revenue Code of 1954 to allow a tax credit on houses or apartments for a portion of the real estate taxes paid or incurred by their landlords; to the Committee on Ways and Means.

By Mrs. MEYNER (for herself, Mr. ADDABO, Mr. CONTE, Mr. HOLLENBECK, Mr. GEPHARDT, Mr. HUGHES, Mr. MINISH, Mr. PATTEN, Mr. PIKE, Mr. RINALDO, Mr. ROBINO, Mr. SPENCE, and Mr. THOMPSON):

H.R. 7429. A bill to amend the Internal Revenue Code of 1954 to exempt from the manufacturers excise tax parts and accessories used on local transit buses, and tires, inner tubes, and tread rubber used on such buses; to the Committee on Ways and Means.

H.R. 7430. A bill to amend the Internal Revenue Code of 1954 with respect to certain excise tax refunds paid to local transit systems; to the Committee on Ways and Means.

By Mr. PRICE (for himself and Mr.

BOB WILSON) (by request):

H.R. 7431. A bill to amend section 6015 of title 10, United States Code, to permit the Secretary of the Navy to prescribe the kind of military duty to which women members of the naval service may be assigned; to the Committee on Armed Services.

By Mr. RHODES (for himself, Mr. UDALL, Mr. RUDD, and Mr. STUMP):

H.R. 7432. A bill to designate the U.S. Department of Agriculture's Bee Research Laboratory in Tucson, Ariz., as the "Carl Hayden Bee Research Center"; to the Committee on Agriculture.

By Mr. SCHULZE (for himself, Mr. LAGOMARSINO, Mr. DUNCAN of Tennessee, Mr. LEDERER, Mr. GILMAN, Mr. EILBERG, Mr. CORRADA, Mr. YATRON, and Mr. JEFFORDS):

H.R. 7433. A bill to provide a \$100 bonus to each Vietnam-era veteran and an additional \$400 bonus to each Vietnam-era combat veteran; to the Committee on Veterans' Affairs.

By Mr. SNYDER:

H.R. 7434. A bill to amend the act of July 2, 1940, as amended, to increase the amount authorized to be appropriated for the Canal Zone Biological Area; to the Committee on Merchant Marine and Fisheries.

H.R. 7435. A bill to establish a program of comprehensive medical, hospital, and dental care as protection against the cost of ordinary and catastrophic illness by requiring employers to make insurance available to each employee and his family, by Federal financing of insurance for persons of low income, in whole or in part according to ability to pay, and by assuring the availability of insurance to all persons regardless of medical history, and on a guaranteed renewable basis; jointly, to the Committees on Ways and Means, and Interstate and Foreign Commerce.

By Mr. BEDELL (for himself, Mr. NEAL, Mrs. SPELLMAN, and Mr. STARK):

H.R. 7436. A bill to amend title II of the Social Security Act, and the Internal Revenue Code of 1954, to increase to \$30,000 over a 3-year period (subject to further increases based on rises in reported wage levels) the ceiling on amount of earnings which may be counted for social security benefit and tax purposes; to the Committee on Ways and Means.

By Mr. EVANS of Delaware:

H.R. 7437. A bill to reaffirm the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce; to reaffirm the authority of the States to regulate terminal and station equipment used for telephone exchange service; to require the Federal Communications Commission to make certain findings in connection with Commission actions authorizing specialized carriers; and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. HARKIN:

H.R. 7438. A bill to amend chapter 44 of title 18 of the United States Code (respecting firearms) to penalize the use of firearms in the commission of any felony and to increase the penalties in certain related existing provisions; to the Committee on the Judiciary.

By Mrs. HECKLER:

H.R. 7439. A bill to amend the Internal Revenue Code of 1954 to provide certain corporate income tax reductions and to increase the amount of the surtax exemption; to the Committee on Ways and Means.

By Mr. KOCH (for himself, Mr. GOLDWATER, Mr. MCCORMACK, and Mr. ROSENTHAL):

H.R. 7440. A bill to establish restrictions on the disclosure of certain financial, toll, and credit records, and for other purposes; jointly, to the Committees on Banking, Finance, and Urban Affairs and the Judiciary.

CXXIII—1051—Part 14

By Mr. MARKEY (for himself and Ms. MIKULSKI):

H.R. 7441. A bill to amend the Communications Act of 1934 to require television broadcast station licensees to preview certain program material provided by national television broadcast networks; to the Committee on Interstate and Foreign Commerce.

By Mr. WIRTH (for himself, Mr. BROYHILL, Mr. BROWN of Ohio, Mr. BROWN of California, Mr. FLORIO, Mr. GUNGER, Mr. LEGGETT, Mr. MARKEY, Mr. MURPHY of New York, Mr. NEAL, Mr. PATTISON of New York, Mr. PEASE, Mr. PREYER, Mr. ROONEY, Mr. ROSE, Mr. WAXMAN, and Mr. BOB WILSON):

H.R. 7442. A bill to amend the Communications Act of 1934 to provide for the regulation of utility pole attachments; to the Committee on Interstate and Foreign Commerce.

By Mrs. COLLINS of Illinois (for herself, Mr. METCALFE, Mr. HARKIN, and Mr. JENNETTE):

H.J. Res. 487. Joint resolution to require a review of U.S. practices with respect to the embargo on arms shipments to the Republic of South Africa in order to insure that such embargo is effective; to the Committee on International Relations.

By Mr. DICKINSON:

H.J. Res. 488. Joint resolution proposing an amendment to the Constitution of the United States to prohibit compelling attendance in schools other than the one nearest the residence and to insure equal educational opportunities for all students wherever located; to the Committee on the Judiciary.

By Mr. ANDREWS of North Dakota:

H. Con. Res. 230. Concurrent resolution providing that residential telephone subscriber interests, especially those of citizens in rural areas, be protected as competition is permitted in the telecommunications industry; to the Committee on Interstate and Foreign Commerce.

By Mr. COTTER:

H. Res. 598. Resolution directing the Committee on International Relations to conduct hearings to review U.S. foreign policy with respect to the hostilities in Northern Ireland; to the Committee on Rules.

By Mr. McDONALD (for himself, Mr. BIAGGI, Mr. BROOMFIELD, Mr. BROWN of Michigan, Mr. COLEMAN, Mr. CUNNINGHAM, Mr. DE LA GARZA, Mr. KASTEN, Mr. LENT, Mr. LUJAN, Mr. MILLER, Mr. MILLER of Ohio, Mr. MURPHY of New York, Mr. JOHN T. MYERS, Ms. OAKAR, Mr. O'BRIEN, Mrs. PETTIS, Mr. POAGE, Mr. PURSELL, Mr. STANGELAND, Mr. VANDER JAGT, Mr. WALKER, Mr. WALSH, Mr. WATKINS, and Mr. WYDLER):

H. Res. 599. Resolution to amend the Rules of the House of Representatives to establish the Committee on Internal Security, and for other purposes; to the Committee on Rules.

## PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. PATIEN:

H.R. 7443. A bill for the relief of William J. Erwin; to the Committee on the Judiciary.

## PETITIONS, ETC.

Under clause 1 of rule XXII.

115. The SPEAKER presented a petition of Antonio C. Martinez, New York, N.Y., relative to the liability of consular officers; to the Committee on International Relations.

## AMENDMENTS

Under clause 6 of rule XXIII, proposed amendments were submitted as follows:

H.R. 10

By Mr. ROUSSELOT:

On page 38, strike out lines 1 through 4 and insert in lieu thereof the following:

"(b) Any employee who is a candidate for elective office shall be placed on leave without pay effective beginning on whichever of the following dates is the later:

"(A) the 90th day before any election (including a primary election, other than a primary election in which such employee is not a candidate) for that elective office, or

"(B) the day following the date on which the employee became a candidate for elective office.

Such leave shall terminate on the day following the election or the day following the date on which the employee is no longer a candidate for elective office, whichever first occurs. The provisions of this subsection shall not apply to the extent an employee is otherwise on leave. The Civil Service Commission shall, upon application, exempt from the application of this paragraph any employee who is a candidate for any part-time elective office.

On page 38, in lines 10 and 11, strike out "to which such employee may be entitled" and insert in lieu thereof the following: "of such employee".

On page 46, strike out line 18 and all that follows down to line 2 of page 47 and insert in lieu thereof the following:

"The Commission shall inform each employee individually in writing, at least once each calendar year, of such employee's political rights and of the restrictions under this subchapter. The Commission may determine, for each State, the most appropriate date for providing information required by this subsection. Such information, however, shall be provided to employees employed or holding office in any State not later than 60 days before the earliest primary or general election for State or Federal elective office held in such State."

On page 47, line 3, strike out "(c)" and insert in lieu thereof "(b)".

H.R. 6161

By Mr. WIRTH:

Page 424, after line 25, insert:

(c) Section 203(a)(4) of such Act is amended by striking out "or" in subparagraph (D), by inserting "or" at the end of subparagraph (E), and by adding the following new subparagraph at the end thereof:

"(F) to knowingly discriminate in the pricing of new motor vehicles manufactured after the model year 1978, or in the availability of models of such new motor vehicles, between dealers located in high altitude areas (as determined under regulations of the Administrator) and dealers located in other areas."

(d) Section 202(b) of such Act is amended by inserting the following new paragraph at the end thereof:

"(7) (A) In the case of any class or category of new motor vehicles sold by a manufacturer in high altitude areas (as determined under regulations of the Administrator, such manufacturer may file with the Administrator an application requesting the suspension of the effective date of any standard required under any other provision of this section. No such suspension shall be effective for more than two model years and no manufacturer may apply for more than one such suspension with respect to such standard.

"(B) The Administrator shall grant a suspension under this paragraph with respect to any standard only if he determines, after notice and opportunity for public hearing, that the applicant has established that it is

not technologically feasible (taking cost into account) for such manufacturer to comply with such standard for the model year (or years as the case may be) for which the suspension would apply in the case of such class or category of vehicles sold in high altitude areas.

"(C) In the case of vehicles for which suspension of the standard for any pollutant has been granted under this paragraph for any model year, the applicable standard for such pollutant for purposes of this Act shall require the same reduction of emissions of such pollutant for such vehicles for such model year as was required for such vehicles for the last preceding model year during which no such suspension was in effect."

(Amendment to Dingell amendment.)

At the end of section 214 insert:

(d) Section 203(a)(4) of such Act is amended by striking out "or" in subparagraph (D), by striking out the period at the end of subparagraph (E) and substituting "or", and by adding the following new subparagraph at the end thereof:

"(E) to knowingly discriminate in the pricing of new motor vehicles manufactured after the model year 1978, or in the availability of models of such new motor vehicles, between dealers located in high altitude areas (as determined under regulations of the Administrator) and dealers located in other areas."

(e) Section 202(b) of such Act is amended by inserting the following new paragraph at the end thereof:

"(7) (A) In the case of any class or category of new motor vehicles sold by a manufacturer in high altitude areas (as determined under regulations of the Administrator), such manufacturer may file with the Administrator an application requesting the suspension of the effective date of any standard required under any other provision of this section. No such suspension shall be effective for more than two model years and no manufacturer may apply for more than one such suspension with respect to any such standard.

"(B) The Administrator shall grant a suspension under this paragraph with respect to any standard only if he determines, after notice and opportunity for public hearing, that the applicant has established that it is not technologically feasible (taking cost into account) for such manufacturer to comply with such standard for the model year (or years as the case may be) for which the suspension would apply in the case of such class or category of vehicles sold in high altitude areas.

"(C) In the case of vehicles for which suspension of the standard for any pollutant has been granted under this paragraph for any model year, the applicable standard for such pollutant for purposes of this Act shall require the same reduction of emissions of such pollutant for such vehicles for such model year as was required for such vehicles for the last preceding model year during which no such suspension was in effect."

Amendment to Preyer substitute.

At the end of section 215 insert:

(d) Section 203(a)(4) of such Act is amended by striking out "or" in subparagraph (D), by striking out the period at the end of subparagraph (E) and substituting "or", and by adding the following new subparagraph at the end thereof:

"(E) to knowingly discriminate in the pricing of new motor vehicles manufactured after the model year 1978, or in the availability of models of such new motor vehicles, between dealers located in high altitude areas (as determined under regulations of the Administrator) and dealers located in other areas."

(e) Section 202(b) of such Act is amended by inserting the following new paragraph at the end thereof:

"(7) (A) In the case of any class or category of new motor vehicles sold by a manu-

facturer in high altitude areas (as determined under regulations of the Administrator), such manufacturer may file with the Administrator an application requesting the suspension of the effective date of any standard required under any other provision of this section. No such suspension shall be effective for more than two model years and no manufacturer may apply for more than one such suspension with respect to any such standard.

"(B) The Administrator shall grant a suspension under this paragraph with respect to any standard only if he determines, after notice and opportunity for public hearing, that the applicant has established that it is not technologically feasible (taking cost into account) for such manufacturer to comply with such standard for the model year (or years as the case may be) for which the suspension would apply in the case of such class or category of vehicles sold in high altitude areas.

"(C) In the case of vehicles for which suspension of the standard for any pollutant has been granted under this paragraph for any model year, the applicable standard for such pollutant for purposes of this Act shall require the same reduction of emissions of such pollutant for such vehicles for such model year as was required for such vehicles for the last preceding model year during which no such suspension was in effect."

#### FACTUAL DESCRIPTIONS OF BILLS AND RESOLUTIONS INTRODUCED

Prepared by the Congressional Research Service pursuant to clause 5(d) of House Rule X. Previous listing appeared in the CONGRESSIONAL RECORD of May 19, 1977 (page 15539).

##### HOUSE BILLS

H.R. 1901. January 13, 1977. Banking, Finance and Urban Affairs. Extends the authorization of flexible regulation of maximum interest rates on deposits and accounts in depository institutions. Designates three additional States as exempt from the prohibition against withdrawals by check against interest earning accounts.

Amends the Federal Credit Union Act with respect to the extension of credit and the duties and powers of the credit union's board of directors and credit committee.

Amends the Federal Reserve Act to extend the limitation on the aggregate amount of United States obligations which may be purchased or sold.

H.R. 1902. January 13, 1977. Education and Labor. Amends the Occupational Safety and Health Act to permit a person possibly liable for an industrial accident involving bodily injury to sue an employer if such employer's failure to comply with an industrial safety requirement caused or contributed to such injury.

Allows a person being sued by the employer in a subrogation suit to raise as a defense the employer's contributory fault of failure to comply with an industrial safety requirement.

H.R. 1903. January 13, 1977. Ways and Means. Amends the Internal Revenue Code to allow an additional investment tax credit for machinery and equipment placed in service on existing manufacturing plants or in nearby areas.

H.R. 1904. January 13, 1977. Ways and Means. Amends the Tariff Schedules of the United States to permit the duty-free importation of intravenous fat emulsions.

H.R. 1905. January 13, 1977. Post Office and Civil Service. Requires that military service performed by an individual who was voluntarily discharged from active military service before becoming entitled to retirement pay in order to accept a Presidential appointment to a civilian position requiring Senate confirmation, be included in deter-

mining the period of service on which a civil service annuity is based.

H.R. 1906. January 13, 1977. Ways and Means. Amends the Internal Revenue Code to provide that certain trusts established for the payment of medical or dental malpractice claims and related expenses shall be tax exempt, and that contributions to such trusts shall be tax deductible.

H.R. 1907. January 13, 1977. Interior and Insular Affairs. Designates specified lands within the National Wildlife Refuge System and within the National Forest System as wilderness. Provides for the addition of specified lands to specified wilderness areas.

H.R. 1908. January 13, 1977. Education and Labor. Amends the Occupational Safety and Health Act of 1970 to require the Secretary of Labor to take the differences between the light residential construction industry and the heavy construction industry into consideration when promulgating standards for such industries.

Stipulates that the standards promulgated for the light residential construction industry shall be kept separate and distinct, and shall reflect the less hazardous conditions in such industry.

H.R. 1909. January 13, 1977. Education and Labor. Amends the Occupational Safety and Health Act of 1970 to prohibit assessment of penalties against an employer where such employer has corrected the violations with which he is charged within a prescribed abatement period.

H.R. 1910. January 13, 1977. International Relations. Restricts payments of the United States to the United Nations to the ratio of the population of the United States to the total population of member nations.

H.R. 1911. January 13, 1977. International Relations. Amends the Foreign Assistance Act of 1961 to direct the President, when it is deemed to be in the national interest, to endeavor to insure that assistance under such Act or under the Foreign Military Sales Act shall be furnished pursuant to agreements for the exchange of such assistance for strategic or critical raw materials. Permits the transfer of materials so obtained to any Federal agency for stockpiling, sale, transfer, disposal, or other purposes.

H.R. 1912. January 13, 1977. Interstate and Foreign Commerce. Prohibits the Federal Trade Commission from promulgating trade regulation rules which repeal or limit use of holder in due course defenses in connection with the sale or lease of goods or services to consumers.

H.R. 1913. January 13, 1977. Interstate and Foreign Commerce. Reaffirms the intent of Congress with respect to the structure of the common carrier telecommunications industry rendering services in interstate and foreign commerce. Grants additional authority to the Federal Communications Commission to authorize mergers of carriers when deemed to be in the public interest. Reaffirms the authority of the States to regulate terminal and station equipment used for telephone exchange service.

H.R. 1914. January 13, 1977. Judiciary. Revises the judiciary of the Supreme Court and United States district courts to prohibit the consideration of any case arising out of a State law relative to abortion.

H.R. 1915. January 13, 1977. Judiciary. Amends the provision of the Gun Control Act of 1968 imposing additional sentences on persons committing Federal felonies while carrying, or with the use of, a firearm to: (1) increase sentences thereunder; (2) prohibit suspended, probational or concurrent sentences with respect to a first conviction; and (3) provide for a mandatory death penalty if the felony results in the death of any other than the perpetrators of such felony.

Increases penalties for anyone transporting firearms or ammunition with the intent to commit, or with the knowledge that others

will commit, an offense punishable by imprisonment of one year or more.

H.R. 1916. January 13, 1977. Judiciary. Eliminates the divisions in the western judicial district of Louisiana.

H.R. 1917. January 13, 1977. Merchant Marine and Fisheries. Amends the Migratory Bird Treaty Act to permit the possession or mounting of migratory birds for display and educational purposes, if such birds are dead from natural or unknown causes.

H.R. 1918. January 13, 1977. Veterans' Affairs. Provides that recipients of veterans' pensions and compensation will not have the amount of such pension or compensation reduced because of increases in social security benefits.

H.R. 1919. January 13, 1977. Ways and Means. Amends the Internal Revenue Code to provide income, estate and gift tax deductions for charitable contributions for the construction or maintenance of buildings for tax-exempt lodge organizations.

H.R. 1920. January 13, 1977. Ways and Means. Amends the Internal Revenue Code to provide for the refund of excise taxes paid on alcoholic beverages where the beverages are destroyed prior to final sale through disaster, breakage or destruction resulting from vandalism or malicious mischief.

H.R. 1921. January 13, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act by removing the limitation upon the amount of outside income which an individual may earn while receiving benefits.

H.R. 1922. January 13, 1977. Ways and Means; Interstate and Foreign Commerce. Amends Title XVIII (Medicare) of the Social Security Act to extend the coverage for dental services to include any services performed by a properly licensed dentist and to authorize payment under such program for all inpatient hospital services furnished in connection with dental procedures requiring hospitalization.

H.R. 1923. January 13, 1977. Agriculture. Exempts the Toledo Bend Dam and Reservoir project of Louisiana and Texas from payment of annual charges to the United States for the use of lands within the Sabine National Forest, Texas.

H.R. 1924. January 13, 1977. Post Office and Civil Service. Amends the Federal Salary Act of 1967 and the Legislative Reorganization Act of 1946 to specify when an adjustment in the rate of pay for Members of Congress proposed during any Congress shall take effect.

H.R. 1925. January 13, 1977. Public Works and Transportation. Amends Title XVIII (Medicare) of the Social Security Act to provide payment for enterostomal therapy services under the supplemental medical insurance program.

H.R. 1926. January 13, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 1927. January 13, 1977. Judiciary. Provides for the inclusion of service in the War Department in the calculation of retired pay due a certain individual.

H.R. 1928. January 13, 1977. Judiciary. Declares certain individuals eligible for naturalization under the Immigration and Nationality Act.

H.R. 1929. January 13, 1977. Judiciary. Declares a certain individual eligible for naturalization under the Immigration and Nationality Act.

H.R. 1930. January 13, 1977. Judiciary. Directs the Chairman of the Civil Service Commission to pay a certain individual at a different rate under the Civil Service Retirement and Disability Fund.

H.R. 1931. January 13, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 1932. January 13, 1977. Judiciary. De-

clares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 1933. January 13, 1977. Judiciary. Amends the Federal Food, Drug, and Cosmetic Act to require: (1) that all manufacturers of cosmetics be registered with the Secretary of Health, Education, and Welfare; (2) that each cosmetic manufactured for sale be tested and the results of such tests submitted to the Secretary; (3) that the labels of cosmetics include certain specified information; and (4) that each manufacturer submit a complete list of consumer complaints with respect to any cosmetics manufactured by such person, to the Secretary.

H.R. 1934. January 13, 1977. Judiciary. Declares a certain individual lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 1935. January 13, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain corporation in full settlement of such corporation's claims against the United States.

H.R. 1936. January 13, 1977. Judiciary. Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 1937. January 13, 1977. Judiciary. Directs the Secretary of the Treasury to pay a specified sum to a certain corporation in full settlement of such corporation's claims against the United States.

H.R. 1938. January 13, 1977. Judiciary. Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 1939. January 13, 1977. Judiciary. Authorizes classification of a certain individual as a child for purposes of the Immigration and Nationality Act.

H.R. 1940. January 13, 1977. Judiciary. Declares certain individuals lawfully admitted to the United States for permanent residence, under the Immigration and Nationality Act.

H.R. 1941. January 13, 1977. Judiciary. Permits certain individuals to name the United States as a defendant in a civil action to determine title to certain real property.

H.R. 1942. January 13, 1977. Public Works and Transportation. Revises the definition of "bridge" for purposes of programs relating to the availability of Federal funds for the alteration of bridges obstructing navigation to include within such definition bridges which were lawful at the time of their construction but whose elevation has changed through no action or fault of their owners or users.

H.R. 1943. January 17, 1977. Banking, Finance and Urban Affairs. Exempts Federal savings and loan association insured loans from specified limitations of the Homeowners' Loan Act.

H.R. 1944. January 17, 1977. Judiciary. Amends provisions directing the imposition of additional sentences on persons committing a Federal felony with a firearm or while unlawfully carrying a firearm to prohibit (1) a suspended or probationary sentence with respect to a first conviction and (2) parole prior to serving a period equal to the minimum permissible additional sentence.

H.R. 1945. January 17, 1977. Ways and Means. Amends title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) to extend from 9 to 24 months the trial work period during which an individual who is receiving supplemental security income benefits on the basis of disability may render services for remuneration or gain without suffering a loss of or reduction in such benefits. Applies such provisions to any case where an individual entitled under such title to supplemental security income benefits on the basis of disability has had a period of trial work which ended

with or prior to the close of the month in which this act is enacted.

H.R. 1946. January 17, 1977. Ways and Means. Amends title XVI (Supplemental Security Income for the Aged, Blind, and Disabled) to eliminate the reduction in supplemental security income benefits which is presently imposed when the recipient is living in another person's household. Directs that support maintenance furnished the recipient in kind by such other person shall be disregarded in determining such recipient's income for supplemental security income purposes.

H.R. 1947. January 17, 1977. Rules; Government Operations. Sets forth a 5-year schedule for initial review and reauthorization of all Federal programs according to functional and subfunctional categories.

Establishes a Citizens' Commission on the Organization and Operation of Government to study and recommend ways to improve the efficiency and effectiveness of the Federal Government.

Requires a review and revision of Federal tax laws every 5 years.

H.R. 1948. January 17, 1977. Education and Labor. Amends the Emergency School Aid Act to extend to Franco-Americans the same benefits afforded other minority groups under such act.

H.R. 1949. January 17, 1977. Merchant Marine and Fisheries. Establishes a Commercial Fisheries Assistance Fund to be used by the Secretary of Commerce to make loans and grants to commercial fishermen. Requires the Secretary to establish a commercial fishing training program. Creates within the National Oceanic and Atmospheric Administration an Associate Administrator for an Office of Commercial Fisheries Assistance to administer this act. Requires the Secretary to establish a Fisheries Board to promote commercial fisheries and for other purposes. Establishes a Fisheries Board Fund. Establishes a Fisheries Cooperative Service Program to assist fishing interests in formulating fisheries cooperative organizations.

H.R. 1950. January 17, 1977. Merchant Marine and Fisheries. Amends the Maritime Academy Act of 1958 to increase the subsistence payments to students at State maritime academies.

H.R. 1951. January 17, 1977. Armed Services; Merchant Marine and Fisheries. Terminates the authority of Members of Congress and Delegates to Congress from the various territories to make appointments to the service academies. Amends the Merchant Marine Act, 1936, to accomplish such purpose with respect to the Merchant Marine Academy.

H.R. 1952. January 17, 1977. Judiciary. Amends the Federal charter of AMVETS (American Veterans of World War II) to change the name of such organization to AMVETS (American Veterans of World War II, Korea, and Vietnam).

H.R. 1953. January 17, 1977. Judiciary. Requires specified minimum prison sentences for any individual who uses or carries a firearm, or a cutting or stabbing weapon, during the commission of a Federal felony.

H.R. 1954. January 17, 1977. Veterans' Affairs. Removes the 10-year period on educational assistance provided by the Veterans' Administration to the widows of persons who died of service-connected disabilities.

H.R. 1955. January 17, 1977. Ways and Means; Interstate and Foreign Commerce. Amends title XVIII (Medicare) of the Social Security Act to expand the coverage of the supplementary medical insurance program to include physician extender services.

H.R. 1956. January 17, 1977. Judiciary. Repeals the provisions of the Immigration and Nationality Act which require alien children adopted by U.S. citizens to reside in the United States for 2 years in the legal custody of such citizens before being eligible for U.S. citizenship by naturalization.

H.R. 1957. January 17, 1977. Veterans' Affairs. Directs the Administrator of Veterans' Affairs to initiate and carry out a program for the treatment of Vietnam-era veterans and their dependents who are experiencing psychosocial readjustment problems as a result of military service or as a result of problems evolving from readjustment from such service.

H.R. 1958. January 17, 1977. Post Office and Civil Service. Makes National Guard civilian technicians members of the competitive service. Gives such individuals certain rights relating to order of retention and procedures for removal or suspension from employment.

H.R. 1959. January 17, 1977. Ways and Means. Amends the Internal Revenue Code to provide a limited tax exclusion for persons aged 65 or over for any amount received as an annuity, pension, or other retirement benefit.

H.R. 1960. January 17, 1977. Government Operations; Rules. Abolishes within three years of the enactment of this Act, or three years after they have been established, all Federal regulatory agencies unless the President and Congress determine that such agencies should continue to exist.

H.R. 1961. January 17, 1977. Ways and Means. Amends the Internal Revenue Code to allow a deferral of an individual's income tax liability to the extent it equals a limited portion of the higher educational expenses incurred for the taxpayer, his spouse and dependents. Defers payment until the year following the end of the individual's attendance at an institution of higher education, or the tenth year following the taxpayer's initial deferral, whichever is earlier.

H.R. 1962. January 17, 1977. Ways and Means. Amends the Internal Revenue Code to allow a medical deduction, without regard to the three percent floor, for those expenses paid for the medical care of the taxpayer, his spouse, or any dependent of the taxpayer, if that individual is mentally retarded or handicapped.

H.R. 1963. January 17, 1977. Interstate and Foreign Commerce. Permits a pharmacist when filling or refilling a prescription to use a substitute drug if the prescribed drug is identified: (1) by its proprietary name or designation; or (2) its established name.

Imposes limitations on the use of substitute drugs and exempts certain transactions from the requirements of this Act.

H.R. 1964. January 17, 1977. Interstate and Foreign Commerce. Amends the Community Mental Health Centers Act to permit agencies located outside catchment areas with community mental health centers and which have received children's mental health grants before the Community Mental Health Centers Amendments of 1975 to continue to receive such grants.

H.R. 1965. January 17, 1977. Banking, Finance and Urban Affairs. Amends the Housing and Community Development Act of 1974 to allow recipients of grants to utilize such grants for the construction of public buildings and facilities. Provides for the adjustment of geographic boundaries of standard-metropolitan statistical areas.

H.R. 1966. January 17, 1977. Merchant Marine and Fisheries. Directs the Secretary of the Interior to establish a pilot program to compensate persons in Minnesota for damage to livestock caused by the wild eastern timber wolf since such wolf was listed as an endangered or threatened species. Stipulates that such compensation shall be equal to the fair market value of the damaged livestock or the medical expenses incurred to restore such livestock. Sets forth the formula for determination of the Federal share of such compensation. Directs the Secretary to study the damage caused by such wolf and means of reducing or eliminating such damage.

H.R. 1967. January 17, 1977. Public Works and Transportation; Ways and Means. Authorizes the Secretary of Transportation to approve Federal participation in State projects to repair or replace unsafe highway bridges. Amends the Highway Revenue Act of 1956 to extend the appropriations authorized under such act for the Highway Trust Fund through fiscal year 1990. Amends the Land and Water Conservation Fund Act to extend such fund through fiscal year 1990. Postpones specified excise tax reductions under the Internal Revenue Code of 1954.

H.R. 1968. January 17, 1977. Post Office and Civil Service; Rules. Amends the Federal Salary Act of 1967 to change the date when recommendations of the President to Congress, regarding salary adjustments for certain Federal employees become effective.

Sets forth rules of procedure to be followed in the House of Representatives with respect to resolutions disapproving the recommendations of the President under the act.

H.R. 1969. January 17, 1977. Ways and Means. Directs that the benefits received by an individual pursuant to a Federal plan or program, or a plan or program of a State funded by Federal funds, shall not be reduced as a result of a general increase in monthly social security benefits.

H.R. 1970. January 17, 1977. Public Works and Transportation. Amends the Local Public Works Capital Development and Investment Act of 1976 to increase the amount authorized to be appropriated under such Act.

H.R. 1971. January 17, 1977. Public Works and Transportation. Amends the Local Public Works Capital Development and Investment Act of 1976 to increase the amount authorized to be appropriated under such Act.

H.R. 1972. January 17, 1977. Ways and Means. Amends the Internal Revenue Code to limit the application of the Tax Reform Act's elimination of the sick pay exclusion for persons who have not retired on total disability, to taxable years beginning after December 31, 1976.

H.R. 1973. January 17, 1977. Agriculture. Directs the Secretary of Agriculture to guarantee emergency loans to farmers and ranchers, and to private domestic corporations and partnerships controlled by farmers and ranchers, engaged directly and primarily in farming or ranching in the United States.

Amends the Consolidated Farm and Rural Development Act to increase the maximum unpaid indebtedness allowed a borrower who receives a loan under such Act.

H.R. 1974. January 17, 1977. Interior and Insular Affairs. Designates specified public lands and waters in the State of Alaska for inclusion in the National Park, National Wildlife Refuge, Wild and Scenic Rivers and National Wilderness Preservation Systems. Makes provisions for the management of subsistence uses of fish and wildlife on national lands.

H.R. 1975. January 17, 1977. Banking, Finance and Urban Affairs. Amends the United States Housing Act of 1937 to require the Secretary of Housing and Urban Development or public housing agencies with which the Secretary is dealing to notify Members of Congress before entering into annual contributions contracts to assist housing projects in such Member's congressional district or State.

H.R. 1976. January 17, 1977. Post Office and Civil Service. Amends the Federal Salary Act of 1967 and the Legislative Reorganization Act of 1946 to specify when an adjustment in the rate of pay for Members of Congress proposed during any Congress shall take effect.

H.R. 1977. January 17, 1977. Ways and

Means; Interstate and Foreign Commerce. Amends the Social Security Act by replacing medicare with a national health care program under which the cost of covered medical services provided to all United States residents and certain non-resident aliens shall be paid by the Federal Government. Establishes an independent Social Security Administration to administer this program, old-age, survivors and disability insurance, supplemental security income, and the health standards provisions of the Federal Coal Mine Health and Safety Act.

Amends the Internal Revenue Code to impose a tax on wages, self-employment income, and certain unearned income for purposes of the national health care program.

H.R. 1978. January 17, 1977. Ways and Means. Amends the Internal Revenue Code to provide that certain social security and veterans' children benefits shall be disregarded when determining whether a child receives a sufficient percentage of his support from the taxpayer to qualify as a dependent.

H.R. 1979. January 17, 1977. Banking, Finance and Urban Affairs. Amends the Fair Credit Reporting Act to set forth additional requirements under such act for the notification of consumers by consumer reporting agencies of their customers when an investigative report on a consumer is requested or furnished.

Establishes civil liability for the publication of untrue statements with respect to consumers. Establishes a Presidentially-appointed Board of Consumer Investigator Examiners to license and regulate consumer credit investigators under the Consumer Credit Protection Act.

H.R. 1980. January 17, 1977. Banking, Finance and Urban Affairs. Establishes within the Department of Housing and Urban Development a program providing financial assistance to low-income individuals and families for the purchasing and installing of solar heating equipment.

H.R. 1981. January 17, 1977. Education and Labor. Amends the Civil Rights Act of 1964 to make age discrimination in employment an unlawful employment practice.

H.R. 1982. January 17, 1977. Education and Labor. Directs the Commissioner of Education to allot funds authorized by this Act to local educational agencies to assist in reducing crime against the children, employees and facilities of their elementary and secondary schools.

H.R. 1983. January 17, 1977. Education and Labor. Requires every temporary help service which supplies unskilled, nonsecretarial, non-clerical workers to obtain a license from the Secretary of Labor or his designee.

States that no such temporary help service may be licensed unless it provides its employees certain benefits and rights.

Prohibits such a temporary help service from restricting the right of any of its employees to obtain permanent employment with a client. Forbids the use of temporary help service employees as strikebreakers where a legitimate labor dispute exists.

Directs the Secretary to make recommendations for extending unemployment insurance to employees of temporary help services.

H.R. 1984. January 17, 1977. Judiciary. Establishes privacy standards for organizations maintaining information systems containing personal information. Specifies the rights of data subjects.

H.R. 1985. January 17, 1977. Banking, Finance and Urban Affairs; Judiciary. Prescribes standards and procedures for disclosure of financial records of any customer by a financial institution to any State or any political subdivision of any State. Sets conditions under which the interception of oral or wire communications in the course of doing

business is lawful. Establishes criminal and civil penalties for violations of this Act.

H.R. 1986. January 17, 1977. Education and Labor. Amends the Education of the Handicapped Act to authorize the Commission of Education to make grants to State educational agencies for the development and operation of tutorial and instructional programs for homebound handicapped children.

Stipulates that (1) special consideration should be given to handicapped veterans and handicapped students in selecting tutors, (2) Federal funds should be used to help the handicapped child into society, and (3) Federal funds should only be used to supplement State, local, or private funds.

Directs the Commission to offer technical assistance to a State to aid such State in receiving funds under this Act.

H.R. 1987. January 17, 1977. Education and Labor. Entitles State and local government employees to specified rights including the right to join or form a labor organization and the right to bargain collectively through representatives of their own choosing.

Lists unfair labor practices with respect to public employers and public employee labor organizations.

Establishes a National Public Employee Relations Commission to oversee selection of employees and their complaints and issue orders regarding unfair labor practices.

Sets forth a system whereby the Federal Mediation and Conciliation Service may initiate factfinding procedures to facilitate resolution of disputes concerning public employee collective bargaining agreements.

H.R. 1988. January 17, 1977. Education and Labor. Amends the Community Services Act of 1974 to establish a National Office for Migrant and Seasonal Farmworkers within the Community Services Administration. Sets forth the functions of the Office, including administration of all laws relative to migrant and seasonal farmworkers presently within the jurisdiction of the Administration or of the Department of Health, Education, and Welfare, and development of national policies with respect to such workers.

Directs the Secretary of Health, Education, and Welfare to appoint a special task force on migrant and seasonal farmworkers to conduct a continuing study of the needs of such workers and the means for meeting them.

H.R. 1989. January 17, 1977. Education and Labor. Directs the Secretary of Agriculture and the Secretary of the Interior to establish a Civilian Conservation Corps to provide employment for unemployed persons in projects connected with the conservation of the Nation's land and water resources. Authorizes grants for State conservation projects which meet eligibility requirements under this Act.

H.R. 1990. January 17, 1977. Government Operations. Establishes the Office of Spanish-Speaking Affairs in the Executive Office of the President to assist Federal agencies in developing and implementing programs and policies designed to help Spanish-speaking and Spanish-surnamed Americans.

Establishes a coordinating Council on Spanish-Speaking Affairs to develop and implement agreements designed to reduce conflict among Federal agencies in carrying out programs to assist Spanish-speaking Americans.

H.R. 1991. January 17, 1977. Interstate and Foreign Commerce. Amends the Public Health Service Act to allow the Secretary of Health, Education, and Welfare to make grants to nonprofit private entities and enter into contracts with private entities for the purposes of research and development of new equipment and techniques for delivery of health services to the critically ill.

H.R. 1992. January 17, 1977. Interstate and Foreign Commerce. Bans aerosol cans in commerce unless they conform to safety standards established by the Consumer Product Safety Commission.

H.R. 1993. January 17, 1977. Interstate and Foreign Commerce. Amends the Federal Food, Drug, and Cosmetic Act to require: (1) that all manufacturers of cosmetics be registered with the Secretary of Health, Education, and Welfare; (2) that each cosmetic manufactured for sale be tested and the results of such tests submitted to the Secretary; (3) that the labels of cosmetics include certain specified information; and (4) that each manufacturer submit a complete list of consumer complaints with respect to any cosmetics manufactured by such person, to the Secretary.

H.R. 1994. January 17, 1977. Judiciary. Authorizes the Secretary of Health, Education, and Welfare to pay for certain medical services provided to qualified individuals suffering from physical injuries attributable to the atomic bomb explosions on Japan in August 1945.

H.R. 1995. January 17, 1977. Judiciary. Amends the Civil Rights Act of 1964 to prohibit discrimination based on physical or mental handicap in federally assisted programs unless lack of such handicap is a bona fide job qualification.

H.R. 1996. January 17, 1977. Judiciary. Requires that whenever a Federal district judge, including a United States magistrate or referee in bankruptcy, determines that a party or witness does not speak and understand the English language such proceeding or appropriate portion thereof shall be: (1) simultaneously translated through an interpreter certified by the Director of the Administrative Office of the United States Courts; and (2) recorded verbatim.

H.R. 1997. January 17, 1977. Post Office and Civil Service. Includes as creditable service for purposes of civil service retirement, service as an enrollee of the Civilian Conservation Corps.

H.R. 1998. January 17, 1977. Ways and Means. Amends the Internal Revenue Code to allow a taxpayer who has attained the age of sixty to claim a limited amount as a credit against his income tax, and a refund, equal to any amount in excess of his tax for the real property taxes paid by him, or for the amount of his rent constituting such taxes.

H.R. 1999. January 17, 1977. Ways and Means. Amends Title II (Old-Age, Survivors, and Disability Insurance) of the Social Security Act to increase the amount of outside earnings which is permitted an individual each year without any deduction from benefits under such title.

H.R. 2000. January 17, 1977. Ways and Means. Amends the Tariff Act of 1930 to require search warrants for body searches of persons entering the United States from a foreign country for merchandise on which the duties have not been paid. Prohibits a body cavity search pursuant to such warrant unless conducted by a physician under sanitary and medically approved conditions.

#### HOUSE RESOLUTIONS

H. Res. 162. January 26, 1977. Rules. Amends rule XI of the Rules of the House of Representatives to require that, insofar as applicable, the House rules which apply to standing committees shall also apply to any select, special, or ad hoc committee, commission, or other entity established by the House.

H. Res. 163. January 26, 1977. Rules. Amends rule XI of the Rules of the House of Representatives to require that records of committee actions be made available for

public inspection except for information which would endanger national security or would violate any rule of the House.

H. Res. 164. January 26, 1977. Rules. Amends rule XI of the Rules of the House of Representatives to require that records of committee actions be made available for public inspection except for information which would endanger national security or would violate any rule of the House.

H. Res. 165. January 26, 1977. Rules. Amends rule XI of the Rules of the House of Representatives to require that records of committee actions be made available for public inspection except for information which would endanger national security or would violate any rule of the House.

H. Res. 166. January 26, 1977. Rules. Amends the Rules of the House of Representatives to prohibit voting in any committee or subcommittee by proxy.

H. Res. 167. January 26, 1977. Rules. Amends the Rules of the House of Representatives to prohibit voting in any committee or subcommittee by proxy.

H. Res. 168. January 26, 1977. Rules. Amends the Rules of the House of Representatives to prohibit voting in any committee or subcommittee by proxy.

H. Res. 169. January 26, 1977. Rules. Amends the Rules of the House of Representatives to require that all committee meetings be open to the public, with specified exceptions.

H. Res. 170. January 26, 1977. Rules. Amends the Rules of the House of Representatives to require that all committee meetings be open to the public, with specified exceptions.

H. Res. 171. January 26, 1977. Rules. Amends the Rules of the House of Representatives to require that all committee meetings be open to the public with specified exceptions.

H. Res. 172. January 26, 1977. Rules. Amends the Rules of the House of Representatives to require a rollcall vote on demand of any committee member on any question before the committee and on every motion to report any bill or resolution of a public character.

H. Res. 173. January 26, 1977. Rules. Amends the Rules of the House of Representatives to require a rollcall vote on demand of any committee member on any question before the committee and on every motion to report any bill or resolution of a public character.

H. Res. 174. January 26, 1977. Rules. Amends the Rules of the House of Representatives to require a rollcall vote on demand of any committee member on any question before the committee and on every motion to report any bill or resolution of a public character.

H. Res. 175. January 26, 1977. Rules. Amends rule XIX of the Rules of the House of Representatives to require that an accurate account of words actually spoken on the floor of the House, together with permitted supporting data be printed in the CONGRESSIONAL RECORD.

Entitles Members to insert in the Record remarks not actually delivered on the floor. Stipulates that such insertions always be clearly distinguished from words actually spoken on the floor.

H. Res. 176. January 26, 1977. Rules. Amends rule XIX of the Rules of the House of Representatives to require that an accurate account of words actually spoken on the floor of the House, together with permitted supporting data be printed in the CONGRESSIONAL RECORD.

Entitles Members to insert in the Record remarks not actually delivered on the floor. Stipulates that such insertions always be

clearly distinguishable from words actually spoken on the floor.

H. Res. 177. January 26, 1977. Rules. Amends rule XIX of the Rules of the House of Representatives to require that an accurate account of words actually spoken on the floor of the House, together with permitted supporting data be printed in the Congressional Record.

Entitles Members to insert in the Record remarks not actually delivered on the floor. Stipulates that such insertions always be clearly distinguishable from words actually spoken on the floor.

H. Res. 178. January 26, 1977. Rules. Amends the Rules of the House of Representatives to prohibit bringing any measure or matter up under a suspension by the committee having jurisdiction or its chairman and ranking minority member.

H. Res. 179. January 26, 1977. Rules. Amends the Rules of the House of Representatives to prohibit bringing any measure or matter up under a suspension by the committee having jurisdiction or its chairman and ranking minority member.

H. Res. 180. January 26, 1977. Rules. Amends the Rules of the House of Representatives to prohibit bringing any measure or matter up under a suspension by the committee hav-

ing jurisdiction or its chairman and ranking minority member.

H. Res. 181. January 26, 1977. Rules. Adds Rule XIV to the Rules of the House of Representatives to provide for continuous radio and television broadcast coverage of House floor proceedings.

Makes the broadcast available to all United States broadcasting stations for legitimate news or research purposes.

H. Res. 182. January 26, 1977. Rules. Adds Rule XIV to the Rules of the House of Representatives to provide for continuous radio and television broadcast coverage of House floor proceedings.

Makes the broadcast available to all United States broadcasting stations for legitimate news or research purposes.

H. Res. 183. January 26, 1977. Rules. Amends the Rules of the House of Representatives to remove the 25-member limit on the number of sponsors of any House of Representative bill. Permits the addition or deletion of any Member's name as the sponsor of any legislation by a request made by a Member or the Speaker on behalf of such Member.

H. Res. 184. January 26, 1977. House Administration. Creates a senior citizen intern program in the House of Representatives.

Authorizes each Member of the House of Representatives to hire two additional employees for such program.

H. Res. 185. January 26, 1977. International Relations. Declares it the sense of the House of Representatives that the Government of the United States should maintain its rights and jurisdiction over the Panama Canal and the Panama Canal Zone.

H. Res. 186. January 26, 1977. International Relations. Declares it the sense of the House of Representatives that the Government of the United States should maintain its rights and jurisdiction over the Panama Canal and the Panama Canal Zone.

H. Res. 187. January 26, 1977. Interstate and Foreign Commerce. Directs that hearings be commenced as soon as possible by the committee with appropriate jurisdiction to consider telecommunications policy.

H. Res. 188. January 26, 1977. Post Office and Civil Service. Authorizes the President of the United States to designate January 22 of each year as Ukrainian Independence Day.

R. Res. 189. January 26, 1977. House Administration. Authorizes funds from the contingent fund of the House of Representatives for expenses incurred during the first session of the 95th Congress by the Committee on Rules of the House of Representatives.

## EXTENSIONS OF REMARKS

### THE 59TH ANNIVERSARY OF ARMENIAN INDEPENDENCE DAY

**HON. JOE MOAKLEY**

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. MOAKLEY. Mr. Speaker, May 28, marks the 59th anniversary of Armenian independence. It is a day when, around the world, people of Armenian descent remember their past and renew their call for true freedom and independence for modern-day Armenians.

Mr. Speaker, we would be wise to join in these remembrances, because the Armenian past is a dark story which humanity must recall in order to prevent its reoccurrence.

Since the 14th century, the Armenians have endured 600 years of foreign domination before triumphing in their struggle for self-determination on May 28, 1918. But their hard-won independence was taken from them only 2 years later when Russia and Turkey invaded and partitioned the youthful Armenian Republic.

Horrible years of mass extermination followed. Abdul Haimid once remarked during those years that "the best way to finish with the Armenian Question is to finish with the Armenians"; the Armenian National Committee headquarters in Boston now properly labels this Turkish plan as genocide.

Untold numbers, perhaps over a million Armenians, were tortured, killed outright or "deported" in massive death marches to the deserts of—what is now—Syria and Iraq during these years. Their deaths were terrible, but the Armenians never stopped in their efforts

to preserve their national identity and regain their territorial integrity.

Today, the Soviet Union and Turkey continue to inhabit the lands of the Armenians. The Armenian culture is still suppressed, and Armenian unity and independence still denied.

Hitler asked long ago, "Who talks nowadays of the extermination of the Armenians?" But he was mistaken to believe that this matter has been forgotten. Armenians and their descendants observe their Independence Day faithfully, and each year spread the tale of their tragic history and current dreams to new listeners.

The late Archbishop of Boston, Richard Cardinal Cushing, once termed the Armenian claim "the oldest unresolved grievance on the agenda of world business." That grievance has yet to undergo serious examination and redress, but perhaps the day is drawing nearer.

The people of the world are beginning to wake up to the meaning of human rights, including a culture's right to self-determination. Perhaps they will begin, also, to act on behalf of these rights.

The 59th anniversary of Armenian independence is a particularly apropos date from which to encourage such action, because it is a day which recalls both man's inhumanity to man and man's ability to withstand terrible oppression and still fight for his freedom. It is a date when all peoples should pause in their thoughts to give tribute to those who continue the battle for human rights.

The Armenian people have endured the depths of human cruelty, and it is time to recognize their right to independence. I only hope that their courage can hold out until an independence day arrives with promise of true freedom for their people.

### A TRIBUTE TO TENNESSEE'S BARBERS AND COSMETOLOGISTS

**HON. HAROLD E. FORD**

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. FORD of Tennessee. Mr. Speaker, it gives me great pleasure to rise today to present to the distinguished Members of this body the proclamation which designated yesterday, May 22, 1977, "National Barbers and Cosmetologists Day in the State of Tennessee." These dedicated, hard-working citizens of the Volunteer State set aside a day of work at their establishments, devoting all proceeds to St. Jude Children's Research Hospital in Memphis, Tenn.

As many of you may already know, the work done at St. Jude Research Hospital is vitally important to the health and welfare of the children of every Nation. This fine hospital is the largest childhood research center in the world and is the first and only institute established for the sole purpose of conducting basic clinical research in catastrophic childhood diseases. The fruits of its research and the benefits of its remarkable accomplishments are shared with physicians and scientists of every country.

Included among St. Jude's many achievements are its research in malnutrition, leukemia, and other severe infectious diseases. Members of St. Jude's outstanding staff have published many professional papers, revealing hitherto unknown explanations for Byzantine medical problems, and its work regularly appears in the pages of prestigious medical and scientific journals. Characteristic of its dedication to the needs of the children of the world, the institution's researchers and scientists have given

literally thousands of lectures and hundreds of seminars and presentations across the globe.

It is interesting to note that the popular star of stage and screen, Danny Thomas, is greatly responsible for the founding of this unique research center and he is personally dedicated to sustaining this facility. His vocal and frequent advocacy of St. Jude's is in many ways responsible for making the mission of the hospital familiar to millions of Americans. It is his deep commitment to St. Jude's that has not only won him the respect and admiration of the people of this country but also earned him the Layman Award from the American Medical Association, AMA. This award is the highest award given by the AMA to a layman and it is bestowed on an individual in recognition of an unusual contribution toward the advancement of the ideals of American medicine in the fields of medical science, medical education, or medical care.

Mr. Speaker, I am proud of the barbers and cosmetologists of the State of Tennessee for their generous work on behalf of St. Jude's and the children of the world. I would also like to take this opportunity to express my special appreciation to Mr. David Zaricor of Memphis, Tenn., who has devoted so much of his time and energy to this project. It is reassuring to know that so many fine citizens are involved in this important undertaking and I am proud to present the proclamation recognizing their contributions at this point:

#### RESOLUTION

Whereas, Dread childhood diseases are killing many thousands of American children each year; and

Whereas, only Medical Research provides hope of discovering the still unknown causes of childhood cancer, leukemia, neuro-muscular and blood disorders, and other childhood diseases; and

Whereas, St. Jude Children's Research Hospital funded by Danny Thomas, is the only children's research center in America doing basic and clinical research in these catastrophic disease areas; and

Whereas, Barbers and Cosmetologists of the State of Tennessee have set aside a day to work with all the proceeds going to help provide the operating funds for St. Jude Children's Research Hospital; and

Whereas, more than 90% of all funds raised go directly to this important work because of the dedicated efforts of our volunteer Barbers and Cosmetologists: Now therefore be it:

*Resolved*, That May 22, 1977, be proclaimed National Barbers and Cosmetologist Day in the State of Tennessee: And be it further

*Resolved*, That all citizens, schools, Churches, Business establishments and scientific, social civic, and fraternal organization to give this worthwhile project their support and cooperation.

#### A TRIBUTE TO REV. JAMES E. JONES

**Hon. Yvonne Brathwaite Burke**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mrs. BURKE of California. Mr. Speaker, it is indeed an honor for me to join

the Brotherhood Crusade in a tribute to Rev. James E. Jones, who has served the Los Angeles community in many ways, including parish ministry, education, the arts, and social service.

Rev. Jones served to build and strengthen our educational system during his years as a member of the Los Angeles School Board of Education. As president of the board, he brought to bear his wisdom and insight on the difficult tasks of directing one of the largest school districts in the Nation.

Rev. Jones has served on all levels of the educational system from preschool to college. He has conducted projects in education which range from single school to nationwide planning.

Rev. Jones has ministered to the poor by organizing Operation Breadbasket which distributes food during the holiday season. He also spends a lot of time counseling the youth who have become involved in gang activity.

He has organized exchange programs that brought high school students from Mississippi to Los Angeles to live with foster parents. In this kind of environment, people can learn to know and understand cultural differences within our Nation.

These are just a few of the extraordinary accomplishments of the Rev. James E. Jones. He is to be commended for his years of dedicated work. The citizens of Los Angeles deeply appreciate the work he has done for the community.

#### INTERNATIONAL SECURITY ASSISTANCE ACT CONSIDERED

**HON. BARBARA A. MIKULSKI**

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Ms. MIKULSKI. Mr. Speaker, today the House of Representatives considered the International Security Assistance Act. Following lengthy debate and several amendments, I voted in favor of this legislation. Yet, had it not been for the certain restrictions that were placed upon the aid to Turkey, and similar aid that was given to Greece, I would have been reluctant to give this measure my full support.

I have been very concerned with the ongoing difficulties faced by the island of Cyprus since its invasion by Turkey. It is due to the events surrounding this incident, that led me to state that I would not vote in favor on any military aid to Turkey until such time as an equitable solution to the Cypriot crisis could be reached by all parties concerned.

Because of certain provisions provided for in the International Security Assistance Act, I was willing to revise that stand. I reluctantly supported military aid to Turkey in this instance only because it cannot be made available to that country until the President has certified that Turkey is in compliance with the U.S. laws regulating the transfer of defense articles to other nations and that genuine progress has been made on Cyprus peace talks.

I will continue to give my full support to Greece, but in the future, I will not be able to give further support to Turkey until the Cyprus situation has been resolved to the satisfaction of all parties involved.

#### THE CONSUMER PROTECTION AGENCY

**HON. JOHN P. MURTHA**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. MURTHA. Mr. Speaker, as Congress prepares to debate the creation of a Consumer Protection Agency, there are some facts I would like to share with the Members.

Fact No. 1. There is already one "consumer ombudsman" in each of 17 agencies. These positions were created by President Carter. There is no reason to believe these individuals will not be able—along with other consumer advocates within the Government—to do the job of protecting the consumer.

Fact No. 2. In 1975 I took an "instant poll" of 7,000 residents of the 12th Congressional District. I asked: "Should a new Federal Consumer Advocacy Agency be established." The results were: 32 percent yes, 64 percent no, 4 percent undecided. The reasons most often cited by constituents for opposing the new agency were:

First, the people are tired of delay they have come to associate with the Federal Government; they do not see how a new agency is going to correct that;

Second, with the large amount of Government spending, they did not rate this as a priority, and suggested Congress should be thinking about spending cutbacks and less bureaucracy, instead;

Third, the individual citizen could not see how this would help his or her own situation.

Fact No. 3. Supporters of the Agency are citing a recent Harris poll showing the Agency is favored by a margin of 52 to 34. I would like to quote from the Washington Star article by John Holusha on that poll.

In response to a slightly different question, the poll noted "fewer than one American in every three sees a solution to consumer problems coming from more government regulation or, for that matter, [any] regulation."

According to pollster Harris, what the survey results show is that while the consumer movement is strong, the prevailing sentiment among individuals is that they, rather than someone else, have a say in determining their economic destinies.

Fact No. 4. I believe there are few Members who would disagree that the American people are tired of big Government, more correctly, inefficient big Government that does nothing to improve their lives or national policy.

I believe that would be the very role of a Consumer Protection Agency—more bureaucracy, more redtape, more cost, more delay—without really adding to

the final product of consumer protection in Government decisionmaking. If the Government wants to protect the consumer, the machinery is already there to do it. Let us not create another agency, and more bureaucracy, let us protect the consumer with the people and rules we have in place to do it.

#### INTRODUCTION OF URBAN GRANT UNIVERSITY ACT

**HON. WILLIAM D. FORD**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. FORD of Michigan. Mr. Speaker, I am today, in company with other Members of the Education and Labor Committee introducing legislation to create an Urban Grant University program—an urban counterpart to the Land Grant College Acts of the last century, and the Sea Grant Act of a generation ago. Joining me in sponsoring this proposal are the chairman of the Education and Labor Committee (Mr. PERKINS), the ranking minority Member of the Subcommittee on Postsecondary Education (Mr. BUCHANAN), Mr. THOMPSON, Mr. BRADEN, Mr. BIAGGI, Mr. PHILIP BURTON, Mr. SIMON, and Mr. MOTT. It is our hope that introducing this legislation will elicit from the education community, from the municipal organizations, and from students of the urban condition the constructive criticism which will, I trust, make the legislation even better designed to meet the needs of our cities and to utilize the talents of our urban universities.

The Urban Grant University Act, Mr. Speaker, does not propose to compensate urban universities for being urban universities. On the contrary, the legislation implicitly accepts the idea that the university and the city have a natural affiliation, and that the university can provide research and other services to the city, as well as performing its more traditional function of providing educational services to the city's people.

This, simply, is what the Urban Grant Act is all about. It authorizes Federal support for the development and provision by the universities of programs of research and services aimed at aiding the cities in their dealing with urban problems.

The bill provides for assistance to urban universities in the development of research and service capabilities for the funding of individual projects by which universities may aid the cities in which they are located in their attack upon individual problems or sets of problems, for the designation of universities which develop multidisciplinary comprehensive programs in this area as "urban grant universities," and for the continued support of such programs.

The legislation, Mr. Speaker, has been urged upon us by the Committee of Urban Program Universities, an organization of universities located in, and

characterized by a tradition of direct service to, metropolitan areas. The 19 members of this committee issued a brochure about a year ago in which they stated their perception of the challenge and the opportunity which confronted the urban university. In part, that brochure said:

We have learned as a nation that ill-informed infusions of federal dollars will not, by themselves, alleviate our urban problems. On the other hand we must regain some sense of confidence that a well-informed, systematic search for solutions is not a hopeless, quixotic exercise.

An integral part of such an initiative is a federal policy that seeks to marshal the resources of urban public universities. Such institutions are unique resources in their communities. Originally established primarily from State and local investments, they are now in a position to provide a national service if complementary federal and private resources are added to generate and sustain such a policy.

Because of their location and the student bodies they serve, these universities are in close touch with the educational and social needs of urban residents. To serve their students better, they have adopted educational strategies to meet the special requirements of a changing job market. To serve their urban constituencies—government, private organizations, community groups, and students—they have attempted to transform research and service programs into resources that can be used by people and groups external to the institution. And the universities have a stable source of internal resources—faculties, students, and physical facilities to develop and evaluate plans to help alleviate many of the problems that continue to plague our metropolitan areas.

Simply stated, the time is long overdue for taking stock of the available resources; for pulling together the fragmented and competitive responses to urban problems by pooling people and resources from all sectors of the community.

With one significant change—a change which the Committee of Urban Program Universities has urged upon us—this legislation seeks to implement the vision of that brochure. The change is the dropping of the distinction between urban public universities and other urban universities. There are differences between public and so-called private universities, and those differences are not without serious implications in most areas of Federal higher education policy. But the sponsors of this legislation consider that distinction to be irrelevant to this issue. It does not matter much, as I see it, whether a city is able to receive needed research and service assistance from a university whose support is largely from the public coffers or largely from private sources. The validity of the research, the utility of the services depends primarily on the competence of the university's students, faculty, and administrators, and these qualities are little affected by the institution's source of financial support.

Let me reiterate, Mr. Speaker, what I have already said to the universities who are asking for the enactment of this legislation, and to the cosponsors of this bill.

The Urban Grant University Act represents a first step in the development

of an urban grant program. As its primary sponsor, I certainly accept the proposition that this bill can be improved; that what we need now is a legislative proposal, and an opportunity for public comment so that we can improve that proposal. I hope that my subcommittee can hold hearings and that all interested groups will in the meantime feel free to examine this proposal and do some careful thinking on how it can be improved or how better we can provide for a bridge between the resources of our universities and the needs of our cities.

#### BAD FOR OUR HEALTH

**HON. DEL CLAWSON**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. DEL CLAWSON. Mr. Speaker, the assurance that any program directed at a national problem will not in practice create new problems or adversely enhance the existing problem is a bare minimum requirement the Congress would do well to apply. An editorial in the Wall Street Journal of Wednesday, May 18 is included at this point in the RECORD for the pragmatic yardstick it applies to an administration proposal which it suggests will be "bad for our health":

#### BAD FOR OUR HEALTH

President Carter's proposals for controlling hospital costs probably aren't going far in Congress and that is just as well; they're the wrong medicine.

The President proposes to put an 8.3% limit, of sorts, on the annual rise in revenues of acute care hospitals and also limit capital outlays above \$100,000. In that way he would hope to bring government's sharply rising Medicare and Medicaid costs under better control.

At the present rate of growth, these two programs will cost the federal government \$30 billion in fiscal 1978, a rise of 13% from the current year. Hospital costs, rising at 15% a year, are a major reason. About 45% of all hospital bills are paid by government.

But the Carter proposals fail to address the underlying cause of rising hospital costs—they are rising so rapidly largely because there is insufficient restraint on demand. About 92% of all hospital bills are paid by some third party, either the government or private insurers. The incentive for the patient and his doctor is not to economize on hospital usage but to make the most of the fact that insurance will pick up most of his bill.

No one in particular is to blame for this, although it is not overly harsh to say that past administrations and Congresses should have given more thought to designing health care policies that would have been less inflationary. Not only did the sharp rises in demand under Medicaid and Medicare raise prices but the government also has encouraged, through its tax policies, the present broad coverage of private insurance. Economist Martin Feldstein of Harvard estimates that tax deductions for health insurance premiums lower the cost of such insurance some 30% from what it otherwise would be.

The answer to the cost inflation problem is not as complicated as many people would like to make it sound. Hospitalization is different from other services in that treatment is often a matter of life and death. But it is

not radically different in economic terms. Mr. Feldstein, one of the most persuasive experts on the subject, makes a convincing case that with patients paying a substantial portion of their bills out of pocket—up to, say, 10% of their annual income—and insurance picking up only the rest, medical costs would soon come under the rigorous control of supply and demand.

Any politician, however, can see political liabilities in this. Politicians have been promising the nation "free" medical care for so long that there is a pervasive belief that such a thing exists—that doctors and nurses presumably can be made to work for nothing and that X-ray machines can be had for a song. Rather than control costs by resort to co-insurance by the patient, government is willing to try almost anything else.

Unfortunately, innovative attempts to avoid reality have come a cropper. President Nixon established federal subsidies to promote Health Maintenance Organizations, which he hoped would hold down health costs by competing with existing forms of health care delivery. But liberals in Congress loaded the HMOs up with so many federal requirements that they have had difficulties achieving their supposedly inherent efficiencies. Congress established Professional Standards Review Organizations, which were supposed to enlist doctors to review the performance of their peers in spending federal money. But doctors don't much like that line of work, so that only about half the proposed number of PSROs have been formed. It is doubtful whether even those exert much effective control on hospital utilization by doctors.

Now Mr. Carter is falling back on that last resort of failing government policies, direct controls. But there are all sorts of flaws, real and potential, in the ceilings. For one thing, they would permit non-supervisory wage increases to be passed through. The idea of controlling capital expenditures already is being employed by federally sponsored Health Systems Agencies in a number of states; the main effect seems to be to embroil the HSAs in litigation and controversy with hospitals and doctors. And in some states, where the main focus has been to try to control Medicaid costs, arbitrary controls and ceilings have contributed to nursing home bankruptcies, a dubious contribution to the efficacy of American health care.

Direct controls simply will not work. And since they won't work, neither will "national health" in the sense that it has been envisioned by Senator Kennedy and others as a blank check for unlimited care—that is, unless Congress is willing to face up to a federal budget deficit of \$150 billion or so.

So the choice is open. Congress can go along with something like the Feldstein proposal and bring costs under realistic control at some political price. It can adopt the Carter proposal and plunge deeper into the morass. Or it may continue to let matters drift. We suspect it will choose the latter. It should be obvious that it could do a lot worse.

#### NATIONAL SCHOOL BUS SAFETY WEEK

**HON. DAVID E. BONIOR**

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. BONIOR. Mr. Speaker, today I am introducing a joint resolution declaring that the week of October 9, 1977 through October 15, 1977 be designated as "National School Bus Safety Week."

Since Michigan can claim to be one of the leading States in school bus safety, it seems only appropriate that my colleague from Michigan (Mr. RIEGLE) and I introduce this resolution in the House and in the Senate.

School bus safety is a concern of both parents and educators because of the large number of students who travel to school by bus. In my State alone, 1 million students are transported by school bus daily. And according to a report by the Department of Transportation, 22 million students are transported daily throughout the United States. With so many children being transported every day, a heightened awareness with respect to the safety of their transportation is an aim hopefully to be achieved through the observance of this week.

The taxpayers pay almost \$2 billion annually to make traveling by school bus seven times safer than traveling by passenger car. Acknowledging "national School Bus Safety Week" will make the people of the United States aware of this fact along with furthering the effort to continue the safe transportation of our children.

#### THE TRIS BAN

**HON. JAMES T. BROYHILL**

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. BROYHILL. Mr. Speaker, I am sure my colleagues in the Congress are only too aware of the recent furor caused by the Consumer Product Safety Commission's ban on articles containing the chemical Tris. The Tris ban, and the way it was administered, has caused hundreds of thousands of dollars' damage to businesses throughout the Nation, not to mention the time and worry spent by countless parents of young children.

I am equally sure we all recognize the paradox here. The Government has mandated that the fabric and garment manufacturers must insure the fire retardancy of clothing worn by small children, and yet on the other hand has ordered many of these garments removed from the marketplace—leaving the producers, processors, manufacturers, and distributors of Tris-containing products holding the financial bag.

For this reason, I have joined with Congressman JAMES MANN in introducing legislation to confer jurisdiction on the U.S. Court of Claims in determining the dollar value and rendering judgment for losses sustained by those businesses suffering financial hardship due to the ban on Tris. Aside from providing Tris-related businesses with a chance for returned financial stability, the enactment of this legislation would indicate to manufacturers and consumers alike that our Government wishes to share in the hardships on the people and to assume responsibility for its actions.

As has been pointed out so clearly with the Tris incident, we have all become increasingly aware of the need to carefully screen chemicals before they are used in products the public will consume. The

Toxic Substances Control Act we passed last year requires the Environmental Protection Agency to test, prior to marketing, chemical substances and mixtures which cause or significantly contribute to an unreasonable risk to health or the environment. This is an important measure, but it should only be one part of our Government's total, well-coordinated approach to the problems raised by an ever-growing list of possible carcinogens, some of which are already on the market.

Only yesterday, I received a press release in my office indicating that a large supplier of fabric for children's sleepwear, Springs Mills, Inc., will cease production of fabric for that market, due to "unpredictable Government policies." It is imperative that we in the Congress chart, and hold, a firm course in banning hazardous chemicals, and at the same time demonstrate to the American people that we are willing to accept responsibility for our actions. The legislation I have cosponsored will take us one step closer to that goal.

#### U.S. POSTAL SERVICE

**HON. EDWARD J. DERWINSKI**

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. DERWINSKI. Mr. Speaker, top officials of the U.S. Postal Service seem determined to maintain a poor public relations image not only with the Congress but also with the general public.

An example of this is the controversy over orders given letter carriers to take short cuts across lawns to save time. While it is a known fact in the mail delivery profession that carriers are capable of delivering their routes faster than the allocated schedule time, deliberate short cuts across lawns are obviously creating predictable public resentment.

Channel 5, WMAQ-TV, Chicago, addressed this subject in their editorial commentary of April 29, which I insert into the RECORD at this time:

#### EDITORIAL

Letter carriers in a number of suburbs are fighting with their employer, the U.S. Postal Service, because they don't want to walk across people's lawns.

Their supervisors are telling the carriers to take shortcuts across lawns to save time.

At first this sounds like a silly dispute. But when you think about it, it is a classic example of a fight between management's demands for efficiency and labor's insistence on job preservation.

The Postal Service, with all its financial problems, claims it can save millions of dollars if letter carriers take the quickest route on their deliveries which means crossing lawns.

The Letter Carriers Union sees this as a threat to jobs. If they can get their jobs done in a shorter time, the Postal Service won't need as many people to carry the mail.

Some carriers have been picketing the post office in the town of Roselle. And there is a circular being passed out that claims "postal supervisors are prowling the streets at taxpayer's expense and giving every letter carrier they see a direct order to cut across the lawns."

The two sides are taking this issue very

seriously indeed. They've even gone to arbitration and the letter carrier's union lost.

Frankly, we do not have a strong feeling one way or the other, but if you are upset by the mail carrier trekking across your property, you can settle the dispute all by yourself. Just call the post office and ask for a form you can sign prohibiting the letter carrier from walking on the grass.

(This editorial was broadcast on April 29, 1977.)

## A RETURN TO CITIZEN— REPRESENTATIVES

**HON. J. J. PICKLE**

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. PICKLE. Mr. Speaker, there are numerous Members of Congress who can remember fondly when sessions did not last for 11 or 12 months, each year. My good friend Jerry Siegel was a participant, as the counsel for the Senate Democratic Policy Committee, when Congress was not in session full-time.

I am enclosing his recent article from the Washington Post in which he carefully defines how he believes it is possible to make such a system viable once again. It is my hope that you will give his article close study.

The article follows:

### SAVE CONGRESS BY LIMITING IT

(By Gerald W. Siegel)

The Founding Fathers never intended Congress to be the fulltime institution of professional lawmakers that it has become. Rather, they foresaw a legislative branch that would meet for a few months to set national policies and enact the few laws necessary to implement them. It was to be a citizen body which, ideally, would always reflect the broadest composition of our people: farmers, merchants, workers, lawyers, doctors and so forth.

Of course, the Founding Fathers never anticipated the complexity which has overtaken us. But their conception of the role of Congress remains valid. To return to such a limited legislative role would be a major reform. Yet it could be done without any fundamental change in our federal system and without any reduction in the importance of Congress.

We have focused too long on methods of reorganizing Congress which would enable it merely to do better the job it is doing. This year's reorganization of Senate committees was merely the latest example. What we need instead is a redefinition of the kind of legislative body Congress should be. If we really want to improve the operation of Congress, we must challenge deeply embedded patterns and traditions.

As I see it, Congress should confine itself to making only major, broad national policies and laws. The fleshing out of such laws, the endless process of developing the intricate mechanisms for their implementation, should be the responsibility of executive departments and independent administrative agencies.

The bills to amend the Environmental Protection Act are an example of how Congress becomes smothered in detail. So much attention has been given to comprehensive statutory provisions that Congress has lost sight of its principal responsibility: the establishment of overall, balanced basic environmental policies which are consistent with other essential policies in the nation, i.e., energy, employment and growth.

Just look at the vital statistics of the last Congress: 21,096 bills introduced; 588 public laws enacted; with brief recesses in each year, the two houses met from Jan. 14 to Dec. 19, 1975, for a total of 1,177 Senate and 941 House session hours, and from Jan. 19 to Oct. 1, 1976, for a total of 1,033 Senate and 846 House session hours. There is probably no tabulation of the hours spent by committees in hearings and executive sessions.

How much better if fewer bills were introduced, fewer considered in committee and simpler, more basic policy type bills passed. And how much better if the time saved were spent by the legislators at their own occupations, with their own people, in their own states.

To effect such change will require strong congressional determination. Subject to waiver in emergencies, there should be in each session an early mandatory adjournment date; a limit on the number of bills each member may introduce and on the number each committee could consider and report; and a ban or limit on nonlegislative functions (such as assassination investigations). But consider the benefits.

The time required for the members in Washington could be shortened drastically. There would be no need for, and it would in fact be recognized as undesirable for, members to give up their normal occupations to become professional lawmakers. The members could remain closer to their states, districts and constituents. No detailed code of conduct would be necessary. A system of full disclosure is all that would be needed to reduce the likelihood of corruption and the improper consequences of unavoidable conflicts of interest. There would be no need for public funding of elections.

And, finally, Congress could reduce the volume and complexity of federal law for which it is primarily and directly responsible. Subordinate policies and principles, not merely details, would be delegated to the departments and agencies, where they can be more calmly, expertly and professionally developed by fulltime experts.

Would we all become the victims of a faceless and inaccessible bureaucracy? Not necessarily. Preventive measures could be established by Congress and the executive departments. And access to Congress for equitable relief from administrative decisions beyond the corrective action of the courts would be more efficient and effective because Congress would have more time for such functions and could better organize to carry them out.

A determination to legislate only to the extent absolutely necessary should also permeate throughout the administrative bureaucracy. "Sunset" legislative policy, applied to Congress and the executive departments, coupled with a new philosophy of Congress as described here, could sweep away much of the statutory and regulatory debris which has accumulated over the years and release much human talent, time and energy to tackle new basic problems.

A major shift of this kind in legislative responsibility will require reexamination and changes in our independent agencies and departmental administrative processes—especially where lines of rule-making, administration, regulation and adjudication run parallel or cross. But these are not insuperable obstacles. The knowledge exists to structure this part of the executive branch of government so that it can faithfully and effectively perform all of its duties, under the direction and surveillance of Congress.

Relieved of the necessity of legislating in each field with such comprehensiveness and specificity, Congress could better deal with the task of determining balanced policies which properly equate the competing and conflicting demands of separate but inter-

related areas. The newly established congressional budget procedure could be enlarged and perfected, and the trade-off balancing so necessary there could become the pattern for policy making in each substantive area of legislative concern. For example, Congress might well develop a full employment policy which would not unduly restrict individual and group freedoms in the private sector and would not impact harmfully on a national policy of stable prices.

A new role for members of Congress, with less tedious duties but more fundamental responsibility; with few restrictions on the opportunity to continue their normal private lives and with a more clear-cut image of citizen part-time lawmakers, could induce some to seek office who now turn away from it. Longevity of service would be less essential. Indeed, more rapid turnover in membership could be a desirable result. A new delineation of the functions of Congress could breathe new life into our federal system and encourage the states to take on more of the responsibilities of governing their citizens.

The changes proposed here would not weaken Congress or the federal government. Members of such a Congress would truly be the most important and powerful decision-makers in the nation. No one is diminished by delegating less important duties.

Too long have we struggled at the edges of the problems which beset Congress. Codes of conduct, election financing reforms and committee reorganizations will not do the job. If Congress is to achieve maximum effectiveness, a real effort to rediscover its proper role must be made.

## HELSINKI ACCORDS

**HON. RAYMOND F. LEDERER**

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. LEDERER. Mr. Speaker, I would like to bring to your attention a letter which I have sent to General Secretary Brezhnev which I believe reflects the concerns of many of my colleagues in the House and the people of the United States:

DEAR MR. GENERAL SECRETARY: Permit me to open this letter with a statement you made at Helsinki in August 1975 in regard to the Final Act of the Conference on Security and Cooperation in Europe:

"We assume that all countries represented at the Conference will implement the undertakings reached. As regards (to) the Soviet Union, it will act precisely in this manner."

At a time when the Strategic Arms Limitation Talks between our two nations are a matter of serious controversy, the people and Congress of the United States of America would sincerely like to accept the good faith of the Government of the USSR.

However, the recent actions of the Soviet Government belie the commitment she has made in the Helsinki Accords. What the Soviet Union has done is to systematically violate the human rights of Mykola Rudenko, Oleksa Tykhy, Mykola Matusevych and Myroslav Marynovych, whose only crime as members of the Ukrainian Public Group to Promote the Implementation of the Helsinki Accords, was to monitor the compliance of their country to the principles of human rights which the Helsinki Accords had committed her.

By taking away the freedom of the Ukrainian people or indeed any nationalist group to insist on compliance by their country with

the Helsinki Agreement, is to relegate the importance of that treaty to that of an empty scrap of paper.

I urge you not to allow the Helsinki Accords which offered the hope of freedom and dignity for so many to become a cruel hoax. The immediate release of these men, and the freedom of such nationals as the Ukrainians to operate without harassment, would be a demonstration of the Soviet Union's commitment to human rights, which the Congress and the people of the United States anxiously await.

Sincerely,

RAYMOND F. LEDERER,  
Member of Congress.

## TEST CARS AND AUTO EMISSIONS

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. DINGELL. Mr. Speaker, great emphasis has been placed on test automobiles meeting emission levels at or near the 1978 statutory levels, which we are in the process of amending. I submit for your consideration my views on test cars and auto emissions and insert them at this point in the Record:

### TEST CARS AND AUTO EMISSIONS

Getting an automobile from the test laboratory to production and for sale nationwide in interstate commerce and conform with all Federal regulations—is not an overnight possibility nor, necessarily, a possibility in 1, 2, 5 years, or more.

While automakers—both foreign and domestic—may have a dozen or more test cars for emission controls or fuel mileage research programs and may occasionally find one vehicle that produces greatly lowered pollution emissions or increased fuel economy, the massive amount of investment required by that automaker may not produce a car that will work in the real world nor clear all Federal regulations. General Motors just reported that it has concluded—at an estimated cost of over \$100 million—that the rotary engine, famed earlier as a potentially great fuel saver, is not economically suited for mass production. Continued testing showed that its anticipated fuel economy gains and control of pollution exhaust did not test out as had been hoped. It has been shelved by G.M. Research and Investment by automakers continues into several alternate engine models and drivelines to develop improved fuel economy and lower emissions.

Volvo, when it met California emission levels in certification last summer for its 1977 model car, including its sophisticated and expensive total emission control system (Lambda-sond) on its base priced, \$6,500, inline four-cylinder car, did reach reduced emission levels but not consistently below 1978 statutory standards of 0.41 hydrocarbons, 3.4 carbon monoxide and 0.4 oxides of nitrogen. When it was certified to meet the California standards of 0.41 HC, 9 CO and 1.5 NO<sub>x</sub>, it did so at a small fuel economy improvement compared to its sister 1976 model cars, but still at almost a 10-percent fuel economy penalty when compared to the foreign and domestic U.S. Federal fleet of cars meeting 1.5 HC, 15 CO and 2 NO<sub>x</sub> for 1977 model cars.

Volvo, in confirming that it did not meet the statutory standards last summer and that it had not attempted to do so in the California test, replied to several in Congress in the following manner:

"As Volvo and others in the auto industry have stressed, obtaining low emission levels from relatively few test vehicles, even during certification testing, is a different matter than insuring that all vehicles from a particular year's production will achieve the same results, which is what current Federal requirements demand. A manufacturer must, in effect, guarantee that the emission performance of each and every vehicle will fall below the standards, and no manufacturer is likely to do so unless convinced that adequate margins exist between test results and the regulated emission levels, so as to insure that all production vehicles will comply given required in-use maintenance."

Some still would argue that Volvo did meet the tight statutory standards for 1978. The Volvo did not. It could not have been certified by the Environmental Protection Agency for the 50,000-mile durability test. Volvo's development is to be commended for coming close, but "coming close" does not satisfy standards in Federal law. Volvo has again publicly confirmed that their California certification car of last summer did not pass the statutory standards test by EPA. Volvo testified March 9, 1977, before the Commerce Committee's Health and Environment Subcommittee:

"In discussing the emissions results to date, it is important to note that the very low emissions figures which have recently been quoted for the Volvo Lambda-sond™ system are the average results from four 4,000-mile certification test vehicles with four-cylinder inline engines. It should also be noted that during the 50,000-mile durability portion of the EPA test procedures the durability vehicle equipped with Lambda-sond™ exceeded the statutory limits according to the Federal certification procedure, thus we could not have been certified to the statutory emissions levels."

Volvo began development of what became its sophisticated 1977 model year emission control system in 1972. It incorporates electronic fuel metering, electronic fuel injection and, at that time, the relatively unknown three-way catalytic converter and oxygen sensor device in the exhaust system, to name a few of the 1977 car's components. It took Volvo 5 years to get that vehicle ready for its 1977 test, a test that Volvo has said was not intended to be aimed at meeting the 1978 Federal standards of the Clean Air Act, but just to meet the less stringent California levels.

Volvo sells four- and six-cylinder cars in the "upper price classes" (\$6,500 to \$11,000). Its total emission system is estimated to cost from \$500 to \$600.

Volvo, in the Health and Environment Subcommittee hearing testified that its system was working on the inline four-cylinder engine in its small, four-passenger car, but was much more difficult to adapt to the "VEE (V-6 and V-8) type engine because of basic configuration."

Volvo went on to say to the subcommittee:

"In order to provide the stability necessary to optimize emission control systems, Volvo has recommended that U.S. exhaust emission levels be set at 0.9/9.0/2.0 gms/mi HC, CO and NO<sub>x</sub> respectively for model years 1978-82. We still believe this is a reasonable compromise to achieve clean air and good fuel economy with a variety of powerplants."

This important testimony by Volvo, and testimony by other auto manufacturers further confirms the automotive engineering community's, and others', agreement for the need of the 9 CO and 2 NO<sub>x</sub> standards contained in the Dingell-Broyhill (H.R. 4444) legislation to amend the Clean Air Act. The Dingell-Broyhill standards are only slightly tighter than Volvo's recommendation for these same model years and are tighter due to our understanding of the technological

achievements by the industry at large in the past year and the need to control hydrocarbons by our more stringent 0.41 HC standard to begin in 1980.

We point out that there remains uncertainty and lack of confirmed health data for the standard to go as low as 1 NO<sub>x</sub> or as low as 0.4 NO<sub>x</sub>. Even the administration's schedule does not impose a 0.4 NO<sub>x</sub> standard due to the uncertainty and calls for further study of the issue. In the Dingell-Broyhill schedule we impose the 1 NO<sub>x</sub> in 1982, but again, due to uncertainty on health and air quality, and due to the administration and Nation's energy conservation demands, we provide for that NO<sub>x</sub> standard to be suspended or waived up to, but not in excess of, 2, if it will not endanger public health and would save fuel and economic cost. This procedure also provides automakers incentive for more research and test cars if they know there are provisions in the law to permit their manufacture of a new system. Innovative technology, such as the Volvo system, diesel, stratified charge, lean-burn, and other systems, may be developed and placed in mass production. This may then lead to greatly improved, cleaner burning, fuel efficient and cost-effective systems on automobiles to protect consumers, the economy, the environment, energy conservation objectives, and have a resulting wholesome impact on automotive industry employment.

## THE HATCH ACT

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. LAGOMARSINO. Mr. Speaker, in view of the intense debate we had last week regarding the Hatch Act, without coming to any resolution, the Members might be interested in the following views expressed in the Ventura County (Calif.) Star-Free Press May 9:

EDITOR'S NOTEBOOK

(By Julius Gius)

Shortly before World War II, when the expanding list of New Deal agencies began to read like a recipe for alphabet soup, a Democratic senator from New Mexico named Carl Hatch began fretting about the political potential of the thousands of workers then swelling the federal payroll.

He reasoned, quite logically, that federal workers could constitute an army of campaign workers for any national candidate making the right promises. So Hatch, his pioneer streak of puritanism coming to the fore, decided to do something about the problem he foresaw.

The Hatch Act evolved in 1939. It prohibited active participation in national politics by federal employees. The law has been amended from time to time, but the basic ban on partisan politics by our 3 million federal civil servants still stands. That's what a government worker, like those at Point Mugu or in the Postal Service, means when he says, "I've been Hatched."

Last year, Congress voted to wholly repeal the Hatch Act but President Ford vetoed its action, and an attempt to override this veto narrowly failed. But the repeal effort has been reborn this year with a similar measure, H.R. 10, offered by Rep. William Clay, Democrat of Missouri who has been a regular recipient of labor union campaign money. Further, there have been signals from the White House that President Carter favors the bill.

The argument for Hatch Act repeal is that it makes "second class" citizens out of fed-

eral workers because their involvement in partisan politics is legally limited.

(There is no restriction, of course, on their participation in non-partisan government affairs; thus we have federal workers who served on city councils, school boards and the like.)

Whenever a party in the majority strongly favors a partisan bill, I suspect that the party's benefit likely looms larger in the consideration than the principle. I think that's the case now.

The proposed bill would lift many of the restrictions prohibiting federal employees from running for partisan office or working actively on behalf of a party-backed candidate. It would continue to ban political activity during working hours or on federal property and would impose controls aimed at preventing coercion by bosses, including a ban on fund solicitations by them.

The problem is, as it has always been, that whatever is allowed very soon will become mandatory, even in enlightened administrations. And it seems to me that the law's repeal is likely to lead to a second-class civil service by opening it up to partisan pressure.

The congressional hearing record that I have read shows no great visible eagerness and no truly organized effort by federal employees themselves to repeal the Hatch Act. In fact, much of the testimony indicates that most government workers want to keep the law as it is, with some witnesses even advocating a strengthening of existing protections against political coercion within the government service.

If that's what the non-political federal worker really wants, others may share my suspicion that repeal of the Hatch Act would be more benefit to politicians than federal workers.

#### CLEAN AIR ACT AMENDMENT

**HON. GUNN MCKAY**

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. MCKAY. Mr. Speaker, I submit for the RECORD the following amendment to section 108, H.R. 6161, the Clean Air Amendment of 1977. This important amendment provides a class II variance procedures allowing the Governor of a State greater flexibility in balancing environmental concern and economic growth. The high terrain topography of Utah demands this flexibility. I urge its adoption.

The amendment follows:

#### AMENDMENT TO H.R. 6161

Page 320, after line 19, insert:

(g) (1) Subtitle C of title I of the Clean Air Act is amended by adding the following new section at the end thereof:

#### "CLASS II INCREMENT VARIANCE

"Sec. 162. (a) For purposes of this section—

"(1) The term 'class II increment variance' means a variance granted under this section (prior to, or in conjunction with, a permit required under section 160(c)(4)) by the Governor of a State to a proposed new or modified stationary source of sulfur dioxide which permits such source to construct and operate in an area designated as class II under section 160 without regard to the maximum increase of sulfur dioxide allowable for such area under such section 160 for the three-hour period of exposure.

"(2) The term 'Federal land manager' has the same meaning as when used in section 160.

"(b) (1) After consultation with general purpose units of local government (in accordance with section 125) and State legislative representatives, and after notice and opportunity for public hearings, upon application by the owner or operator of any proposed new or modified stationary source, the Governor of the State in which such source is proposed to be located may grant a class II increment variance to such source if—

"(A) such owner or operator demonstrates to the satisfaction of the Governor, and the Governor finds, that the conditions of subsection (c) have been met, and

"(B) the State establishes (and provides for enforcement of) such emission limitations as may be necessary to assure that the conditions of subsection (c) (2) will continue to be met.

Such opportunity for public hearings shall be provided at the State capital and in each political subdivision in which the maximum allowable increase for sulfur dioxide for the three-hour period of exposure will be permitted to be exceeded by reason of the variance (as determined by the Governor on the basis of the application).

"(2) No variance granted under this section shall take effect unless—

"(A) the Governor provides the Administrator, and the appropriate Federal land manager (in any case in which Federal lands are located in the area in which the maximum allowable increases for sulfur dioxide would be exceeded by reason of the variance, with a written report supporting his findings, and

"(B) (1) the Administrator finds that the procedures required under paragraph (1) have been followed and concurs with the Governor's findings required under subsection (c), and

"(ii) in any case in which a report is required to be provided to a Federal land manager, the Federal land manager concurs with the Governor's findings required under paragraph (2) (D) of subsection (c).

The Administrator and appropriate Federal land managers, if any, shall, after notice and opportunity for public hearing, concur or refuse to concur in the Governor's findings for purposes of this paragraph and publish notice thereof in the Federal Register not later than 180 days following their receipt of the report required under subparagraph (A).

"(c) A variance may be granted only if the Governor finds that the following conditions have been met—

"(1) (A) the Administrator has promulgated regulations under subsection (d) specifying applicable models and modeling techniques to be used for purposes of this section.

"(B) construction and operation of the source at the site at which the source proposes to locate (or undertake a modification) has fewer or less severe environmental impacts than construction and operation at other reasonably available alternative sites, and

"(C) the source cannot construct and operate at the proposed site unless a variance is granted under this section, and

"(2) (A) emissions from the source will not affect concentrations in any area in which the class II maximum allowable increase of sulfur dioxide for 3 hours is permitted to be exceeded by reason of any other variance granted under this section,

"(B) the total number of days during which, in any calendar year, the class II maximum allowable increase for sulfur dioxide for the three-hour period of exposure will be exceeded by reason of the variance (when all modeled or monitored measure-

ments of pollutant concentrations are aggregated) will not be more than 5 percent of the days of such year and only over an area of unpopulated terrain which is—

"(i) not less than 1,000 feet above the base of any stack used by the source to disperse emissions, and

"(ii) not more than 10 miles from any such stack,

"(C) the increase in concentrations of sulfur dioxide in such area over the baseline concentrations (determined under section 160) for the three-hour period of exposure will not exceed the maximum increases allowable for such period of exposure under section 160 for areas designated as class III, and,

"(D) emissions of all pollutants from the source will not cause or contribute to air pollution concentrations—

"(i) in any area in which a national primary or secondary standard is exceeded or in any area classified under section 160 which concentrations are in excess of the maximum concentrations (other than the specific increment with respect to which the variance is granted) specified for such area under section 160, or

"(ii) in the area in which the maximum allowable increases for sulfur dioxide will be exceeded by reason of the variance, which concentrations may reasonably be anticipated to cause harm to humans, animals, plant life, or visibility, or to any use, feature, or value of the area, or

"(iii) in any Federal area (other than a national forest) which cannot be designated other than class I or class II as specified in section 160(c)(3)(B), which concentrations are in excess of the maximum concentrations specified for such area under section 160(c)(2).

"(d) No source will be eligible for a variance under this section until the Administrator, by regulation, determines that there are generally available air quality models and modeling techniques which are sufficiently accurate to allow reliable and competent implementation of the provisions of this section. Such regulations shall specify such models and modeling techniques. Upon petition of a State, the Administrator shall determine whether or not such models and techniques are generally available, and if he finds in the affirmative, he shall specify such models and techniques.

"(e) For the purposes of this Act, the conditions contained in subsection (c)(2) shall be treated as requirements of the applicable implementation plan. If the Administrator determines that a source to which a variance is issued under this section is in violation of any condition of subsection (c)(2), he shall—

"(1) enforce such condition under section 113;

"(2) give notice of noncompliance and commence action under section 122; or

"(3) take any appropriate combination of such action."

(2) Section 113(b)(4) of such Act is amended by inserting "162(c)(2)" before "121."

#### CONFORMING AMENDMENTS

Page 27, line 17, after "facilities," insert "a variance under section 162 (relating to class II increment variances)."

Page 27, line 18, after "suspension," insert "variance."

Page 28, line 11, strike out "or."

Page 28, line 12, insert "or variances under section 162 (relating to class II increment variances)" after "indirect sources".

Page 33, after line 16, insert: "(iv) any source which has received a variance under section 162 and is not in compliance with any emission limitations pursuant to such variance."

May 25, 1977

GRATIFIED BY ENDORSEMENT OF  
H.R. 6111

## HON. BALTASAR CORRADA

OF PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. CORRADA. Mr. Speaker, I am gratified by the House's overwhelming endorsement of H.R. 6111, which amends the Juvenile Justice and Delinquency Prevention Act. As a member of the Subcommittee on Economic Opportunity, and as an individual deeply concerned with the problems which affect our Nation's youth, I am pleased by my colleagues' sense of commitment.

In my congressional district we have a much higher percentage of youths in comparison with the mainland States. Out of a population of 2.7 million—1970 census—1.3 million were youths below the age of 20—48 percent of the total population. Last year, of the 27,527 type I crimes—murder, voluntary homicide, rape, theft, assault, and so forth—10,974 were committed by minors. The problems of our youth are intrinsically interrelated to other societal problems, such as drug abuse, unemployment—20 percent, overpopulation—1,000 persons per square mile, poverty—60 percent below Orshansky poverty level, dropout rate in school—20 percent and so forth. It is facing these statistics that we welcome the initiative taken by the Federal Government in providing assistance to cope with this pressing and expanding problem. The Puerto Rico Crime Commission currently receives \$776,000 from LEAA under the act, which has enabled us to lay a solid foundation for our local juvenile justice and juvenile delinquency programs.

As I stated in my supplemental views in the committee report, I would have wished to see a higher authorization level for next year, as opposed to a \$25 million reduction. When we consider the scope of the problem, the limited participation level up to now, our easing the deinstitutionalization requirement to bring in current nonparticipants, and the addition of new special emphasis categories, we should strive for the highest funding level possible. I sincerely hope that the Appropriations Committee will concur with these views and opt for a substantially higher appropriation level.

With respect to the Runaway Youth Act, I was pleased that the Subcommittee on Economic Opportunity as well as the full Education and Labor Committee endorsed my suggestion to increase the authorization level from the current \$10 million to \$25 million. Runaways should have alternatives to turn to before they get caught up in the criminal justice system. Since our current authorization level allows us to only serve 4.6 percent of our Nation's true runaways, we still have a long way to go.

Although the bill provides for the possibility of an eventual transfer of the Runaway Youth Act from HEW to ACTION, I hope that those sore spots

## EXTENSIONS OF REMARKS

which prompted this initiative, can be ironed out. HEW is not too large an agency to administer this program, but on the contrary, is the agency entrusted with administering complementary youth programs, and thus possesses a special expertise in the field. HEW can effectively deal with those deep rooted problems which prompt a youngster to run away from home, namely poverty, drug abuse, child abuse, mental health, etc. The fact that the current program as administered by HEW utilizes the services of numerous volunteers does not mean that we should carry this to a logical progression and turn the whole program into a volunteer program. The problems of runaways have to be addressed by a cadre of service persons who have a long range perspective and commitment, which would be lacking if the program were transferred. If there are current deficiencies in the program, let us take a close look at its operation. Let us evaluate it. We have no guarantee that ACTION would be successful in those areas where some have faulted HEW. An eventual transfer decision should thus be carefully weighed and warranted only by having proper documentation of such a need.

Finally, I would like to thank, as I have done on several occasions, the subcommittee chairman, Mr. ANDREWS, and the full committee chairman, Mr. PERKINS, for their commitment to hold prompt hearings on the subject of school violence and school vandalism, which plague our Nation. The May 15 issue of *El Mundo*, the largest Spanish daily in Puerto Rico, ran headlines which indicate the public concern: "Vandalism in the Schools: A Problem Which Demands a Solution in Puerto Rico." I look forward to these hearings, with the hope that after the necessary legislative record, we can draft some form of Federal legislation aimed at dealing with the problem.

### AN ANSWER TO THE MYSTERY MEMO ON CLEAN AIR

## HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. ROGERS. Mr. Speaker, there has been some discussion about the support of the Office of Management and Budget for the auto emissions which the Commerce Committee adopted in the Clean Air Act Amendments of 1977.

Those backing the Dingell-Broyhill have incorporated an undated memorandum to which they attach a great weight in their argument for weakening the automobile standards.

I requested and received a response by the OMB's Associate Director for Natural Resources, Energy, and Science, on this memo and it backs up what we have been saying right along—that the memo was an early draft which underestimated levels of carbon monoxide in urban areas and overestimated the reduction of carbon monoxide attributable to the use of

the three-way catalyst and the associated electronically controlled fuel systems.

I would like to insert into the RECORD this letter. If those who back the Dingell-Broyhill placed such weight on the memo, then there is good cause to reconsider.

OFFICE OF MANAGEMENT AND BUDGET,  
Washington, D.C., May 23, 1977.

Hon. PAUL G. ROGERS,  
Chairman, Subcommittee on Health and the Environment of the Committee on Interstate and Foreign Commerce, Rayburn House Office Building, Room 2415, Washington, D.C.

DEAR CHAIRMAN ROGERS: I am responding to your request that I comment on the preliminary, undated OMB staff memorandum on automotive emissions.

First, I would like to emphasize that the preliminary OMB staff recommendation is identical to the Administration's position with respect to the ultimate level for hydrocarbons and oxides of nitrogen.

The remaining analyses contained in the staff memorandum were based upon preliminary data which has since been revised by the Environmental Protection Agency, the Federal Energy Administration and the Department of Transportation.

Use of the preliminary data resulted in:

An overestimate of the reduction in the carbon monoxide content of the ambient air attributable to the use of the three way catalyst and associated electronically controlled fuel system.

An underestimate of current carbon monoxide (CO) concentrations in crowded urban areas. This underestimate fails to include allowance for ambient CO violations that may occur but are unreported because of the absence of air quality monitors.

Thus the staff analysis underestimated the extent of the current ambient CO problem, and overestimated the improvement achievable by imposition of a 9 grams per mile CO standard.

The Office of Management and Budget participated in the recently completed FEA, DOT, EPA Study on auto emissions and agrees with the accuracy of the conclusions presented therein. The Office of Management and Budget also participated in the development of the Administration's position and supports it in its entirety.

Sincerely,

ELIOT CUTLER,  
Associate Director for  
Natural Resources, Energy and Science.

### COMPASSION FOR ALL

## HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. RANGEL. Mr. Speaker, a dear friend of mine has been named as President Carter's choice to serve as Chairman of the Equal Employment Opportunity Commission. Eleanor Holmes Norton has served for the past 7 years as chairman of the New York City Commission on Human Rights. During this time she diligently and persistently attempted to alleviate employment discrimination and to guarantee the civil rights of all people.

In the 1960's Mrs. Norton joined the civil rights movement legal battle. As a staff attorney for the American Civil

16711

Liberties Union she assisted in the preparation of briefs which were part of Mohammed Ali's legal efforts to regain his boxing crown and she was also a part of the team of lawyers who argued that State Senator Julian Bond was unconstitutionally denied his seat in the Georgia Legislature.

Mrs. Norton has taken up many other causes which at times have made her quite unpopular within her own community. As a vigorous advocate of the free speech doctrine found in the Constitution, she has defended Gov. George Wallace, the National States Rights Party, as well as individual members of the Ku Klux Klan. I believe that this, Mrs. Norton vigorous pursuit of justice irrespective of how totally obnoxious she personally finds the client, illustrates that she will make a most impartial and effective Chairman.

To this end I would like to share with my colleagues an article which appeared in the Thursday, May 19 issue of the New York Times. The article describes the many achievements and ideas of this most interesting woman. I think my colleagues will find it very informative.

The article follows:

#### FIERY PASSION AND CONCERN

(By Charlayne Hunter-Gault)

Edward Norton remembers that the first time he met Eleanor Holmes he was so impressed by her "extraordinary energy and intelligence" that he began to refer to her as "La Pasionaria," the fiery woman who galvanized the Spanish loyalists in their fight against Franco.

He is biased—they were married four months later. That was 12 years ago.

But that is the type of reaction many people have to Mrs. Norton, who was announced yesterday as President Carter's choice to head the Equal Employment Opportunity Commission.

Invariably, when associates and others describe the wispy, unpretentious lawyer, who for the past seven years has headed the New York City Commission on Human Rights, it is in strong terms.

They refer to her "persistence and drive" and her "passionate concern" in matters of employment discrimination and civil rights.

That the impressions do not vary is probably a result of a pattern of consistency established early in her life. She was born June 13, 1937, into a secure black professional family in Washington, D.C. Her father was a lawyer and her mother a teacher.

Her upbringing in a segregated town ("I was a member of one of the last officially segregated school classes in the District") seemed to reinforce her sense of self, as well as help shape her life's direction.

"You were reminded from the time you were a little child that you were in a segregated system and that you had to be smarter than anybody else," she recalled.

It was "out of the impulses of the civil rights movement," Mrs. Norton said, that after graduating from Antioch College, she entered the Yale Law School at the same time she was pursuing a master's degree at Yale in American Studies.

She not only experienced the movement as a demonstrator but also, as one of the few black law students of the early 1960's, she became involved in civil rights legal battles.

In 1965, Mrs. Norton joined the staff of the American Civil Liberties Union because of her interest in constitutional law.

She helped prepare briefs for both Muhammad Ali, who had had his heavyweight boxing title taken from him, and State Senator Julian Bond, whom the Georgia legislature at first refused to seat.

But she also found herself on separate occasions defending Gov. George C. Wallace of Alabama, the National States Right Party and individual Ku Klux Klansmen.

Mrs. Norton, who also served as assistant to Mayor John V. Lindsay, enjoys the reputation of having one of the best run agencies in New York City.

One of her major achievement, in a city where its own money is tight, was her success in attracting Federal funds for innovative programs in civil rights issues such as equitable alternatives to layoffs, affirmative action in the Civil Service system and a neighborhood stabilization program aimed at stemming middle-class flight from the city.

In a revamping of her agency, Mrs. Norton stressed early settlement of cases, which partly eliminated a backlog there.

Yesterday, Mrs. Norton, a strong feminist who said she would like to be referred to as "Chair" in her new position, was happy about the appointment because it "represents a logical progression in my own professional commitment to civil rights."

Many of the widely known problems of the commission, such as internal division and low morale, which have resulted in part from a backlog of more than 130,000 cases, were attributable, Mrs. Norton said, to the agency's "own successes."

"Initially, this agency was created to fight job discrimination," she said, "And as the first in the history of this country to do so, it inspired such confidence in its remedy that people flooded to it even before it had enforcement power."

"As a result, while it correctly concentrated on developing a substantive body of civil rights law, it got bogged down by not shifting soon enough to better management techniques to deliver the service."

Mrs. Norton's husband, who is also a lawyer, has already joined the Carter Administration as Deputy General Counsel at the Department of Housing and Urban Development.

They live in Harlem with their two children, Katherine, 6 and Johnnie, 5. Mrs. Norton herself has two younger sisters.

Mrs. Norton, who stays thin by doing her own version of the Royal Canadian Air Force exercises, said: "One of the things that happens when you have small children and a high-powered job is that the children end up being your spare time."

#### DINGELL-BROYHILL SUBSTITUTE AMENDMENT TO H.R. 6161

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mr. DINGELL. Mr. Speaker, on behalf of Representative JAMES BROYHILL and myself, I am pleased to provide our colleagues on the House with a section-by-section summary of the substitute amendment we will offer to title II of the Clean Air Act Amendments of 1977, H.R. 6161, when the bill is taken up by the House this week.

We have inserted in the amendment section of the Record today, our substitute which contains 21 sections. Our amendment has been made in order by the House Rules Committee to be offered as a substitute to title II.

SECTION XV SECTION SUMMARY: DINGELL-BROYHILL MOBILE SOURCE EMISSION CONTROL SUBSTITUTE AMENDMENT TO BE OFFERED TO TITLE II OF CLEAN AIR ACT AMENDMENTS H.R. 6161

SECTION 201—LIMITATION ON INDIRECT SOURCE REVIEW AUTHORITY

This provision is identical to the provision contained in the Committee bill and allows additional time for the States before they are required to implement programs for control of pollution from facilities (indirect sources such as shopping centers and sports arenas) which attract significant amounts of traffic.

SECTION 202—EXTENSION OF TRANSPORTATION CONTROL COMPLIANCE DATES

This provision is identical to the provision contained in the Committee bill and allows a more realistic time frame within which cities and metropolitan areas must implement transportation control measures (such as preferential carpool/bus lanes, toll bridges, public transportation, etc.)

SECTION 203—LIGHT-DUTY MOTOR VEHICLE EMISSIONS

The schedule of emission standards in this section is similar to the Dingell-Broyhill (Train-EPA) provision which was overwhelmingly adopted by the House on September 15, 1976, by a vote of 224 to 169, and which was previously introduced in the 95th Congress, as H.R. 4444 with 121 cosponsors. The standards in this section reflect the agreement reached by Dingell-Broyhill, Senators Riegle and Griffin, and Mr. Leonard Woodcock of the United Auto Workers.

This agreement provides that automobiles manufactured during model years 1978 and 1979 meet the same emissions standards applicable for model year 1977, that is: 1.5 grams per mile hydrocarbons, 15.0 gpm carbon monoxide, and 2.0 gpm oxides of nitrogen. For 1980 and subsequent model years the hydrocarbon standard requires a full 90 percent reduction from the levels emitted in model year 1970, or .41 gpm hydrocarbons. For 1980 and subsequent model years the carbon monoxide standards is 9.0 gpm. For 1980 and 1981 the oxides of nitrogen standard is 2.0 gpm.

For 1982 and subsequent model years the NOx standard is 1.0 gpm which the EPA Administrator is permitted to revise up to 2.0 gpm for periods of two or more model years if he determines in a suspension proceeding that such standard should be revised due to (1) the lack of available, practicable, emission control technology to meet such standard during such period, (2) the cost of compliance with such standard, and (3) the impact of such standard on motor vehicle fuel consumption. No such revision may be made if the Administrator determines that it would endanger public health.

Additionally, the Administrator may waive the standard of 1.0 gpm NOx up to 2.0 gpm during any period of four or more model years beginning with the model year 1982 if he determines that a waiver is necessary to permit the use of an innovative power train technology that can produce a substantial energy saving compared to conventional power trains. No waiver may be granted if the Administrator determines it would endanger public health.

## Auto Emissions Schedule, Dingell-Broyhill/Fraser-Woodcock (UAW)

|                     | HC (gpm) | CO (gpm) | NOx (gpm) |
|---------------------|----------|----------|-----------|
| 1978-79             | 1.5      | 15.0     | 2.0       |
| 1980-81             | .41      | 9.0      | 2.0       |
| 1982 and thereafter | .41      | 9.0      | 1.0-2.0   |

<sup>1</sup>Suspension or waiver for NOx based on EPA Administrator decision, if public health would not be endangered.

This auto emission schedule provides certainty in the industry and job certainty. It is environmentally balanced with the energy conservation demands of the nation and provides savings for consumers while improving air quality and protecting public health.

#### SECTION 204—EMISSION STANDARDS FOR HEAVY DUTY VEHICLES OR ENGINES OR CERTAIN OTHER VEHICLES OR ENGINES (SUCH AS MOTORCYCLES)

This provision is identical to the provision contained in the Committee bill and places into statutory law, emission standards similar to those required for automobiles.

#### SECTION 205—AIRCRAFT EMISSION STANDARDS

This provision is identical to the provision contained in the Committee bill and authorizes the Secretary of Transportation to disapprove any aircraft emission standard required by the Administrator, if he finds that the standard would create a hazard to aircraft safety.

#### SECTION 206—ASSURANCE OF PROTECTION OF PUBLIC HEALTH AND SAFETY

This provision is identical to the provision contained in the Committee bill and requires that automobile manufacturers show, as a condition of obtaining certification of their vehicles or engines, that emission control systems that are used to meet emission standards will not produce other pollutants in concentrations which will create an unreasonable risk to health.

#### SECTION 207—TEST PROCEDURES FOR MEASURING EVAPORATIVE EMISSIONS

This provision is identical to the provision contained in the Committee bill and requires that EPA revise its test procedures so that the test will measure all evaporative emissions from an automobile.

#### SECTION 208—VEHICLE INSPECTION AND MAINTENANCE

This section requires an annual emission inspection of light duty vehicles which are registered to persons who live or maintain their principal place of business in an area where transportation control measures were required as of June 30, 1975. This provision contains broader authorities to EPA than does the Committee bill, but also allows greater flexibility to the Administrator to structure an inspection program that is workable, effective, and requires only necessary adjustments to vehicles. As in the Committee bill these programs shall be implemented not later than two years after the date of enactment of this Act.

#### SECTION 209—WARRANTIES AND MOTOR VEHICLE PARTS CERTIFICATION

This provision, which the automotive aftermarket, small business parts industry, describes as critical to their continued existence as a viable force in the free marketplace, would do the following: (It is contained in H.R. 4444, Dingell-Broyhill)

1. Reduce the current federally mandated performance warranty from 5 years or 50,000 miles to 18 months or 18,000 miles.
2. Provide for a self-certification program under regulations to be promulgated by EPA, through which the independent parts manufacturer or rebuilder may continue to serve its traditional role in the automotive aftermarket.

3. Require the motor vehicle manufacturer to prominently disclose in its maintenance instructions "notice that maintenance, replacement, or repair of the emission control devices and systems may be performed by any automotive repair establishment or individual using any automotive parts which has been certified . . ."

4. Provide a meaningful and rational definition of the term "emission control device or system" as a catalytic converter, thermal reactor, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions, excluding those vehicle components which were in general use prior to model year 1968.

#### SECTION 210—PARTS STANDARDS: PREEMPTION OF STATE LAW

This section, from H.R. 4444, Dingell-Broyhill, provides that if the Federal government establishes a program to certify parts which may be used in a vehicle so as not to result in a failure of the vehicle to meet applicable emission standards, then the States, except California, are preempted from establishing their own certification programs.

#### SECTION 211—PROTECTION OF COMPETITION; ASSURANCE OF CONSUMER FREEDOM OF CHOICE

This section provides that if the Attorney General finds that the auto manufacturer's practices in regard to its emission control warranty are resulting in unfair or anticompetitive conditions, he shall so notify the Administrator of EPA. The Administrator is then authorized to promulgate such rules as are necessary to minimize or eliminate those conditions and protect the consumer's freedom of choice.

#### SECTION 212—ANTI-TAMPERING PROVISION

This section extends the existing prohibition against knowing removal of or tampering with automotive emission controls to cover independent repair and service businesses, and selling, leasing, trading, and fleet operations. A civil penalty of up to \$2500 per vehicle is established for violations of this prohibition.

#### SECTION 213—COST OF VAPOR RECOVERY SYSTEMS TO BE BORNE BY OWNER OF RETAIL OUTLET

The EPA has promulgated regulations which require the installation of costly vapor recovery devices at retail gasoline stations in certain areas. The purpose of these requirements is to catch the fumes which come out of the tank while gas is being put into a car. This section is identical to the Committee bill and provides that the costs of vapor recovery systems would be borne by the owner of storage tanks and pumps and not by the franchise retailer.

#### SECTION 214—HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

This section, which includes the same provision approved by the House and adopted by the Conference, and as contained in H.R. 4444, Dingell-Broyhill, exempts the adjustments of emission control systems of high altitude vehicles from the anti-tampering provision of existing law, if the adjustment does not adversely affect emission performance. The manufacturer is required to submit to the Administrator adjustment instructions.

In addition, this section adds a new provision which authorizes EPA to conduct a

new rulemaking proceeding to determine the most appropriate method of implementing the Act's mobile source emission requirements for model year 1978 and thereafter with respect to light duty vehicles intended for principal use in high altitude areas. EPA is directed to consider the economic impact of any such regulation upon consumers, franchised dealers and the manufacturers, the state of the art of emission control technology, and the probable impact of such regulation on air quality in the affected areas.

#### SECTION 215—FILL PIPE STANDARDS

This section is identical to the provisions contained in the Committee bill and authorizes the Administrator to prescribe fill pipe standards for new motor vehicles to assure effective connection between the fill pipe and any certified vapor recovery system.

#### SECTION 216—ONBOARD HYDROCARBON TECHNOLOGY

This section is identical to the provision contained in the Committee bill and requires the Administrator to consider the feasibility of prescribing standards for new motor vehicles to require the use of certain technologies which would minimize vapor emissions. If the Administrator makes certain findings concerning costs, fuel economy, feasibility, etc., he is directed to promulgate such standards.

#### SECTION 217—CARBON MONOXIDE INTRUSION INTO SUSTAINED USE VEHICLES

This section is identical to the provisions contained in the Committee bill and requires the Administrator, in cooperation with the Secretary of Transportation, to conduct a study to determine if carbon monoxide gas is intruding in vehicles such as schoolbuses, taxis, and police cruisers.

#### SECTION 218—IMPLEMENTATION OF MOTOR VEHICLE EMISSION WARRANTIES

This section provides that it is a prohibited act for automobile manufacturers to fail or refuse to comply with the emission control warranty.

#### SECTION 219—TESTING OF FUELS AND FUEL ADDITIVES

This provision is identical to the provision contained in the Committee bill and requires the testing and the submission of test results as a prior condition of registration for any new fuel or fuel additive.

#### SECTION 220—TESTING BY SMALL MANUFACTURERS

This section is identical to the provision contained in the Committee bill and exempts motor vehicle manufacturers with projected annual U.S. sales of 300 or less from the requirement for 50,000 mile certification testing of such vehicles.

#### SECTION 221—CALIFORNIA WAIVER

This section is identical to the provision contained in the Committee bill and allows the State of California to adopt its own auto emission standards if such standards will be, in the aggregate, at least as protective of public health and welfare as applicable Federal standards.

### SOLAR AND GEOTHERMAL POWER IN SOUTHERN CALIFORNIA

HON. SHIRLEY N. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mrs. PETTIS. Mr. Speaker, since first coming to Congress, I have long advocated the development and use of alter-

nate sources of energy, particularly solar and geothermal. Realizing the long-range potential of these energy sources, I have actively worked in the House for Federal assistance necessary to spur research and development. Hopefully, with the approval of Congress, the world's first 10-1 megawatt pilot solar electric powerplant, to be located in the Daggett-Barstow area of California, can begin on schedule.

An equally exciting energy project lies further south in the lush, agricultural region of southern California's Imperial Valley, where it has been determined lies enough geothermal energy to produce electricity to light 10 cities the size of San Francisco for 30 years.

Along these lines, I have been working with the Bureau of Reclamation on a project to combine Salton Sea desalinization—a local problem—with the development of geothermal power for the entire Southwest.

I call the following articles to my colleagues' attention, Mr. Speaker, because they underscore a very important point—we cannot afford to be near-sighted in our approach to the energy crisis. If we ignore the long-range potential of solar and geothermal resources we will undoubtedly fail to solve our energy problems.

It is my hope that this Congress will look beyond the next election and put its support behind those projects which initially may not produce tangible results, but which in the future will insure this country's energy independence.

The articles follow:

[From the San Bernardino (Calif.) Sun-Telegram, May 15, 1977]

#### ENERGY ALTERNATIVES

Efforts to establish a \$110 million solar power electric plant at Daggett cleared their initial hurdle last week when the House Science and Technology Committee authorized \$41 million for the project in the upcoming federal fiscal year's budget.

However, as Rep. Shirley N. Pettis, R-Loma Linda, pointed out, the program must face a "long drawn-out" congressional fight before final approval is secured.

This process may have been made more difficult because of President Jimmy Carter's decision to emphasize development of residential solar heating projects, rather than solar electrical generating plants.

Rep. Pettis disagrees with the President's approach. She said, "The President felt that short-term solar heating systems were more important than long-term solar electrical generation. I just don't feel we can afford to be so nearsighted in our approach to the energy crisis."

We agree with her. In our electricity-oriented society, much fossil fuel is being burned to generate electrical power. There are almost as many estimates of the world's fossil fuel resources as there are experts. But one thing is certain: fossil fuels are a non-renewable resource that some day will be exhausted.

Using solar energy for residential heating is an idea that has merit because it is a means to conserve petroleum fuels, but eventually the nation is going to have to develop energy sources that are alternatives to petroleum. The sooner that is done, the better.

[From the Christian Science Monitor, May 19, 1977]

#### GEOTHERMAL ENERGY ENVISIONED IN CALIFORNIA

(By Judith Frutiger)

LOS ANGELES.—In the rich farmland of southern California's Imperial Valley, a blueprint is emerging for the large-scale commercial generation of electricity from underground heat.

The plan is based on a two-year study, which concluded there is enough geothermal energy in the valley's scalding subterranean brine wells to produce enough electricity to light 10 cities the size of San Francisco for 30 years—with present and available technology.

The \$364,000 study was prepared for Imperial County government officials by scientists from the University of California at Riverside (UCR) and the California Institute of Technology. It was funded by the National Science Foundation and supervised by the federal Energy Resource and Development Administration (ERDA).

"It . . . should serve as an important pilot test to see whether geothermal energy will be an important substitute for coal and oil," says project coordinator Stahri Edmunds, director of UCR's Dry Lands Research Institute.

As a part of the project, ERDA announced recently that it has approved a \$9 million loan guaranty to Republic Geothermal, Inc., of Santa Fe Springs, California—the first such guaranty for a commercial geothermal project. The company plans to drill and develop 11 new geothermal production wells and four reinjection wells in the East Mesa area of the Imperial Valley.

The firm has been conducting exploratory operations there since January, 1974.

#### LOAN APPLICATIONS

The loan was authorized by the Geothermal Research Development and Demonstration Act of 1974. A major provision of that act was to speed the commercial development and use of geothermal energy in an environmentally acceptable manner.

ERDA is also evaluating six other applications for similar loan guarantees, in Utah, New Mexico, Nevada, and California, according to an agency spokesman.

The Imperial Valley plan is to tap the energy through a network of wells. The first 10 megawatt plant is scheduled for completion in early 1978, with 500- and 1,000-megawatt plants to follow by 1985. Public hearings on the project are scheduled to begin June 9 in Calexico, California, June 23 and July 5 in El Centro, California.

If the plan is successful, project officials expect geothermally produced electricity to become part of the Southwest's regional power grid, serving private and commercial consumers in California, Arizona, and Nevada.

Scientists and engineers have long considered the Imperial Valley—the Salton Sea area of southern California—one of the potentially richest and most strategically located U.S. geophysical resources. The valley lies near one of the largest population concentrations in the country, the energy-starved Los Angeles-San Diego megalopolis, which has a ravenous appetite for electricity but a dearth of power-generating resources.

Geothermal energy exists in three types of formations: hydrothermal, meaning either steam or hot water; hot dry rock; and geopressured, meaning hot water under tremendous pressure located at great depths. The locations of these formations have been carefully mapped by the U.S. Geological Survey. Hydrothermal reservoirs are prevalent in the Western states, but only 5 percent of them are steam.

#### PROBLEM WITH BRINE

The geothermal resources of the Imperial Valley result in large measure from its location along the boundary between two geotectonic

plates, the North American and the Pacific. The plate boundary is an area known as the East Pacific Rise, which extends up the Gulf of California and runs inland to the Mexican and Imperial Valleys.

The water that collects in this formation generally runs off mountains around the valleys and seeps in from the Colorado River.

But the brine of the Salton Sea has also presented some stringent chemical and physical conditions for engineers. The reason: both its temperature and salinity are extreme.

In some areas, for example, the salt content is 10 times greater than seawater. At 550 degrees F. the brine is highly corrosive.

To correct corrosion problems, according to Dr. Jeffrey Weigand, geothermal administrator for Imperial County, project scientists and engineers have developed materials resistant to corrosion and erosion.

Exploration of geothermal sites is also under way in Chile, China, El Salvador, Ethiopia, Guadeloupe, Hungary, Indonesia, Kenya, Nicaragua, the Philippines, Taiwan, Turkey, the Soviet Union, and Zaire.

[From the Riverside (Calif.) Press-Enterprise, May 18, 1977]

#### BURIED TREASURE

The more that is learned about the geothermal fields of the Imperial Valley, the more attractive they become as a potential source of energy for Southern California—and the more important it becomes to find ways to tap them.

Deep beneath the shores of the Salton Sea and desert sands, a UCR-Caltech research team has concluded, is enough geothermal energy to meet all of Riverside County's energy needs several times over by the year 2020, using only scientific knowledge already in existence.

And if new ways to use the energy locked up in the subterranean pools of superheated brine are found, the researchers found, they could meet the equivalent of the county's current energy needs for six centuries.

That is an impressive energy resource by any definition, especially when one considers that the techniques developed for using geothermal energy in this region could be applied to similar areas worldwide. The key to geothermal energy lies in greater support for the research and development needed to put it to use.

The benefits that could be at stake in an era of energy scarcity hardly need be pointed out, and argue strongly for devoting more effort to unearthing the powerhouse buried in Southern California's deserts.

#### VOTING EARLY AND OFTEN

#### HON. MARJORIE S. HOLT

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1977

Mrs. HOLT. Mr. Speaker, a seasoned veteran of the political wars of Baltimore City has offered the keenest possible insight into the election "reform" proposal that would allow voting without prior registration.

Said City Councilman Dominic Mimi DiPietro:

They are enticing me to become a criminal; they are enticing me to be a thief.

His reaction to the proposed Federal election legislation was reported in an article in the Baltimore Sun May 17.

Mr. DiPietro knows almost all there is to know about politics in an urban environment. He knows what would happen if election officials did not have reliable lists of registered voters on election day.

He knows that political organizations would be sorely tempted to implement the old-time recommendation:

Vote early and often.

State election laws which require prior registration of voters are designed to protect the integrity of our elections against fraud. These laws were enacted to correct abuses that actually occurred, sometimes in the most rampant fashion.

The purpose of the proposed Federal legislation is to encourage more public participation in elections, which is a very worthwhile goal. I would remind the House that the States have already taken very practical steps to encourage voter participation, including special registrations, traveling registrars, and even postal registration in the case of my own district.

But broader public participation will be of no value if it is accompanied by widespread fraud, which is what the proposed Federal legislation appears to promise. If the public confidence in the election process is undermined, the very foundation of our constitutional republic will be shaken.

For the consideration of the House, I offer the following editorial published recently in the Baltimore Sun and another published May 20 in the Washington Post:

#### VOTING EARLY AND OFTEN

A Senate committee approved last week a bill to allow election day registration of voters. Earlier a House committee had approved a similar bill. We support the proposition that something needs to be done to increase citizen participation in elections in this country. In recent years even presidential elections, which tend to produce the largest turnouts, have attracted only a little over half the potential voters.

Election day registration will certainly increase participation, as experience in four states has shown. But there are problems with these bills. It needs to be recalled, as supporters of this approach call for it as a "reform," that pre-registration was, itself, a reform, adopted when the Nineteenth Century's traditional election day registration practice led to tombstone voting, multiple voting and other such unsavory behavior ("Vote early and often.") The potentiality of such reforms. Experts in the Criminal Division of the Justice Department say that the new law would "create substantial enforcement problems" for U.S. attorneys.

So the House, which may take up the bill next week, should devote its attention to safeguarding against fraud. The committee's safeguards should be subjected to strict scrutiny. One change not related to fraud safeguards that should be made in the bill is to include primary elections. Primaries are as important as general elections in most states. In many states they are more important, and turnout in primaries is even worse than in general elections.

But fraud protection is the major point. All too many Americans do not vote, not because they lack faith in politics and politicians. If this administration makes election day a fraud, in the name of increasing participation, it is entirely possible that turnout will decrease.

#### INSTANT VOTERS

It's not clear whom President Carter had in mind when he told the United Auto Workers the other day that "some powerful special interests are trying to kill the electoral reform bill, because they don't want working people to register and to vote." That formulation may serve the President's interest—

and perhaps his party's—in bringing about instant, election-day voter registration. But one need not be a "special interest" in order to see grave defects in the bill. To sum up our own view in Mr. Carter's terms, we do want working people and others to register and vote—but not necessarily on the same day.

The bill's wrongheadedness starts with its premise that pre-registration is a major barrier to voting. That used to be true. But registration rules and procedures have been greatly eased since 1960—and the percentage of voting-age Americans who turn out in presidential elections has been dropping anyway. The primary causes of the decline are demographic changes, public disenchantment and apathy—forces that can't be countered by a law. While simplifying pre-registration—by using a postcard system, for example—is a good idea in itself, it does not necessarily lead to larger turnouts at the polls. Even abolishing pre-registration may affect the turnout less than the nature of a given campaign. Last November, turnouts were a few percentage points above 1972 levels in the four states with instant registration. But they were also higher in most Southern states, where pre-registration is still required.

It's generally assumed that larger turnouts would help the Democrats, which is why partisan lines are drawn so sharply on this bill. The basic question, though, is whether democracy as well as Democrats would be well served by making election-day registration available in every precinct in the land. An impressive array of state and local election officials, among others, say no. They predict widespread fraud if they can no longer obtain signature cards and verify addresses of all potential voters before election day. Requiring voters to show IDs and sign an affidavit at the polling place may deter fraud in Minnesota or other states where elections are generally scandal-free. In areas with more turbulent traditions, though, stronger precautions have proven desirable—as Rhode Island's secretary of state said in Senate testimony excerpted for the RECORD on this page.

The administration's bill presents other problems, too. It would compel most states to rewrite their election laws in short order, and to train many new precinct workers to process instant registrations. It would trample on the tradition of state governance of state and local elections. States would have to either extend instant registration across the board or suffer the cost and confusion of running elections under two different sets of rules. Finally, the federal grants for administration and "voter outreach" strike us as virtually impossible to police without bureaucratic controls so elaborate that the states will rebel and the Federal Election Commission will collapse.

All in all, the more we study this proposal, the worse it looks. We have no quarrel with instant registration, or no registration where the integrity of elections is not jeopardized thereby. But the states ought to make that judgment for themselves. We see no current abuses so flagrant, and no potential benefits so great, as to justify the dangers this program would open up and the disruption it would cause. If the Democrats want to get more voters to the polls, they should try to do so in the time-honored way: through good political organization, a sound choice of issues, strong candidates and vigorous campaigns.

#### ENGLAND'S SICKNESS

#### HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. BONKER. Mr. Speaker, I would like to draw the attention of the House

to an article which appeared in the Sunday, May 14, 1977, edition of the Washington Post. This is particularly noteworthy because it is penned by a brilliant young Englishman, Mr. Peter Jay, who was recently appointed as Britain's next Ambassador to the United States.

As Mr. Jay is an economist of repute, we would do well to examine closely what he has to say. If Mr. Jay's theories are right, the United States, as a free Western popular democracy, would do well to heed Mr. Jay's warnings about the economic pitfalls ahead.

Mr. Jay notes that our country is already beginning to "show unmistakable symptoms" of the "English sickness."

At the same time, I would also like to place on record the appreciation of many Members, both of the House and Senate, for the notable services of Sir Peter Ramsbotham, the outgoing Ambassador. Sir Peter has been a good friend of our country, and wherever he has traveled he has been liked and admired. We will be sorry to see him go but look forward with expectancy to the arrival of his successor.

The article follows:

[From the Washington Post, May 14, 1977]

#### ENGLAND'S SICKNESS

(By Peter Jay)

We in Britain are a confused and unhappy people. So are those of our fellows on the continent of Western Europe who have their wits about them. So, too, are our many friends in the United States who rightly see in the anguish of the United Kingdom the advanced stages of a disease that has already taken hold throughout Western Europe and that is beginning to show its unmistakable symptoms in the United States.

We are unhappy because the foundations of our prosperity seem to be eroding faster and faster and because we can neither find nor agree upon any sure remedy for this decay. We are confused because we do not clearly understand why all this is happening to us, whether it is due to the malefactions of subversive groups, the incompetence of governments, defects of national character, the rhythms of history, the luck of the draw or what.

The search for someone to blame adds to the confusion and the bitterness. Government and governed become more and more alienated from one another. The governors believe the governed to be irretrievably greedy, feckless, idle and recalcitrant, while the governed believe the governors to be stupid, corrupt, power-crazed and unrepresentative. Likewise, class is set against class, the middle classes denouncing the rapacity of the workers while the workers rail at the privileges and the hypocrisy of the better-off.

In Britain region is set against region, and separatism gains steady support in Ulster, in Scotland, in Wales and, by reaction, in England itself. Only the Labor Party can any longer claim a vestige of nationwide support, and even it could not get even 30 per cent of the potential electorate to support it in 1974; but for London and Bristol, the Labor Party would be virtually unrepresented from the whole of the south of England.

The fissures spread out in all directions like an ice fall: disintegration in slow motion. Labor unions, business management and financiers are locked in a triangle of mutual vituperation and incomprehension. Union leaders point to the lack of investment in productive industry. Industrialists complain that the capital markets and the banks do not support them because the financiers' time horizons are too short and their

understanding of industry is negligible. And the investors ask how they can be expected to put up capital when the unions preempt all, or more than all, the potential return on new plant and equipment.

Weak labor unions with low-paid members loudly support same-all-round ceilings on pay increases while their stronger brothers, in entrenched industrial positions with higher-paid workers, stoutly defend their "differentials" and angrily compare their lot with standards enjoyed by bloated capitalists, whom they still imagine—not always wrongly—to be living like a caricature of a 19th Century railway baron. The media criticize everyone and everything; almost everyone blames the media for the lack of national unanimity and commitment.

It is an unedifying spectacle and an unprofitable arrangement. Nor does it touch at any point on the true causes of the problem. These causes are deep-seated and general, embedded in the very organization of our society. They are also complex and abstract. There are no guilty men, but there are defective institutions.

The political and economic organization of modern liberal democracies is dedicated, above all, to the satisfaction of individual wants. How are we to establish what individuals want? By asking them. How are we to ensure that they get what they want, at least so far as possible? By letting them make the decisions. How do we arrange that? By letting them elect their governments and by letting them spend their money in a free competitive marketplace.

This engagingly simple political philosophy may indeed have been a useful antidote to the depredations practiced on mankind by authoritarian and paternalist regimes in the name of higher values. But, alas, it already has built into it the tension that lies at the root of our present troubles. For, as the Austrian economist Joseph Schumpeter pointed out, the marketplace for votes and the marketplace for goods operate according to vastly different and frequently incompatible criteria. When the domains of the economic and political marketplaces overlap—as they often do—they come into serious conflict.

The political arena is a marketplace in votes. Rival teams organize themselves to win a majority or at least a plurality of support so they can exercise power. The only cost of voting for one team is that you cannot vote for another. The teams naturally and inevitably seek to outbid each other by offering more of whatever they think the voters want. There is no mechanism that requires bids to be internally consistent or forces voters to balance more of one good against more of another.

The economic arena is—or at least supposedly starts out as—a marketplace in money. But here the individual chooses quite differently. He makes small decisions all the time instead of one big decision every few years. Each decision is marginal, to spend his next penny on a little more of this rather than a little more of that. He does not have to pledge all his income for the next few years to one of a short list of comprehensive packages.

The conflict between the different logics of political and economic choice is most clearly manifest in the relationship between unemployment and inflation. Since [John Maynard] Keynes, since the war, since the British *Employment Policy White Paper* of 1944, and since the American *Employment Act* of 1946, a pledge of full employment has been an indispensable ingredient in any bid for electoral victory.

After the experiences of the 1930s, almost every voter—or so all politicians have assumed—has regarded the avoidance of mass unemployment as an overriding political objective. After the writings of Keynes and even more after the simplified popularization of his writings and their endorsement by government, the politicians and the public

have also assumed that the means of securing high employment always lay at hand.

Whenever unemployment looked like it was rising to politically embarrassing levels, the response was to put more spending power into people's pockets, whether by cutting taxes, increasing government spending or easing credit conditions through monetary policy.

It was recognized in theory that one might go too far in this direction, overheat the economy and cause inflation. But it was not doubted that there was a safe zone in which something approaching full employment could be maintained without running risks of serious inflation.

The economic realities were unhappily different.

The truth is that in the short term—for the first year or two—demand management, the regulation of spending power, mainly affects the real volume of spending, output and therefore employment, while in the longer run it mainly affects the price level. The notion inherent in the popular understanding of Keynes—that an economy could be indefinitely underemployed through deficient demand without prices eventually being forced down sufficiently to clear markets, including the labor market—was a dangerous misunderstanding of the unhappy experiences of the 1930s.

Nonetheless, the belief was almost universal in British economic circles and increasingly predominant in American and European circles that, provided overheating of the economy was avoided (and with it "overfull employment"), budget deficits and the associated expansion of the money supply could be used more or less without limit to head off any incipient rise in unemployment.

At the same time, there were objective reasons why unemployment was likely to rise above the levels regarded as "full employment," even in the absence of any positively deflationary actions by government and the central bank. These were and are of two kinds, both barely recognized and little understood: the general imperfections of the labor market; and the operation of what is variously known as "free collective bargaining" and as "trade union monopoly bargaining."

Imperfections of the labor market include anything that keeps job seekers and vacancies from being instantly matched to one another. As the pattern of demand and the techniques of supply constantly evolve, different kinds of workers are required by different entrepreneurs in different places. It takes time to convert some workers from one role to another. Others can never be converted and have to be replaced by a new and differently trained generation.

The role of free collective bargaining may be regarded as a second and separate reason why conventional postwar full employment policies were incompatible with price stability—or indeed with a stable rate of inflation—or it can be seen as a special case of the first general reason. The latter way of putting it emphasizes the monopolistic character of collective bargaining by labor unions.

The effect of charging a monopoly price for labor must be to reduce "sales," that is, employment, below the market-clearing level. Some people will get paid more than they would under perfect competition in the labor market, but others will not get jobs at all.

The effect, therefore, of a widespread pattern of monopolistic bargaining in the labor market will be to increase the numbers unemployed—in other words, to raise the "natural" rate of unemployment. This, as has often been pointed out, is in itself a once-and-for-all effect. But like the once-and-for-all-effects of other labor market imperfections, it gives rise to an accelerating, eventually explosive rate of inflation when it is combined with a government commitment to

maintain by demand management a lower rate of unemployment than this new "natural" level."

As soon as unemployment begins to approach the higher "natural" rate, government rushes in with injections of additional spending power, whether by fiscal or monetary means. These monetary or fiscal injections initially increase demand and so check or reverse the rise in unemployment. But this creates an imbalance of supply and demand in the labor market. Either unemployment is now below the natural rate, or it is below the rate that is needed just to inhibit the further exercise of labor unions, monopoly bargaining power.

In consequence, the price of labor rises once again. If final prices are not raised to cover this, businesses close and unemployment rises once again. If prices do go up, consumers' incomes will buy less, the volume of sales falls, output falls and unemployment rises once again. Whereupon government is forced to intervene again with another injection of extra spending power.

Before long, consumers and pay bargain-ers—indeed, everyone involved in the economy—gets used to inflation. It becomes built into expectations, and so the stimulative effects of any given amount of governmental "reflation" are eroded. Governments then begin to increase the dose; there is no end to this process of trying to keep the actual inflation rate permanently ahead of constantly catching-up expectations until the stage of hyperinflation—and breakdown—is reached.

Surely, it will be said, Western democracy is not going to wreck itself on such absurd and obvious nonsense. Unfortunately, it probably will, at least on the eastern side of the Atlantic.

It takes more and more inflation (or bigger and bigger balance-of-payments deficits, which are in some circumstances an inflation substitute) to achieve—or, more often, to fail to achieve—any given employment level. This evidence has been overlooked because we have all been watching the ends of the seesaw go up and down, without seeing that the fulcrum on which the whole contraption rests is steadily rising.

Even if the danger is fully appreciated, it is far from clear that the right action will be possible. The logic of ballot-box choice enables us—indeed, almost forces us—to vote for full employment without thereby also voting for the means to achieve it, which must include a willingness to sell one's own labor at a market-clearing price. Even that would not be enough. Everyone else would have to be committed to such individual bargaining; and that would imply the end of collective bargaining; and therefore of unions in their main historic role.

It would further be necessary to vote for other measures that would reduce the "natural" level of unemployment until it coincided with our chosen definition of full employment. This could certainly include in Britain an end to subsidized municipal housing.

Thus, even though the mass of voters may dislike inflation more than they dislike unemployment, the logic of ballot-box choice may still give rise to inflationary policies. Voters can vote against inflation—or imagine they are voting against inflation—but actually to stop inflation they would have to vote against collective bargaining, housing subsidies, and the like. Even the statesman who fully perceives the nature of the dilemma is debarred from campaigning accordingly. He knows—or thinks he knows—that this would be the road to political extinction, which, as he will say, solves nothing.

Likewise, the fully intelligent citizen is debarred from voting for an option that no party puts forward. Even if the fully perceptive statesman and the fully intelligent voter could somehow establish contact, it is still not certain that it would be rational

for the voter to support the statesman. The voter may fear the certainty of a deep and prolonged recession for three or four years more than he fears the eventual crash to which he knows traditional policies must one day lead.

So we reach the depressing conclusion that the operation of free democracy appears to force governments into positions (the commitment to full employment) that prevent them from taking steps (fiscal and monetary restraint) that are necessary to arrest the menace (accelerating inflation) that threatens to undermine the condition (stable prosperity) on which political stability and therefore liberal democracy depend. In other words, democracy has itself by the tail and is eating itself up fast.

There is nothing inevitable, in the absolute sense, about a process that consists of human actions. We could all decide to travel a different route; but that is an extremely difficult thing for people in groups of many millions to do in the absence of a system that reconciles public with private goods, that harmonizes the logic of political choice with the logic of economic choice.

### DEEP SEABED HARD MINERALS ACT

**HON. JOHN M. MURPHY**

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1977

Mr. MURPHY of New York. Mr. Speaker, on February 9, 1977, Congressman JOHN BREAUX and I introduced H.R. 3350, a bill to promote the orderly development of manganese nodule mining on the deep seabed. Since the time we introduced that bill, our Subcommittee on Oceanography has conducted the most comprehensive and extensive hearings to date on this most important issue. Last Friday, the subcommittee concluded its seventh and final hearing prior to mark-up on the bill.

U.S. companies presently have the technology to mine for manganese nodules which are found in abundance lying on the ocean floor around the world. Our companies have a clear lead in technology and would be proceeding to develop mining areas if it were not for the ongoing Law of the Sea negotiations. These negotiations have lasted 10 years in an attempt to alter international law with respect to the oceans. Because of this enormous potential for a change in the legal framework under which U.S. companies will have to operate, these companies cannot make the necessary large investments to continue into commercial recovery of these strategic minerals. H.R. 3350 would create a domestic legal framework to encourage U.S. companies to continue their development of technology. When this technology development leads to commercial recovery the United States can begin to become self-sufficient with respect to copper, cobalt, nickel, and manganese—strategic minerals which the United States is importing in enormous quantities.

Similar legislation has been introduced in this Congress to accomplish the important national interest objectives which this legislation addresses. It is abundantly clear to me that a consensus has developed this year to proceed with
